The Nation.

NEW YORK, THURSDAY, JANUARY 5, 1882.

The Week.

JUDGE Cox had an opportunity last week to explain his peculiar manner of conducting the Guiteau trial, and his explanation was probably what most persons who have followed the proceedings with any care looked for. There was, it must be confessed, something absurd in having a solemn discussion as to the propriety of putting Guiteau in the dock. It seems to have been approached by counsel engaged in the case as if it involved grave constitutional questions, or as if the dock, instead of being the prisoner's regular place in court, were a relic of antique barbarism and cruelty, like the thumbscrew or the rack. Judge Cox, at the end of the argument, rendered his decision with the gravity of a final judgment, and no sooner was Guiteau placed in the dock than he began again to interrupt the proceedings. The reason why he exhibited so much fear of being removed from his seat inside the bar evidently was that he thought he might, if put in the dock, be shot. He was relieved of all anxiety on this score, however, by the judge, who assured him of protection. In deciding the motion, Judge Cox admitted the truth of all the criticisms made in the press on the subject of the conduct of the trial. The behavior of the prisoner had been from the first "in persistent violation of order and decorum." This had been allowed by the court, at the express desire of the District Attorney, "in order to furnish the experts an opportunity of diagnosing the prisoner's case," and on the ground that "the prisoner's conduct and language in court would afford the best indication of his mental and moral character, and contribute largely to the enlightenment of Court and jury on the question of his responsibility." This expectation had been justified by the result, for the opinions of the experts had been largely founded on the exhibitions which had taken place on the trial. The case was, however, now approaching its end, and it was incumbent on the Court to impose such restraint as the circumstances admitted. He could not be gagged or sent out of court, because this would interfere with his constitutional right to a fair trial, and so he must really now be placed in the dock.

It cannot be denied, scandalous as the trial has been, that there is a good deal in what Judge Cox says as to the effect produced by the spectacle afforded by Guiteau in court. The experts have had an opportunity of making up their minds upon the very important point as to whether he was acting a part; as to which, had he been kept under restraint, they would have been much in the dark. There was at the outset a suspicion in the minds of a good many people that the man was irresponsible, and nothing could possibly have removed all doubt on this head so completely as the course adopted by Judge Cox. On the other hand, Judge Cox by no means clears himself of the charge of weakness. He has not only permitted the prisoner to exhibit himself in a true light to the jury and the witnesses, but he has allowed the audience a latitude that no judge with a proper sense of the dignity of his court would have countenanced. Whatever he might permit Guiteau to do, there was no reason why he should not have sternly repressed the misbehavior of the audience. Clearing the court-room once or twice would have brought them to their senses, but Judge Cox very early in the trial showed a disposition to make threats which he was not prepared to enforce, which is the surest invitation to disturbance. It was Judge Cox himself who made the suggestion that Guiteau should be gagged, and yet if he did at the outset determine to give him full swing, this must have been intended as a mere form of words.

We have heretofore commented upon Mr. Hewitt's bill providing for the free exchange of gold dollars for silver dollars at the Treasury, indicating that in our opinion it would be unwise to lodge in the hands of the Secretary the power to increase the present monthly rate of coinage of silver dollars, although this power, as proposed by Mr. Hewitt, is limited by the public demand for such dollars. Mr. Hewitt has replied that it was not his intention to add to the powers of the Secretary in this regard, unless there should be an actual demand, which is not likely to arise, seeing that the great bulk of coined silver lies inert in the Treasury. Obviously Mr. Hewitt's belief is that the discretionary power proposed to be given to the Secretary would lead to a cessation of such coinage for some time to come, which would of course be a gain to the taxpayers, who are now contributing two million dollars per month for the purchase of silver bullion not wanted for the purposes of trade. The question whether the producers of silver might not create an artificial demand for that kind of dollars, under the operation of the bill, in order to "steady the market" for silver, ought to be considered along with the question whether the Secretary will always properly construe his own powers and keep on the side of safety. Inasmuch as there is room for doubt upon both points, we think that the bill should be amended in this particular. Apart from this, it may be said in favor of Mr. Hewitt's bill that the position of the Government in respect of silver is now illogical and unjust. It buys silver bullion at the rate of, say, 87 cents per dollar, coins and issues it (so far as it is issued at all) at 100 cents, and pockets the difference, but refuses to give gold for it except in the indirect way of receiving silver for duties and taxes. This awkward and roundabout system grows out of an attempt to establish a double standard, and at the same time to guard against its evils. This is what the Allison bill avowedly sought to do. We have now reached a point where some further legislation is necessary, and we recognize in Mr. Hewitt's bill the purpose to accord something to the silver advocates and at the same time to exact something from them in return. Probably any bill which has any chance of passing will have to be based upon a compromise of some kind.

A correspondent writing from Adeline, Illinois, sends us the following paragraph clipped from the editorial columns of the Chicago *Tribune*, and inquires whether the statements therein made are correct:

> "The United States silver dollar being a legal-tender throughout this nation in the payment of all debts, and possessing exactly the same purchasing power as gold or greenbacks, it is received by European traders, manufacturers, and merchants on an equal footing with American gold. The only possible difference in value would be the extra cost over gold of sending it back to this country for the purchase of American products, and that would only amount to an insignificant fraction on the dollar. There is no other difference in Europe between the current value of legal-tender American gold and silver coin."

In the first place, the number of United States silver dollars in Europe is about the same as the number of English half-crowns in the United States—probably rather less. But if 1,000 silver dollars could be collected in Europe they would sell for as much as they would bring in New York minus the cost of handling, not because they are legal tender here, but simply and solely because the Government receives them for taxes and duties. The legal-tender property adds nothing to the value of silver except as it may be made to apply to debts previously contracted. In the making of new bargains and contracts and in the purchase of property from day to day, the legal-tender feature is not worth the smallest fraction of a penny. Whenever the amount of silver coined and got into circulation becomes sufficient to cause it to pass at its bullion value, gold will buy more property than silver, although both will be equally available to discharge old debts. But while the amount in circulation remains so small that the Government can take care of it and redeem it from day to day by receiving all that is offered at the custom-houses and internal-revenue offices, the silver dollar will buy as much here as a gold dollar, and will buy as much in Europe, minus the somewhat higher charges for brokerage and transportation. Therefore the Chicago *Tribune* is technically and in a narrow sense right, but by inference and suggestion altogether wrong.

The unprecedentedly heavy stream of immigration that poured into the country last year —over 430,000 arrivals in eleven months— seems to alarm timid citizens with serious apprehensions as towhether this mass of humanity, consisting of people wholly unacquainted with American life, can be safely absorbed by the body politic. It is true, the number of newcomers seems very large, almost sufficient to form three new States out of territory hitherto uninhabited, were the immigrants all to settle down together. But the effect produced by the sudden accession of a foreign element to our people depends in a great measure upon the proportion it bears to the general population and its dis-

tribution among the different parts of the country. From this point of view it appears that the heavy immigration of 1881 will not put our institutions under as severe a strain as they have been put before. We have now a population of over fifty millions, and the number of immigrants for the whole year will be about 440,000. In 1854 the population of the United States was about twenty-five millions, and the number of immigrants in that year was 319,223, a number more than two-thirds as large as that of the present time, while the aggregate population of the country was only half of what it now is. It is also reported that the majority of the immigrants who arrived last year were of an uncommonly good class, people of working habits and generally of some means. More than one-third of them were Germans, mostly belonging to the agricultural classes, who proverbially make good citizens and are easily assimilated. Immigrants from Great Britain, mostly Irishmen, come next, forming something less than one-third of the aggregate, a valuable addition to our working forces. Norway, Sweden, and Denmark furnish the next largest contingent, about one-eighth of the whole, and the rest is divided among other nationalities. The bulk of the immigration is going to the West. It is a fact worthy of note that the Northwestern States, which receive among their people the largest proportionate number of foreign immigrants, rank among the most orderly of American communities.

The *Mail and Express* published on Thursday a long reply to the charges of the *Times* with regard to the elevated-railroad management, consisting chiefly of opinions of counsel and decisions of the courts with reference to the consolidation of the roads and the operations which led to it. These documents go to establish the following facts: first, that the agreement between the Manhattan, the Metropolitan, and the New York, made in 1879, by which the first leased the other two and guaranteed ten per cent. dividends on their stock, was a valid contract; second, that the modification of it made in October last, by which this rental was cut down from ten per cent. to six, was also valid; third, that the directors had legal power to act for the companies in the matter; that the agreements needed no ratification by them; that the old ten per cent. guarantee cannot be enforced at the instance of individual stockholders who might have benefited by it, and that since the reduction the Manhattan Company is no longer insolvent.

The *Times* admits that all this is settled and out of the way, but insists that these matters are all irrelevant to its main charges, which it repeats, substantially, as follows: Gould, Field, and their associates entered into a stock-jobbing conspiracy to depress the elevated-railway shares and then buy them in and secure the control of the lines. At or not far from the same time the Attorney-General, Mr. Ward, set out with great zeal on behalf of the State to wind up the Manhattan Company, not merely on the ground of insolvency, but on that of a forfeiture of all its rights and franchises before the ten per cent. agreement of 1879 was entered into. But "about the time that Jay Gould entered the management of the Metropolitan Company he abandoned his suit in this city and resorted to Judge Westbrook at Kingston with an amended complaint, alleging only the facts involving the insolvency of the company"—insolvency being a difficulty which could easily be got over by the means actually resorted to of cutting down the guaranteed rental. The company's affairs were put into the hands of receivers, the men selected being "closely associated in interest with the principal manipulators of elevated-railroad stocks." This of itself is a very grave charge against Mr. Ward, as he was bound to see that the receivers were disinterested persons. Having brought affairs to this point, his interest died out; and, his original suit being out of the way, there was nothing to prevent the consolidation from going on. With regard to Judge Westbrook the charge is that he made an order granting authority to issue certificates of indebtedness in Jay Gould's private office, and in the same office rendered a decision for the surrender of the property of the New York Company. The *Mail and Express*, in bringing forward its array of "highly esteemed judges" and "foremost jurists," does not, after all, touch the real point; no stock-jobbing conspiracy has ever been unearthed in this city without finding it backed up by the opinions of judges and jurists. As the *Times* says, they may amount to no more than proof that the conspiracy was successful. The question most important to the people is, Were the Attorney-General and a judge of the Supreme Court knowingly instrumental in forwarding it?

The explanation of Attorney-General Ward to a *Tribune* reporter of his course in connection with the elevated-railway litigation may be summed up as follows: He brought the action for insolvency against the Manhattan Company, before Judge Donohue, at the instance of the newspapers. Judge Brady stayed the proceedings, and the case got into such a tangle that he discontinued it and commenced a new action before Judge Westbrook at Kingston. The Manhattan Company denied its insolvency, and issue was joined. He (the Attorney-General) believed that the leases of the New York and Metropolitan Roads to the Manhattan were invalid, and so stated to the public. He also doubted the validity of the $13,000,000 of Manhattan stock. When issue was joined on the question of insolvency he was ill and could not attend court; so he telegraphed to Judge Westbrook to do what he thought was right. The Judge, with the consent of all the parties, discharged the receivers and restored the property to the Manhattan Company. He (the Attorney-General) never had any interest in elevated-railway stock and never received any consideration for anything he did in the premises. The gist of the charge in the *Times* against Attorney-General Ward is that he used his official position to help Jay Gould in a vile stock speculation. It was important for Gould that the Manhattan stock should be depressed to a low figure, but that the company should not be destroyed. The action by the Attorney-General, as things went on, was adequate to accomplish both these ends. It was important that the litigation should not be unduly protracted. The discontinuance of the first suit and the beginning of the second one before Judge Westbrook were adequate to push matters forward rapidly. It was important that the owners of the New York and Metropolitan Railways should be frightened so as to consent to the execution of new leases at a reduced rental. The statement of the Attorney-General that he doubted the validity of the old leases and consideration of those leases—viz., the $13,000,000 of Manhattan stock—was well calculated to produce fright among those who had received the stock and sold it, and might be required to account for it to the Manhattan Company. The discontinuance of the suit when the necessary effect had been produced upon the New York and Metropolitan stockholders was the only remaining act needed to carry out Gould's programme. Now, nobody can probably affirm that Attorney-General Ward received any consideration for his agency in the proceedings, but the general verdict will be that such greenness as he displayed according to his own showing is exceedingly dangerous to the public when united with power and responsibility.

The hasty assertion made in some quarters that the Star-route prosecutions died with the late President is effectually contradicted by the spirited letter of Attorney-General Brewster to associate-counsel Bliss. The Attorney-General says that as soon as he assumes the duties of his department he will give the counsel special authority to push the civil suits for the stolen money, and that "the uttermost penny lawlessly received and taken from the public treasury must be recovered." He further insists that the criminal proceedings "be earnestly pressed." Mr. Brewster, however, is not content to turn the matter over to the special counsel employed by the Government. "I have," he says, "resolved that my duty will require me to take active part in the trials in court," and he promises to be present as the leader of the prosecution. Whatever hope the Star-route rascals have founded upon the supposed indifference of the Administration must be dispelled by the Attorney-General's emphatic letter.

General Grant has made a very frank and very complete recantation of his views on Fitz-John Porter's case, owing to his having gone over it again with the fresh light derived from the Confederate orders and reports. He thinks that, had "the testimony and documents now available been brought before the court-martial, there would have been no verdict against General Porter." This is very creditable to him; and as there is no politics in the matter, nobody will question the sincerity of his conversion. We may add that we believe his experience is that of every disinterested person who has gone over the ground recently. It was that of Mr. Joseph H. Choate, who appeared without fee, and as a consequence of his change of opinion, as counsel for

General Porter before the late Advisory Board. It has been our own experience, also. Porter has for nineteen years been lying under a tremendous penalty, inflicted after a conviction which, however justifiable at the time, is now shown to be untenable, and the country owes it to its own honor to relieve him. But all this does not solve the problem of poor General Logan's condition. He is the head and front of the great anti-Porter phalanx. He knows, and has always known, that Porter was guilty. He feels it in his bones and his moustache. Now, however, his idolized chief, General Grant, has gone back on him, and says Porter is innocent. Who will mourn for Logan now? What will he do? Whither will he turn?

The discussion in the press on the proposed Tariff Commission shows that the subject has really taken a strong hold upon the public mind. The point in controversy at present is whether the commission shall be composed of Congressmen or of persons outside of Congress. The high-tariff men generally favor an outside commission because they could more easily pack it and conceal any evidence tending to discredit the present outrageous scale of duties on imports. The principal objection to an outside commission is that the work to be done has to be passed upon, in order to acquire any validity as law, by another and different body of men, that is, by Congress, and thus virtually will require to be done twice. The conclusion reached by the commission must be reviewed first by committees of the two houses, and afterward by the houses themselves. It will be practically impossible for the committees to examine all the evidence taken by the commission, and if it were possible, it would still be open to question whether all the evidence which the committees themselves would have taken was gathered in. In the discussion which the report must undergo on the floor of the two houses, the members of the commission can take no part if they are not also members of Congress. Consequently there will be much groping in the dark when unexpected questions are put by members in debate to those who have the measure in charge. Moreover, an outside commission would be an irresponsible body, having no constituency to pass effective judgment upon their doings. The public will be better assured of the fairness of the report if they know that its members have to meet their fellow-citizens at the hustings within a brief period of time, and give an account of themselves. We can conceive of no method of dealing with the tariff so poorly calculated to satisfy public opinion, so awkward and dilatory, and so unlikely to lead to a permanent adjustment, as to send the subject to an outside commission.

Early in the last week there was a sharp recovery in prices at the Stock Exchange, but on the closing day of the year depression again became the rule and has since continued to be. The particular reason for the decline in prices is that the railroad war has broken out afresh—in other words, that business is being solicited and taken by the trunk railroads at prices which do not cover the cost of the work done. During the close of navigation the railroads usually earn a good part of their yearly profits, and the present contest is therefore the more serious, since every month of delay in settling it before navigation reopens shortens by so much the most profitable season of the year. There was a sharp demand for money throughout the week, yet the New York banks lost but little in their surplus reserve, and the money market has ceased to be a matter of concern for several months, as all domestic influences will now work in favor of lower rates. Foreign exchange advanced during the week, so that at the close there was no profit in importing gold.

There has been a large meeting of Irish landlords in Dublin, at which resolutions were passed expressive of the alarm and disappointment with which they view the proceedings of the Land Commission, hinting that the antecedents of some of the commissioners disqualify them for their work, and demanding that if their decisions are confirmed on appeal, Parliament should compensate the landowners for their loss. There is little likelihood that this complaint will produce much effect on English opinion. It is in substance a complaint that the act is producing the effects it was intended to produce. It was passed simply and solely because rents in Ireland were believed to be too high, and the payment of them was enforced by means which were held to be cruel and unjustifiable. The evidence on these points was overwhelming. What the commissioners have done in a large number of cases is to lower rents, and in lowering rents they have simply taken away from bad landlords money to which, in the estimation of the framers of the bill, they had no claim. It would, therefore, be an absurdity on its face to call on English taxpayers to make up to such landlords what they have lost through the operation of the law. Outrages on a large scale continue, but the judges declare that they seem in very few cases to be the work of the farming class. They will probably disappear as the discontent of the farmers disappears. That the Land Act is going to prove successful in removing this discontent there is daily less reason to doubt.

The budget of the German Empire for 1882–3, which has recently been prepared, presents some features that are worthy of notice, because they bring out in strong relief the weakness of the present system of imperial finance, and give the real cause of the recent changes made in the system by Prince Bismarck. However much his protective measures and his agitation for a tobacco monopoly and taxes on spirits may militate against sound political economy, circumstances demand that something be done to create a steady revenue. According to the budget, the ordinary expenditures will amount to 534,140,792 marks, and the extraordinary expenditures to 73,393,979 marks, or a total of 607,534,771 marks. The income is estimated at 607,534,771 marks. The budget, which is voted annually, when closed is always found to be in equilibrium, the revenue being equal to the expenditure. This result cannot be readily understood without explaining the general outlines of the financial system of the empire. The resources of the empire are derived from customs duties and excises, railroads, posts and telegraphs, the public property, and the treasure made up of the French war indemnity. These are the chief sources of revenue, but the sums thus obtained, together with other numerous small items of revenue, are insufficient to defray the necessary expenditure of the empire for the central administration, army and navy, courts of justice, and foreign office, and the deficit is a large and increasing one. This deficit is covered by contributions which are apportioned among the States according to their population, some allowances being made for the privileges they enjoy. Thus the contribution is relatively larger for Bavaria, Baden, Würtemberg, and Alsace-Lorraine, because they are allowed to impose taxes for their own account on malt and spirits. The sum of the contributions is then the deficit between revenue and expenditure. This deficit, which was in 1872 81,327,265 marks, in 1881 had increased to 103,684,389 marks, and in 1882 to 116,062,748 marks, being an increase of more than 12,000,000 marks in a single year. Of this large sum more than 85,000,000 marks are to be redistributed among the individual States, so that the real contribution amounts to but 30,000,000.

So long as the war indemnity could be drawn upon, the extraordinary expenditures were paid from it, and the contributions of the States were so small as to create but little discontent among the States. But as the war fund has been exhausted, and the deficits to be covered have increased, the contributions bear more heavily upon the smaller and poorer States, many of which are unable even to pay the expenses of their own administration, and the difficulty of meeting them is increasing. The income of the individual States is derived from lands, forests, and such mining and manufacturing operations as they conduct. This is, at best, an uncertain revenue; for while the lands and forests afford a nearly fixed income, the manufactures carried on by the State are not exempt from the vicissitudes of trade, and the revenue from this source is liable to be greatly decreased in years of depression. The same objection will also in great part apply to the mines, so that while the calls made upon the States are rapidly increasing, there is no corresponding increase in the means of meeting them, and there is the constant danger of a diminishing income. The complaints and discontent among the States against the present system are growing more bitter each year, and some reform by which they may be relieved of these contributions is loudly called for. It is true that the Chancellor is allowed to borrow funds to cover whatever deficit may occur in the budget, but this power has been but little used. In order to allay this discontent Prince Bismarck has been casting round for some new sources of revenue which may allow him to decrease the calls upon the States, and his protectionist tariff is a part of this plan. His measures for a Government monopoly on tobacco, such as exists in France, and for imperial excises on liquors, are only means for attaining this end.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

ADDITIONAL interest was lent to the proceedings in the Guiteau trial on Wednesday. During the cross-examination by Mr. Scoville of one of the witnesses for the prosecution, Judge Porter objected to one of the questions as being "blasphemous," whereupon Guiteau began to abuse Mr. Porter in a most violent manner. The latter then demanded that the Court remand the prisoner to the dock. After some argument the motion was granted, and Guiteau, considerably cowed, was removed to the dock. In rendering his decision, Judge Cox took occasion to say a few words in explanation of the course which the Court had pursued with regard to the prisoner's conduct during the trial. He stated, among other things, that Guiteau had been allowed considerable latitude, in accordance with the expressed wish of the District Attorney, so that the experts might be able to observe his conduct. Two more experts were called to the witness stand on this day—Drs. A. E. Macdonald, of New York, and Randolph Barksdale, of Virginia—both of whom expressed the belief that Guiteau is sane now, and was sane on the 2d of July. On Thursday Dr. Walter Kempster, of Wisconsin, was the most important witness. He has made a specialty of craniology and has had considerable experience with insane criminals. Dr. Kempster did not think that Guiteau's head was of an unusual shape, and illustrated this point by card-cuttings showing the shape of the heads of various well-known men, including District Attorney Corkhill, whose head is said somewhat to resemble Guiteau's in shape. Dr. Kempster further said that he thought the prisoner was feigning insanity. On Friday morning, as Guiteau was being taken across the court-room to the dock, he said to Mr. Scoville and Mr. Reed, as he passed them, "If you will just keep quiet, I'll laugh this case out of court." He proceeded to carry this project into effect by making more of a buffoon of himself than usual. Dr. John P. Gray, the last expert witness for the prosecution, was examined on Friday. Dr. Gray had had interviews with Guiteau before the beginning of the trial, in one of which the latter had said that had the Paris consulate been given him it would have prevented him from "removing" the President. At the close of this day's proceedings Dr. Gray emphatically stated that the result of his interview with Guiteau had been to convince him of the prisoner's sanity. On Saturday Dr. Gray continued his testimony and gave his reasons for considering the prisoner sane, which were in brief that he had found nothing in the story of his former life to show that he had ever had any symptoms of insanity, and that his account of the assassination showed reason, judgment, reflection, self-control, fear for personal safety, and preparation of a legal defence before the commission of the crime. These things were, according to Dr. Gray's experience, entirely inconsistent with a delusion of a divine command to commit homicide. Mr. Scoville's cross-examination of Dr. Gray, which was continued on Tuesday, resulted in nothing of importance to the defence. On Friday Mr. Scoville gave notice of an application for the introduction of new evidence for the defence. The remanding of Guiteau to the dock seems to have had little effect upon him. He has been as noisy and abusive as ever.

Guiteau was allowed to see about 200 callers on Monday, who were permitted to go as far as the door of his cell. Many of them are said to have been women.

Mr. Solomon, chairman of the Committee on Ways and Means of the Garfield Memorial Hospital, says that the subscriptions to the institution now amount to about $80,000, but that, as it is deemed desirable to make the hospital independent, if possible, of Congressional appropriation, a much larger fund will be necessary.

The committee of the Garfield Memorial Hospital have received $400 from the Khedive of Egypt, through Consul-General Wolf, who writes that he expects to supplement this with further subscriptions to the amount of $1,000.

The total amount raised for the endowment of a Garfield professorship in Williams College is reported to be about $35,000. It is expected that $15,000 more will be raised.

Senator Hoar of Massachusetts delivered a eulogy on President Garfield, before the City Council, in Mechanics' Hall, Worcester, on Friday. There was a large audience present, including Governor Long, Chief Justice Gray, and Justice Devens.

In order to correct certain misstatements which have been made concerning the relations between the President and Mr. Blaine, a statement has been furnished for publication which asserts that there has never been the slightest misunderstanding between the President and Mr. Blaine in regard to the latter's retirement from the Cabinet, and that their personal relations continue, as they have always been, entirely friendly and cordial.

Postmaster-General James expects to surrender his department to his successor on Thursday next, on which day he will have been ten months in charge.

From the returns made to Third Assistant Postmaster-General Hazen, it appears that the sale of postage stamps, stamped envelopes, and postal cards for the quarter ending September 30, 1881, amounted to $7,017,788 88, an increase of $1,030,109 over the corresponding period of last year.

A letter has been published from Attorney-General Brewster to Mr. George Bliss in regard to the Star-route prosecution. Mr. Brewster says that the civil as well as the criminal prosecutions must be "earnestly pressed," and "the uttermost penny lawlessly received and taken from the public treasury must be recovered." Mr. Brewster also says that he is convinced that his duty will require him to take an active part in the trials in court, and that he proposes to be present with Mr. Bliss "and in person lead in the prosecution for the United States."

Mr. Bliss sent out on Saturday seventy subpœnas for witnesses to appear before the Grand Jury in the Star-route cases, which will soon be brought up. Mr. Bliss is reported to have said that Brady and Dorsey will surely be indicted.

The Post-office Department is reported to be "waging a war" against the Mormons. The department having found that the Mormons in the territory of Utah were "boycotting" such postmasters as were not of the Mormon religion by buying postage stamps, etc., only from Mormon postmasters, have removed Democratic and Mormon postmasters and substituted anti-Mormon Republicans in their place. In most of the post-offices in Utah the compensation of the postmaster is derived from his commission on the sale of his stamps.

It is stated to be the general sentiment of the House Committee on Elections, in regard to the Cameron-Campbell case from Utah, that neither of them is entitled to a seat. It is thought that the whole matter will be referred back to the people of Utah for a new election.

The debt statement for the month of December, issued on Tuesday, shows the decrease of the public debt during the month to have been $12,793,623 56.

The annual estimate by the Director of the Mint of the values of foreign coins for 1882 makes only two changes from the estimated values of last year. The Austrian florin and the Japanese yen are each reduced one mill.

Some 440,000 emigrants arrived in this country during the past year. Of these three-fourths were landed at Castle Garden, New York.

The growth of the State of Colorado during the past year is said to have been unprecedented in its history. The Auditor's records show the assessed valuation of the State to be $96,059,000, an increase of $23,000,000 over that of 1880. The total indebtedness of the State is $330,000.

The Atlanta Cotton Exposition was closed with appropriate ceremonies on Saturday. An immense throng was present. Director-General Kimball and Governor Colquitt, President of the Exposition, delivered addresses, after which the machinery was stopped and the Exposition declared at an end.

There was a disastrous fire in a crowded hall at Shanesville, Ohio, on Monday night. It is said that the total number of killed and wounded will probably reach 100. The building was a rickety frame structure, and has long been considered unsafe.

The annual message of Governor Cornell, of New York, which is ready for the Legislature, treats solely of State matters, and announces that there is a surplus of $2,500,000 in the State's treasury. This, which is said to be the largest surplus there has ever been in the treasury, it is expected will enable a reduction in the State taxation to the lowest rate in fifty years.

There is a "deadlock" in the New York State Legislature. The Tammany members of the Democratic party refuse to support the nominees of the regular Democratic caucuses, and the result is that it has been impossible to elect any officers or to transact any business.

The Virginia House of Delegates recently passed a bill removing from about forty persons the political disabilities which had been incurred in consequence of duelling contrary to the State law. A systematic movement is now being set on foot by the ministers of the State to defeat the bill in the Senate.

Mr. William G. Russell, who was appointed by Governor Long to the Chief Justiceship of the Supreme Court of Massachusetts, made vacant by the appointment of Mr. Gray to the Supreme Court of the United States, has declined the appointment.

There is a dispute between the Choctaw and Chickasaw Indian nations in regard to the right of way recently granted by the Choctaw Council to the St. Louis and San Francisco Railroad Company through the Choctaw country. Ex-Governor Overton appeared before the Secretary of the Interior on Tuesday, as the representative of the Chickasaw nation, to protest against the ratification of the grant, on the ground that the Chickasaws had an interest in the Territory and had not been consulted in the matter. It has been asserted that the Choctaw Council was "bought up," the majority of the nation being opposed to the railroad.

There has been an alarming increase in smallpox cases in all sections of the country. The Post-office Department has been appealed to by postmasters in several States, especially in New York, to adopt some method of protecting them from infected mail matter, even to the extent of stopping the mails altogether, if other means fail. It is stated that the postal authorities are considering the matter, with a view to taking such measures as may be feasible.

The deaths from smallpox during the week ending Saturday, the 24th of December, are officially reported to the National Board of Health to have been as follows: At Pittsburg, 25; Cincinnati, 14; New York, 11; Philadelphia, 11; Madison, Indiana, 1. On Thursday seventy-seven cases of smallpox were reported to have occurred in the infected region below Wahpeton, Dakota, twenty-five of which proved fatal. The disease is said to be spreading in that region.

It is reported that the court-martial in the case of the cadet Whittaker have found him guilty of cutting his own ears, and have sentenced him to be dishonorably dismissed from the service. It is also rumored that Judge-Advocate-General Swaim has reviewed the

proceedings of the court, and has decided that it was illegally constituted because it was ordered by President Hayes without any request from the department commander, and that therefore all the proceedings were void. Although no official statements in regard to the matter have as yet been made, there seem to be good reasons for believing the above to be true.

The ceremonies accompanying the retirement of the old and the reception of the new Chinese Minister took place at Washington on Saturday. The new Minister, Cheng Tsao Ju, was presented to the President by Mr. Frelinghuysen, and the customary addresses were made.

Señor Martinez, the Chilian Minister at Washington, has received a despatch from the Chilian Government, stating that a manifesto has been issued to all the powers with whom Chili is represented by an envoy, giving the reasons on account of which Chili went to war with Peru, and defining the Chilian policy in regard to the present difficulties. The arrival of the manifesto is awaited with interest.

Mr. James Stevenson, who has been in charge of the Archæological and Ethnological Exploration among the aboriginal towns of the Southwest, has, in a conversation with a reporter of the New York *Tribune*, given a very interesting account of the result of his labors. These have been mainly among the Pueblo Indians in New Mexico and Arizona. He explored a number of ruined towns built by the old cliff-dwellers, one of which, he says, must have been the abode of 100,000 souls, and which these explorations are believed to have first brought to the knowledge of the civilized world. The dwellings in the city are carved out of the rocks for sixty miles along the face of a winding cliff, and many interesting relics, such as pottery and the like, were collected therefrom. These researches have been conducted under the auspices of the Smithsonian Institution, and Mr. Stevenson's collection, comprising eight or nine thousand articles, is on the way to Washington.

FOREIGN.

In receiving the congratulations of the Senators and the members of the Chamber of Deputies on New Year's Day, King Humbert said, among other matters, that it was well to make known that Italy was firmly decided not to admit the slightest discussion on the part of foreign governments of certain questions touching internal order. This is supposed to have been an allusion to Prince Bismarck's designs in behalf of the Vatican. King Humbert also dwelt upon the necessity of completing the military organization. The King's words are reported to have "produced a great impression."

In replying to a question in the Spanish Cortes as to whether in case of a "powerful nation" undertaking to protect the rights of the Pope in Rome, the Spanish Government would interfere, Señor Armijo, the Minter of Foreign Affairs, said that as far as he was aware no power contemplated taking the rights of the Pope under its special protection.

It is stated that, notwithstanding the rumors which have been circulated of late, the Pope has no thought of leaving the Vatican.

Arabi Bey, the leader of the national party in Egypt, has written a long letter to the London *Times* setting forth the aims of the party. He says it is loyal to the Sultan and the Khedive, but is determined to oppose any attempt on the part of either to assume despotic authority. It hopes to redeem the country from the hands of its creditors, and desires the army to be strengthened so as to protect the Assembly in obtaining a fair measure of popular rights.

It is stated that France and England have agreed to send to the Khedive of Egypt an identical note, announcing that, in the event of peace being disturbed or his authority overturned, they are prepared effectively to "support him, restore order, and protect his authority by material coöperation."

It is stated that the British Government has opened negotiations with France, Germany, and America, with a view to establishing an international court to deal with outrages connected with the kidnapping of natives of the South Pacific.

It is stated from Parisian sources that the Anglo-French treaty negotiations are virtually ended, owing to the refusal of the English commissioners to accept the concession made by the French commissioners in regard to cotton and woollen goods. This concession did not reach the minimum fixed by the English. A despatch to the London *Times*, however, states that the situation is slightly improved and a definite arrangement quite possible.

Affairs in Tunis seem to be becoming comparatively peaceful. A despatch states that a majority of the Hammema tribe, numbering 2,300 tents, were expected at Gafsa on the 27th inst., to make submission, and that the rest of the tribe were also disposed to submit. If this be true, the insurrection in the south of Tunis will be practically at an end.

M. Roustan, the French Minister, returned to Tunis on Sunday. He was met by a few French residents and natives, but no great demonstration was made.

French troops have entered Figuig, Morocco, and fighting has ensued between them and tribes within the frontier.

The French Government has issued a decree abolishing the post of Directeur des Cultes at the Ministry of Worship. This department is to be entirely reorganized, and an examination is to be made of the modification of the decree and laws affecting the State churches. It is understood that no new bishop will be appointed without taking the oath prescribed by the convention between France and the Vatican.

A meeting of delegates from the Department of the Seine for the election of Senators, was held in Paris on Thursday. Victor Hugo is among the candidates for the Senatorship.

The Irish Property Defence Association is constantly receiving recruits. On Dec. 28 an influential meeting of the landowners and traders of the city and county of Dublin was held and a branch of the association formed. The Lord Mayor of London is reported to be energetically advocating the fund for the defence of property in Ireland, which has now reached the sum of £9,000. On Thursday the police entered the shops of all the news agents in Dublin who are engaged in the sale of seditious journals, and seized all the copies of the *United Ireland*, *Irish World*, and *United Irishman*. The organization of eleven of the worst counties into five districts, each under the supervision of a special magistrate, is looked upon as an indication that the Government has resolved to take still more vigorous measures for the suppression of the disorders. A meeting of the Ladies' Land League was held in Dublin on the 1st of January, at which Miss Anna Parnell presided. The police did not interfere. The Dublin correspondent of the London *Times*, in reviewing the events of the past year in Ireland, draws a very dark picture. He says that commercial credit is broken and the spirit of the country sunk in deep depression. The result of the year's trade shows a decrease of thirty per cent. in imports.

Mr. Dawson was formally inaugurated Lord Mayor of Dublin on Monday. The Corporation refused to pass the customary vote of thanks to the retiring Mayor, Mr. Moyers, in consequence of his refusal to convene a special meeting of the Corporation to confer the freedom of the city on Messrs. Parnell and Dillon.

The London *Times* of December 31, in a financial article reviewing the state of British trade during the past year, says that "the year has been marked by a quiet but steady improvement in trade"; that pauperism is diminishing and the revenue from deposits in savings banks increasing, and that the outlook, on the whole, for the new year is reassuring.

The English Foreign Office has published Mr. Blaine's despatch of November 14th to Minister Lowell, thanking the British people for their sympathy with Mrs. Garfield and her family.

It is understood that Mr. Bradlaugh will appear before the bar of the House of Commons and make claim to have the oath administered to him on the day on which Parliament reassembles.

The total amount of the subscription obtained in London in aid of the sufferers by the Vienna fire exceeded £100,000.

The Allan Line steamship *Moravia*, from Portland, bound for Liverpool, England, ran ashore near Yarmouth, Nova Scotia, on Friday. The cargo, consisting mainly of wheat and flour, was thrown overboard, and the passengers taken ashore, but it was found impossible to get her afloat. It is stated that there is little hope of saving the vessel, as she fills with each tide.

The Hamburg-American Line steamer *Gellert*, which sailed from New York on the 15th of December for Hamburg, ran ashore on Wednesday during a fog, near Cuxhaven, on the bank of the Elbe, fifty-six miles from Hamburg.

Since the Anti-Socialist Law was promulgated in Germany, 225 Socialist societies have been dissolved, and 758 Socialist publications suppressed.

It is stated that Herr Richter will soon resign the leadership of the Progressists in the Reichstag, and that Herr Hanel will succeed him.

The trial trip through the St. Gothard Tunnel was made on Thursday. It is said to have been highly successful. The time occupied in the passage of the train was forty minutes one way and thirty-three minutes the other.

Despatches from St. Petersburg announce that great frauds, amounting to millions of rubles, have been discovered at the custom-house at Taganrog, and all the officials arrested.

The total number of arrests of persons engaged in the recent riots at Warsaw is 1,700. It is stated that the prisoners are mostly young men.

A committee, consisting of Sergeant Simon, Baron Nathaniel de Rothschild, and Messrs. Cohen and Worth, in London, is collecting information with regard to the persecution of the Jews in Russia and Poland.

A Madrid despatch announces that the conversion of the privileged debts into four per cents has succeeded beyond all expectation. About £53,000,000 of the nominal capital of the debt has been converted.

King Luis of Portugal opened the Portuguese Cortes on Monday.

Complaint is being made in Portugal in regard to the treatment in the Sandwich Islands of emigrants from the Azores. The press in Lisbon has called upon the Government to take some steps in the matter.

The elections in Greece have been held. The returns are as yet incomplete, but so far they are unfavorable to the Government. The Ministers of Marine and Finance have lost their seats.

It is said that Señor Matias Romero has been appointed Mexican Minister to Washington.

The latest despatches from South America announce that when the news of the departure of Messrs. Trescott and Blaine, on a special mission to Chili and Peru, was received it caused a decided improvement in the markets.

TUESDAY, January 3, 1882.

FRENCH STOCK SPECULATION.

It is impossible to judge, until a full report of the recent libel suit of M. Roustan against the *Intransigeant* has been received, to what extent, if any, the jury were influenced by political considerations in finding for Rochefort, the defendant. The salient facts in support of the charge that Roustan's operations against the Bey were part of a gigantic stock speculation are, that his character does not seem to have stood very high at Tunis, and that the price of Tunisian bonds rose greatly at Paris just after the Bardo treaty, and next after the commencement of active military operations; further, that the original quarrel with the Bey was a dispute about the possession of a farm claimed by a French company against an English Jew, and that Roustan had long been an active dispenser of concessions from the Tunisian Government to French speculators. Moreover, an appearance of bad faith and of the existence of something that had to be concealed was created from the very first by the campaign against the Kroumirs, which everybody saw was a sham in the first fortnight. This was enough to cast discredit on the whole enterprise. The *Temps*, which is now a semi-official organ of the Gambetta Ministry, has admitted frankly that the Kroumirs were phantoms, but justifies the use of them, on the ground that there were serious diplomatic objections to saying, at the outset, that the real cause of the attack on the Bey's sovereignty was the desire to put an end at once to Italian pretensions to influence over him. Of course, a Government which confesses that it went to war on a fraudulent pretext, must expect to have its honesty impugned at every stage of the enterprise of which the war was the beginning. It is true that Gambetta was not in office when the war began, but he approved of it, and since coming into office has adopted all the methods and agents of his predecessors. Moreover, the Jules Ferry Ministry made no secret of the fact that the subjugation of Tunis was to open a rich field to French capital.

What makes the verdict of the jury appear a serious blow for Gambetta is, however, probably not so much anything positively criminatory which has been brought out at the trial, as the formal confirmation it seems to give, in a country in which judicial findings have great moral weight, to the theory which all the opponents of the Republic have been vigorously preaching, that the Republican régime is essentially a corrupt, stock-jobbing régime. Ever since the Monarchists had to cease denying its power and permanence, they have taken to accusing it of dishonesty in money matters, and the charge has derived a certain plausibility in French eyes from the fact that the present Government is, to a greater extent than any other which has preceded it since the Revolution, a government of poor men who have their fortunes to make, and men unknown to "Society," and whom Society thinks ready to steal whenever they get a chance.

It is not this, however, which makes a Parisian bourgeois jury ready to believe evil of the men now in power, so much as the enormous extent to which the French people is now plunged in stock speculation. Nothing like it has hitherto been known in French history, and one consequence of this is undoubtedly a readiness on the part of the ordinary Frenchman to believe that everybody, high and low, official and non-official, is in pursuit of things which have "money in them." A writer of high authority in the *Revue des Deux Mondes* asserts that it is not only the failure of the vine and the olive which has lowered the value of land, and thrown much of it out of cultivation, and made it very difficult to rent on any terms in central and southern France, but the rage of the peasantry for stocks, and the town life which seems to be a necessary accompaniment of stock speculation. In fact, it has now gone so far as to have greatly weakened if not destroyed, over a large part of France, the old "earth hunger" which has been so long one of the most powerful agents in French history, and did so much to ensure the success of the Revolution. The peasant has, in short, begun to prefer to have his money in scrip, or rentes, to having it in land, and to prefer the chance of increasing his store by lucky turns on the exchange to the chance of increasing it by that painful industry of the spade, for which he has long been famous.

To meet this demand for stocks, the railroads and "governments" by no means suffice as they do with us, great speculators as we deem ourselves. There is now in France a great swarm of banking companies, or "crédits," as they are called, in whose shares thousands of small people deal without knowing anything of their business. But the greatest material for speculation is afforded by the "Crédits-Fonciers," of which there is another and larger swarm, with much greater command of capital. These are in reality what we call "Construction Companies," of which our famous Crédit-Mobilier was a pretty example. Their proper business, theoretically, is some kind of speculation in real estate, as their name implies. They are ready to dig canals, make railroads, open streets or tunnels, build houses or stores, sell lots, and carry on farms, or vineyards, or sugar plantations. Nothing comes amiss to them, in fact, and their operations reach all over France and Algeria. They will soon be in operation in Tunis, but they rarely venture from under the French flag, owing to some remains of the timidity which has for nearly two centuries stopped French colonization. Their shares are small in amount, and thus within everybody's reach, and with this great variety in the nature, extent, and profitableness of their undertakings there is of course room for numerous and heavy fluctuations in their Bourse value.

How managers are provided for organizations requiring such a great diversity of talent and capacity, and how frauds and malversation both small and great are prevented, we are unable to say, and for our present purpose is of no consequence. It is enough that no gross mismanagement has yet been revealed, and that the companies still command the confidence of the small investors and speculators; and it is highly probable that they exerted considerable influence in precipitating the Tunisian crisis in order to provide themselves with new fields. The real danger of Gambetta's Ministry on the financial side probably lies not so much in popular suspicion that its members are making money through their use of power, as in the liability of the bubble to burst while he is in power. If he could support the collapse of speculation which his Government might be fairly accused of fostering, it would show that he was the strongest ruler France has ever had, for the resulting ruin would be felt over a wider area than any similar preceding calamity. Most "crashes" touch only the well-to-do; a French crash just now would reach the "chaumières," in which every French Government has to keep content alive as a condition of existence.

OUR "PROTECTED" FORESTS.

Among the most interesting of the points which require attention in the impending revision of the tariff is that relating to lumber. Here the principle of protection has received a very whimsical application, and one decidedly hostile to the public advantage which protection is supposed to subserve, whether we view it as assisting the accumulation of raw material for our manufacturers and builders, or as protecting the process of its manufacture by them. The production of new stores of this raw material is very slow at the best, and yet it is of the utmost importance to both our builders and manufacturers that the required supply should be ample and of moderate cost. It is no less important that the indirect benefit of our forest growth to agriculture should be considered. The necessity of an abundant timber supply to our carpenters every one can see at a glance. It will be very hard for us in a thousand ways to have the supply of black walnut, for instance, give out as that of tulip wood and ebony has done. But the loss of the forest to the farmer, though not so plain at first glance, is no less real. Scientific men agree with great unanimity that the preservation of extensive forests is vital to the prosperity of a large part of the country. Our climate is naturally drier than that of Europe, and vast tracts of our Western territory are particularly exposed to prolonged droughts and devastating gales. The whole great region extending from the valley of the Missouri to the Rocky Mountains is very generally of this character. There the wind acquires enormous force in its unobstructed sweep over hundreds of miles of prairie, and no mountains intervene to break its force or arrest the travelling rain clouds. Every season we are appalled by accounts of calamitous gales and irresistible tornadoes. The rainfall, too, diminishes markedly to the west of the Missouri, and when the needed showers come they fall too often upon parched and unretentive ground. From this they roll off in sheets to the stream channels, through which they rush in appalling floods. Drought is a frightful foe to the farmers of the far West. For several years they have escaped it, but three times in the last decade the crop has failed from this cause over whole States. More than once the rich bottom lands have been rendered untillable from floods.

These bad Western crops were felt heavily in the East, in the shape of diminished demand for goods, and bad debts. The East cannot flourish while the West suffers; for there is produced the food that feeds the nation and preserves the balance of our European trade, and there is consumed the product of the Eastern mills. Moreover, the prosperity of the West is an agricultural prosperity directly connected with its forest growth, for one of the few means of moderating these violent excesses and keeping up the even distribution of the necessary moisture is by forests. Indeed, that and the altered character of the surface, produced by cultivation, by which the soil becomes more porous and receptive of moisture, as well as more regularly drained, seem the only methods of producing any effect in the desired direction. The thrifty Western farmer has taught himself without books the value of the little grove on the windward side of his dwelling, and the benefits to be expected from a better system of arboriculture are so widely recognized that many States offer tax abatements to those who set out trees.

In direct opposition to that wise policy, our national Government puts a premium on the destruction of our forests by its tax on Canadian and other imported lumber, and under this extraordinary legislation our forests are rapidly falling. It is estimated by the Government that the once superb forests of Minnesota will be exhausted in a dozen years, and that the Florida supply will not last more than thirty. In California the destruction of the trees has been so reckless that over great tracts of land the soil, stripped of its natural protection, is burned by the sun and powdered by the wind into a hopeless desert. In northern Wisconsin and Michigan, where the depleted soil cannot be profitably farmed, it is true that the woods are allowed to spring up again, but the lumbering is so improvidently done that a worthless scrub growth generally takes the place of the destroyed forest. The denudation is so rapid that with all our natural optimism we cannot help looking with alarm at the approaching scarcity of an article so valuable at every step of our lives. Yet the Government does its best to hasten the evil hour, and does it apparently in mere carelessness.

It seems almost impossible to defend the lumber tariff. It is not in the interest of the manufacturer—he is impeded by the enhanced price he has to pay and threatened with an exhaustion of raw material; it is not in the interest of the farmer—he has to pay more for his house and more for every wooden thing he buys, while he is exposed to an increased danger from drought and flood. The whole country suffers, and the only persons benefited are a few great lumber firms—a mere handful of capitalists—whom the nation could far better afford to support in luxury at some European capital, where their destructive propensities would not be exercised at our expense. From their position as employers of a large force of men in a sparsely-settled region they have, of course, considerable political influence, but that need not be yielded to so tamely, and probably would not be if their position were better understood.

The method upon which our tariff was made up was that of buying off opposition by giving every interest a share in the protection distributed, and like most other political compromises it had its good points; but the danger it was especially exposed to was that of unduly assisting business interests which were particularly importunate or influential in politics at the expense of the well-being of the inattentive and unorganized community at large. This will plainly seem to have been triumphant in regard to our woodlands, upon which the tariff has had the most unfortunate effect. One thing that led to the mischievous blunder was probably a neglect of the difference between the lumber crop and most others in which foreign competition was feared. In most products increased prices tend to increase the supply. The tariff on wool did not exhaust the national stock, because it made it more profitable to breed sheep, and so it enormously increased the domestic flocks; but no such result followed from the lumber duties, because timber trees are so slow of growth that we cannot stop to cultivate them. Hence the tariff has not led to their planting anywhere, but only to the speedier sacrifice of the stock on hand. Here protection not only does not protect, but it hastens the rapidly approaching exhaustion of our native supply, so that the next generation must become dependent upon foreign support unless the evil process is arrested. The active encouragement of forest culture is probably a matter best accomplished by State action. State officials appointed to give their immediate personal care to the matter, and laws imposing a tax upon wild lands, from which land with good growing timber should be free, are expedients for State action which naturally occur to the mind. But at least we may demand of the national Government that it shall not offer a premium for forest destruction.

MARK TWAIN'S VISIT TO CANADA.

According to a despatch from Ottawa, published on Thursday, there has been some "fearful blundering" over the interpretation of the Canadian copyright law within the past few weeks, and no one has blundered more than Mark Twain, who made a trip there in search of a copyright for a new book which he is bringing out. As a humorist Mark Twain must enjoy the account given of his attempts to get protection for his property, though as a literary man he may wish that the law of the subject was in a condition which would make the security greater and the fun less uproarious. He had, it seems, in the first instance, obtained an English copyright, which only requires first publication in England, and this copyright might naturally be supposed to extend to all the British possessions. Such, however, is by no means the case, for though by the laws of Canada the book cannot be reprinted in the Dominion, foreign reprints of it may be imported into Canada on payment of a royalty or duty. To protect his property against this a Canadian copyright is necessary, but a Canadian copyright cannot be obtained unless the author is domiciled in Canada.

Now, the meaning of domicile, though the word is of Latin origin, is extremely simple. It means living in a place; and we all know that Mark Twain does not live in Canada. But, to alter slightly the sentiment once expressed by an eminent judge, if a man may ever be pardoned for quibbling about anything, he may be for quibbling to save his property. The proprietor of a copyright is so surrounded with enemies eager to waylay him and rob him that he may fairly resort to any shift that the most ingenious technicality can devise. So Mark Twain appears to have thought, for on discovering that it was necessary for him to have a Canadian domicile to get a Canadian copyright, he immediately stated that he had what he called an "elective domicile" in Canada. The only kind of elective domicile which is known in this country is the domicile which voters sometimes suddenly choose immediately before election for the purpose of casting their ballots, with the full intention of returning to what the lawyers call their domicile of origin as soon as they have cast them. But in Canada there is said to be a funny kind of domicile, unknown to our law, consisting of "an address or place where it has been agreed that delivery will be accepted." The Department of Agriculture, however, which for some reason best known to the Canadian Government has charge of matters connected with literary property, decided that Mark Twain's elective domicile was all moonshine, and that if he wished to get a Canadian copyright he must actually live in Canada. Few authors wish to do this, and so we presume Mark Twain has come home a sadder and wiser man.

He has the satisfaction of knowing, that if he has not succeeded in the object of his trip, he has at least brought to the attention of the world a new and amusing feature of the copyright problem. Canada is a country which, as regards copyright, is a good deal in the position occupied by the United States fifty years ago—that is, it produces few authors but a good many publishers. What these publishers want is protection, not for authors, but for themselves; and, according to the despatch already quoted, the Canadian Publishers' Association "is now moving in the direction of petitioning the Imperial Government for absolute power for the Dominion Parliament over copyright laws." The British Government has given Mr. West power as Commissioner to negotiate with our Government at Washington as to the proposed international treaty, and he has been instructed also to confer with the Canadian Government, and obtain such assistance as will ensure the protection of the "interests of Canada" in the event of an international copyright treaty being arranged between Great Britain and the United States. The "interests of Canada" mean the interests of the Canadian publishers; and it is highly important, whatever view we may take of their interests, that, in the consideration of the proposed copyright treaty, the relation of Canada to the contracting parties should be taken into the account. We have stated what is generally understood to be the law as it now exists; but the extent of the authority of the Dominion over copyright has never been fully determined by the English courts, and the recent adventures of Mark Twain, who of course acted under legal

advice, show that, between the three sets of laws now in existence, it is very difficult to know what the position of any copyright is. A treaty between England and the United States which left the status of copyright in Canada undetermined might lead to complications of a serious character.

NEW YEAR'S DAY.

THE decline in the observance of New Year's Day by "Society" in New York has at length reached a point at which its traditional customs may be said to have no longer any obligatory force. Although there is, probably, just as great a number of people who receive calls, and of other people who make them, as ever, both making and receiving have, in the world which is supposed to enact, amend, and repeal social laws, become as entirely optional as on any other day in the year. There is no more exultation over a long New Year's list of callers; there is no more remorse in the breast of the unfortunate wretch who has not called at all. This change was, of course, in the first instance due, as so many great social changes are, to feminine influence. Social laws are generally under feminine protection; men who undertake to originate reforms do so at their peril. The custom of New Year's calls once part of the social order, nothing could relieve men from the duty of calling it imposed upon them, except some action on the part of women to indicate that they intended to give up receiving. Accordingly the first step was taken when it was suddenly discovered to be "good form" to leave the city altogether for the day, and hang out a basket for cards as a sort of symbol of the hospitable intentions which absence alone prevented from having free play. The popularization of the card-basket, however, as might have been seen from the first, had a deterrent effect upon callers, who perceived at once that there was a wide difference between going to see people who stayed at home for the express purpose of receiving you, and leaving a card upon people who go out of town for the almost avowed purpose of avoiding you. In the same way, the failure to find in the card-basket a number of cards at all corresponding to the old list of "callers" led to a perception of the fact, on the part of the receiving sex, that even that relic of the custom might be abandoned without any loss to pride, and so, at first by degrees, but finally with great suddenness, New Year's calls have, as we say, ceased to be a matter of binding obligation at all.

The explanation of the disappearance of this social incubus—for such it had got, for Society, to be—that at once suggests itself to every observer of the changes which have taken place in New York in the last twenty-five years, is the great size of the city. The number of every one's acquaintances is so great, and the distances to be traversed are so serious, that it had become nearly a physical impossibility to make the rounds at all. The only way in which it could be done was to begin at an hour of the morning when the receiving sex could on no theory be supposed to wish to see anybody, and to keep it up, by rapid driving, and restricting the period of each visit to a moment of time, sufficient only to establish the caller's identity, till a late hour of the evening. The idea on which the old New York New Year's Day was based was that of sociability, but the new system of instantaneous visits was really a burlesque on sociability, and in fact had grown to be a huge social sham. The only excuse for social shams, as all moralists know, is their convenience and utility, and when a custom has developed not only into a sham, but into a terribly onerous, inconvenient, and wearisome sham, it is surely doomed.

There are one or two influences besides this, however, which have had an important effect in determining the fate of New Year's Day. It is essential to the long-continued success of any social observance that it shall be restricted to "Society," and shall not be vulgarized by too great an extension and mimicry among those whom Society does not recognize as belonging to its own world. But New Year's calls have been, as any one can see from the newspapers, greatly vulgarized within the past generation. As the custom began to assume proportions in Society itself which threatened its ultimate extinction, a sort of passion for its observance seemed to spring up in the population of the city at large, which knows little of Society except by hearsay, or the accounts given of its doings in the press, or what can be seen of it in the streets. As a general rule, any very extensive imitation of the corporate proceedings of Society is forbidden by the amount of time and money required. Those who can afford time and money find it a much better plan to obtain admission to it than to imitate it. But here was something which required only one day in the year, and that a holiday, and a comparatively trifling outlay. To stay at home and "receive," requires nothing but that the receiver shall be a woman; to call, nothing but that the caller shall be a man. New Year's calls, therefore, could be placed on broad human grounds. They were open to all ranks, classes, and conditions, not only to the reserved and haughty millionaire and his wife and daughters, but to the genial and expansive "curb-stone" broker and his; to the socially irresponsible "worker" who fixes the results of elections, as well as to the thoughtful and distant statesman who profits by them; to the tailor as to the swell made up by the tailor; to the milliner no less than the employer of the milliner. The head-waiter, the driver of the "bob-tailed" horse-car, the boot-black, the lightning-rod man, the book peddler, and the "drummer"—all these and their wives and families saw in New Year's Day an opportunity for them to play, or seem to play, a part in the doings of Society. Now whatever else may be said of our best society, all observers are agreed that it is very undemocratic; and this spread of New Year's calls, far from pleasing it, as in accordance with the theory of our institutions it of course ought to have done, shocked its sensibilities. In Society, as in France, ridicule kills, and it does make the custom ridiculous to have the streets filled with "callers" who imagine that the proper dress to assume is a swallow-tailed coat and white kid gloves, and to have the columns of the papers filled with inquiries as to whether when four men hire a barouche for the purposes of the day they ought to send in their names on a joint card, or whether it is necessary for them to drink whatever is offered them in every house they go to.

Another perhaps more remote but probably powerful influence in producing the altered feeling of Society with regard to New Year's Day is that *anglomania* which, since the war, has done so much to change the social tone of New York. Society here has always been more or less imitative, and whereas down to about the time of the war it imitated Paris, it now imitates London. Like all other forms of mania, *anglomania* is irrational, but for that very reason all the more powerful. It does not lead to the importation or adaptation of English fashions and customs because they are good in themselves, or suited to the country, but simply because they are "English," and to be "English" is to-day to be in "good form." Now the old New Year's Day was not, perhaps, exactly French, but it was much more nearly French than it was English. It was sociable, it was democratic, and something or other remotely resembling it prevailed in Paris.

In those now so distant days when there was in the United States no coaching and no anise-seed bag hunts, no five o'clock teas, and no anxious inquiries as to the proper pronunciation of the *a* in such difficult combinations as "glass" or "pass," but when the New York swell had a French tailor, a French bootmaker, and cultivated French manners, New Year's Day seemed a part of his "not too French" Frenchiness. But the custom was obviously one which any one who wished to be regarded as "English" must look upon with suspicion and dislike. The mere idea of being on a given day bound to receive any one who considers himself an acquaintance—for that is what it came to—would necessarily be repulsive to an English lady, brought up to discriminate with sharp precision between those whom the receiver visits, bows to, shakes hands with, or cuts. The idea that it might be left to men to determine upon whom they might call would be shocking to every feeling that permeates English Society. Any attempt to introduce such a custom in London would produce a social pandemonium. Of course it is impossible now to discover who first struck a deliberate blow at New Year's, but we fancy, if the matter could be probed to its depths, it would be found that the revolution was set on foot by reformers who, after due reflection, had come to the conclusion that for Americans who desired before all things to be really and truly English, a custom so obviously unsuited to London must be given up in New York.

Correspondence.

REASONABLE DOUBT AS TO INSANITY.

TO THE EDITOR OF THE NATION:

SIR: In your comments on the article of a correspondent published under the above heading in the last number (860) of the *Nation*, you omit to cite Mississippi as one of the States holding that the burden of proof, when the question of sanity is in issue in criminal trials. is on the State.

In the case of Cunningham *vs.* The State, 56 Miss., 276, Mr. Justice Chalmers, delivering the opinion of the court, says:

"We think the true rule is this: Every man is presumed to be sane, and in the absence of testimony engendering a reasonable doubt of sanity no evidence on the subject need be offered; but whenever the question of sanity is raised and put in issue by such facts, proven on either side, as engender such doubt, it devolves upon the State to remove it, and to establish the sanity of the prisoner to the satisfaction of the jury beyond all reasonable doubt arising out of all the evidence in the case."

The reasoning of the court on which the conclusion given is based seems to be unanswerable. The argument is thus stated by Judge Chalmers:

"Because he is a human being the accused is presumed to be sane. He must be sane in order to be guilty. The trial commences with the presumption that he is so. If nothing in the testimony suggests otherwise, there is no obligation to establish sanity; but the moment the proof warrants a reasonable doubt of it, no matter from which side it comes, that doubt must be removed. Which side must remove it? Manifestly that side which set out to show guilt, because there can be no guilt without sanity. The condition of sanity, which is ordinarily the attribute of all men, has been rendered doubtful as to the particular man, and, as his guilt depends upon his sanity, its existence must be shown in the same manner and to the same ex-

tent as any of the other elements which go to make up the crime. What logic or consistency can there be in saying that all the other elements [of crime] must be established beyond a reasonable doubt, but that this one—certainly as essential as any other—may be assumed on less satisfactory proof? True, the case started with the theory that it existed; but can this in any wise affect the condition in which it must be left at the close, if it has, during the progress of the trial, been rendered doubtful? How can a jury say, We have no doubt of the guilt of the prisoner, but we doubt whether he was sane? If a jury in a capital case should bring in such a verdict, would it not be judicial murder to inflict a sentence of death? And yet many such verdicts are practically inevitable under a theory of the law which holds that the burden of proving insanity rests upon the accused, and that he must be convicted unless he has clearly proved it beyond all reasonable doubt."

Yours respectfully, S. J.

JACKSON, MISS., Dec. 26, 1881.

[The only reply, it seems to us, that can be successfully made to this reasoning is, that it involves a confusion between the law relating to the burden of proof and the technical doctrine of "reasonable doubt." The burden of proof, which merely means in ordinary language that the plaintiff must make out his case, is the same in criminal trials as in civil causes. But in the former the state is required in England and America to go a little beyond this, and make out its case "beyond a reasonable doubt." Precisely what this means no judge has ever been able to explain to any jury; and the rule itself is capable of two widely different interpretations. It may mean either that the prisoner is entitled to have the judge tell the jury that to convict they must be satisfied of his *guilt* beyond a reasonable doubt, or that they must be satisfied beyond a reasonable doubt as to every particular fact which goes to make up the guilt—*e.g.*, sanity, identity, presence at the time of the commission of the crime. Some courts have taken the latter view, but we do not know that the reasons *pro* and *con* have ever been fully gone into by any court of high standing, with a full sense of the importance of the point involved. If "reasonable doubt" applies to every particular fact in the case, this condition of the law would sometimes lead to singular results. For instance, in the Costley case in Massachusetts there was a "reasonable doubt" as to which of three counties the murder had been committed in, owing to an uncertainty as to the county line, so that if the jury had given the prisoner the benefit of the doubt as to this fact, he could not have been convicted in any one of them. On the other hand, if a judge tells the jury merely that all reasonable doubts as to guilt must be removed, the effect of this must be merely to carry out what was undoubtedly the original intention of the rule—that the jury should be more cautious in criminal than in civil trials. The tendency of recent decisions, however, seems in the direction of applying the rule of reasonable doubt to every fact in the case. The matter may become one of serious importance in Guiteau's case on appeal.—ED. NATION.]

THE EXCAVATIONS AT ASSOS.

TO THE EDITOR OF THE NATION:

SIR: I hear with almost consternation that the excavations of the American Institute of Archæology at Assos, Asia Minor, are not assured of their continuance and may even be suspended or abandoned this winter. In any other civilized country the Government would have come in aid at once of such an undertaking, especially when its results have already given earnest of so much importance and so much has been done by private means. It is quite within the bounds of probability that these excavations, dealing as they do with the entire range of classical time, and even prehistoric matter, may, if conducted seriously, as begun, and persistently, as they merit, be the most important contributions to archæology of the century, certainly far more important than those of Schliemann either at Hissarlik or Mycenæ. Every American who has the slightest interest in classic archæology, or pride in his country's reputation for liberal education, owes it to himself to contribute his mite; and some of those who spend so profusely for public purposes which the whole public can appreciate, would do well to water this enterprise with a little of their bounty. There is no undertaking now on foot under American direction, to my knowledge, half so likely to render honor to the country as this work of the Institute of Archæology, and it will be a disgrace to the nation if the pittance demanded for the continuance of the work is not at once given and even trebled. Either the French, German, or English Government under the same circumstances would have given pounds sterling where the Institute asks for dollars. The work should not be stopped for a day. The winter season is always the most fruitful in discoveries, and especially in the finding of small objects of value, as the rains wash them free from the soil; and to abandon the ground for a month is to leave it open to clandestine search by the experienced native excavators, who will profit by the work done, and may carry away objects of inestimable value, as everything from Assos is valuable, but especially so when exactly located.

The public spirit of the United States should put $50,000 at once into the treasury of the Institute to drive this work through with a despatch and thoroughness which would do credit to the nation. W. J. STILLMAN.

P. S.—I am a poor man, but I send Professor Norton for the excavations at Assos $25.

ATHENS, Greece, December 9, 1881.

THE TRUE MONROE DOCTRINE.

TO THE EDITOR OF THE NATION:

SIR: The Hon. John A. Kasson has devoted an article, in the September number of the *North American Review*, to what he calls the "Monroe Declaration." He gives us the genesis of what is more usually called the "Monroe Doctrine," and, as far as he goes, with that correctness which might have been expected from a gentleman as intelligent and well informed as Mr. Kasson is known to be. But to a proper understanding of what was meant by President Monroe in his celebrated message of December, 1823, we have to take the strictly American view of the political condition of Europe at the time in question. In the "Holy Alliance" (which, by the way, had no practical importance, and was the offspring of a mystical whim of the Czar Alexander I.) our American statesmen could take only an academic interest. The allied powers spoken of by Mr. Monroe in his message—not the shadowy Holy Alliance—were Russia, Prussia, Austria, and France, who at their conference at Carlsbad and their congresses at Troppau, Laibach, and Verona, had, upon the urgent insistance of Prince Metternich, raised the legitimacy of hereditary monarchy to a fundamental principle of universal application, and had pledged themselves to support it by actual intervention in favor of every reigning dynasty of Europe. In consequence of their agreement, publicly proclaimed to the world, the popular risings in Piedmont and in Naples were suppressed by armed force, Austria acting as executioner; and so was the revolution in Spain against Ferdinand VII., France by her army performing the office of peacemaker.

The Spanish Colonies on this continent had been in open revolt against the mother country ever since 1812, and Spain seemed to be wholly unable to reconquer them. The United States had recognized their independence, and valuable commercial interests had sprung up between us and the Spanish American States, who had freed themselves from the colonial bondage which fettered their trade with the outside world. Besides these important material interests, it was but natural that the people of the United States should cordially sympathize with their American neighbors, and should ardently desire the republican system to be extended on this continent. The latter consideration had of course no weight with England, even while Mr. Canning was Secretary of the Foreign Office. Commercial interests, however, made England as keen in maintaining the republics of Mexico and of Central and South America as these interests did the United States. England's policy in that respect has never changed. When Mr. August Belmont, in July, 1861, in an interview with Lord Palmerston, who had the reputation of always taking the liberal side in any revolutionary movement outside of England, expressed himself somewhat astonished that England, which had so long combated slavery and had supported the anti-slavery party in the United States, should now rather incline to favor the slaveholders, he was answered by the noble lord: "We don't like slavery, but we want cotton, and don't like your Morrill tariff." It had become known to Canning that, after the Liberals in Spain had been subdued, the King's Government had made an attempt to obtain the help of the allied powers for the purpose of reconquering the Spanish colonies in America. He was afraid that France and Russia would enter into the scheme, and, if successful, would gain important advantages in commercial favors, perhaps even in territorial cessions. Hence his anxiety to enlist the United States in a protest against such intervention on the part of the allied powers. The fears of Canning, and also of our own statesmen, turned out afterward to have been unfounded. France particularly disavowed any intention to interfere. This disavowal, however, may have been caused, in part at least, by the stand which Mr. Monroe had taken, and which was known in diplomatic circles a considerable time before his declaration was made public.

Now, then, against what points was the Monroe Doctrine directed? Let it speak for itself:

"We owe it to candor, and to the amicable relations existing between the United States and the allied powers to declare, that we should consider any attempt on their part to extend *their system* to any portion of this hemisphere as dangerous to our peace and safety. *With the existing colonies or dependencies of any European power* we have not interfered, and shall not interfere; but with the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and just principles, acknowledged, we could not view an interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as a manifestation of an unfriendly disposition toward the United States."

In another part of the same message, and with reference to a very different subject, the message declared that "the American continents should no longer be subjects for any new European colonial settlements." As to this, it is not necessary to say more than that it had special reference to our northwestern country on the Pacific Coast, which we claimed under the treaty with Spain of 1819, and part of which was claimed

by Russia. It was a bare claim by Russia, no colony having been established nor any sort of occupation taken by that power. This conflict was then pending, and ended in a settlement, as did also the later controversy with Great Britain on the same coast, by the Treaty of Washington, concluded in 1846. As the whole American continent and islands contiguous to it are now occupied either by independent states or by European powers, that part of the message has become obsolete and may be dismissed from consideration.

What, then, did the first branch mean, when it was promulgated, considered in the light of the surrounding circumstances? It meant this: Some of the governments on this continent have declared themselves independent, and successfully thus far sustained their independence. We have recognized their independence. We have reason to believe that the allied powers (Russia, Prussia, Austria, and France) contemplate an interference between Spain and those governments, according to the system of intervention which they have proclaimed in Europe, and just successfully carried out. Against this intervention we may feel bound to intervene, and we give you fair warning thereof. Nothing was said about the United States abandoning the neutrality which they had heretofore observed between Spain and her resisting colonies. If Spain would reconquer them, she might try; but the United States would not permit this to be done with the assistance of the allied powers who were bent on propagating absolute monarchical government over the whole world, and introducing their system of intervention into the New World.

As stated by Mr. Kasson, the draft of that passage of President Monroe's message was submitted to Thomas Jefferson, surely one of our most distinguished statesmen, particularly in foreign affairs. In his reply to Mr. Monroe, he expressed himself as follows:

"I could honestly, therefore, join in the declaration proposed, that we aim not at the acquisition of any of those Spanish-American possessions, that we will not stand in the way of any amicable arrangement between them and the mother country, that we will oppose, with all our means, *the forcible interposition of any other power* as auxiliary, stipendiary, or under any form or pretext, and most especially their transfer to any power by conquest, cession, or acquisition in any other way."

This is Mr. Jefferson's interpretation, and undoubtedly the only correct one, of the Monroe Doctrine. The latter part of his remarks has reference to the fear entertained that Spain, in order to reconquer her vast domains, might cede part of it, as a consideration for assistance, to France or Russia—powers which of course would have been far more formidable to us than declining Spain. This, also, was Mr. Canning's great fear, for one of the points which he was very anxious we should join England in publicly declaring, was, "That we could not see any portion of them [the Spanish-American colonies] transferred to any other power with indifference" (August 20, 1823). To leave no doubt upon the true construction of the Monroe Declaration, and to do away with all false impressions and erroneous inferences which had even then been drawn by some, the House of Representatives in 1825 passed the following resolutions:

"That the United States ought not to become parties with the Spanish-American republics, or either of them, to any joint declaration for the purpose of preventing the interference of any of the European powers with their independence or form of government, or to any compact for the purpose of preventing colonization upon the continents of America; *but that the people of the United States should be left free to act in any crisis in such a manner as their feelings of friendship toward these republics, and as their own honor and policy, may at the time dictate.*"

As late as 1848, in a debate about the acquisition of Yucatan, Mr. Calhoun, who had been in Mr. Monroe's Cabinet, and was one of the advisers of the Monroe Declaration, emphatically asserted in the Senate that "the United States was under no pledge to intervene against intervention, but was to act in each case as policy and justice required." (See note 36, p. 97, 'Wheaton's International Law,' Dana.) As before stated, the principle of intervention was never carried out, if ever entertained, by the allied powers, as regards Spain and its revolted colonies. Spain struggled along in a hopeless contest, recognizing the independence of those states gradually, and it was not until some time in 1870, I believe, after a last faint assertion of sovereignty in 1864 over Peru and Chili, that their independence was finally acknowledged by Spain.

The occasion for such a declaration as that contained in the message of President Monroe in 1823 will in all probabilty never arise again. The Monroe Doctrine, as understood by its authors and the statesmen of that time, has passed into the domain of history, furnishing one of its brightest pages for our people, and reflecting the highest credit on President Monroe, his Cabinet, and his advisers, who defied the greatest powers of Europe when supposed to be desirous to extend their system (of intervention for the suppression of liberty) to the American continents. It is obvious that in its true sense that part of the Monroe Declaration which refers to a combined intervention of European governments with American states is just as dead as the other branch of it in regard to colonization. And yet with all this easily accessible documentary evidence before our eyes, coupled with the fact that our Government as such, in its relation with foreign powers, has never since insisted on this doctrine, there having been no occasion for it, there is no subject more misunderstood than this very Monroe Declaration. Even Mr. Kasson, just returned from his mission to Austria, and having made a particular study of the subject—to judge from the opening remarks of his article—seems to share the same loose, vague, and ever-changing ideas in regard to it with the great majority of the American people.

"The Monroe Doctrine," he says, "is quoted as the supreme, indisputable, and irreversible judgment of our National Union. Among the very few maxims which serve to guide public opinion in our country this ranks as the chief. It has also taken fast hold on the popular mind. A President of the United States, justly appealing to it in an emergency, could not fail of the unanimous following of patriotic citizens, even in presence of a consequently impending war. It touches the instincts of national safety and of pride in our national instituti ons."

The Monroe Doctrine proper, however, as understood at the time it was made, and with its limitations as applicable to a particular crisis, could have no such stirring effects as Mr. Kasson ascribes to it. But what has been from time to time substituted for it, its misunderstood meaning, may often have excited the American people. Some have taken it to mean that America belongs to the Americans (whatever that may signify); others, that we have a right to extinguish all monarchical governments still found on this continent; others, that we have a right to annex all territories on the continent, republican or otherwise, that we have a mind to. It was invoked in 1836, when the French part of Canada had risen against the English Government; it was invoked to further the annexation of Texas; it was appealed to whenever a filibustering expedition started for Cuba. When France in 1838 made war on Mexico and attempted to besiege Vera Cruz, it lay at the bottom of the Ostend Manifesto. It was loudly called into requisition when France imported Maximilian and his ephemeral empire into Mexico; and, lastly, now, when a private company, under the auspices of M. Lesseps, has undertaken to dig a canal through the Isthmus of Panama—a corporation, by the way, which offered its stock to any American citizen who had a surplus to invest in a hazardous undertaking.

These appeals, however, were made by the press, by orators in and out of Congress, but never by any act of Congress or by our Government as such. True statesmen do not rule by doctrines, programmes, or platforms. With them the welfare of the people is the supreme law. They do not commit themselves by generalities. Every conflict that arises is judged by them according to the circumstances of the times. If our interests or our honor be threatened in the particular instance, then they protest, then they arm, then they go to war, independent of sentiments, of traditions, of programmes, of doctrines. The highest commercial interests, the permanency of our republican institutions, would have been seriously threatened had Spain, by the help of the allied powers, reduced her revolted provinces to subjection, or ceded them in part to other far more powerful nations. Here was an emergency, and Mr. Monroe met it manfully, but not on philosophical, abstract principles. If allied or single European powers should at this day try to conquer some of our sister republics, and plant monarchical institutions on American soil, so as to endanger our own safety, the American people would calmly weigh the matter, and, without any reference to former action, decide the case for itself, and no President would fail to carry out this decision. It would go to war just as if the Monroe Declaration had never been made.

The invasion of Mexico by the French in 1862, under pretence of enforcing a settlement of claims (most of which were fraudulent and held by the Emperor's intimate associates in crime), but in truth to subvert the Republican Government and to assist the Clerical-Conservative party in Mexico to establish a monarchy, furnished, perhaps, the most plausible reason for an application of the Monroe Doctrine. There was this difference, however, in the case: at the time of the Monroe message Spain was to be assisted in her conquest by the great powers of Europe, and the principle of intervention was to be applied to America, as was feared. In 1862 there was a powerful clerical and monarchical party in Mexico itself, not strong in number, but in wealth, rank, and intelligence. They acted, at least apparently, as the home Government, called a Congress of "Notables" together, proclaimed a monarchy, and called (1864) the Archduke Maximilian to the throne.

Mr. Seward recognized this distinction. Early in February, 1863, a letter of Louis Napoleon's, written in 1862 to General Forey, who, after the French had been at first repulsed from Puebla, had been appointed commander-in-chief of the French army, very unaccountably found its way into the French papers. In an interview which the American Minister in Spain had with Marshal Serrano, Minister of Foreign Affairs, after official business had been disposed of, an unofficial conversation took place, in which the latter expressed his very great surprise at the letter in which Louis Napoleon had foreshadowed his intention to establish a Government in Mexico, and would hereafter protect the Latin races on the American Continent from the dictation and encroachments of the Anglo-Saxons in the North. The American Minister shared this surprise, not so much at the contents of the letter itself, but that it ever should have been made public, and took occasion to say that his Government would not look upon this plan with indifference, but would consider it as highly danger-

ous to its interests, and would take proper action to prevent it. The American Minister, in his next despatch, called the attention of Mr. Seward to this remarkable letter, and reported also the conversation with General Serrano in regard to it. Mr. Seward, however, in his reply (February 28,1863) to this despatch, expressed his regret that the Minister should have used this language, remarking that the United States were strictly neutral in this affair, and he desired him to explain to General Serrano that what the Minister had said to him was only his private opinion, and not that of the Government he represented. As the Minister at once perceived that this despatch was intended for Paris and not for Madrid, he made no such explanation or apology, and Mr. Seward afterward approved of this omission. Sure enough, on the 29th of May, 1863, Mr. Dayton informed Mr. Seward that he had read to Mr. Drouyn de Lhuys a copy of the despatch of February 28 to our Minister at Madrid, and that Mr. Drouyn de Lhuys expressed himself very kindly, saying that he was much gratified by the contents (Message and Documents Department of State, 1863–1864, part ii., p. 741). Later on, when it was well understood that, after the French had taken possession of the City of Mexico and started a provisional government, negotiations had been set on foot to make Mexico a monarchy, and to call Maximilian to the throne, Mr. Motley, our Minister at Vienna, became very much alarmed, considered this conquest of the capital as "fraught with piteous woe to our country" (August 17, 1863), reminded Mr. Seward of the Monroe Doctrine, and asked the Austrian Minister of Foreign Affairs for explanations; but Mr. Seward most emphatically instructed him to make no representations to the Emperor of Austria, as chief of the House of Austria, regarding Maximilian's acceptance of the crown. To serve, as it were, as a guide for our other ministers, Mr. Seward sent a copy of this despatch to all our chief ministers in Europe. In his despatch (October 9, 1863) to Mr. Motley, Mr. Seward very elaborately repeated those instructions. It contains this remarkable passage:

"France has invaded Mexico, and war exists between the two countries. The United States hold, in regard to these two states and their conflict, the same principle that they hold in relation to all other nations and their mutual wars. *They have neither a right nor any disposition to intervene by force in the internal affairs of Mexico, whether to establish or maintain a republican or even a domestic government there, or to overthrow an imperial or a foreign one if Mexico shall choose to establish or accept it.*" (Despatch to Mr. Motley, Oct. 9, 1863.)

Mr. Seward distinctly denied even here the application of the Monroe Doctrine. It would be a very great mistake, however, to infer from this course of Mr. Seward that he for one moment forgot the true interests of our country. We were still in the midst of our troubles, and so he bided his time. His policy was that of opportunity, which, in fact, is the only true one for a statesman. He was determined from the start, if we could, to drive out the French, and to make an end to the empire of Maximilian. In spite of the urgency of the French Government, he declined, in the politest manner, to recognize the new Latin empire. But as soon as he ascertained that the Mexican expedition had become extremely odious in France itself, and we had triumphed over the rebellion, and hundreds of thousands of veterans of the victorious and vanquished armies were ready and anxious at once to spring to arms to restore a republican government in Mexico, he began reminding Louis Napoleon of his promises that the French should evacuate the country after the government of Maximilian was once established, not only once but again, and again, and so pressingly and persuasively invited the French to step out, using always the most courteous language, that France could no longer resist his friendly admonition, and took her leave, being handsomely complimented by Mr. Seward for so doing. The withdrawal of the French army was the end of the unfortunate Mexican empire.

The true Monroe Doctrine is the interest of our country; and what that interest is, and how it is to be protected, and whether it is to be asserted or not, is to be judged by the circumstances existing at the time such judgment is to be exercised, unfettered by any traditions, or programmes, or doctrines, or precedents. Practically, we have always so acted, and as long as we have statesmen at the helm of state, and not mere "doctrinaires" or political "aspirants," we shall continue so to act, whether our action squares with the Monroe or any other doctrine or not. No doctrine will excuse us when we act unjustly, and none will prevent us from asserting our rights, at any cost, when our interest or our honor is involved. GUSTAVE KOERNER.

BELLEVILLE, Ill., Dec. 20, 1881.

Notes.

MACMILLAN & Co. are about to publish a new translation of Herman Grimm's Tales, with illustrations by Walter Crane. They will directly bring out Nordenskiöld's 'Voyage of the *Vega*.'——Canon Luckock's 'Studies in the History of the Prayer-Book,' and the Rev. Andrew Jukes's 'The New Man and Life Eternal,' are announced by T. Whittaker.——Fords, Howard & Hulbert have in press for Sunday-school use a "comparative edition" of the old and new versions of the Gospel of Mark, edited by Dr. Roswell D. Hitchcock.——The first number of the fourth volume of the *American Journal of Mathematics* (for March, 1881) was issued just before the close of the year. The management of the *Journal* has taken its printing back to Baltimore again, the press of Isaac Friedenwald printing this number. The typography, if in any respect different from the Cambridge print, is improved by the change. It should not escape remembrance, however, that merely to print such mathematical papers as appear in the *Journal* is no easy matter, to say nothing of typographical elegance; and in this regard the *American Journal* seems to have been more fortunate than a number of its foreign contemporaries. We note the absence of the names of the former associate editors, as also that of the late managing editor, Dr. Story. ——Engravings of some of the bas-reliefs from the temple of Assos accompany a brief report on the result of the excavations, by the director, Mr. Joseph Thacher Clarke, in the *American Architect* for December 10.——We have been favored by Prof. Henry W. Haynes, of Boston, with a copy of his 'Discovery of Palæolithic Implements in Upper Egypt,' a paper extracted from the 'Memoirs' of the American Academy of Arts and Sciences, and containing four pages of text and seven beautiful plates in the Albert-type method, illustrative of some of the more "select" finds made by the author in the valley of the Nile during the winter of 1877-8. Prof. Haynes asks whether the discovery of his "large quantity of flint inplements" may not be "fairly claimed to have settled the vexed question of the existence of the 'stone age' in Egypt." Reasons for thinking the question to have been previously settled were given in a controversy in Nos. 811, 813 of the *Nation*.——The Census Office has begun to issue Forestry Bulletins, of which the first instalment shows in beautifully colored maps the pine supply (chiefly) of Florida, Alabama, Mississippi, Texas, and Minnesota. Tables of estimates, in feet of board measure, of the standing wood are supplied by Prof. C. S. Sargent. ——The proceedings of the American Association for the Advancement of Science, at the Boston meeting in August, 1880, have been published in two parts, numbering together nearly 800 pages. First on the list of the "Communications" is that remarkable, perhaps epoch-making, paper by Professor Graham Bell, "On the Production and Reproduction of Sound by Light." A single contribution by a woman, "Field-work for Amateurs," by Ellen Hardin Walworth, occurs in the Natural History section.——The American Oriental Society have published their Proceedings at New Haven in October, 1881. Professor C. H. Toy's comments on F. Delitzsch's discussion of the site of Eden are the most interesting for laymen. Two-thirds of the pamphlet is taken up with additions to the library from July, 1878, to date, of which the collection by the late Dr. Joseph P. Thompson constitutes by far the larger portion.——From the Long Island Historical Society we have a list of recent additions to its library, including the newly completed sets of the Calendars of English State Papers, and the Chronicles and Memorials of Great Britain and Ireland during the Middle Ages. Here, too, are the 125 volumes of the Camden Society's publications. The librarian, Mr. Hannah, gives hopes of an early beginning of a catalogue of the Society's 35,000 volumes.——Bound volumes of *Lippincott's Magazine* (xxviii.) and the *North American Review* (cxxxiii.) are on our table, both noticeable, aside from their intrinsic merit, for the indifference displayed in the tables of contents. —— J. W. Bouton sends the first number of the *Bibliographer*, published by Elliot Stock, London, in a form exactly corresponding to the *Antiquary*, but with a somewhat more attractive typography. The editor is Mr. Henry B. Wheatley, and Messrs. J. O. Halliwell-Phillips and William Blades are among the contributors at the start. This periodical would but half fulfil expectations if it did not attempt occasional illustrations, and these are promised, such as "fac-simile titles of rare books" (recalling Mr. Stevens's plan of cataloguing).——The most artistic likeness of the late President Garfield that we have seen is the artotype vignette mounted on a buff card, and published by Mr. John Snare, 701 Broadway.——The announcement is made that Friedrich von Hellwald ceases to be the editor of *Das Ausland* with the present year, and that he will be succeeded by Professor Ratzel, who proposes to restrict that periodical exclusively to the science of geography. Other news of importance is that the Augsburg *Allegemeine Zeitung* is to be published from the beginning of the present year in Munich.

— B. Westermann & Co. send us the *Almanach de Gotha* for 1882, which, but for its prevailing color, might be called a red-letter volume; for an unprecedented number of censuses have become available since its last issue, and will be found compactly bestowed under their respective headings. The change of rulers in Russia has led both to a considerable "rotation" in office and to some reforms, and has therefore compelled an entire overhauling of the article on that country. The *Almanach's* year closed just on the eve of Guiteau's fatal shot, and the following significant entry ends the *chronique* for this country: "May 16. On account of the President's adhering to Robertson's nomination for the New York collectorship, Senators Conkling and Pratt resign their seats." A very fair likeness of President Garfield is one of the *Almanach's* regular quartet, another being Alexander III.'s. The *Almanach* claps Tunis under France, in spite of administrative

protestations, and the Transvaal under Great Britain, in both cases accepting the logic of events, and welcomes Rumania for the first time as a full-blown kingdom. The editors will, during the present year and hereafter, issue a supplement containing a full list, even to the vice-consuls, of diplomatic and consular agents. ——The same firm sends us two new Tauchnitz volumes (8vo) edited by Dr. Oscar von Gebhardt, first custodian of the University Library at Halle, containing respectively the New Testament according to Tischendorf's latest revision—the eighth—compared with the text of Tregelles, and that of Westcott-Hort; and the Tischendorfian Greek side by side with Canstein's century-old revision of Luther's translation, the variants in both languages being noted. Of course, one who compares these with the text of the English Revised Version will find all the discarded texts retained, and some, but not all, of the old errors of the King James Version. In other words, the editing, which seems faultless in its own sphere, is historical and not critical.——From Dietrich Reimer, Berlin, we have a political map of France, in a new school series for the wall, edited by Richard Kiepert. It is issued in four sheets, and when mounted will measure about five feet by four. The physical features are not neglected, though their scientific expression in levels, etc., is reserved for a companion physical map of the same country. The lettering on the map before us for the smaller divisions and for places would be hardly legible at any great distance from a class. Otherwise the map is as pleasant to the eye as it is trustworthy. The series will embrace the whole of Europe, and on a uniform scale, except in the case of Russia and Scandinavia, of which the scale will be but one-third and two-thirds as large. The price in marks is, for the four-plate maps, about $1 25, and for the six-plate, about $1 90.

—We are glad to announce that the 'History of Greek Philosophy,' by Prof. H. Schwegler, for some time in process of translation, will probably appear early in the present year. Schwegler's 'General History of Philosophy,' in its two translations, has long been favorably known to English scholars as the most successful attempt yet made to condense into 200 octavo pages the entire current of human thought. Accurate as it is, however, it is as little readable as Freeman's 'Outlines of History,' and is of principal use to those already acquainted with its material. Schwegler's 'History of Greek Philosophy,' on the contrary, is the best book on the subject, even in Germany, to which a young student can be sent who wishes precision, moderate fulness, and the allurement of an agreeable style. It is not an outline like Mayor's, nor a brilliant series of sketches like Ferrier's, nor a course of sermons on philosophic themes like Archer Butler's, nor a repository of all learning like Zeller's. It is moderate in compass, sober, learned, engaging, a book to supply a need especially in college instruction. The translator is Mr. Henry Norman.

—Mr. Norman, who acted the part of *Creon* in the memorable performance of the "Œdipus" last summer, has written an 'Account of the Harvard Greek Play' (Boston: James R. Osgood and Co.). It may be "eminently proper," as Professor Goodwin says in his prefatory note, "that the first performance of a Greek tragedy in America should be commemorated in some permanent record"; but surely that record should have been intrusted to a more practised hand. If the book were a mere "college book," the enthusiastic young student might have been suffered to descant on the sensation that the play made and the enhanced price of admission tickets, but the professors who did so much for the play should have crowned their work by taking charge of the chapters on "Sophocles" and "Œdipus the King," and by a sharp revision of the strange jumble which makes up the bulk of the book under the title "The Performance," in which Sophocles the poet and Mr. Millet the costumer struggle for preëminence. The groups and portraits with which the little volume is illustrated, fifteen in number, are heliotype reproductions. The groups, which were made from photographs taken by the electric light, are—let us be frank—fearful to behold, and no matter how cunningly Mr. Millet arranged his "rich but deep-toned reds," his lavender tunics, his delicate blues and salmons, the imagination refuses to associate these admirable hues with the black figures and scowling faces of the photographs; and one cannot but quarrel with the light that has transformed the thoughtful if unheroic face of Mr. Riddle (plate i.) into the unmistakable Ah Sin of plate xii. and the Tecumseh of plate xiv. This is a positive wrong done to the meritorious actors of the piece; a wrong which is not fully redeemed by the sunlight portraits of the principal personages—some of them excellent. As for the great impulse given to Greek studies, if the outcome is to be a weak imitation of Harvard, the benefit is questionable. College presidents will shake their heads when they read that for five months there were three or four rehearsals a week, and that for the six weeks preceding the performance there was a rehearsal every day, to say nothing of the vast drain on the time and energies of the professorial managers. A smaller college than Harvard would simply be broken up by it for the entire session. Even Harvard has not got over it yet, as is shown by this book, although much force has not gone into the preparation of the account of the Greek play.

—The Archæological Institute of America have resolved not to await the accumulation of the fund needed to carry out on a permanent foundation their project of an American School of Classical Studies at Athens. They have accordingly made overtures to some of the principal colleges to coöperate by an offer (on the part of each) of one or more fellowships to its students "for a residence of not less than two years at the School, to be obtained as the reward for distinguished proficiency in classical studies during the undergraduate course." The director of the School it is proposed to choose for a term of one or two years from among the professors or teachers of Greek in the associated colleges, his salary to be continued by the faculty which gives him leave of absence. It remains to provide by annual appropriation for the necessary expenses of the school, which it is thought should not exceed $2,500. A gentleman connected with Harvard College has pledged $250 for a term of ten years (or less if a fund be meantime secured), and the friends and alumni of other colleges will, we cannot doubt, be willing to contribute in like measure. The chairman of the committee is Prof. John Williams White, Cambridge.

—That these fellowships may ere long be applied for by the gentler sex seems probable from the statistics for the past year of the Harvard "Annex," or "Private Collegiate Instruction for Women." In Greek there were four classes and twenty-one students; in Latin, four and seventeen, in mathematics, four and eleven, respectively. German had three classes and eleven students, history three and twelve. "All the courses in Greek were taken," and the tendency clearly was "toward the traditional classical curriculum and not toward science." The considerable number of courses uncalled for were almost entirely non-classical. Out of forty-seven students, sixteen were taking their second year. Of the whole number, Massachusetts furnished thirty-nine and New England forty-two. Nearly half the Massachusetts students came from Cambridge; and Boston and Cambridge together furnished one-half of the whole. Ten young ladies had studied at or graduated from other colleges, including Smith, Vassar, and Wellesley. The examinations, marked upon the same scale as for the young men, were very gratifying to the instructors. "Though the application of the young ladies has been assiduous, the condition of their health has been uniformly good"; and Dr. Sargent, director of the Hemenway Gymnasium, has, at his own expense, fitted up rooms (not connected with his own establishment) with appropriate apparatus, and gives those who frequent them the benefit of his advice. The Reference Library has grown by gift and purchase to considerable proportions. Scholarships in numbers to meet all the actual demands have been provided by friends of the enterprise, and the expenses have so far fallen within the estimates that the support of the course is assured for six years instead of four. "At the end of that time the managers will consider that their work has been accomplished," and the responsibility of its continuance "will be laid upon the public." They appear confident, and all the friends of the higher education will unite with them in hoping, that an adequately endowed institution will then arise.

—The two most entertaining articles in the *Atlantic* for January are Mr. Howells's "Police Report" and an anonymous writer's "Studies in the South." These studies have included a region little visited by strangers—the mountain land of illicit stills and crooked whiskey. We cannot describe very definitely the particular provinces of the moonshiners' country visited by our observer—who, by the way, writes in a manner that recalls the descriptions of Northern American life, published some years since in the same magazine, by Mr. J. B. Harrison—since he leaves the locality very vague, for reasons which will be apparent to any moonshiner or internal-revenue officer who may read what he says; but, wherever it was, the account given leaves no doubt in the reader's mind as to its truth and accuracy. The picture is perhaps a barren one, except in bringing vividly before the mind what, in the case of systematic outlawdom, is so generally forgotten by the civilized man—that the outlaws themselves regard their business as essentially legitimate if unlawful, and look on murder and violence, resorted to as a means of preventing interference with it, merely as a disagreeable necessity, covered by the natural right of self-defence. The proprietor of the mountain-still is in reality a small farmer, to whom his still is as much a part of his inalienable "plant" as a cider-press might be in other parts of the country. He has always made whiskey. His fathers and grandfathers made it before him. As an aged moonshiner, who was the source of much information to the writer, said: "It don't do nobody any harm. It's about all the way we have of makin' any money in this wooden country. It don't go into the general trade of the country enough to amount to anything"—a fact over which the reader who has been unpatriotic enough to put the virtues of untaxed whiskey to the test of experiment, may well pause to breathe a sigh of regret. The liquor is made by these simple mountaineers out of their own corn, and the actual collection of the tax upon it would probably result in their migration *en masse*. The opening of the country by railroads to new industries is already beginning to hem them in, and make their life more difficult. A very graphic and pathetic description of the inroads soon to be made by civilization is given by the old man already quoted, whose conversation has a genuinely conservative tone:

"But this hyur country's all a goin' to change. It's a goin' to be most everlastin'ly *improved*, ye see. *I* sha'n't never be improved; I'm too old. But the old ways is a comin' to an end. They's men a buyin' up thousan's of acres of this land. They'll be railroads built, direc'ly, hither an' yan, more 'n 'll do anybody any good. They'll cut off the woods for fuel an' lumber, an' they'll be mines an' quarries up hyur, they say. An' they'll be mean, dirty little towns laid out, all about. Then, instid o' people drinkin' a little healthy whiskey, as we've always done, they'll be forty times as much miser'ble p'ison stuff sold an' drunk, an' whoever drinks it 'll begin to steal an' lie. I reckon they'll be some mighty fine houses built som'eres along this river, an' they'll put big scientific locks on to their doors, an' thieves 'll come up from Cincinnarter an' Chat'noog', an' break into 'em. They ain't never ben a lock on to a door in these mountains. But they's a goin' to be the all-firedest improvements about hyur, an' I s'pose our people 'll l'arn to steal too; haf to, to keep up an' live. An' they'll be some o' them city women hyur, I reckon, from them big places, with their fine feathers, an' their dresses a draggin' on to the ground, an' they'll be the devil to pay among our young men. That's what they call *civ'lyzation*, ain't it, stranger? I tell ye, this country 'll soon be improvin' like hell, but I sha'n't live to see much of it, I reckon."

The deep-rooted conservatism of the moonshiners, as exhibited in this speech, may perhaps partly explain the linguistic confusion into which they have fallen with regard to their public enemy—the informer. This odious creature is known among them as the "reformer," and they are entirely unaware that this is not his usually accepted designation. The malignant tenacity with which he sticks to their trail is accounted for by the fact that "the reformer gits half."

—*Lippincott's* has an article on "Railway Stations," a subject which would bear a good deal of writing, to say nothing of pictorial treatment. The condition of the railway station in any modern and progressive country is, as the writer, Mr. Edward C. Bruce, points out, an indication of the stage which civilization has reached. During the last twenty or twenty-five years some progress has been made in the older parts of the United States in this respect; but we fear that the old-fashioned American station —a source of pain to the eye and weariness to the flesh—is still to be regarded as a type. The unpainted, square wooden shed, with its surrounding platform, the secondary receptacle of so much of the rain and snow which falls upon its shelving roof; the close, setteed waiting-room, with its huge, reddening stove, its ragged and uncared-for approaches; its taciturn station-master, who, apparently regarding his duties as a mere voluntary contribution to the solution of the transportation problem, confines them as far as possible to a few brief moments at the periods of the arrival and departure of trains; the ever-recurring gang of village loafers and boys—cannot this sort of country station yet be found without diligent research? Its amelioration depended upon the railroad corporations themselves, and there is no doubt that it is being ameliorated. The Boston & Maine railroad, besides giving its station-masters money for the purchase of seeds and plants for horticultural purposes, gives annual prizes to those whose stations are kept in the best manner. Wherever it becomes for the interest of the company to have its agents live permanently in the stations, the work is of course easier. In the West very few railroads appear to have seen as yet that attractive railroad stations may be counted as among the minor and by no means unimportant attractions to emigrants. The emigrant, though he is frequently treated as if he was little better than a quadruped, is really governed in his migrations by complex considerations, into which a general appearance of neatness and comfort and picturesqueness enter to a degree greater than many monopolists suppose. There is not much else in the way of prose in *Lippincott's*. Mrs. Howells contributes a pretty little adaptation or imitation of "Abou ben Adhem," which, as Christmas poetry, stands quite alone for its simplicity of sentiment and expression.

—The topics discussed in the *North American* for January are: "The Moral Responsibility of the Insane," by a quintet of medical symposiasts; "The New Political Machine," by William Martin Dickson; "Shall Women Practice Medicine?" by Dr. Mary Putnam Jacobi; "The Geneva Award and the Insurance Companies," by George B. Coale; and "A Chapter of Confederate History," by F. G. Ruffin. We have read with care the articles on insanity, and cannot see that they advance the subject much. Indeed, as to Dr. Elwell and Dr. Beard, however important and weighty their opinions as experts in a given case may be, their facility of literary expression so runs away with them as to make their symposiastic utterances of comparatively little value to any one. "Truth," says Dr. Elwell, "always runs in parallel lines, which crime, in its zigzag course, strikes and crosses at all angles"—a pretty image, but difficult to connect, out of Bedlam, with the following, which is given as its logical consequence: "An act of crime, therefore, while always unnatural, and contrary to ordinary human action, is not necessarily an insane act." What has this to do with the parallels of veracity, or the zigzags of crime? Again: "No words in our language have yet been able to define 'mind,' sane or insane; and it has no synonym but 'mystery.'" This is not literally true, of course; for if it were we could substitute "mystery" for "mind" wherever it occurs in the symposium, and this would make parts of it more difficult to understand than they are now. Metaphor is the bane of scientific discussion, and accuracy of statement is hardly to be expected from a writer who is so fond of it as Dr. Elwell. Accordingly, when he comes to discuss the legal aspect of insanity, he hazards assertions that will be likely to make the legal reader wish that a lawyer or two had been admitted to this intellectual banquet. The question of insanity, he declares, "may be said to be entirely open to the peculiar views of the presiding judge and the witnesses in each case." Dr. Beard rather funnily begins his symposium as follows: "In traversing a thick forest we are often struck in the face and eyes by a branch which, in passing, we have bent forward, and, smarting with the pain, we automatically and angrily raise our club and strike the branch, as though it were at fault for what has happened." But it is needless to attempt to pursue him in his winding course. There is one radical difficulty with the whole batch of papers: that each writer "sympozes" (necessity must soon lead to the coining of this verb) by himself, without any apparent effort to follow in the lines suggested by his predecessor. The idea of a symposium, and the entertainment of it to a reader, consists in its being a public controversy conducted according to the laws of honorable literary warfare by skilful disputants. The audience is supposed to watch the blows and thrusts and parries with a keen interest, and to amuse itself by seeing which of the combatants comes off with the crown of victory and which is worsted. When the symposium was first imported into this country by the energetic editor of the *North American*, this characteristic feature was consistently preserved, and the engagement of the world-renowned "Jerry" Black and "Bob" Ingersoll seemed likely at one time even to improve the symposium as it has existed in England, and to give it a novel, racy, American flavor which promised to be very refreshing to the jaded reader of non-illustrated monthlies. Of course there was danger in the symposium, as there must be wherever human passions become excited in controversy; but then there was always the editor at hand to prevent any excesses and to prescribe and enforce the rules of the contest. The wild performances of "Jerry" and "Bob" did undoubtedly bring a momentary discredit upon the symposium; but their misbehavior should not allow the editor to forget that the original function of the symposium must be preserved. The first writer must be replied to by the second, and the second by the third, and so on, so that the whole may be a real discussion, and not mere random disconnected essays. He need not be afraid of a recurrence of the horrid scenes between "Jerry" and "Bob," because there is no other "Jerry" and no other "Bob" in the world. Mr. Dickson's article on "The New Political Machine" is a discussion of civil-service reform which leads to the startling conclusion that no real improvement is possible without rotation in office. Mr. Dickson does not think well of the argument derived from English experience, because "a pyramid whose base is a vast official organization, civil and military, with life-tenure, has naturally the throne as its apex," while "a similar base here, with a President for four years, is a truncated cone." There is more metaphor in the *North American* this month than in any other magazine or review.

—The *Fortnightly* for December opens with an article by D. C. Lathbury on "Atheists in Parliament," apropos of the Bradlaugh case, which will come up anew at the next session, as the action taken by the last Parliament has no binding effect beyond that session. The writer weighs the results of the different courses that may be taken, and thinks that if a bill should be introduced for the relief of atheists, it ought to pass. If Parliament should admit Mr. Bradlaugh without debate, the moral sentiment of the country would be offended. Mr. W. Gifford Palgrave gives an account of Kioto, Japan, and describes, not the ware of the city, but mainly the Shinto religion, which he rates very high, and ascribes to it nearly all the virtues of the Japanese character. He goes so far as to say that "Japanese nationality and Shinto are in truth one thing; born together, they will perish, if perish they must, together; the death-note as the birth-note of Shinto and Japan is one." As nations sometimes change their religion, and considering also the inroads that Buddhism has made upon Japan, this rhetoric seems rather exaggerated, however true the praise of Shinto may be. The author himself says immediately that the wrong done Japan by Chinese Buddhism has not been without some compensating advantages. On the other hand, Shinto is still vigorous: it is a mistake to say that it has been completely superseded by Buddhism. "Thriftless Thrift," by Hugh S. Tremenheare, shows that the Savings-Bank Department of the Post-office has failed to reach the class of poorest depositors by fixing too high the limit of smallest deposit—*i. e.*, at twenty pounds. The limit should be fixed at five pounds, if Government would suppress the numerous burial societies, friendly societies, etc., in which the poor man invests for the sake of obtaining at death a decent burial. These societies are very expensively managed, and are also very unsafe. It is estimated that £36,594,000 were invested in these different institutions in March, 1881. The article illustrates a curious phase of English social life. A. Frisby says Conservatism has increased in the large constituencies since the Reform Bill of 1868, and he fears a continuing increase; but the gain seems to be slight. Dr. William Pole describes the *Bergsturz* (fall of the mountain) at Elm, Swit-

zerland, last summer. G. J. Romanes writes a short digest of the 'Origin of Species,' entitled "Scientific Evidence of Organic Evolution," and, with Professor Huxley, puts the case strongly, if not with some heat. The latter says: "Choose your hypothesis; I have chosen mine, and I will not run the risk of insulting any sane man by asking him which he chooses." And Mr. Romanes says he should regard "any man as weak-minded who, after studying the many lines of evidence all converging on the central truth, that evolution has been the law of organic nature, should fail to perceive the certainty of that truth."

— The November number of the Proceedings of the Royal Geographical Society contains a short paper by Francis Galton, read before the British Association, "On the Construction of Isochronic Passage-Charts." The accompanying chart is colored variously to designate the length of time required to reach the different parts of the world from London "by the quickest through-routes, and using such further conveyances as are available without unreasonable cost." All of Europe, for instance, the northern coast of Africa, the Levant, the northern half of the Red Sea, Iceland, the east coast of Greenland, Newfoundland, and Nova Scotia, being within ten days' journey, are colored green. A strip of Asia lying between longitude 60° and 75° and including the islands of Spitzbergen and Nova Zembla (or Novaia Zemlia), Asia Minor, parts of Persia and Arabia, the west coast of India, the northwestern coast of Africa, together with a strip adjacent to the Mediterranean and Red Seas, the larger part of the United States, the Dominion and the West Indies, are yellow, to signify that they are from ten to twenty days distant from London. Eastern Arabia, a strip of Asia from Ceylon to the Arctic Ocean, Cape Colony, and portions of the interior and eastern coast of Africa, Western North America, including Behring's Straits and Smith's Sound, Central America, and the northern and eastern coast of South America, are in pink, being from twenty to thirty days' journey. Blue, or thirty to forty days' distance, is to be found on a considerable part of Siberia, the East Indies, the southern coast of China and western of Australia, the northern island of New Zealand, the Guinea coast and a strip nearly surrounding the interior of Africa, a part of British America and the west coast of South America, together with the territory adjacent to the Atlantic coast. The rest of the world is colored brown, as indicating more than forty days' journey, and includes the Chinese Empire, part of Siberia, nearly all Australia, Central Africa, the interior of Greenland, the northern coast of North America, and the interior of South America. The chart has been constructed with great labor from data furnished by the time-tables of the principal ocean steamship companies, information given by the "Postal Guide of the average time taken by the post to reach various places," and records of voyages. Mr. Galton believes that this "new principle" might be adopted in constructing maps for the convenience of travellers. Excursions of five or ten days might be planned by its means with tolerable accuracy and comparatively little trouble. It would be interesting to compare this chart with one prepared in the same manner to show the distance from London of the same places fifty years ago. Nothing would illustrate so vividly and at a glance the progress which has been made in the last half century in bringing men together.

—The Czar Alexander II. and President Garfield furnish the tragical element in the necrology of the year 1881, which in this respect is not likely soon to be equalled. The Imperial idea lost two eminent defenders in Beaconsfield and Drouyn de Lhuys, bossism its inventor, Fernando Wood. The Opposition has "gone over to the majority" in the persons of Émile de Girardin, Friedrich Hecker, Ruffini, Karl Heinzen, and Stephen Foster. Rio Branco, author of the Brazilian Emancipation Act of 1871; Count Giovanni Arrivabene, philanthropist and political economist; and Jules Armand Dufaure, make a small but select class of statesmen by themselves, with whom it is not illogical to connect J. G. Bluntschli and Wm. Beach Lawrence. The greatest name blotted out in literature was Carlyle. But other notable historians, like Duvergier de Hauranne, John Hill Burton, and J. G. Palfrey; the great lexicographer Littré; the philologist Benfey; the philosopher Lotze; the poets Dingelstedt, Cossa, and Lanier; James Spedding, the biographer of Bacon; Dean Stanley; Paul de Saint-Victor; William R. Greg; Mrs. S. C. Hall; with the publishers and booksellers Frederic Muller of Amsterdam, Joseph Sabin, and James T. Fields, have left large vacancies in the same ranks. Explorers like Weyprecht and Gessi Pasha; archæologists like Mariette Pasha, Ferdinand Keller, the pioneer in the Swiss lake-dwelling revelations, Benjamin Fillon, Samuel Sharpe, John F. M'Lennan, and Lewis H. Morgan; John Gould, the ornithologist; H. Sainte-Claire Deville, the chemist; Professor George Rolleston, the anthropologist; and F. A. Nobert, the maker of test-plates for microscopes, are some of the losses to science. Art enumerates Hugues Merle, Verboeckhoven, and Gustav Richter, painters; Samuel Palmer, etcher and water-colorist; and George Edmund Street, architect. Add, also, Henri Vieuxtemps, the violinist, and Sothern, the actor. Journalism can point to Francis A. Durivage, Dr. J. G. Holland, and Charles Hudson, the last its historian for this country. From the pulpit we miss Bishop E. O. Haven and Leonard Bacon, and from the professor's chair, J. Lewis Diman; from the list of educators, George B. Emerson. The men of action who went to their repose in 1881 were Admiral La Roncière le Noury; General Von der Tann; Generals Robert C. Patterson, Burnside, Crooke, Upton, and John C. Pemberton, of our civil war; and Colonel Thomas A. Scott, efficient both in peace and in war. Here, too, may be remembered William Ross Wallace, author of "The Sword of Bunker Hill" and of other popular lyrics, and Alfred B. Street, the poet of our lakes, forests, and aborigines. General Jo Lane, Henry Stanbery, and Matthew H. Carpenter stand for distinct phases in our political development.

—In the last two numbers of Prof. Dr. Friedrich Müller's 'Outlines of Linguistic Science,' just published in Vienna, grammatic sketches are given of thirty-eight languages and groups of dialects spoken by American Indians. All the methods and results of modern linguistic science are brought to bear on the subject, and the terms of all the languages have been reduced by the author to one phonetic system—that of Lepsius, also called the standard or the missionary alphabet. In view of the great difficulties to be surmounted, the author of this comprehensive work, which is nearly completed and will then embrace the best-known languages of the globe, has achieved a great advance when compared with the previous linguistic cyclopædias of Balbi and Maury, and with Adelung-Vater's 'Mithridates.' His principal difficulty was the critical examination of many dozens of old grammars, some incomplete, some hardly intelligible, and composed after the most antiquated methods. These old grammars generally pay no attention to one of the main features of a language—we mean, to phonetics. One of the linguistic fields in which Dr. Müller is thoroughly at home is that of the Malay-Melanesian-Polynesian languages, sketched in a previous number of the 'Outlines.' Here he shows that of the three groups of this family the Malayan, the nearest to the Asiatic continent, is also the most developed group, and has preserved the most ancient grammatic forms. The Eskimo and Ale-ut languages he unites into one class with four linguistic stocks of northeastern Asia, and calls it that of the "hyperborean races." As to the American languages, Dr. Müller refrains from giving any general characteristics applicable to them all. He is perfectly right in not doing so, for such characteristics do not exist, and it is time to banish the notion from all the books on the subject. Müller concurs with the late Prof. Buschmann's discovery of the affinity of the Shoshóni languages (Uta, Pa-Uta, Comanche, Moqui, Shoshóni proper) with those of the Nahuatl stock spoken in the Mexican States; in fact, those who still doubt this fundamental connection show that they have not read Buschmann, or have failed to understand his researches on the subject. The grammatic terms *animate* and *inanimate*, applied by Müller and others to certain forms of the verb and noun, are strictly applicable to certain American languages only, and by no means to all; in some, for instance, the names of birds and smaller animals follow the inanimate inflection, although they represent animate beings. In rendering a certain sound of the Maskóki dialects and of the Oregonian languages, Müller is wrong in using Pickering's *tχl*, for this sound is a linguo-dental, represented as *s* with a point underneath in Lepsius's standard alphabet. Müller's 'Outlines' and L. Adam's 'Sixteen Languages' exhibit the great progress made by Europeans in the study of the American tongues, and no student in the same field can dispense with reading these two representative treatises.

—Although the "arctic wave" predicted for the 28th of December did not make its appearance, the managers of Steinway Hall had made every preparation to receive it. The heat in the hall was so excessive, and so much of it must have been absorbed by the audience, that when they scattered after the concert the radiant heat would have sufficed to warm the whole city even in the midst of an arctic wave. Steinway Hall is a sufficiently aggravating place, owing to the shamefully inadequate "facilities" for exit, and it is not necessary to convert it into a Turkish bath besides. That it was possible, under such depressing circumstances, to give so fine a performance of the "Messiah" as the Oratorio Society, under the direction of Dr. Damrosch, gave, and that the audience had sufficient energy left to indulge in frequent and enthusiastic applause, must be largely ascribed to the esteem in which Handel's popular oratorio is held by the singers and the audience which assembled to hear it, and which, by the way, resembled in physiognomy a congregation much more than an ordinary concert audience. The annual performance of the "Messiah," in truth, must be regarded rather more in the light of a religious ceremony than a concert, so that one might almost question the propriety of criticising the manner in which the work was done. We may briefly say, however, that with the exception of some details, the chorus and orchestra did excellent work, and that the soloists were quite equal to their tasks. Miss Drasdil and Mr. Remmertz are so well known as accomplished oratorio singers that any praise of their voices or methods would be superfluous. Mr. A. L. King, the tenor, displayed a voice of fair quality, but lacking in expression and shading. Miss Hattie Louise Simms seemed a little nervous, which prevented her from doing herself and some of the sustained notes full justice. She has, however, an agreeable, pure, and well-trained voice, and an uncommonly distinct enunciation, which would qualify her for

the assumption of more dramatic rôles than are to be found in Handel's oratorios. Her efforts, like those of the other singers, were rewarded with cordial applause. It was noticeable that many of the seats were vacated before the end of the performance; and this leads us to add a few words regarding the propriety of constantly repeating the "Messiah," a work whose merits are greatly overrated in England and America in comparison with Handel's other oratorios and the incomparably grander works of Bach. There are some admirable arias in the "Messiah" and several superb choruses. But most of the choruses are massive rather than grand, and impose more by their sonority than the impressiveness of their musical ideas. The interminable roulades which adorn the music are, of course, a concession to the taste of the time in which they were written; but to a modern ear they are not only tedious, but often supremely ridiculous, as where, in the chorus "For unto us a child is born," the word born is spread over fifty-seven notes. No wonder that Handel did not succeed in opera and had to turn to oratorio. These remarks are not offered in a frivolous spirit, but from a selfish motive. They are intended as a corrective of the one-sided Handel worship at the expense of greater masters of sacred music. Handel is more superficial and at first sight more melodious than Bach, and hence his greater popularity among English-speaking people. If the "Messiah" in Christmas week is to be regarded as a religious ceremony, sanctioned by custom and popular approval, the Oratorio Society does well to repeat it every year or oftener. But if their work is to be judged from a purely musical point of view, they would deserve more credit for familiarizing the public with some of the glorious choral works of Bach, whose extraordinary wealth of ideas, richness of harmony and modulation, and skilful interweaving of melodious parts are a source of wonder and delight to the select few who have been initiated into their beauties.

JOWETT'S THUCYDIDES.—I.

Thucydides. Translated into English, with Introduction, Marginal Analysis, Notes, and Indices, by B. Jowett, M.A., Master of Balliol College, Regius Professor of Greek in the University of Oxford, etc. 2 vols. Oxford: Clarendon Press; New York: Macmillan & Co.

"THUCYCIDES, an Athenian, wrote the War of Peloponnesians and the Athenians, as they warred against each other, beginning to write as soon as the War was on foot, with expectation it should prove a great one, and most worthy the relation of all that had been before it; conjecturing so much both from this, that they flourished on both sides in all manner of provision, and also because he saw the rest of Greece siding with the one or the other Faction; some then presently, and some intending so to do. For this was certainly the greatest Commotion that ever happened amongst the Grecians, reaching also to part of the Barbarians, and, a man may say, to most nations. For the Actions that preceded this, and those again that are yet more ancient, though the truth of them, through length of time, cannot by any means clearly be discovered; yet for any Argument that (looking into Times far past) I have yet light on to persuade me, I do not think they have been very great, either for matter of War or otherwise."

This is the language in which Hobbes translates the first chapter of Thucydides. Place side by side with it the rendering of the same passage by Professor Jowett:

"Thucydides, an Athenian, wrote the history of the war in which the Peloponnesians and the Athenians fought against one another. He began to write when they first took up arms, believing that it would be great and memorable above any previous war. For he argued that both states were then at the full height of their military power, and he saw the rest of the Hellenes either siding or intending to side with one or other of them. No movement ever stirred Hellas more deeply than this; it was shared by many of the Barbarians, and might be said even to affect the world at large. The character of the events which preceded, whether immediately or in more remote antiquity, owing to the lapse of time, cannot be made out with certainty. But, judging from the evidence which I am able to trust after most careful inquiry, I should imagine that former ages were not great either in their wars or in anything else."

Intelligent readers will find it well worth their while to study with care these two translations of the same original, for such a comparison brings clearly into light a matter which often escapes the attention of critics—namely, that the translator of a classical masterpiece such as the history of Thucydides must of necessity make choice between two ideals of translation: he may, on the one hand, hold that the main object to be attained is such a reproduction of the manner and language of the original author as may give to a person ignorant of Greek the same impression of Thucydides' mode of writing, of his mannerisms—in short, of his style—as is derived by a scholar from reading Thucydides in Greek. This is the object, whether aimed at consciously or not, which is to a singular extent attained by Hobbes. In the very passage quoted it were possible to point out some dubious renderings of the original, but it would be unfair to deny that the stiffness, the intricacy, even a certain confusion of language rather than of thought—for example, in the words "most worthy of relation of all that had been before it"—which perplex and bother the reader of Hobbes's English, are undoubtedly to be found in the Greek of Thucydides, and must assuredly perplex and bother the student who comes to them for the first time.

A translator may, on the other hand, hold that the true end of his work is to reproduce not so much the style as the thoughts and meaning of the original author. On such a view of translation, the end of the English translator of Thucydides is most fully reached when he has put before readers ignorant of Greek a clear, perspicuous, accurate—we may add readable—version of Thucydides such as the Athenian writer might, were he revived to life and endowed with perfect command of the English language, lay before the educated public of England or of America. If this be the true object of translation, Prof. Jowett has as nearly attained it as it can in the nature of things be attained. The passage before us gives every thought which Thucydides wished to put before his contemporaries, and, what is equally important, it does not convey any idea in addition to the thoughts which he intended to express. It further conveys the meaning of the Athenian historian in English as easy to be understood by Englishmen of the nineteenth century as was the Greek of Thucydides by the Athenians of his day. What the English of the Regius Professor of Greek does not exactly reproduce is the effect which the style of the Greek author undoubtedly makes on the mind of Englishmen who have to force out his meaning from the original Greek. We can quite believe that readers acquainted only with Prof. Jowett's version might describe Thucydides as a writer of an easy, flowing, lucid style. It is hard to believe that these terms would be applied to him, say, by students going in for examination at Oxford, and trembling lest they should be "put on" at the account of the Corcyrean Revolution.

We are most anxious to bring out the essential difference between Prof. Jowett's translation and the kind of translation of which Hobbes's work may stand as a type, both because the one apparently-plausible reproach which can be brought against a book which is a specimen of the very highest literary art, is the failure to reproduce the mannerism of Thucydides, and still more because we are convinced that the imputed defect is, if the true end and aim of translation be considered, one of the greatest merits of a work which one may fairly say is almost above praise. That this is so will, we suspect, be admitted by any one who will candidly consider what are the reasons which make it worth while in modern times for great scholars to consume years of labor in rendering the masterpieces of antiquity into modern English. What justifies, and more than justifies, the toil expended by scholars such as Prof. Jowett and other eminent men on the work of translation, is not the satisfaction given to idle ingenuity by turning the words of one language into the equivalent expressions of another, nor is it in modern times the necessity of making known through vernacular translations the contents of Greek or Latin books. Hundreds of persons can spell out for themselves with the help of a dictionary the sentences of Thucydides; thousands can make themselves acquainted with every fact of the Peloponnesian War by reading Grote or Thirlwall. Scholars might escape from the labors of translation if the only object of their work were to make known facts which are unknown; for any educated person can now, by the purchase of histories, manuals, or abridgments, learn for himself, at no great cost of trouble or expense, all the mere facts of the contest between Athens and Sparta. The justification and reward of scholastic toil in the effort to render ancient classics into English are the immense—the unspeakable—benefit conferred upon the so-called educated classes, of making them really and truly acquainted with the great literary monuments of the ancient world. It is one thing to know about Thucydides; it is quite another thing to know Thucydides himself. Now, if the aim of a translator be to make a classical author as truly accessible to English readers as, say, Carlyle, Gibbon, Motley, or Macaulay, this aim will of necessity regulate his whole conception of the right method of translation. In the case of certain authors, notably of all poets, a translator of genius will feel rather than argue that the reproduction of manner and style must of necessity be a primary consideration. The same remark applies, with certain reservations, to authors like Tacitus, in whose works one must fairly admit manner plays quite as great a part as the substance of their thoughts. A diffuse translation of Tacitus would not be Tacitus at all. In the case, on the other hand, of writers such as Thucydides, whose great thoughts and whose mode of thinking formed the very essence of their work, a translator who understands what he is about will assuredly feel that the first aim of translation is to render the thoughts and meaning of the original author, so that they may both be understood and read by the English public.

Moreover, the translator who makes the rendering of style subordinate to the lucid reproduction of meaning does, in the case of a writer like Thucydides, only sacrifice the letter for the sake of the spirit of accurate reproduction. Thucydides was not a mannerist; there is not the least reason for supposing that he aimed at writing in a way which seems strange, startling, or affected to his readers. In the later periods of Greek literature, as in modern times, the neglect or defiance of the rules of grammar would inevitably be a proof of a writer's deliberate affectation of peculiarity of style. But the apparent grammatical solecisms of Thucydides are not, in any true sense, violations of grammatical rules. A law which does not exist cannot be broken.

"The language of Thucydides presents a curious and interesting problem, because it be-

longs to a period when the uses of words and constructions were not yet fixed, and an original writer had much greater freedom in varying them than was possible in the Alexandrian times. . . . He who considers that Thucydides was a great genius writing in an ante-grammatical age, when logic was just beginning to be cultivated, who had thoughts far beyond his contemporaries, and who had great difficulty in the arrangement and expression of them, who is anxious but not always able to escape tautology, will not be surprised at his personifications, at his confusion of negatives and affirmatives, of consequence and antecedents, at his imperfect antitheses and involved parentheses, at his employment of the participle to express abstract ideas in the making, at his substitution of one construction for another, at his repetition of a word or unmeaning alteration of it for the sake of variety, at his over-logical form, at his forgetfulness of the beginning of a sentence before he arrives at the end of it. The solecisms or barbarisms of which he is supposed to be guilty are the natural phenomena of a language in a time of transition, and, though not always, as Poppo maintains, common to other Greek writers, yet having some analogy by which they may be defended. They are also to be ascribed to a strong individuality, which subtilizes, which rationalizes, which concentrates, which crowds the use of words, which thinks more than it can express."

The student who ponders upon this admirable description of the style of Thucydides will easily perceive that the pedantic attempt to reproduce all the peculiarities of the manner of Thucydides would have been in effect to sacrifice the substantial truthfulness of translation to the translator's credit for verbal ingenuity. Such a reproduction would have turned a writer who lived at an early stage of literary progress into a writer aiming at the deliberate affectation of style belonging to ages of mature literary development, or rather of impending literary decline.

Nor is a reference to the success of Hobbes in the imitation of the Thucydidean manner any plea for the use in modern times of a similar kind of imitation. Hobbes wrote in an age when English literature itself had not acquired an easy, clear style in the treatment of matters of thought or speculation. His 'History of Thucydides' was not to the readers of 1634 a book as unlike the style of the day as a translation of the like character would be to the readers of 1881. To put the matter plainly, each age must, within certain limits, translate classical writings not only into its own language, but into its own manner. No translation which is unreadable is really a good rendering of an author who has been read by generation after generation, and who will be read as long as the literature of the world endures. To have kept this constantly before his mind is one of the greatest merits of Prof. Jowett as a translator. He has felt that a fine translation of a classical masterpiece must itself be a work of high art, which ought to charm the English public in the same way in which they are charmed by the works of great modern writers. This end his translation achieves. To thousands, not only of those unacquainted with Greek, but of men supposed to have a fair acquaintance with the classical languages, Mr. Jowett has for the first time really opened Thucydides. They can now read and reread the funeral oration of Pericles, or the siege of Syracuse, as they can read Macaulay's description of the siege of Derry, or Carlyle's picture of the death of Louis the Fifteenth. They can now for the first time learn for themselves all that can be learned of the great crisis of Greek history, without the need of imbibing together with the statements of Thucydides the often misleading speculations or misguiding illustrations of even men as eminent as Arnold, Thirlwall, or Grote, Mr. Jowett has brought the educated classes of England and America face to face with the thoughts of the greatest historical genius of the ancient world. We may say something in another number on the lessons which Englishmen and Americans may learn from their Athenian teacher. It is enough for the moment if we press on every man and woman who, unacquainted with Greek, cares to understand Greek history, the wisdom of profiting to the utmost by the noble present which has been made to the whole English-speaking world by the labor, the learning, and the literary genius of the Regius Professor of Greek.

GOTTSCHALK'S TOUR IN THE UNITED STATES.

Notes of a Pianist. By Louis Moreau Gottschalk. Preceded by a biographical sketch with contemporaneous criticisms. Edited by his sister Clara Gottschalk. Philadelphia: Lippincott. 1881.

HEINE called himself the first poet of the nineteenth century, as having been the first born in it. For a similar reason, Gottschalk assumed the name of the first American pianist. Before him, he says, piano concerts were heard only when a famous artist came from Europe and attracted an audience by the celebrity of his name and the curiosity to see the lion. At the time when he himself first returned from Europe (1853) "the public listened with indifference; to interest it, it became necessary to strike it with astonishment; grand movements, *tours de force*, and noise had alone the privilege in piano music, not of pleasing, but of making it patient with it." But Gottschalk was not the man to be daunted by this state of affairs. He accommodated himself, to a certain extent, to the demands of the public, and if in so doing he partly sacrificed his artistic principles, he deserves credit, on the other hand, for the work of a pioneer who was frequently obliged to toil under circumstances as discouraging as those which beset the early settler, who has to convert a virgin forest into a wheat-field. In playing to an audience of Western roughs he was wise enough to ignore the classics and limit his programme to popular tunes or his own show-pieces, such as his 'Siége de Saragosse,' in which "there is a passage where Gottschalk in a most ingenious manner imitates a military parade, accompanied by the beating of the drum." But that Gottschalk was also capable of rendering compositions of a higher order in an artistic manner will be remembered by many who heard him play in our larger cities, and is also attested by the judgment passed on him by noted critics during his sojourn in France and other foreign countries. Berlioz, in the *Journal des Débats*, called him an accomplished musician, in possession of "all the different elements of the sovereign power of the pianist." "He has a perfect grace in his manner of expressing sweet melodies and of scattering the light passages from the top of the keyboard. As to prestesse, fugue, éclat, brio, originality, his playing strikes from the first, dazzles, astonishes; and the infantine simplicity of his smiling caprices, the charming ease with which he renders simple things, seem to belong to a second individuality, distinct from that which characterizes his thundering energies." Escudier, writing of his characteristic compositions, "Le Bananier," "Le Bamboula," "La Savane," and "Ossian," says that Gottschalk resembles no one, and is a pianist who has the prime merit of copying no other composer. Théophile Gautier admires him for the possession of that rare faculty, a distinct individuality, which he traces to the fact that "after having formed his talent by solid studies, he left it to wander carelessly in the fragrant savannas of his country, from which he has brought back to us the colors and perfumes" that equal in charm "the chants of the Muezzin and the reveries under the palms which Félicien David and Ernest Reyer have noted with their souvenirs of the East."

These criticisms were passed on Gottschalk when, at the age of twenty-two, he gave a series of concerts in France and Switzerland. He was born at New Orleans in 1829, and showed a strong inclination for music at the early age of seven. In 1842 his father sent him to Paris to continue his musical studies. His master in composition was Mr. Maleden, who also numbered Saint-Saëns among his pupils. It is of psychological interest to learn that at this period of his life he had a most remarkable memory for music, which enabled him to recollect hundreds of pages after a few days' study, while in literature, on the contrary, his memory was so defective that he had to invent a system of musical mnemotechny which he applied to history and geography. At the age of sixteen he gave his first public concert in Paris, on which occasion it is said that Chopin, in the artists' room, put his hand on the boy's head and said: "Donnez-moi la main, mon enfant; je vous prédis que vous serez le roi des pianistes." After his successful French and Swiss concerts, Gottschalk made a tour through Spain, where his reception was at first somewhat cool because the Queen was reported to have said that she would never patronize an American artist; on which account the nobility were reserved toward him. Soon, however, the tide turned, and the pianist was invited to play before the King and his family at a private soirée. The extraordinary favors shown him on this occasion excited the envy and hatred of the court pianist, who on a subsequent occasion endeavored to avenge himself by slamming a carriage door on his rival's fingers. The pain was so severe that Gottschalk fainted, and amputation of his little finger was at first considered necessary. Fortunately he objected to this, and the finger, recovering, subsequently became more powerful than it had been. After leaving Madrid, he visited other Spanish cities, where his triumphs were not diminished by the fact that the Queen had written to the authorities that he should be received with the greatest distinction. His glory culminated in the receipt of a letter, accompanied by a magnificent sword, from the famous bull-fighter Don José Redendo, in return for an invitation to one of his concerts.

After reaching this sublime height of terrestrial glory an ordinary mortal would have rested on his laurels. Not so Gottschalk. Early in 1853 he left Europe for America, which at that period was anything but a paradise for musicians, in spite of the extraordinary success of a few favored artists. His experiences in this country, from New York to San Francisco and from Panama to Rio Janeiro, where he died in 1869, are contained in the 'Notes' now under consideration. They cover a period of fifteen years, those relating to the years 1862-1863 being in the form of a diary. The letters written to his family, which will probably be published at some future day, will supply the lacuna found in the last year of his life. Miss Gottschalk declares that although numerous letters have been addressed to Gottschalk's friends in Rio, to his physician and his landlord, his family up to the present day know absolutely nothing about his last moments nor about the true cause of his death, although it is known that he had an attack of yellow fever four months before his death. Great trouble was also experienced in securing possession of his personal effects, his manuscripts and literary remains. After four years' delay, the trunk containing them was at last secured, but the papers it contained were so soiled and torn that Miss Gottschalk at first despaired of being able to arrange them and carry out her brother's "cherished

scheme of publishing his travels." It is fortunate that she rallied from her despair, for otherwise we should have been deprived of a book which is not only of interest on account of its simple but vivid descriptions of events in various countries, and its revelations of the tastes and characteristics of an original musician, but which will some day be of inestimable value as showing more clearly perhaps than any other record the attitude of various rude and semi-civilized communities toward music and virtuosity.

A desire for literary fame was not the only motive which induced Gottschalk to fix his impressions on paper. The horrible monotony of concerts, as he calls it, the invariable repetition of the same pieces, the daily round of railroad cars, isolation in the midst of the crowd, forced him, in order to avoid becoming brutalized and being converted into an automaton, to adopt the habit of making of his note-book a sort of mute confidant to whom he could entrust all his joys and sorrows. How much he needed such a confidant becomes apparent when we read of the reception accorded him in some of our extreme Western towns, which contrasted so vividly with his European experiences. The newspapers seemed to oppose his "invasions" frequently, and recommended only the patronizing of local concerts, "because the money then does not leave the locality." Being ill on one occasion for three days in a town in Nevada, and finding himself completely isolated and deserted, he gives vent to his feelings in these words:

"I defy your finding in the whole of Europe a village where an artist of reputation would find himself as isolated as I have been here. If, in place of playing the piano, of having composed two or three hundred pieces, of having given seven or eight thousand concerts, of having given to the poor one hundred or one hundred and fifty thousand dollars, of having been knighted twice, I had sold successfully for ten years quarters of salted hog, . . . my poor, isolated chamber would have been invaded by adorers and admirers."

He explains the worship of wealth in this country as due to a sort of gratitude to any man who has fixed in the country the capital which augments its prosperity. Even in San Francisco, the newspaper editors seemed to him ignorant of the elementary laws of politeness, inasmuch as of all whom he had invited to a supper at his hotel, after having paid them a personal visit, only two came, the others not even sending a note of excuse. The fact that at that period only the circus flourished in San Francisco, while concerts never succeeded—Ole Bull, Strakosch, and others having "left in confusion"—leads him to make some admirable remarks on the attitude of primitive communities toward his art:

"Music, of all the arts, is the last to implant itself, and only takes deep root in old civilized societies. It is too abstract, it appertains too much to the domain of thought and feeling, to flourish where the physical forces are in full activity. It is an art for idlers and dreamers. Neither the one nor the other is found among men who have to build houses to shelter themselves and who have to seek their food. The plastic arts are the first, after spoken poetry, which suggest themselves to the minds of primitive peoples."

It must not be inferred from this that Gottschalk's efforts were always and invariably unappreciated in the great West. On his departure from California, the admiration of his friends found expression in a fine gold medal with his initials set in diamonds, and other signs of appreciation were not wanting. In most of the smaller towns, however, he could not conceal from himself the fact that the usual audiences of one hundred or one hundred and fifty who paid their dollar, not knowing exactly what sort of a "show" or "panorama" they were going to see, were generally disappointed, and vowed to wreak their vengeance by ignoring the next pianist who might come along. Still, he could not help "remarking the propriety of conduct of these audiences, who, however wearisome our music must appear to them, submit to it without protest." Perhaps the majority of those who listened to him were as ignorant of music as the Indian of whom he tells an amusing story on page 369. This Indian had heard Gottschalk play "Hail, Columbia," and after he had left the room, examined the piano, which, to his astonishment, responded to his own touch. When Gottschalk returned he sat down at the piano, and with all the force of his arms began to beat the keys, calling out triumphantly, "You see, I never tried before, and I make more noise than he." At Zanesville he was greatly annoyed on one occasion by a charming young girl and her mamma, who occupied a front seat and passed the whole of the concert in watching his feet. Being ignorant of the use of the pedals, they apparently saw in his movements only a kind of queer trembling and odd and rudimentary steps in dancing which afforded them an inexhaustible source of amusement. We might cite many more of these characteristic anecdotes, but those here given will suffice to show that the 'Notes of a Pianist' contains much that is amusing as well as instructive. Gottschalk was able to converse fluently in five or six languages, but his notes and letters were written in French, the present volume being a translation by R. E. Peterson. His style is occasionally unpolished, but in general it has the merits of simplicity and directness. His descriptions betray close observation and an eye for the picturesque, while a poetic vein is revealed by such lines as these written near Dayton, Nevada:

"The mountains are brought so near that, seen from the height where we are, through this blue vapor, they seem to be the waves of an ocean which, by a magical effect, have become petrified in the midst of a tempest. The breeze, which blows softly, brings to us the thousand distant sounds from the deep valleys and high peaks. A bird, concealed at the bottom of the precipice, gives forth its monotonous song, composed of three notes, which it repeats without interruption."

LALOR'S ENCYCLOPÆDIA OF POLITICAL SCIENCE.

Encyclopædia of Political Science, Political Economy, and of the Political History of the United States. Edited by John J. Lalor. Vol. I. A–Dut. Chicago: Rand, McNally & Co.

THE editor of this work is known to the public as the translator of Von Holst's 'Political History of the United States' and of Roscher's 'Political Economy.' In the pursuit of his vocation as the introducer of important works in a foreign language to the English-speaking public he appears to have conceived the idea of compiling a cyclopædia of political science from the 'Staatswörterbuch' of Bluntschli and Brater, and the 'Dictionnaire Général de la Politique' of Maurice Block. This would have been a welcome addition to our storehouse of ready reference, seeing that we have no work in English corresponding to these except one volume of an unfinished 'Dictionary of Political Economy,' by H. D. Macleod. If this was Mr. Lalor's first intention, he has improved upon it by adding a large number of original articles by American, English, and Canadian writers, and by extending the scope of the work so as to include American political history within its range.

The body or groundwork of the first volume consists of articles translated from the two foreign works already mentioned, and from the 'Dictionnaire de l'Économie Politique' of Guillaumin and Coquelin. The original work embraces a large number of articles on American political history, by one writer (Mr. Alexander Johnston of Norwalk, Conn.), and articles on legal, political, economic, statistical, social, and administrative topics by persons of distinction or of special training. The high excellence and value of the works of Bluntschli and Block are so widely recognized as not to call for fresh commendation, and it only needs to be said that Mr. Lalor has made very judicious selections for the purpose of translation. The original matter is for the most part of equally high merit. It is not too much to say that the American contributors suffer nothing by comparison with the foreign writers whose articles are placed in juxtaposition with them. It will occur to the student that a much larger proportion of the work might have been equally well done at home, and that the whole would have been fresher and more entertaining in consequence. Nevertheless, we cannot withhold our warm commendation for the industry and discrimination of the editor and the enterprise of the publishers. The cyclopædia of which they have given us the first volume is a timely and valuable aid to political education. As a work of reference upon the subjects of which it treats it will prove especially serviceable to students, editors, and public speakers.

For the purpose of indicating the range of subjects treated, we shall confine ourselves to the original articles. Mr. Johnston, to whom has been confided the treatment of American political history, furnishes the articles on Abolitionists, *Alabama* Claims, Alien and Sedition Laws, American Party, Annexations, Bank Controversy, Compromises, Confederate States, Peace Conference, Constitution, Hartford Convention, Democratic-Republican Party, and Dred Scott Case, besides a large number of brief biographical notices of American statesmen. These, by the way, are so limited in the information which they contain that they might as well have been omitted altogether. A cyclopædia of political science need not be at the same time a biographical dictionary, but, if it essays that rôle, ought to furnish something more than the dates of birth, accession to office, and death or retirement of the persons whose names are introduced. Mr. David A. Wells furnishes two articles in his best style, one on the American Merchant Marine, and the other on Distilled Spirits as Subjects of Taxation. Mr. John Jay Knox, the Comptroller of the Currency, presents the subject of Banking in the United States with a thoroughness which leaves nothing to be desired. The subject of Banks and Banking is treated at great length by no less than seven writers. Mr. Edward Atkinson deals with the general functions of banks; Mr. John P. Townsend gives a history of the rise and growth of savings banks, with a considerable treatise on the principles of their administration, and Professor E. J. James, of Normal University, Ill., discusses banks of issue, his article being essentially an abridgment of the one in Bluntschli on that subject, with applications to the practice and requirements of the United States. It is worthy of notice that the writer gives his judgment in favor of the "banking principle," as applied to circulating notes, as distinguished from the "currency principle," upon which the Bank of England notes are based. The banking principle looks to bank capital and good business methods for the security and usefulness of circulating notes, while the currency principle looks to Government security. The discussion of this subject in Mr. James's article is very thorough. The subject of Bankruptcy is well presented by Judge Lowell, of Massachusetts.

Judge Cooley, of Michigan, furnishes articles

on the Bar and the Law of Corporations, and Mr. E. S. Isham has a paper on Corporations as Economic Forces. Judge Jameson, of Illinois, whose work on the Constitutional Convention is well known, writes an article on that subject. Mr. Dorman B. Eaton contributes articles on Civil-Service Reform, Civil Administration, and Confirmation by the Senate; Mr. F. W. Whitridge writes upon Political Assessments and the Caucus System, and Mr. Simon Sterne on Administration of American Cities. Professor Cliffe Leslie furnishes two interesting articles, one on Cost of Production and the other on Definitions in Political Economy; Mr. Horace White discusses Commercial Crises; Mr. Horatio Burchard, Coinage; Mr. H. D. Lloyd, the Clearing-House System; and Mr. Robert P. Porter, the subject of Public Debts. Mr. A. R. Spofford, the Librarian of Congress, furnishes articles on Academies, Budget, and Congress. The subject of Blockade is discussed by Professor Woolsey. Chinese Immigration is treated by Mr. Henry George in a moderate tone, from the standpoint of a Californian, and China itself is presented at considerable length by Professor W. E. Griffis, who also has an article on Corea. Original articles, moreover, are furnished on Aliens, Apportionment, Bill of Rights, Court Martial, Dominion of Canada, and a number of minor topics.

While the selection of subjects is generally well conceived, we find a few articles (some translated from foreign works) which are not worth the small space they fill, such as Abstention, Abuses in Politics, Acclamation, Barricade, Copperhead, Corporal's Guard. It is also a defect of the work that topics of foreign history are not always brought down to the present time. The article on Bolivia, for instance, does not mention the recent war with Chili, and the article on Chili merely mentions the war, but does not tell us what were its causes. The editor has probably labored under some disadvantages through insufficient personal acquaintance with professional men in the East, for although the major part of the original writing is furnished from this meridian, there still remains a large body of political science to draw from, which we shall hope to see represented in the two succeeding volumes. It would be wiser for the editor, and more remunerative to the publishers in the end, to make up the remaining volumes of original matter entirely, for which there is abundance of material within their reach.

RECENT NOVELS.

Dr. Breen's Practice. A Novel. By William D. Howells. Boston: James R. Osgood & Company. 1881.

The Giant Raft. Part 1. Eight Hundred Leagues on the Amazon. By Jules Verne. Translated by W. J. Gordon. New York: Charles Scribner's Sons. 1881.

A Laodicean; or, The Castle of the De Stancys. A Tale of To-day. By Thomas Hardy. [Franklin Square Library.] New York: Harper & Bros. Also, Henry Holt & Co.

Kith and Kin. By Jessie Fothergill. New York: Henry Holt & Co.

Severa. From the German of E. Hartner. Translated by Mrs. A. L. Wister. Philadelphia: J. B. Lippincott & Co.

'Dr. Breen's Practice' is a novel of New England life, in which Mr. Howells shows his usual skill and humor, and more than an ordinary amount of ingenuity as well. The plot is founded on an idea which has, so far as we know, not been utilized in fiction before. Dr. Grace Breen is a young New England girl, who represents what Mr. Howells seems to consider the modern form of Puritanism, this ancient faith taking in her a moral rather than a religious form, and making her conscience sensitive as regards all her relations with her fellow-creatures to a degree unknown in parts of the world unaffected by Puritan traditions. The scene of the story is laid in a seaside "resort" known as "Jocelyn's," where may be found the usual New England summer boarding-house, with its visitors from all quarters. Grace Breen having had some years before an unfortunate love affair, in which she had been badly treated by her lover, has adopted the practice of medicine, much as other women enter convents or go out as missionaries—though Mr. Howells intimates that this is putting the case in rather an exaggerated way; but at any rate, she has chosen this work with the intention of giving her life to it and supporting herself by it. Its study has cost her sensitive nerves a good deal of suffering, and many of its details are almost insuperably repugnant to her. She has studied medicine in New York, and appears at the opening of the novel as a graduate of a homœopathic medical college. It should be stated, however, that this unfeminine professional self-devotion has been far from unsexing the devotee, who is, notwithstanding her occupation, simply a charming girl, by no means disqualified by her first love affair from having a second one. With her, at "Jocelyn's," is also staying Mrs. George Maynard, a Western woman, who had been befriended at school by Grace, and whose relations with her husband are, at the opening of the story, involved in some mystery. According to her own account, she has been so ill-treated by him that a divorce is absolutely necessary, and perhaps independently of this she looks upon divorce rather more in the light of a natural consequence of marriage than her friend Grace does.

Mr. Maynard is on a ranch in Wyoming, and matters being in this situation, there appears at "Jocelyn's" a young friend of both husband and wife, a Mr. Walter Libby, who immediately falls in love with Grace, while Grace imagines him to be desirous of setting on foot a flirtation with Mrs. Maynard. Libby proposes a sail to Mrs. Maynard, chiefly for the purpose of getting Grace to go also, she neither wishing to go herself nor to have her friend go. Her unwillingness to consent to the expedition leads her to tell the young man that Mrs. Maynard, who is an invalid and who has put herself under Grace's care, ought not to go, because the sea air will do her no good. This subterfuge she does not resort to without a twinge of her Puritan conscience. Libby, who is far more anxious to please her than to take his friend's wife out at all, immediately goes off and returns with the suggestion that his skipper thinks that the wind may become pretty fresh before they get back. Grace, perceiving the drift of this, and refusing to take part in the prevention of the scheme, now insists that Mrs. Maynard shall sail, and that she will take the risk of any harm from bad weather. It will be seen from this that the extraordinary delicacy of her conscience is somewhat tinged with the peculiarities of her sex, and that it is distinctly an illogical conscience. The wind, singularly enough, does become pretty fresh. Mrs. Maynard and Libby are wrecked and Mrs. Maynard barely rescued from drowning.

This result of Grace's insisting upon the sail makes her peculiarly contrite and self-reproachful, and the bitterness of her remorse is increased by the fact that Mrs. Maynard becomes more and more ill. The confidence which the invalid felt in her woman physician so long as her ailments were trifling disappears when they become serious, and Dr. Breen begins to feel that although she is competent to treat the case, the patient herself has not sufficient trust in her to make it advisable that she should continue alone in it. Mrs. Maynard, in fact, strongly intimates the feeling which most women have about doctors of their own sex, and this of course causes new and more serious twinges of conscience in Grace's tender heart. She finally determines that she will call in a certain Dr. Mulbridge from a neighboring town for a consultation. Dr. Mulbridge represents that peculiar New England type—a well-educated but rough and uncouth village physician, cynical with a sordid cynicism hardly known out of New England, practical, intelligent, ambitious, and selfish. He is a man of great force of will, and no sooner sees Grace Breen than he determines to make her his wife. Their first interview, however, is of a professional character, for learning that she represents the homœopathic schism, he informs her that as a regular practitioner he cannot possibly consult with her. As a physician, it is somewhat surprising that the heroine should not have known this in advance, but she did not, and his refusal is one humiliation the more. The necessity of some other physician being called in determines her in the end to turn over Mrs. Maynard to Dr. Mulbridge and to sink herself to the humble level of nurse. In the end, after first rejecting Libby she accepts him, or rather she makes him come back by a very distinct avowal of the fact that she had mistaken her feeling for him, while Dr. Mulbridge, who proposes marriage to her about the same time, is sent about his business; and the reader feels that he ought to be. George Maynard is summoned back from the West and becomes reconciled to his wife, whose illness effects a change in her character for the better. Grace at length marries Libby, and finds a field for self-sacrifice and altruistic efforts in the care of the children among her husband's operatives.

Jules Verne, to judge from his present story, has exhausted his resources in the way of fiction, and fallen back on geography and natural history. He has shown a tendency in this direction for some time, but in none of his previous books has so large a proportion of space been occupied by description and information of an encyclopædic kind. The story contained in the 'Giant Raft' is extremely slight. Torres, an adventurer and a bad man, has come into possession in some way of papers very damaging to the reputation of one Joam Jarral, a good man. The papers, in fact, contain conclusive proof of the commission by him of a murder, of which in reality he is entirely innocent. Torres tracks him down for the purpose of making what he can out of his proofs, and when the critical moment arrives insists on Jarral's giving his daughter in marriage in return for his silence. This daughter is engaged to be married to the hero of the tale, and the whole party are going down the Amazon on a raft built by Jarral. The object of the voyage is that the marriage of the daughter and her lover may come off as soon as possible, and the first part of the story closes with the arrest of the innocent Jarral, at the instigation of Torres, the one person who is able to prove his innocence of the charge having just died of apoplexy. It is impossible, even with the most grateful recollection of the amusement derived from Jules Verne's earlier stories, to say that the 'Giant Raft' will be found entertaining. If all the facts contained in it with regard to the flora and fauna of the valley of the Amazon, its physical conformation, and the customs of its inhabitants are true, the book might be used for purposes of reference or as a travellers' guide; but we believe M. Jules Verne has never cultivated that accuracy in matters of science which would tend to make his novels works of authority, and we can only regret his apparent involuntary lapse from his real vocation as a writer of ingenious if improbable fiction.

Mr. Hardy's novel opens with a curious scene

in a Baptist chapel in an English village, of which George Somerset, a young architect, is an accidental witness. On a platform at the end of the chapel an ascetic-looking middle-aged minister stands reading a chapter. Between the minister and the congregation, assembled evidently for some other than ordinary purpose, is an open space in the floor in which is sunk a tank full of water, reflecting the lights (for it is evening) overhead. The people, quietly seated, are evidently waiting for some event to take place. A brougham drives up to the side door, and a lady in half mourning alights, followed by a companion carrying wraps. They enter the vestry room of the chapel, and the door is shut. The service goes on until at a certain moment the door between the vestry and the chapel is opened, and the lady of the brougham comes out clothed in baptismal robes of white. Somerset cannot see her face, but observes she is rather tall than otherwise, and is a girl in the heyday of youth and beauty. She stands upon the brink of the pool and the minister descends the steps at its edge. The candidate for ecclesiastical honors, however, does not follow him; instead of doing so she remains at the brink. He stretches out his hand, but still she shows reluctance, till finally, in a voice audible to all near by, he says, "You will descend?" She approaches the edge, looks into the water, but gently turns away. Somerset then for the first time sees her face, which, like most heroines' faces in modern novels, is described as being, though imperfect, very attractive. It is one which makes the spectator think "that the best in womankind no less than the best in psalm tunes had gone over to the Dissenters." She does not, however, look like a Dissenter, for there is something in her face suggesting that she has had experience of things far outside the circumscribed horizon of dissent. In fact, she might be a thoroughly secular girl, accidentally placed in entirely uncongenial religious surroundings. She has, it seems, agreed to be baptized according to the forms of the church, at her father's dying request, but at the last moment she repents, and, notwithstanding the expostulations of the minister, declines to comply. The minister turns to the congregation, and declares that the baptism is postponed, upon which she withdraws from the church. The lady is Miss Paula Power, daughter of the great railroad contractor of that name, and inheritor of the castle of the De Stancys, around which Mr. Hardy's tale centres.

Mr. Hardy is an ingenious novelist, and by this opening scene, and by applying the term "Laodicean" to his heroine, he has managed to convey to the mind of the reader a subtle doubt with regard to her character which pervades the book almost to the end. Somerset falls in love with her and in the end marries her, but the obstacles thrown in the way of this termination are very numerous. The ancient house of De Stancy is represented by Sir William De Stancy, his daughter Charlotte, who is the intimate friend of the heroine, and his son, Captain De Stancy. Miss Power has unlimited wealth, and an æsthetic taste which her Baptist surroundings have never yet permitted her to gratify. She determines to restore Stancy Castle, and, forming the acquaintance of Somerset, wishes to make him her architect. There is, however, another professional gentleman in the field named Havill, a man of inferior education and taste, but who has stood in confidential relations with Miss Power's father. Out of a feeling of professional delicacy, Somerset suggests that Havill and himself shall compete for the work; that both shall draw designs for the restoration, which shall be submitted to some competent authority, and that the successful competitor shall carry off the prize. To this Miss Power consents, but meanwhile Somerset is installed at the castle for the purpose of making drawings and studies. The villain of the piece, a young man named Dare, now appears on the scene, and for purposes of his own enters into an unholy alliance with Havill in order to beat Somerset in the competition. With this end in view, Dare surreptitiously makes copies of Somerset's sketches, and the result of this is that both plans are pronounced equal in merit. Miss Power of course, under these circumstances, selects Somerset as her architect.

Meanwhile the plot thickens; for it appears that Dare is the illegitimate son of Captain De Stancy, and has formed the design of arranging a marriage between his father and Miss Power, his father being an extremely susceptible person who has only to be exposed to the influence of female beauty to lose his heart and head. The wicked Dare induces the Captain, a weak, amiable man, completely in his son's power, to make a critical examination of Miss Power through an opening of the wall of a gymnasium, where she is in the habit of indulging in somewhat picturesque athletic exercises. There is every reason in the world for regarding an alliance between the fallen De Stancys and the heiress of the deceased contractor as an excellent match, and there is something in the idea which is agreeable to Miss Power herself, as her lack of family rather rankles in her mind. To carry out his design Dare sets on foot all sorts of machinations against Somerset, and succeeds with devilish ingenuity in making Miss Power believe that he is not only a gambler and a drunkard, but that he has gone to the length of having a photograph taken representing him in a disgusting state of intoxication, the fact being that Dare, understanding the secrets of photography, has made a caricature photograph of the unfortunate man for the purpose of furthering his dastardly plot. Disgusted with her lover, Miss Power (who does not at all dislike De Stancy) agrees to marry him, and the day is fixed for the wedding. The marriage does not come off, however, for on the day appointed for it Dare's depravity comes to Miss Power's knowledge, and while in the very act of preparing for the ceremony she learns that she has been grossly deceived. Not knowing the relation between Dare and De Stancy, she insists on the former's immediate arrest, upon which De Stancy, to save his son, is obliged to confess the relationship between them. The marriage is broken off. Miss Power's feeling for Somerset has now reached a point far removed from the Laodicean mean of lukewarmness, and she determines to right the wrong she has done by hunting him up and confessing her error. Her pursuit of him is attended with some difficulties, but reconciliation, it is hardly necessary to say, is in the end complete. At the last moment, the old castle, which has been the scene of much of the story, and has seemed to exist as a sort of gloomy fate overhanging the fortunes of the lovers, is burned to the ground by the incendiary hand of Dare, leaving Somerset and his wife to begin their new life freed from the mouldy associations of the past.

Jessie Fothergill has tried a higher flight in 'Kith and Kin' than in any of her previous works. The duty of filial devotion, and the merit of total self-sacrifice to save a mother's honor, form a noble subject; but to work it out adequately requires a larger knowledge of the world, a clearer judgment of the value of motives and results than the author possesses. So that the total effect of the book is something like that of a grand theme in music rendered by thin voices. Judith Conisbrough refuses the reparation which her cousin Bernard Aglionby is eager to make to her family for the loss of the fortune which they have expected from their grandfather. She refuses because she knows that the will was an old man's tardy repentance for neglect of Bernard, the only son of his only son, disinherited but afterward bitterly mourned. She believes, too, that her mother had prevented a reconciliation with the young widow, Bernard's mother, by a double and deliberate deception. So Judith bears poverty, everything, rather than receive one penny from her cousin, and later refuses his love, as does her sister that of her suitor, lest they shall expose their mother's sin or bring the disgrace of it upon the men they love. Years pass, till just before death, already warned of fatal malady, the mother confesses to Bernard her falsehood, but excuses herself as deceived and angered by the old man himself. The confession sweeps away all obstacles, and the book closes with the happiness of all the four. But such a conclusion presents difficulties. If Mrs. Conisbrough's course of action, after all, was not dishonorable, then the long misery endured by the daughters was futile. Their scruples about marriage were only overwrought sensitiveness. It might be said they did not know the whole story. So much the more, then, should they have shown their loyalty to their mother by believing in her, not by doubting her, and the reader still feels his sympathy wasted. On the other hand, if the sin were indeed so dreadful, so shameful, as the daughters' agony would make it appear, what manner of men are these who pass it over so lightly? There is another discrepancy between conception and execution in the plot within the plot—the story of Bernard's first love. His faithfulness to Lizzie Vane, to whom he had been betrothed in his earlier humble life as a city clerk, until her preference is shown for a man more her equal, is well given. But Lizzie Vane herself, who is meant to be very pretty and only very silly, is made so vulgarly inane that the mere sight of her lowers one's respect for Bernard. Too often the portraiture of character is marred by a pettiness of spirit in details or comparisons. Bernard's first sight of his inheritance, his first sense of possession, is strangely belittled: "The view before him struck with a strange thrill upon him—a thrill half pleasure, half pain. . . . To him it was more—it was a revelation. . . . It was as wonderful to him, and certainly quite as agreeable, as her first ball to a girl of seventeen who has been brought up in strict seclusion."

'Severa' is a new though not very original version of the old story of the guardian who marries his ward. This time she is the daughter of his first love, who deserted him for an actor. There is a very beautiful young widow who would work mischief if she could. But why are such women made such *obvious* schemers? It is too much to expect admiration for a hero who can be even for a day the victim of such transparent wiles. The merit of Mrs. Wister's translations is so well known that it is a surprise to find such mistakes as, the "enormity" of a debt; "defiant" for mistrustful. "One fell in the fight for freedom," means anywhere and any time, whereas the "War of Deliverance" is as definitely accepted a phrase in English for the struggle against Napoleon in 1813–15, as "Freiheitskampf" is in German.

An Essay on the History of English Church Architecture, prior to the Separation of England from the Roman Obedience. By George Gilbert Scott, F. S. A. With numerous illustrations. New York: Scribner & Welford. 1881.

THIS important and scholarly work, by a son of the late Sir Gilbert Scott, is an attempt to show how the Christian architecture of England, from

the earliest times to the end of the fifteenth century, is a continuous and orderly evolution, having its spirit in the history of Christianity itself, and its form in the internal and external conditions of society. The author treats the subject as an essential part of the great fact of Christianity, and, unlike other historians in this branch of inquiry, is not content to begin his story abruptly with the Saxon Domination, but shows the natural effect of traditions from the earliest forms of the Church in Asia Minor and ancient Rome. These relations are traced with curious and patient research, and the later and more glorious developments of the thirteenth, fourteenth, and fifteenth centuries are illustrated with an animation of description, a boldness and ingenuity of speculation, and a fertility of knowledge rare to meet with in works of this character. Much of the book necessarily traverses well-worn paths; but no student, however versed in the literature of the subject, can fail to notice in the presentation even of the most familiar facts a freshness of method at once interesting and instructive. The discursus upon ecclesiology and its effect upon the distribution of churches is perhaps the most valuable part of the book. On the whole, we commend it as the most noticeable contribution yet made by an Englishman to this important branch of archæology. The style of it is lucid, and not without good literary form; but even in this brief notice we cannot avoid condemning the singular affectation of Gallicism in the use of small initial letters in such phrases, as "the irish churches," "the saxon period," "the roman domination," etc.

My Boy and I; or, On the Road to Slumberland. By Mary D. Brine. New York: George W. Harlan. 1881.

THE incongruities of this volume are too annoying to be passed by without a word. A number of poems, all on the fertile theme of a mother's love for her baby boy, have been printed in sepia with black-letter type, on loose leaves of tinted paper. Several pages of "process" reproductions of curiously chaotic inscriptions and sketches, mingling carelessly imitated antique letters with fragments from a sketch-book and a tangle of Blake-like lines, have been sandwiched between these poems. The whole, not forgetting a song with music, has been bound to its flexible covers of Russia leather by hanks of floss silk. The studied rudeness of the exterior decoration, combining the ecclesiastical and the Japanese; the obtrusiveness of the quaintly accidental and the weird element in the illustrations; the discord between type and text; the lavish luxury of material and workmanship, prove that the intention of the volume is to cater to a hyperæsthetic taste which demands novelty with dyspeptic impatience. Whatever merit there may be in the poems is swamped by the unsympathetic medium through which they are presented to the reader. The book will have success as a seasonable novelty. As an artistic production it is not likely to add to the reputation of Louis C. Tiffany & Company, Associated Artists, who are responsible for its arrangement.

HYGEIA HOTEL,
OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. mails, landing only twenty rods from the hotel, which is substantially built and comfortably furnished; has two Otis hydraulic passenger elevators, gas, Creighton's oral annunciator or electric bells in all rooms; water: rooms for bath, public or private, including *Hot Sea*, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or resting-place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Has during the cold weather over 15,000 square feet of the spacious verandas (of which there are over 35,000 square feet encircling the houses on all sides), enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity, MALARIAL FEVERS BEING ABSOLUTELY UNKNOWN. The record of the Meteorological Observatory for the past ten years shows an average temperature of 60°, 74°, 76° in summer; 70°, 59°, 40° in autumn; 45°, 44°, 42° deg. in winter; and 48°, 52°, 63° in spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

Kalani of Oahu.
A THRILLING ROMANCE OF HAWAII.
By Dr. C. M. NEWELL, of Boston. 1 vol. 12mo, illustrated, 415 pp., $1 50.

"It is a strange, bewildering story, and in subject and execution is unique in literature. The author's style is luxuriant, and well befits the scenes he describes. His pages abound in glowing description and tropical imagery, and the various characters are painted in strong and effective colors. No one who reads the book will forget it, and it is not too much to say that a more distinct and definite idea of the ancient people of Hawaii, their customs and characteristics, and of the country itself, may be had from its perusal than from any so-called historical narrative yet published."—*Boston Transcript.*

The Nation.

NEW YORK, THURSDAY, JANUARY 12, 1882.

The Week.

No Speaker of the House of Representatives has ever succeeded in pleasing everybody in the formation of the standing committees. But Mr. Keifer has certainly been more successful than any one of his predecessors that we can remember in decidedly displeasing a large majority of the House over which he presides. While the grumbling of personal disappointment is always heard after the announcement of the committees, there has never been more pointed and more well-founded criticism of a Speaker's action than there is now. The fact is that Mr. Keifer, in making up the committees, has regarded neither the peculiar fitness of certain members for certain duties, nor the courtesies of the House, nor those valuable and time-honored traditions according to which a regular promotion of the older members on the committees takes place. While omitting to make several assignments demanded by every consideration of propriety as well as public interest, he has made others of a decidedly improper character. The composition of the Ways and Means Committee, and of the committees on the Navy and on Naval Expenditures, are of that kind; likewise the treatment of Mr. Kasson, and of some prominent members of the minority, who, in a long course of public service, had acquired certain specific knowledge and experience which would have been of great value in the discussion in the committees of some of the most important questions coming before Congress. Not only the members of the House of Representatives are dissatisfied with the Speaker's work, but the people at large have reason to be so too.

It is no wonder, therefore, that the general discontent should have found a voice in an open protest on the floor of the House, and whatever may be thought of the personal merits or demerits of Mr. Orth, his complaint of unfair treatment will be generally regarded as well founded, and his proposition that henceforth the composition of the committees shall be effected by the House of Representatives itself, instead of being left to the arbitrary discretion of the Speaker, will receive very serious consideration. There never has been any valid reason why so immense a power as the formation of the committees, and thereby an almost decisive influence upon the legislative action of the House, should be entrusted to one man instead of being exercised by the House itself. At first sight it might be thought that the House is too unwieldy a body to accomplish so delicate a task; but in point of fact it is done in the Senate, and the machinery employed there for its accomplishment would work with equal smoothness in a larger body. This machinery is very simple. The members of the majority meet in caucus and appoint a small committee in which all the different shades of the majority are properly represented. That committee is charged with the duty of preparing a list of the standing committees of the Senate. While preparing this list the committee is accessible to the advice of individual members. It may also consult the minority as to their wishes. When the list is prepared it is reported to the full caucus, and then either accepted as it stands or amended as the caucus may see fit. On the whole, the Committees of the Senate, so formed, give general satisfaction, and there seems to be no reason why the system in which they are made up should not work as well in a body of three hundred as of seventy or eighty members.

The Mormon literature, if we may call it so, grows in volume every day, and will apparently have reached huge proportions by the time Congress comes to deal with polygamy. The *Christian Union* publishes a vigorous unfinished article on the subject from the pen of the late Dr. Bacon, of New Haven, but he did not get further in the way of suggestion than recommending the substitution of absolute for popular government of the Territory of Utah. An illustration at the close seemed to indicate that he meant to argue in favor of treating polygamy as adultery simply, and making adultery a penal offence; and the *Christian Union*, in pointing this out, asks for the treatment of adultery as a crime by all State legislation—the absence of which it considers a serious defect in "our Anglo-Saxon legislation." It overlooks the fact that adultery is treated as a crime in some States—Massachusetts for instance; but even there prosecutions for it are very rare, although the offence is probably frequent enough. The reason is that it is extremely difficult of proof, even when the husband or wife is eager to prove it, almost impossible when both are determined, as they would be in Utah, to cover it up. It may now be said that thus far public opinion does not go further than asking for the absolute or nearly absolute government of the Territory by United States officers. This is undoubtedly a necessary beginning of any national action against Mormonism, but we are now ready for some account, from those who are familiar with the condition of the Territory and with Mormon habits, of the precise mode in which polygamous households should be broken up, supposing that monogamists have obtained from Congress all the legislation they desire. On this point few except those who live in the Territory can speak with authority. On one matter—and this the most important of all—the feelings of the Mormon women about "the peculiar institution," the rest of the country is still strangely ignorant.

The plan of solving the Mormon problem by dividing the Territory of Utah between the adjoining State and Territories, brought out in the *Herald* despatches on Friday morning, would be a very good one if the result would necessarily be to leave the annexed Mormons in a minority in each community. The division of the Territory, however, while it would wipe out Utah, would by no means wipe out the Mormons, or deprive them of their right of locomotion; and even if they were at the outset in a minority in each annexing community, there would be nothing to prevent their moving into any one of them in sufficient numbers to swamp the Gentiles completely, and thus start the "Mormon problem" over again in a new place. Wyoming, for instance, has a population of only 20,000 (partly Mormon already), while there are over 100,000 Mormons in Utah. The Territory of Wyoming is to a small extent adapted to agriculture, and, in fact, it is for this reason that the Mormons have emigrated into it already. The geographical details of the scheme as they appear in the *Herald* are, by the way, a trifle "mixed." Montana is mentioned as one of the Territories which is to have a part of Utah, but as the nearest part of Montana is a hundred and twenty miles away, and the Territories of Wyoming and Idaho intervene, no such bad luck can happen to that innocent monogamous community.

The letter of the late Postmaster-General James to the President, showing that it was impossible without further legislation to exclude from competition for postal contracts men who had already imposed bogus bonds upon the Government, was sent to Congress on the 6th of January. The letting of a number of contracts was fixed for the 7th. We learn from the New York *Times*, that on the very day that some of the dealers in these straw bonds were arrested, they "were very busy completing bids for Star service to be filed in the Post-office Department before 3 o'clock in the afternoon." The fraudulent proceedings in making Government contracts, and the impossibility not only of putting a stop to them but even of preventing their continuous repetition by the same men, have long been familiar. Now that the practices have been made so conspicuously ridiculous in these Star-route cases, perhaps the system will be overhauled. Mr. James's letter reached Congress too late to protect the Government in the letting of January 7; but with its facts before them, and in view of Saturday's performances, Senators and Representatives ought not to allow another letting to take place without giving the department power to exclude notorious swindlers from competition.

It is now said, apparently with authority, that the reply of the British Government to Mr. Blaine's second despatch on the subject of the Panama Canal will be that it does not approve the modifications suggested in the Clayton-Bulwer treaty. The negotiations thus far may therefore be summarized as follows: The United States—We propose to take care of the Panama Canal ourselves. Great Britain—You can't, because you have agreed already to let us take care of it with you. The United States—You refer to the Clayton-Bulwer agreement; we will modify it. Great Britain—We won't do anything of the kind. This last reply must be explained by the

unfortunate tone of Mr. Blaine's despatch, his minatory references to the irresistible power of the United States, and the undiplomatic character of his arguments. A conciliatory despatch would have opened the way to further correspondence; but Mr. Blaine left nothing open to England except to say yes or no. There is no way to get rid of the obligations of the Clayton-Bulwer treaty now except to declare the convention entirely obsolete and withdraw from it, on the ground that the treaty contemplated the immediate digging of the canal, that thirty years have elapsed without anything being done, that the relations of the United States to the subject have entirely changed, and that all negotiations to secure a general guarantee of neutrality have broken down.

The House Committee on Foreign Affairs has, it is said, begun an investigation into the diplomatic negotiations with regard to the Peruvian troubles, and there is a general desire that the State Department shall produce the whole correspondence. Friends of Mr. Blaine believe that it will show that Mr. Hurlbut not only transgressed instructions, but that he entered into various speculations of an improper character. On the other hand, Mr. Hurlbut's friends "claim" that he did nothing but obey instructions, and that the trouble was that Mr. Blaine first ordered him to support the demands of the Peruvian Company, and later to do nothing at all about the matter. The Peruvian Company, too, thinks that it was badly treated and left in the lurch. According to the *Herald* despatches, "there is no doubt that somebody in authority" attempted to coerce Chili and persuade Peru into a recognition of the Cochet and Landreau claims; that this was done at a time when Peru was prostrated and impoverished, and when the Peruvians were ready to recognize any claims, however monstrous or groundless, if in return they could be assured of the intervention of the United States in their favor against Chili; and that this country was made to play an extremely despicable part in South America, figuring as the agent of claims which Peru had repeatedly rejected as worthless, and which there is no pretence that she would have acknowledged except as payment for our getting Chili off her back." If any such person exists except in the imagination of the various parties to the present somewhat complicated controversy, he ought to be identified and exposed.

The humors of Western life are numerous and varied, and they appear to grow more so. A few weeks since an insolvent banker was held for ten days in the custody of a mob in Kansas, with the penalty of death hanging over him, in order to compel him to make a complete surrender of his assets, and the details of the negotiations between him and his captors were telegraphed to all parts of the Union and read with much interest by the public, and particularly, doubtless, by the Governor of the State. Last week the citizens of Kentucky assembled in thousands along the banks of the Ohio River to witness the very diverting spectacle of the sheriff and his posse, with prisoners in custody, flying on board one steamer from a mob pursuing in another. The chase, like most stern chases, was a long one, covering ninety miles in all, and the occasion seems to have been highly enjoyed by the crowd, who were summoned by telegraph to see the boats go by. The prisoners were guilty of a very atrocious crime, and the mob came into the town of Ashland ostensibly to see that they had a fair trial, and were much disgusted when they found that the local judges and the sheriff had no confidence in their desire for orderly and just procedure. In passing any national bankruptcy law the Kansas system merits attention. The defect in all bankruptcy legislation is that the penalties and processes provided by it to procure the surrender of the bankrupt's estate are insufficient. There can hardly be a doubt, that if the creditors were permitted to take him into custody and examine him with a rope round his neck, dividends would be much increased.

Elderly Southerners who are in the habit of groaning over the disappearance of the good old times when an insult always led to a fight, must be greatly disgusted with the pacific manner in which the trouble between Mr. Blackburn and General Burbridge seems likely to end. There does not appear to be the remotest chance of a duel, and this is not for lack of language calculated to lead to one, either. In his letter of December 27, Mr. Blackburn said that he had never spoken unkindly of any United States officer, "unless his acts put him beyond the pale of civilized warfare, in the twilight of barbarism, or worse, in the domains of actual crime." In reply to this General Burbridge has written to say that he is not such an officer at all, and that he can prove it by documentary evidence; and that while in Kentucky the only connection he had with the twilight of barbarism or the domains of crime was to punish any outlaws found at large in them. General Burbridge also thinks that Mr. Blackburn ought to have had something to say with regard to "the attempted introduction of clothing infected with the yellow fever into the Northern cities during the war." We venture to predict that Mr. Blackburn will regard this as wholly irrelevant. He has a voice of great carrying power, which he uses to good effect in the House of Representatives, but he seems a peaceable man.

The *Tribune* repeats with much positiveness the story that the Judge-Advocate-General proposes to set aside the finding of the court-martial in the Whittaker case, on the ground that the evidence does not sustain it. It is quite proper, considering the way in which ordinary court-martials are made up, that the President, or Commander-in-Chief, should have the power of overruling their decisions. But the court-martial which tried Whittaker was not an ordinary court-martial. It was a carefully selected one, composed of officers believed to be free from bias either about West Point or colored people, and unusually competent to conduct a judicial inquiry; and the object of so selecting it was to satisfy the public that, whatever disposition was made of the case, it would be one worthy of confidence. If the Judge-Advocate-General, who did not hear the evidence (which included Whittaker's own story), should now set aside the decision, it would show that in his opinion he was competent to try the case in the beginning, and that his judgment, formed in Washington, would have satisfied the public, and that the money spent on the court-martial was wasted—all of which, we venture to say, would be a great mistake. A touch of the comic is given to the story by the assertion that he "deals plainly and fearlessly with the causes which led to the ostracism of Whittaker at the Military Academy," and "has not refrained from criticism of General Schofield's report." But then these things do not affect in any degree the authority of the court-martial. None of its members were at West Point when Whittaker was ostracized, and they were chosen as persons not likely to share General Schofield's opinions. The investigation has left some of the enemies of the Military Academy in a somewhat ridiculous position, but General Swaim should not help them to escape from it by anything which seems to bring judicial proceedings into contempt.

A case of much interest to journalists and proprietors of newspapers was decided last month in San Francisco. It was a libel suit brought by the proprietor of the *Evening Bulletin* and *Morning Call*, "both dailies," against Michael De Young, proprietor of the *Chronicle* The plaintiff alleged that the *Chronicle* charged him with selling the influence of the *Bulletin* and *Call* to the Central Pacific Railroad; that for the sum of about $30,000 the attitude of these papers changed from severe censure of the company to praise and support of it. Most journalists in this part of the country would regard this as a pretty serious charge. The defendant's counsel took a different view of it, and demurred to the complaint on the ground that the statement was not libellous. The Judge in rendering his decision stated the question presented to the Court to be, "Is it morally or legally wrong for a person to advocate a project, matter, or claim for pecuniary or valuable consideration? If it is, then the action is libellous; otherwise it is not." He disposed of it as follows:

"Talent is as much the capital of the advocate, the lawyer, and the editor as merchandise is of the merchant; he has as much right to sell his talents as the merchant his merchandise. The lawyer, the minister, the parliamentary advocate, the lecturer, the author, sells his talent, and he is not the less respected for so doing. The greater his learning, industry, eloquence, and the esteem in which he is held, the greater his pecuniary compensation. It seems to me that it is no more libellous to accuse one of selling for gain the support and advocacy of his newspaper than it would be to accuse the merchant of selling for gain his merchandise. The demurrer is sustained."

Judge Allen will probably be reversed on appeal, as his view of the matter is a novelty in jurisprudence. That commonly taken is that there is a difference between the sale of journalistic "talent" and legal services or merchandise. There is no objection to a lawyer's retainer, because he appears in court to advocate claims by fair argument, and does not make a pretence of doing anything else. A more exact parallel than that suggested by

Judge Allen would be the sale by the judge, in deciding the case, of his "talent" to one side or the other. A newspaper professes to hold a judicial position with regard to such matters as railroads, and to give unbiased discussion and criticism to the public. Consequently, if it disposes of its talent in the way alleged to have been done by the *Bulletin* and *Call*, it imposes upon the public and commits a fraud. To say that a man is an impostor is libellous, whatever "talent" he may have for sale. Otherwise there would be no reason for half the newspaper "controversy" that we see among our brethren around us. To say of a newspaper that "Jay Gould owns it" or "controls it," far from creating any feeling, would be as indifferent a matter as to say that Jay Gould had bought a hat or retained counsel. And to call a newspaper "venal" would rather be a compliment than a reproach. Judge Allen's decision will hardly stand.

The January disbursements of interest and dividends, including the interest on the public debt, have already lowered the rates on loans 1@2 per cent., and augmented the reserves of the banks. The market for foreign exchange, which was depressed to the point at which gold could be imported, has, with the return of easy money here, advanced so that there is no longer a prospect of gold imports. The trade exchanges between this and foreign countries have now for several months been running in a way which leaves little room for expecting that gold imports will again be renewed on a significant scale. The lesson of the exchanges is rather to prepare for gold exports when the next important foreign movement of specie takes place. The latest returns of the foreign commerce of the whole United States are up to December 1. For the four months preceding that date the merchandise imports exceeded those of the corresponding time of the year before by $22,460,000, while the exports were $13,000,000 less; and this reversal of the course which foreign trade has taken since the resumption of specie payments has been as marked at points from which returns could be obtained in the last month as during the four months preceding December 1. At the Stock Exchange there has been an advance in the prices of railroad stocks, mainly because renewed efforts have been made to bring about a settlement of the railroad war. These efforts have not prevented the roads from again reducing rates, so that freight is now taken from Chicago to the seaboard at lower rates than ever. Nevertheless, they have encouraged buying of stocks, because they promise to lead to favorable results, and because the latest reduction in rates is thought to be temporary. The chief movers toward a settlement are foreign bankers, whom some of the railroad managers can hardly afford to oppose, since they represent foreign investment holders of the securities of these companies, as well as a large domestic clientèle.

When Senator Morrill stated so confidently that immigration into this country depended upon the continuance of the protective system, and would cease if that system was relaxed, we doubt if he had glanced over a table giving the immigration for ten years back. It forms one of the most curious and interesting chapters in the history of immigration into this country from European nations (year ending June 30):

1872	351,265	1877	105,092
1873	396,380	1878	100,832
1874	261,232	1879	133,070
1875	181,635	1880	347,747
1876	120,103	1881	550,000

For the year ending June 30, 1881, the total immigration from all parts of the world was 669,431, and we estimate that of this number at least 550,000 came from Europe. Now, according to the Senator's theory, protection must have become very efficient in 1879, 1880, and 1881, and have been relaxed in the previous years; whereas the contrary is the real state of the case. During the depression that followed 1873 the tariff was a heavier burden to carry than it is now, when trade is good and manufacturers are calling for more protection. We know that the Senator does not believe in taking examples from the experience of European nations, but has he noticed the results that followed Bismarck's protective schemes? Emigration increased more than three hundred per cent. in one year. But if emigration and immigration are greatly influenced by protection, why should it work so differently in the two countries?

It seems to be determined by the Gladstone Ministry that they will not begin the work of the coming session of Parliament without having secured the "clôture," or the American previous question, in some shape. One of the Parnellites, O'Donnell, has announced already in the most cynical manner that his group is going to act with the Conservatives, by which he presumably means, not the moderates, led by Sir Stafford Northcote, but the irreconcilables, led by Lord Randolph Churchill and Mr. James Lowther. This means, of course, that they will again try obstruction, on the general ground that everything is fair against Gladstone. The Ministry will, therefore, be compelled to provide harness for them at the very outset, or, in other words, to arm the majority with the power of cutting off debate and bringing on a final vote at any moment, without the restrictions imposed on the application of the existing urgency rules, which requires a two-thirds vote in a house of 300. The temper of the younger English Tories has become curiously like that of the French Bonapartists. They have got to hating the Ministry so vigorously that they almost despise the institutions which it administers. There is a striking resemblance between the Churchill billingsgate and that of Paul de Cassagnac and Cunéo d'Ornano.

The avowed adhesion of Lord Derby to the Liberal party, after three years of what we may call novitiate, cannot but be considered a strong reinforcement for the Gladstone Ministry. What gives his profession of faith most of its importance just now is that he has chosen to make it at the moment when the Liberal policy in Ireland is attacked with great vehemence as hostile to property, if not to social order, and the working of the Land Act in Ireland has been cited with a certain amount of plausibility in support of these charges. The Liberals have made free use of the continuance of Lord Hartington in the Cabinet as an answer to these attacks. He is the heir of a dukedom and of vast estates, and a man of cold and cautious temper, without a particle of sentimentality or fervor of any kind in his composition, and it is characteristic of the English political mind that his presence in the Ministry should deprive the Tory accounts of the dangers of Radical rule of much of their force. His example, however, is not likely to be of nearly as much value as Lord Derby's conversion. Lord Derby is himself a great landed proprietor. He not only has not abandoned Liberalism, but has come over to it. Moreover, he is a man of even colder temper than Lord Hartington, and ascribes even less political force to sentiment. He has for many years almost made a profession of caution, and has, indeed, pushed it to the verge of hopelessness. He might be pronounced with perfect accuracy the safest politician in England—meaning by that the least sanguine, the most incredulous as to the efficacy of anything new, or as to the usefulness of any species of emotion. His occasional addresses at working-class meetings on such subjects as coöperation, savings, and the land question, could hardly be surpassed as expositions of the philosophy of common sense and worldly prudence, and of the absurdity of getting excited, or, in other words, of the motives which must sway the ordinary Tory mind. There are not many ordinary Tories, however deficient in humor, but must feel it a little ridiculous to be afraid of Gladstone or Chamberlain on social grounds, when the head of the house of Stanley acknowledges that he trusts them.

About Ireland, however—and this perhaps adds to his value as a convert—Lord Derby is not hopeful. He does not believe the Land Act, or any other act, will reconcile Ireland to English rule, but believes it to be good legislation nevertheless. He dislikes all investments which promise quick returns, and he does not think anything can be invested in Ireland in the way of conciliation or reform which will produce quick returns. He would put down the Irish nationalist movement simply by proving its hopelessness, and he would prove its hopelessness in the characteristic English way, by opposing to it immovable, overwhelming, and continuous force. It is probably here that his influence is likely to be injurious. He cites the dealings of the United States with the Confederates as an example of what may be done in suppressing discontent by the unflinching use of superior physical power. But the illustration is not of much value. The Southern rebels, whatever their faults, were men of the same faith and race as their Northern conquerors, and they had that inestimable quality which forms so large a part of the Anglo-Saxon political sense—of readiness to accept the inevitable. The Irish, on the other hand, like all the sentimental races, have shown a capacity for enduring hate, on which the English masterfulness—to which Lord Derby seems still to trust—has for centuries spent itself in vain, and which apparently is as constant as English power is likely to be. This must be overcome, it is plain, by something better than big battalions.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

CONGRESS resumed work on Thursday. The session of both houses on this day was short, and the attendance in the House of Representatives was small. The only interesting feature of the proceedings was the protest of Mr. Orth, of Indiana, against the action of the Speaker in assigning him to certain committees. There has been an unusual amount of dissatisfaction among the members of the House in regard to Mr. Keifer's assignments to the committees, and Mr. Orth's protest met with considerable sympathy. Mr. Orth announced that it was his purpose at an early day to propose a change in the method of selecting committees. He said he considered the present system "emphatically a one-man power, and such power is always dangerous and in conflict with republican government." Mr. Orth then went on to state his own personal grievance. He said in substance that with two exceptions he had represented his constituents in the House for a longer period—twelve years—than any other Republican member; that during that period he had been chairman of some and member of other very important committees; that he considered his assignment by Mr. Keifer to the second place on the Committees on Foreign Affairs and Rules as an injustice to himself and his constituents, and that he respectfully asked the House to excuse him from service as a member of the Committee on Rules.

The debate on Mr. Sherman's Refunding Bill began in the Senate on Monday. Mr. Sherman spoke in support of it, and Messrs. McPherson and Bayard in opposition. Mr. Bayard thought that if the rate of interest on the new bonds were no higher than three per cent., when harder times came any fluctuation might put them below par, which would be a stain on the national credit. In the House the subject of a commercial treaty with Mexico was brought up, and Mr. Whitthorne, of Tennessee, offered a resolution authorizing the President to open negotiations with the Mexican Government upon the subject of such a treaty.

The appointment of ex-Senator Howe as Postmaster-General necessitates the appointment of another delegate to the International Monetary Conference which meets in Paris in April next. This is said to have been one of the principal topics of conversation at the Cabinet meeting on Tuesday.

The President has nominated Mr. Samuel C. Parks, of New Mexico, and Mr. Joseph Bell, of New York, to be Associate Justices of the Supreme Courts of Wyoming and New Mexico respectively.

Justice Gray took his seat on the Supreme Bench for the first time on Monday.

It is understood that Judge Marcus Morton, of the Supreme Court of Massachusetts, has been offered, and has accepted, the Chief Justiceship of that court in the place of Judge Gray.

Postmaster-General James surrendered his department to Mr. Howe on Friday. Mr. James has been in office not quite ten months, and during that time has thoroughly reorganized the department. True business principles have been applied everywhere, and the efficiency of the whole department greatly increased. The net reduction in the cost of the Star and Steamboat service from March 1 to December 31 amounted to $1,439,163. The best illustration of the success of Mr. James's administration, however, is that it is expected that for the quarter ending December 31 the department will have been self-sustaining. The calculations showing the relation of expenses to receipts will not be made for some weeks, but it is believed that they will show that the department now pays its own way.

The witnesses in the Dorsey Star-route case have been summoned to appear before the Grand Jury, in Washington, on the 21st of January.

Reports received at the Post-office Department at Washington indicate that the smallpox is still spreading throughout the country. A letter was received from a postmaster in Pennsylvania, saying that a doctor who is treating a number of cases in the town, persists in calling at the office for his mail matter, and that many of the citizens have informed the Postmaster that they will refuse to receive their mails if these visits are allowed. The Postmaster has been informed that he has no authority to prevent persons from calling for their mails, and that, therefore, the matter must be settled between the citizens and the doctor.

Drs. Cabell and Turner, the president and secretary of the National Board of Health, had a conference with the President on Wednesday, the 4th, in reference to the best methods of providing against an epidemic of smallpox. They presented an address, recommending that all immigrants not recently vaccinated be compelled to undergo that operation, and that quarantine regulations be strictly enforced. The President said that he would consider the matter, and would probably make it the subject of a special message to Congress.

It is said that a strong pressure is being brought to bear upon the President by prominent Republicans and journals of the South, to have Mr. Hunt retained as Secretary of the Navy, the claim being made that he is a "representative Southern Republican in the broadest sense of the word."

In the Guiteau case on Wednesday Mr. Scoville filed an affidavit requesting permission to call nine more witnesses, stating what he expected to prove by their testimony. The Court decided against him in this matter, but permitted him to call witnesses to show that on the day of the shooting Guiteau had claimed to be inspired by God. Mr. J. J. Brooks, chief of the Secret Service division of the Treasury Department, was called to the witness-stand for this purpose, but he swore that Guiteau had not made any such claim to him. A letter, written by the assassin's father in 1875, in which he pronounced his son a fit subject for the lunatic asylum, was read. This finally closed the testimony for the defence. Mr. Davidge then submitted the law points on which the prosecution desired the Court to rule. They were in brief as follows:

First. If the accused, at the time of committing the act, knew the difference between right and wrong in respect to that act, he is responsible.

Second. If the accused knew what he was doing, and that what he was doing was contrary to the law of the land, it is no defence that when he committed the act he really believed that he was carrying out an inspiration of divine origin.

Third. Insanity would constitute a defence if by reason of disease the accused, at the time of committing the act, did not know what he was doing, or did not know that it was contrary to law.

Fourth. The prisoner's claim that his free agency was destroyed, could afford no excuse if he knew what he was doing, and that it was contrary to law.

The court then adjourned until Saturday to give the defence time to prepare their points. In these the defence take the ground that where sanity is in question the prosecution must prove sanity beyond a doubt, and failing this the prisoner must be acquitted. Saturday was occupied by both sides in arguing upon the legal points, and the jury were granted leave to be absent from the court-room. Guiteau's interruptions on this day were extremely provoking. On Monday the arguments on the law points were continued, Mr. Scoville concluding for the defence. Mr. Scoville and Judge Porter engaged in one or two rather sharp altercations on Saturday and Monday and were mildly rebuked by Judge Cox.

On Tuesday Judge Porter concluded the argument for the prosecution on the law points. His argument was highly rhetorical, and contained many scathing remarks in regard to Guiteau and his counsel Mr. Scoville. Judge Cox then rendered his decisions on the law points. They bore in the main against the defence. The court then adjourned until Thursday, when the argument to the jury will begin.

At the annual meeting of the Boston Memorial Association, on Wednesday, the executive committee was instructed to collect subscriptions for a statue of President Garfield, to cost not less than $10,000.

General Fitz-John Porter, who was sentenced by a court-martial in 1863 to be "cashiered and forever disqualified from holding any office of trust or profit under the Government of the United States," has appealed to President Arthur for a rehearing of his case. He accompanies his appeal with a letter from General Grant in which the latter says that he has reviewed the testimony in General Porter's case, and has come to the conclusion that he has done "a gallant and efficient soldier a very great injustice in thought and sometimes in speech." General Grant states in "justification for his injustice" to General Porter that he read his defence in connection with a sketch of the field on which the offences were said to have been committed, which he has since ascertained to have been totally incorrect, as showing the position of the two armies. In conclusion, General Grant asks that the "whole matter be laid before the Attorney-General for his examination and opinion." In addition to this, General Porter has sent to President Arthur a letter from General Terry, in which the latter says that for years he has done General Porter "wrong in thought and sometimes wrong in speech."

A "Territorial-division convention" assembled at Fargo, Dakota, on Wednesday, the 4th, to agitate the division of the Territory at the forty-sixth degree of north latitude, the admission of the southern half as a State, and the northern half as a Territory. There was a large attendance of representatives from the counties, and resolutions were adopted calling for the division "without delay." A number of delegates were appointed to visit Washington and press the matter.

The Republican caucus nominated at Des Moines, Iowa, on Tuesday, James H. Wilson as Senator from that State for the long term, and James W. McDill for the short term. Secretary Kirkwood declined to be a candidate.

A private meeting of citizens was held in Philadelphia on Thursday to start a movement to reorganize the departments of the city government. Their plans are not yet ready to be disclosed to the public, but Mr. Colesbury, the secretary of the organization, said that responsibility, with proper checks and counterchecks, fewer departments, more economy, and greater efficiency, were some of the reforms aimed at

The "deadlock" in the New York Legislature still continues.

Governors Lowry, of Mississippi, and Foster, of Ohio, were inaugurated on Monday.

A remarkable occurrence took place in Kentucky on Thursday. The three principals in the murder of the Gibbons family at Ashland in that State were put on board a steamer on the Ohio River, which was to convey them to Maysville in order to escape a mob that had assembled at Ashland, presumably with the intention of taking the law into their own hands and lynching the murderers. The mob thereupon seized another steamer and started in pursuit. The chase was an exciting one for a time, but finally the boat conveying the prisoners was met by a detachment of militia, who escorted them in safety to Maysville. Great crowds assembled along the banks of the river to watch the chase, and the excitement is reported to have been intense. The mob afterward held an indignation meeting, at which it was asserted that their object was

to see that the murderers had a fair trial—an assertion which afforded some amusement to outsiders.

On Saturday news was received of the death at Rome of Richard H. Dana, the well-known lawyer and writer. He was born at Cambridge, Mass., in 1815, and early achieved literary distinction by his 'Two Years Before the Mast,' a work describing his voyage as a common sailor to California. In 1868 Mr. Dana ran for Congress in Massachusetts against General B. F. Butler, but was defeated. In 1876 General Grant nominated him as Minister to England, but the Senate refused to ratify the nomination.

On Saturday Edwin W. Stoughton, ex-Minister to Russia, died in New York. Mr. Stoughton was born at Windsor, Vermont, in 1818. He achieved considerable distinction as a lawyer, and for a time was prominent in politics as a warm personal friend and adherent of General Grant. He was appointed Minister to Russia by President Hayes in the fall of 1877. Other deaths of the week have been those of William Harrison Ainsworth, an English writer of fiction; John Cotton Smith, a well-known American clergyman and theologian; John William Draper, an American scientist of distinction, and Clement Comer Clay, who was United States Senator from Alabama before the war and afterward a Confederate Senator. Mr. Clay was one of the most ardent champions in the Senate of the doctrine of State Rights.

FOREIGN.

An imperial rescript, dated January 4, countersigned by Prince Bismarck, has been addressed to the Prussian Ministry. The rescript defines the relations of the Emperor and the Ministers, and reminds the latter that they are the servants of the King and not representatives of Parliament. The Emperor states that it is therefore his will "that in Prussia and also in the legislative bodies of the Empire no doubt shall be allowed to attach to my constitutional right or that of my successors to direct personally the policy of the Government." He goes on to say that he does not wish to restrict the freedom of elections, but that "the functionaries entrusted with the execution of my official acts are bound to support the policy of my Government even at elections," and that he shall expect all officials to hold aloof, at elections, from all agitation against his Government. The rescript is a curt enunciation of Prince Bismarck's ideas of constitutional government in Germany, and is said to have excited a deeper and more universal sensation in the Empire than any event since the parliamentary conflict twenty years ago. The German press is very cautious in commenting upon the decree, but it is very generally disapproved of, and is believed to be the forerunner of a shortly impending crisis. It is said that the rescript will be debated in the Prussian Diet.

It is announced that the Emperor William of Germany has decided to proclaim the Crown Prince Frederick William regent on the 22d of next March, which is the occasion of the Emperor's eighty-fifth birthday.

In a debate in the Reichstag on Monday, on the development of the factory laws, Prince Bismarck said that the Emperor desired to settle the workmen's question during his lifetime; whereupon Herr Richter vehemently attacked Prince Bismarck, reproaching him with dragging the name of the Emperor into the debate whenever a doubtful question was before the House. Bismarck left the Chamber while Herr Richter was speaking.

Prince Bismarck has sent a "courteous but very explicit" note to the Italian Government, stating that, in his opinion, the Pope's independence cannot be regarded as a question for Italian home politics, but should be considered an international question. Prince Bismarck adds that it is his intention to promote a meeting of a congress of the powers for the purpose of making the guarantees of the independence of the Holy See stronger and more effectual than they are at present, and that Russia, Austria, Germany, England, and Spain favor the holding of the congress as soon as possible.

The Cardinal Archbishop of Rouen has published a letter describing the position of the Pope. He urges the Italians to choose another capital and leave Rome to the Pope in order to avert the necessity of his departure from that city.

It is stated that all arrangements for the departure of the Pope for Malta, in case he deems it impossible for him to remain in Rome, have been completed.

The Prussian Diet has been summoned to meet on January 14. The Government's Ecclesiastical Bill empowers the Prussian Government to provide for a conciliatory administration of the May laws.

The provisions of the Naturalization Treaty with America have been finally extended in their operation all over Germany.

The English and French Consul-Generals at Cairo received from their respective Governments, on Friday, a collective note "explaining in unmistakable terms" that England and France, who placed the Khedive on the throne, are determined to maintain his authority against any attempts to create disorder. The note is said to be directed mainly against Turkish interference in Egypt.

The Egyptian Chamber of Notables are reported to have been elaborating standing orders in which it is proposed to establish ministerial responsibility to the House, except in regard to international obligations. Sherif Pasha delivered a speech dwelling upon the necessity of observing these obligations, which is said to have been "loudly cheered."

A despatch was received from Alexandria on Monday which stated that serious complications had arisen between the Chambers and the European Control in regard to financial measures. Sherif Pasha, the Prime Minister, is supported by the army, and another crisis is deemed probable.

It is said that the results of a recent Turkish mission to Berlin and Vienna have been that the Porte is convinced that although Germany and Austria will not actively aid Turkish policy, they have resolved to maintain the *status quo* in the East. The relations between Austria and the Porte are said to have been greatly improved.

On Thursday evening the Earl of Derby, speaking at the banquet of the Liverpool Reform Club, avowed himself a thorough Liberal. He favored the employment of force in Ireland, and pointing, as an example, to the way in which the United States had dealt with secession, said he did not see why England should show less determination, or have less good fortune in her treatment of the Irish difficulties. Lord Derby's open avowal of his conversion to Liberalism has excited much interest, and is considered a great triumph for the Liberals.

Mr. John Bright and Mr. Joseph Chamberlain, President of the Board of Trade, spoke at Birmingham on Wednesday. Mr. Bright justified coercive measures in Ireland on the ground of their absolute necessity, and pointed out that much of the Irish discontent now arose from misconception or ignorance of English liberality. Mr. Chamberlain said that the Government would find means to enable the Land Courts to deal with the cases which were coming before them. He ridiculed the landlords' demand for compensation, and thought the tenants ought rather to be compensated for the excessive rents extracted from them for many years.

The week has been comparatively quiet in Ireland. The number of "suspects" now in prison is said to be 463. Earl Cowper, the Lord Lieutenant, has refused the request of the Dublin corporation, that he grant permission to Messrs. Parnell and Dillon to attend at the City Hall to receive the freedom of the city conferred on them by the corporation. The followers of Mr. Parnell have decided to call a general meeting of the Irish party in London a week before the opening of Parliament. The Property Defence movement has languished somewhat in England on account of a suspicion of partisan aims in connection with it; but a meeting was held at the Mansion House in London on Friday, at which Mr. Samuel Morley, a Liberal, made a strong appeal against allowing party feeling to have any influence in the matter. He said that if £50,000 could be secured "the work would be finished in half a year."

At a Cabinet council held on Saturday it is said to have been unanimously decided that the state of Ireland rendered it necessary to take additional precautions to bring to justice those persons engaged in supplying arms to the people. The latest form of lawlessness is said to be the organization of "Land-League hunts." Much game has been destroyed, and many preserves damaged in this way. There is an effort being made to obtain Mr. Parnell's release before the opening of Parliament, and the Government is reported to have the matter under consideration.

Messrs. Parnell and Dillon have addressed a letter to the town clerk of Dublin returning thanks to the corporation for the honor conferred on them by presenting them with the freedom of the city. It is stated that the corporation will now ask permission to present the freedom of the city to Messrs. Parnell and Dillon within the prison.

It is understood that the British Cabinet has refused to recognize, as inconsistent with international law in general and the Clayton-Bulwer treaty in particular, the claims of the United States to exercise entire control over the Panama Canal.

Mr. Reclus, head agent of the Panama Canal Company, arrived in Panama on the 28th ultimo, accompanied by two of the most distinguished engineers of the French Polytechnic School. They will at once begin the serious work of excavation, for which preparations are said to be well advanced.

The French Senatorial elections were held on Sunday. Sixty-four Republicans and fifteen Conservatives were elected, the Republicans gaining twenty-two seats.

On the same day, while a procession of 300 persons was proceeding to the Père-la-Chaise Cemetery, to commemorate the anniversary of the death of M. Blanqui, some of those in line became "objectionably demonstrative." The police interfered, and a mêlée ensued, in which twenty or more persons were wounded and about the same number arrested.

It is stated that notwithstanding the favorable result of the French Senatorial elections, the Government will persevere with the revision of the Constitution. The changes intended with regard to the election of Senators will increase the representation of the large towns, and deprive the Senate of the right of rejecting money bills. The Government will also propose the general-ticket system for the election of members of the Chamber of Deputies.

Mr. Morton, United States Minister to France, gave a state dinner to M. Gambetta and his colleagues on Thursday, at which all the ministers of the Cabinet were present, with the exception of the Ministers of Public Works, War, and Justice.

The revenue received from direct and indirect taxes in France for the year 1881 has exceeded the estimate by 217,000,000 francs.

The editors of eleven Republican newspapers in Madrid have signed a declaration in favor of continuous efforts to establish a Democratic Government. The organs of Señor Castelar have abstained from participating in the movement.

TUESDAY, January 10, 1882.

VIRGINIAN REPUDIATION.

GOVERNOR CAMERON of Virginia has sent in his message to the Mahone Legislature, his chief topic being, as might be expected, the State finances. He whittles down the principal of the debt by dividing the burden with West Virginia, and then takes up the question of interest. He thinks the State ought not to pay more than three per cent., first, because the rate of taxation cannot be increased, and three per cent. is all that can be provided for with certainty; secondly, because "the proposed interest is as great as the average rate paid by the debtor class of the world on public securities at the present day." The financial propositions of the Mahoneites are never very clear, and this is one of the least clear. What is "the debtor class of the world"? And why should it "pay interest on" public securities? It has presumably enough to do to pay the interest on its private securities. Public securities are promises to pay issued by States and nations, and the interest on them is paid by the taxpayers through the Government, and these taxpayers may be members of the debtor class or they may not. No matter to which class they belong, every civilized, proud, and prosperous State holds it to be of the last importance to pay its debts, not in the manner most convenient to itself, but in the manner in which its authorized representatives promised to pay them. The moral obligations of a State about money are, in short, more imperative than those of individuals because they are not legal obligations. A State cannot be made to pay, and therefore a cheating State is always a more repulsive object than a cheating man. When a State is bent on cheating, however, decency requires that none of its high officers should try to justify it by subterfuges and evasions. Governors and other prominent public functionaries should indeed be prohibited, in the act providing for the fraud, from entering on any explanation or defence of it. They should simply announce it, and then leave the newspapers to put a good face on it. Governor Cameron's nonsense about the rate of interest paid by the debtor class on public securities is an example of what comes of attempts at official apology for breaches of public faith.

If he means by "the debtor class" the various states of the world which have debts, what he says about the interest is simply untrue. There is only one state in the world—Great Britain—which pays as low as three per cent. on any portion of its public debt, except by cheating. Several states pay nothing, and he must have made up his average by taking the whole public debts of the world and applying thereto the amount of interest paid by honest governments. But by this process we think he might have made "the average" lower. One per cent., we think, is about as much as is paid on all the existing public debts, taken as a whole. If this process were carried into operation in the treatment of private contracts, the result would be very diverting. A debtor who should come to his creditor and ask for a heavy reduction in the amount of his principal or interest, on the ground that the bankruptcies and defaults which had taken place in the town during the previous year had lowered the average of what was due by the whole debtor class of the place, would be either a sorry wag or an impudent rogue.

The fact is, that Governor Cameron demands the right for Virginia to pay a rate of interest as low as that paid by the State whose credit stands highest in the world, on the strange ground that what one government has earned by faithful fulfilment of the letter of its obligations may also be claimed by any other government which prefers evading them. This would be more surprising than it is if General Mahone had not expounded to the Union League Club in this city the truly comic doctrine that the rate of interest was always regulated by the means of the debtor, or, in other words, the poorer a State was, the easier the terms on which it could borrow money. Charity obliges us to suppose that General Mahone was on this occasion really as ignorant as he seemed; but his disciples must not abuse the public credulity and imitate him too freely.

One of the Riddleberger bills now before the Virginia Legislature is of itself sufficient to place in its true light before the world the Mahone scheme of repudiation. The coupons of the State bonds issued in 1871 and 1879 were made receivable in payment of the public taxes. An attempt to take away such receivability was foiled by the decisions both of the State and Federal Supreme Courts. The State is, in short, bound to receive them by every law, human and divine. To get rid of this obligation, Riddleberger has devised a scheme which it is hardly too strong to call a "confidence operation." He has concocted and inserted in the preamble of his bill a story that numerous "spurious bonds" and coupons are in circulation; that therefore, when any coupons are offered in payment of taxes, it is necessary to ascertain their genuineness. He then proposes to enact that the tax collector shall accept no coupons in payment of taxes; that he shall accept any coupons only for the purpose of examination, and that the tax shall, in the meantime, be collected in money on pain of distraint. The genuineness of the coupons is then to be ascertained by a regular jury trial in the county court, with its usual expense and delay. If ascertained, they are to be received in payment of the taxes, and the money originally paid refunded, but without any allowance for costs or vexation. The measure is, of course, based on the expectation that in most cases the taxpayer will not take the trouble or will not have the means to begin a suit, and will thus seem to acquiesce in the pretence of the preamble, and in the fraudulent process for which it prepares. It is safe to say that a State in which such schemes are gravely entertained by leading politicians in its Legislature, ought to raise the salaries of its criminal judges, in order to compensate them for the embarrassment they must feel in trying its "confidence men."

The Mahone-Riddleberger system of finance is made to appear all the more remarkable, as an object of Republican support, by the official report of the State Treasurer. From this it seems that the total amount of the State debt, including what the repudiators think both bearable and unbearable, is $29,614,793. The interest on this, including both what the repudiators say they cannot pay, and what other people think they can and ought to pay, is $1,523,516. Of this $1,117,724 is payable in coupons receivable for taxes, and $96,695 is to be deducted for bonds held by colleges; so that all the State would have to pay in cash to save its good name would be $309,096, besides the interest on $3,565,331 of arrears. The Treasurer reports that the public revenue for the year ending September 30, 1881, was $2,632,345, and the expenditures were $2,152,028, leaving in the Treasury an unexpended and unappropriated balance of $480,317. The Auditor also says in his report:

> "I had the pleasure of exhibiting a gratifying degree of improvement and ease in our financial condition in my first report [that for last year]. It is exceedingly gratifying now to be able to report the continuance of this improvement, and to show that our financial condition is better now than it was at the close of the last fiscal year."

It must also be said that there were several items in the disbursements of last year which cannot be called regular and will not recur. In fact, a strict construction of the term "regular expenses" would make the probable surplus applicable to the payment of interest next year $1,566,023, or $57,692 more than would be sufficient to satisfy all honest claims, and save the State credit. That the revenue will hereafter steadily grow there is little doubt. Virginia, like the other Southern States, has entered on a career of material prosperity which nothing but the knavery of her politicians can check.

In view of these facts, the Republican support given to the repudiators assumes a much more serious aspect than it would have done were the ability of the State to pay its honest debts open to any question. As the world goes, taxpayers who refuse to submit to actual privation in order to meet the demands of public creditors may find excuses enough both in morals and policy to save their character and self-respect. But taxpayers who refuse to pay over to the State's creditors money which lies in the treasury unappropriated, and is the surplus of a rising revenue in a time of general peace and prosperity, can hardly avoid the conviction that they are cheating, and that outsiders who encourage them in their repudiation are their accessories. In Virginia, too, the colored voters get their political morality largely from Northern sources, and it is very unfortunate that the first striking lesson they receive from that quarter should be the lesson that debtors who cannot be made to pay need not pay unless they please.

We presume there is no question that the Mahone "movement," as it is called, has the merit of overthrowing the Bourbons, and of being likely to spread through the South. But what makes the overthrow of the Bourbons of such supreme importance as to justify encouragement of the grossest form of political immorality, it is hard to see. Even in time of open war, a man is not held justifiable in defrauding his foreign creditors in order to give the money to his country. The creditors of Virginia are not alien enemies; and why they should be robbed in order to split the Democratic vote at the South, it would probably puzzle the most

astute Republican casuist to explain. The present attitude of the Mahoneites is, in fact, very like that of the well-to-do Irish farmers who refuse to pay their rent because Parnell is in jail—an ingenious but somewhat comic mode of giving a fraud on one's creditors the air of resistance to political tyranny. A holder of Virginia bonds or coupons receivable for taxes is, as such, in no way responsible for the weaknesses or follies of the old hide-bound Virginia politicians who "mumble the dry bones of the past," and "turn their backs to the morning sun"; nevertheless, it is now proposed to fine him heavily in order to spread the ideas of the new time.

THE UNITED STATES AND MEXICO.

Resolutions have been introduced in the House by Mr. Whitthorne, of Tennessee, providing for the negotiation of a treaty with Mexico, "with a view to secure protection to the capital, labor, and enterprise which may be invested and employed by the citizens of the United States in the opening and maintaining, under grants already or which may be obtained from said republic, such railway and other commercial lines of communication between the Pacific coast and the boundary line of the United States in and through said republic," etc.

This reads very oddly, and if the Mexicans were sensitive they might consider it very insulting. In all our intercourse with Mexico she is treated not only as an independent but as a civilized state, on an equality with the United States in everything but population and riches. We treat her courts as respectable legal tribunals, and her Government as possessing ample force to execute their decrees and afford sufficient protection to life and property. We have never thought it necessary to insist, as in Turkey, and Egypt, and China, and Japan, and other barbarous or semi-barbarous states, on the exemption of American citizens from the jurisdiction of the Mexican courts, and on the trial of American causes arising in Mexico before our own judicial officers.

The Whitthorne resolutions, however, distinctly point to a departure from this policy, and the relegation of Mexico, in so far as our dealings with her are concerned, to the position of an inferior and semi-barbarous power like Turkey or Morocco. Every government owes protection to "the capital, labor, and enterprise" invested under its own grants, concessions, or charters. In fact, a grant or charter is a promise of protection. A grant which did not promise protection would be very like employment in which a man got no wages and paid his own board, or that celebrated grant under which a man worked his passage in the canal-boat by driving the horses on the tow-path. Those American citizens who have already invested, or have asked the permission of the Mexican Government to invest, their capital in Mexican mines, railroads, or plantations, have by so doing acknowledged the ability of that Government to afford them adequate protection. According to the best accounts, there is no part of Mexico in which life and property are less secure than they are in some parts of the United States—New Mexico and Arizona, for instance, in which large bodies of European capital are being invested every year. We should take it very ill, however, if France or England or Germany were to propose a treaty binding us to protect that capital. The answer would be that such a treaty would be derogatory to us; that there was as much protection for investments in this country as in any other in regions in which the population was sparse and communication difficult; that those who had made investments knew well the social and political conditions under which they had to be made, and presumably took whatever risks there were in consideration of the high rate of profits they expected; that in any case, however, the United States were not going to negotiate with any foreign power as to the manner in which they would execute their own laws, or as to the kind of laws they would enact; and that the mere proposal of such a negotiation was distinctly unfriendly.

It is quite possible, if not probable, that Mexico will say this or something very like it in answer to any overtures which may be made under the Whitthorne resolutions. The result of such a treaty as is proposed in them would be, if it answered the purpose of its projectors, to give us the right not only to insist on the protection of our citizens in their lawful undertakings on Mexican soil, which we possess already under the law of nations, but to point out the precise means by which such protection should be afforded, or to assist in affording it ourselves. In short, no arrangement of the kind could be made which would not give us the power to prescribe the manner in which the Mexicans should carry on their Government, and the moment this interference began, Mexican independence would begin to crumble. Mexico would be rapidly overrun by the class of speculators who flourished here under the Grant régime, but now find American public opinion and the American courts too strong for them. They would obtain larger and larger "grants" every day, either by corruption or humbug, or a judicious mixture of both, and, knowing that they had the American Government behind them as a means of coercion, would use their power to extort fresh concessions or enlarge old ones; and we should before long find ourselves saddled with the responsibility of protecting life and property all over Mexico.

It is the obvious interest of the American people at present to strengthen and support every South American government which shows vitality and staying power, and particularly the two republics of Chili and Mexico, which probably show more promise in all the arts than any of the others. Nothing is so important to us as a commercial people as to have neighbors whom peace and industry make good customers, without putting us to the expense or responsibility of governing them. We shall have enough to do for fifty years at least in assimilating the population we have already got, and which Europe has still to send us, and in developing the resources of the territory we already occupy, without saddling ourselves with the management of large bodies of Catholic Latins. Our difficulties with the Mormons furnish warning enough against becoming responsible for the good behavior and happiness of communities which do not coalesce readily with American society as now organized, or which do not take readily to our civilization. We must therefore be wise in time, and let our speculators who go either to Mexico, or Peru, or Chili, or any other South American state plainly understand that they must not look to us for any guarantee beyond what they get from the government to which they owe their grants. Their remedy for the defects of that government they must be presumed to find in the largeness of their profits. Most of them will console themselves in this way. Others will derive comfort from the reflection that weak governments are nearly always easily cheated.

POLITICAL REACTION IN GERMANY.

The "rescript" addressed by the German Emperor to the Prussian Ministry, which was published at length in the Sunday papers, contains two distinct propositions: 1. That, according to his understanding of the Prussian Constitution, the King personally directs the Government and policy of Prussia; that the Ministers are responsible only to him, and that as to this point the King wants it to be understood "that in Prussia, and also in the legislative bodies of the empire, no doubt will be allowed to attach to his constitutional right or that of his successors." And 2, that, as the Ministers and other officials of the state have taken the oath of loyalty to the King, they are in duty bound to support the policy of the King's Government and to use their official power and influence to that effect at the elections. The first proposition is nothing new in Germany. It is, in fact, the constitutional theory insisted upon in Prussia by the Crown ever since the existence of the present Constitution. It is, as the rescript expresses it, "the monarchical tradition of the country." While this is true, the direct assertion by the King or his spokesmen of the principle involved has always grated harshly upon the feelings of a majority of the Prussian people, and it is always understood as an exhibition of defiant arrogation of power. The second proposition, declaring it the duty of all officials to support the King's policy at the elections, expresses a theory which also has been entertained before in Government circles, without, however, being proclaimed with quite as much cynical directness by the sovereign himself, and also without being generally enforced. That it is now meant to be enforced with the utmost rigor, the tone of the rescript leaves scarcely a doubt. The two propositions together make up probably the most absolutistic proclamation of policy in Germany since 1848. In any country governed on constitutional principles in the English sense, it would be called simply monstrous; it would be equivalent to a *coup d'état*.

The rescript was countersigned by Prince Bismarck, and it may safely be assumed that he wrote it. Why he should have chosen this moment for so significant a step, no election being pending, and what special object he expects to accomplish by it, is a matter of speculation. The protests from the Liberal side in the Reichstag against the dragging of the

Emperor's name into the debates, which was freely resorted to by the spokesmen of the Government, and against the illegal meddling of Government officials with the elections, which the Government tried to defend, may have been the immediate occasion for the Chancellor to emphasize the position he had taken by giving it the form of a personal declaration of the Emperor. But he must have had more important objects in view. Did he want to terrify the Opposition in the Reichstag and the Prussian Chambers, and to win a majority by a policy of intimidation? He can scarcely expect an Opposition that feels the sympathy of the people at its back to be frightened into submission by an act calculated to strengthen that sympathy. Did he mean to intimidate the people with the prospect of an acrimonious conflict, in order thus to influence future elections? He can scarcely have forgotten that when a similar policy was tried before in 1863 the result was a large increase of the Liberal vote at the succeeding elections. Even the Clericals will be alarmed by the defiant tone of the rescript. Situated as they are, they understand the value of constitutional privileges too well to acquiesce willingly in the arrogations of absolute power, and thus the alliance between themselves and the Conservatives may be shaken as to the most vital points by this very act. If the Chancellor had such ends in view, his expectations are, therefore, likely to be disappointed.

There is one phrase in the manifesto, about "the rights of my [the King's] successors to direct personally the policy of the Government," which might be taken to indicate that the rescript was intended to forestall the future policy of the Crown Prince. The Emperor being old, and growing more infirm, the accession of the Crown Prince to the throne cannot be far off. Indeed, it is reported, as we write, that the Emperor is going to proclaim the Crown Prince regent on the 22d of March. The old Emperor was the product of a time in which, in Prussia at least, the divine power of kings had almost the sanctity of a religious dogma. He did not find constitutional government in the English sense congenial to him, because it was entirely outside of his comprehension. The Crown Prince has grown up under an entirely different kind of influences. The discussion of constitutional questions was the order of the day during his early manhood, and his English marriage gave him unusual opportunities to familiarize himself with the working of British institutions. We do not attach absolute confidence to the proverbial liberalism of crown princes, but in this case it would be wonderful if the effect of modern ideas of government were not felt. The Crown Prince would prove a far less sensible man than he is thought to be if he did not abandon some of the extreme pretensions of royalty, although he may, while regent during his father's life, maintain them in point of form. It can scarcely be conceived that he should respect the rescript as the fixed programme of his conduct for his whole reign. The immediate effect of the rescript is likely to be the revival of anti-monarchical tendencies in Germany which had almost completely died out; and only a speedy change of government and the adoption of a policy in accord with the current ideas of the times can prevent them from gaining ground among a people naturally peaceable and conservative.

OSCAR WILDE.

Mr. Oscar Wilde delivered on Monday at Chickering Hall a lecture, on "The English Renaissance," which might fairly be called a success. In the present days of easily-manufactured notoriety, a young man who has managed to establish a doubt in the minds of the public as to whether he is a profound thinker or an utter fool may be said to be on the high road to a very good substitute for fame, and this is what Mr. Wilde had previous to his lecture succeeded in doing. The difficulty with his future career is likely to be that his lecture solves the doubt, and that he will be unable to keep alive any curiosity on the subject. When we say that he solves the doubt, we mean, of course, that he is a profound thinker; not by any means, to parody a phrase of his own, a thinker of unthought thoughts, but of thoughts thought, and expressed too, for that matter, a great many times before, though not thought or expressed so profoundly as by Mr. Wilde, nor in his own manner. To say that the æsthete is a disciple of Ruskin gives a meagre idea of the chameleon-like power of imitative reproduction which he displays. His hospitable mind has opened its doors to Ruskin, Millais, Holman Hunt, Dante Rossetti, Swinburne, Baudelaire, Gauthier, William Morris, Burne Jones, Keats, Wordsworth, Shelley, Walt Whitman, Goethe, and Gilbert and Sullivan. It may seem at first that it would be difficult for even a deep young man to find a common basis for an æsthetic movement in all these; but Mr. Wilde is not only deep enough for this, but far too deep to explain what the common basis is, or what he has to do with it himself. Under these circumstances, and at the risk of violating Mr. Wilde's fundamental maxim of criticism—that the function of the critic is to hold his peace at all times and in all places—we will venture to offer a suggestion or two in explanation of the somewhat mysterious phenomenon presented by Mr. Wilde's lecture tour.

When Mr. Ruskin and the pre-Raphaelites set about reforming public taste in England, they were forced to enter upon something very like a crusade. Almost every canon of art-criticism that existed had to be demolished and its opposite established in its place. Springing up in a community strongly impregnated with moral and religious ideas, it is no wonder that the teachings of the school should have taken a religious tone. Appeals to the love of beauty alone would hardly have aroused the dull British Philistine from his contented, vulgar lethargy. To touch him at all it was necessary to stir his conscience, and the forerunners of the æsthetic movement—who, by the way, were all sincere men and loved art themselves with a semi-religious fervor—became the founders of a proselyting church, a sort of artistic Rock of Ages in the weltering waste of British Philistinism. They brought the pure milk of the word to the heathen, showed him his errors, touched his soul, awoke him to the new life, lifted him out of the mire of sin in which he lay wallowing, and showed him the true path. The unconverted heathen mocked and raged, as the heathen always do, and set up more false gods in the shape of bad pictures, and ridiculed the true faith in the columns of their heathen organ, *Punch*. They could not butcher the apostles, or give them to wild beasts to devour, but they inflicted on them all the social persecution that the mild manners of modern times permit, by making them have a thoroughly "bad time." This persecution had its natural effect in strongly stimulating the zeal and devotion of the sect; and no one who has given any attention to its writings or teachings can have failed to notice the sacerdotal tone assumed by it—a tone of which there is a faint echo in Mr. Wilde's platitudes and paradoxes, and even in his dimly religious voice.

Everybody knows now how the church spread; how little by little old Philistines were converted and newborn Philistines were baptized into the new faith. The rage of the heathen disappeared, and on every side the galleries of the old religion were cleared of their Philistine rubbish, and swept and garnished to make room for what was purely true and precious in art.

The success of any church in converting the heathen of course puts it in a different attitude toward society from that which it occupies in the days of its adversity. The Philistine, who, though a man of sin, has a good deal of sense, always keeps his eye on the children of light, and is always willing to take his cue from them when he finds it necessary to do so, and when he does do this he does it handsomely. The Philistine is, after all, of the same flesh and blood as the rest of us, though so hopelessly sunk in the mire. After a time he too joined the Church, and so far as fashionable society in England is concerned, it may be said to have been converted for ten years. The connection between the decorative or æsthetic movement, which Mr. Wilde, with delightful impudence, is undertaking to father in this country, and the old pre-Raphaelite crusade is easy enough to trace. It, too, has been completely successful, and is in full possession of the walls, floors, ceilings, and furniture of the "best society" in England, and to a great and increasing extent of the United States. Mr. Wilde, therefore, instead of being, as he represents himself, a missionary preaching art to the heathen in the wilderness, at the sacrifice of fortune, fame, and everything that the Philistine holds most dear, stands to art more in the relation of the fashionable preacher of a "swell" congregation to religion. To compare profane things to sacred, Mr. Wilde is the Charles Honeyman of the religion of which Ruskin was the St. Paul. When Ruskin preached, society was Philistine, but it now forms the congregation. We all know the spirit in which we listen to a fashionable preacher—how we like to hear him denounce sin, and expose the vanity and frivolity of worldly pursuits, the money-loving and commercial spirit of the age, and how true we feel it to be that collections ought to be taken up for the conversion of others. There is the same vagueness too about the articles of Mr. Wilde's faith that there is about those of the Reverend Charles. The æsthetic principles which he announced on Monday at Chickering Hall were a strange jumble, the chief merit of which lay in the serene superiority of the lecturer to the confusion which he produced in the minds of his audience, and which we notice has led one reporter of it to imagine that he said that English æstheticism sprang from the union of Hellenism with the romantic spirit, "as from the marriage of Faust and Helen of Troy sprang the beautiful Lady Euphonia."

Mr. Wilde, again, represented himself as being determined to carry on the warfare of art against Philistinism to the bitter end, but really he brings peace rather than a sword. Art, when first introduced among the Philistines, did lead to an internecine struggle. It introduced discord into every family, set father against son, and mother against daughter. It inspired passions in the simple-minded, barbarous Anglo-Saxon which nothing else but religion and the

study of language had ever produced. But it is easy to see from the reception we have given to Mr. Wilde that he is not an iconoclast, or in any danger of suffering the fate of a martyr. He is, as we have said, spreading the true faith in art, much as a fashionable preacher spreads the true faith in the Gospel. He and his congregation are really all of one mind, but he has the gift of expression, the sweet eloquence which the successful preacher must always have, and he thoroughly appreciates the value of extravagance in attracting attention. He is glad to have even his congregation laugh at him, if they will only join in his prayer to the Steel of Toledo and the Silk of Genoa, or acknowledge the supreme importance of the "gaudy leonine beauty" of the sunflower, and the "precious loveliness" of the lily.

It makes little difference whether Maudle is the caricature of Mr. Wilde or Mr. Wilde a realization of Maudle. It is the doubt which gives reality to both. There is nothing that shows Mr. Wilde in his true light so completely as his great appreciation of Bunthorne. Bunthorne is an impostor, an "æsthetic sham," and his existence every night tends to make the whole æsthetic movement ridiculous. Now, it is very true that all new movements in art or poetry have had their parodists and satirists. But it never occurred to any reformer before Mr. Wilde that it would be a good thing to encourage parody and satire as a means of keeping the ball going. The same manager "runs" the lecture tour of the æsthete and the operatic company which heaps ridicule upon him. You hear the true gospel at Chickering Hall, and join the mocking laughter of the heathen at the absurdity of it at the Standard Theatre. We must say that, to our mind, Mr. Gilbert has the best of the joke. Real reformers have usually hated, as only just men can hate, those who sneer at reform. It was left to Mr. Wilde to discover the commercial value of ridicule in the good cause. Mr. Wilde is a poet, a preacher, and a man of the world. As a man of the world, he knows that the true way to attract attention to poetry is to shock people's sense of decency, and the true way for a preacher to become fashionable is to make the Word pleasant and soothing to fashionable people, and that a very good substitute for fame is the notoriety attracted by silliness. Mr. Wilde is an essentially foreign product, and can hardly succeed in this country. What he has to say is not new, and his extravagance is not extravagant enough to amuse the average American audience. His knee-breeches and long hair are good as far as they go; but Bunthorne has really spoiled the public for Wilde.

A CHINESE TRANSLATION OF THE CONSTITUTION OF THE UNITED STATES.

A VERY interesting document has just been prepared by a member of the Chinese Legation at Washington, and forwarded by His Excellency Chen Lan Pin to the Foreign Office at Peking as one of the official returns of his Legation. This is no less than a complete translation of the Constitution of the United States into Chinese, accompanied by an elaborate commentary, both by Mr. Tsai Sih Yung, one of the young attachés of the Legation. Mr. Tsai Sih Yung is not over thirty-three years of age, and has been in America for about three years. While in China he took his bachelor's degree in the public examinations at Canton, and is thus a Chinese of the Chinese—one of the literati. He comes of a distinguished family, whose preserved memorial tablets cover a space of more than a thousand years. Mr. Galton might obtain a new argument for the heredity of genius from the fact that one of Mr. Tsai's ancestors three generations back was Prime Minister of China. This, it need hardly be said, is an unusual honor for a pure Chinese under a Tartar dynasty, and we believe there has been but one other such case.

After gaining his bachelor's degree Mr. Tsai abandoned the high road to promotion open to all the literati, and gave up the career of a scholar pure and simple. He entered the Chinese college of Dr. Martin at Peking, and devoted two years to the study of English. In 1878 he came to America, and while in Washington he formed a friendship with one of the astronomers at the Naval Observatory there, which has led to some results. It was suggested that the time of his official residence in Washington could not be better spent than in acquiring a knowledge of the Constitution of the country to which his Minister was accredited, and accordingly the greater part of a year was devoted by these two gentlemen to a study of the Constitution. Beginning with simple text-books, like Hart's 'Manual,' the ground was gone over several times, and finally Kent and Story were studied and mastered.

After a section was thoroughly understood it was reduced to writing, and any doubts were settled by a reference to professional lawyers who had given special attention to this branch. In this way the translation itself gradually grew. The commentary is the fruit of much conversation, of visits to the Houses of Congress, to the Supreme Court, etc., and specially of an assiduous study by Mr. Tsai of the various functions of the departments of our Government, based on reading, conversation, and personal visits. In the amount of time and labor spent it has been a serious and a delightful task, and too much credit cannot be given to the patience and acuteness with which Mr. Tsai has followed up each question until he reached a solution not only satisfactory to himself but to others.

It is to be remembered that in translating and commenting on principles so foreign to all Chinese ideas as those contained in our Constitution, a familiarity with our entire habit of thinking as a political body is to be first attained. "Liberty" is easy to be found in the dictionary. The associations which cling about the word to an Englishman or to an American need to be well studied to become familiar, or even comprehensible, to a mind trained in Eastern methods of thought. "Duty"—with what difficulty does the Oriental master the inner meaning of Wordsworth's immortal ode! And yet he needs to comprehend it to do his work well. These examples may serve to direct attention to some of the obvious difficulties in the way of making a complete translation. The words, "We, the people," introduce a glaring novelty to an Eastern mind. The whole function of the judiciary is at first a hopeless puzzle. The forms of Congressional procedure, the ordering of the yeas and nays, the counting of a Presidential vote—each phase involves new difficulties. These have been as thoroughly and successfully mastered as was possible in the time, and it is noteworthy that the broad, philosophical principles presented but little difficulty to the acute and scholarly mind trained in a philosophy of another genius. The chief obstacles were found in the details of administration or procedure. There is probably no Oriental now living who possesses so extended and accurate a knowledge of our Constitution as Mr. Tsai, and this knowledge cannot fail to be of capital importance to him in his chosen career.

Of the technical arduousness of translation from the English idiom into one so difficult as the official language of China, this is not the place to speak. It will be best, if not solely, appreciated by those few Chinese scholars who are able to write the official language correctly. When we say that a lifelong residence in China and a profound study of the language do not give this ability, we are not exaggerating. The title-page of the best-known and most valuable work on China, written by one of our first Chinese scholars, contains an inscription in Chinese characters which at once betrays its foreign authorship. In general, those Chinese who are sufficiently advanced in their own literature to write a *Chinese* style suitable for such a document have spent far too many of the years of their lives in its attainment to permit of their acquisition of an alien idiom. The translation in question has had the great advantage of an examination by the learned Dr. Williams, of Yale College, who found but two trifling errors in the first draught. These have been corrected, and after repeated revisions the document has been forwarded to Peking under the seal of the Embassy. It cannot fail to be of importance. If for no other reason, its value in giving exact notions of our forms of government to the ruling powers of Chinese diplomacy can hardly be overestimated.

We understand that this labor of love has brought to Mr. Tsai the high title of *Tajen*—a third (highest) degree scholar—and we must congratulate him on the carrying out of an original idea in what seems to be an entirely satisfactory manner.

THE MANSION HOUSE FUND.

LONDON, Dec. 24, 1881.

IF one were asked to give an account of the topic which has been uppermost in the public mind this autumn and winter, one would have to reply, parodying the words of the late Emperor of the French, "Ireland, always Ireland." But I do not propose to trouble your readers with any general remarks on this absorbing subject, for there is no new phase to report, nor is any change likely to take place in the policy of the Government. From Mr. Herbert Gladstone, who has been spending some time in the country and has had the best means of observation, we had last week a most discriminating résumé of the state of affairs, which confirms what I think is the opinion of the most reasonable men—viz., that no immediate cure is within the reach of statesmanship, and that we must trust to time and patience to set things right. This conclusion will be very distasteful to the impatient fire-eaters of the London press and Conservative party; but the truth seems to be that what is going on in Ireland is neither more nor less than revolution—a blind uprising, which in its irritation and unreason can only be likened to the revolt of the French peasantry against the *ancien régime*. In speaking of the truth, however, in matters Irish, one must always bear in mind Whately's remark that, whereas in other countries truth is said to lie at the bottom of a well, in Ireland she lies at the bottom of a bog, and, instead of coming up clear and bright, comes up muddy and hardly recognizable. So it may be that our observers are all at fault, and that the solution may be nearer at hand than one expects.

A new turn has lately been given to the question by the determination of the Lord Mayor to invite subscriptions toward a fund for the defence of property in Ireland. The position of the Lord Mayor of London is so peculiar and exceptional that a few words upon it may not be amiss. Individually, the Lord Mayor is generally a business man, of no position in society, who succeeds for a brief year to the chief post in a sort of close corporation, and is comparatively unknown outside the sphere of the City, both before and after his year of office. If he thus, individually,

brings nothing to the office beyond the qualities of business capacity and sound judgment which he may possess, neither does the class from which he springs. City honors do not suggest honors of the highest order; an odor of feasting and turtle seems naturally to attach itself to the name of alderman, and samples of "plain living and high thinking" would generally be looked for somewhere outside the order. But in spite of this the Corporation has a great history and position; it stands at the head of all the municipal corporations in the kingdom, and if it is a privileged body whose privileges will not escape revision in this reforming age, it has rendered from time to time important public services. As is the body, so is its head. Knowing no politics during his year of office, and with prestige and traditions that inspire respect, the Lord Mayor has an unrivalled position for heading a movement into which party considerations do not enter. In matters of charity, for instance, he is able, by opening a subscription list at the Mansion House, to stamp a cause in a way which is sure to secure for it a large amount of popular support. Doubtless the present occupant of the office believed that the occasion for such an appeal presented itself in Ireland; but the ill luck which attends those who meddle in such thorny matters as matters Irish has not escaped him; and the fund which he has opened has become the subject of a keen controversy.

In the first place, it was seized upon by the malcontents of the Conservative party and Irish landlord class—all those who have never forgiven the Land Act, and are clamoring for compensation for their reduced rents—and interpreted as a means of supplementing the laches of the Government, and doing by voluntary agency what the authorities had left undone. The late Lord Lieutenant of Ireland, in a letter published this morning, takes precisely this view—whether to the advantage of the fund is doubtful. Secondly, the expediency of importing English money into the agrarian quarrels between classes in Ireland may well be doubted; at any rate, it would have been infinitely better that such gifts should have been made directly to already existing organizations in Ireland, such as the Property Defence Association, than that they should have been asked for with the ostentatious opening of a central fund, directed mainly against one of the parties to the quarrel. Then comes the further question, How is the money to be spent? In defending property and freedom of contract, says the Lord Mayor, and trust us as to the use made of it. But this is precisely what, in the present divided state of opinion on Irish matters, the public will not do. What guarantee is there that the fund may not be used in facilitating evictions? and if you say, Trust us that the evictions shall be just ones, is there any general agreement, one might ask, as to what evictions are just and what unjust? The known opinions of the majority of those on the Commission give no such guarantee of impartiality, but rather suggest a bias in favor of the suffering landlords against the suffering tenants. That there are many persons brought to ruin by non-receipt of rent is unfortunately too true, and naturally much sympathy is felt in their behalf; but the landlord class generally have taken up the position of "Intransigeants"; they repudiate the Land Act altogether, and cry out for compensation, not seeing that, had there been no Land Act at all, so far from getting 75 per cent. of their rents (rents which have come before the Commissioners have been reduced about 25 per cent.), they would not have received a penny, while their highest wisdom would have been to accept the decision of the Commissioners, and reduce their rents accordingly. They have shown so impracticable a temper that sympathy for them among our Liberals has been greatly chilled. Hence the Mansion House fund is the subject of much controversy, and hangs fire.

Two matters connected with our electoral system are also just now attracting a good deal of attention. One of them is a curious illustration of the mode in which acts of Parliament, even on the most important subjects, are framed. Your readers are aware that the suffrage here is not universal; in the boroughs it is a household suffrage, based theoretically upon the payment of rates, coupled with a lodger franchise, to which occupiers of unfurnished lodgings of the annual value of £10 and upward can lay claim, and to both of these franchises a condition of one year's continuous residence, from July to July, is attached. In the case of householders, their names are entered by the overseers upon the rate-book for parochial purposes, and, as the register of voters is made up from the rate-book, their names appear in it as a matter of course and without trouble on their part. But with lodgers it is different: they have to take the initiative in the matter, and make a special claim to get their names placed on the register. Owing to this additional trouble, and to the constant changes of residence among the working-classes, very little use, comparatively, is made of the lodger franchise. In the large towns the working-classes rarely occupy a whole house; they live in one or two rooms of a house the whole of which is often let out in separate tenements; and the question has arisen, In what capacity are these men to claim the vote? As lodgers, probably the uninitiated would answer. But the point is a knotty one, and has a history. The Reform Bill which Mr. Disraeli brought forward in 1867, and which still in the main governs our franchises, was based upon the principle that those who paid rates should have votes; but in order to carry this out without unduly restricting the suffrage, it was found necessary to abolish the practice which landlords of small houses inhabited by weekly tenants generally adopted, under sanction of an act of Parliament—viz., of compounding for the payment of rates, and to make each occupier pay his rates personally. The change worked so inconveniently that two years afterward the system of compounding was restored. But, in order not to interfere with the way in which the register of voters was made up, it was provided that the occupier's name should be entered upon the rate-book, whether he personally paid the rate or not. The question then arose, In a house let out in tenements, which of the numerous occupiers is to be put down on the rate-book? The act of 1867 had made a dwelling-house include "any part of a house occupied as a separate dwelling and separately rated to the relief of the poor"; but these words had no meaning, nor, while the vote was attached to the actual payer of rates, any importance. But when for the rate-payer was substituted the occupier, and by another amending act—viz., that of 1878—the word "dwelling-house" was made to include any part of a house "when that part is occupied separately as a dwelling," and separate occupation of one part is defined as not to be done away with by reason of joint use of some other part, then the perplexities began. Were the rooms thus occupied such a separate occupation as was contemplated in the acts? If not, what was the meaning of the words in the acts? But if they were, who then were the lodgers to whom the act of 1867 had also given the franchise? These questions, after passing through various legal stages, have now been decided on appeal, and the decision is, that when the landlord resides in the house, letting out part of it only, the occupants are lodgers; when he lets out the whole, not residing in any part of it, they are householders.

While this decision is generally accepted as the best under the circumstances, the absurdities which it involves are none the less apparent. Suppose, for instance, a landlord resides for a couple of months in the year in one of his houses, is such temporary residence to destroy the right of his tenants to their vote? It seems so; but the judges would probably say that the absurdities are in the acts of Parliament, and not in their decision. Some changes must probably be made, but meantime the attention of the public is rather directed to the political aspects of the decision. A large extension of the franchise has been given in the large towns, much beyond what Parliament seems to have intended, and some of our newspapers of a weak-kneed Liberalism are aghast. But there is no cause for alarm. The new voters will be of exactly the same class as the old; for the landlord who takes a house and lets it out as a speculation is not a bit higher in the social scale than his lessees, and the conditions of residence will shut out the more floating and less desirable section of the population. London mainly will be affected, and that considerably; but nowhere else does the system of living in tenement houses prevail to anything like the extent that it does in the metropolis.

The other matter to which I have alluded is the bribery sentences. The delightful security under which briber and bribee have been accustomed to carry on their operations has been rudely dispelled by a judicial sentence of nine months' imprisonment on two solicitors for bribery and sending in false returns of election expenses; and of terms varying from six to two months on eight other offenders who have been found guilty of bribery, mostly at the last general election. The sentences have given a shock to some people, who have since been actively engaged in stirring up sympathy for the offenders, and have presented numerously-signed petitions to the Home Secretary, requesting him to remit the penalties. It must be admitted that our treatment of bribery has not been hitherto satisfactory. The political object of finding out whether corrupt practices have prevailed extensively in any borough has thrown into the shade the other object—viz., that of punishing the offenders; and the disclosures which have been brought to light by the various Commissioners have led to an impunity being given, both actually and in public opinion, to the guilty parties. But with all this, it is difficult to see on what grounds the memorialists can logically take their stand. Because the law has often been evaded, there is no reason why it should not be enforced when it has been proved to have been broken. But I need not trouble you with the *pros* and *cons* which have filled the newspapers of late. The Home Secretary has refused to interfere, and I think his decision will be generally approved. The Liberal party at any rate is in earnest in this matter, and it is hoped that, with its majority in the House of Commons, some effectual mode of dealing with electoral corruption will pass into law. H.

PROGRESS OF REACTION IN GERMANY.

BERLIN, December 21, 1881.

ON Saturday last, December 17, the Reichstag adjourned to January 9. Short as this first half of its session has been, its results are important, for they indicate the direction in which the Chancellor is driving our home policy. To mention first the only victory which the Government has gained—the accession of the hitherto free port of Hamburg to the Zollverein. Not that Hamburg will entirely lose its old position, but the free port will, at an expense of at least

$50,000,000 to $60,000,000, be transferred from the eastern to the western bank of the Elbe, and the territorial extent of the new free district is even larger than the ground on which Hamburg stands. Instead of contributing a lump sum toward defraying the expenses of the Imperial Government, the Hamburgers, as members of the Zollverein, will in future pay the same duties and taxes as the other German citizens. That is the only substantial change in the present condition, but whether it is worth so large a sum as above mentioned is a question which it is impossible to answer affirmatively. The majority of the committee of twenty-one members appointed for the purpose of sifting the case would have rejected this needless expense and therewith the whole plan if they had had *res integra* before them; but in last year's diplomatic negotiations the Hamburg Senate and merchants had already yielded their privileges to the outside pressure. They now long for quiet and non-interference, and want a definitive settlement. For this reason the committee will report in favor of the bill although they amended it in some of its minutiæ. Thus the final result is certain: the Government's proposal will be accepted in January without much excitement or discussion.

This victory, however, is about compensated by the rejection of the bill creating the *Volkswirthschaftsrath* (*Conseil Supérieur de Commerce*), which some six months ago had already been defeated by the preceding Reichstag. Bismarck was painfully struck by the small minority, commanding only sixty-nine votes, while its opponents cast 179; he nevertheless declared his intention not to give up his pet measure, but to submit it again and again at every session to the reluctant Reichstag. There is no provision in the German Constitution which can restrain him, although the spirit of a real constitutional government should exclude such anti-constitutional schemes. For the present it is a political and a moral defeat which the Chancellor has suffered, and if he does not change his mind he will see it repeated over and over again. Before the last elections thousands of innocent people were good-natured enough to discover no reaction in the direction of our home policy, but now even the most confident admirers of Bismarck begin to realize the fact that we are in the midst of a most reactionary period.

If any additional proof is required, it would be furnished by the speech which Herr von Puttkamer, the Minister of the Interior and trusted servant of Bismarck, delivered on the 15th instant in the Reichstag, on occasion of the debate on illegally influencing the last election. To characterize it in a few words, it outdid the worst French patterns and outstripped even Louis Napoleon and his Morny in their palmiest days. It was not astonishing that a man like Herr von Puttkamer should use such language; but that he made this speech in the most cynical and frivolous manner before such an audience and with such self-assurance, created a painful surprise. It became apparent from his tone that he was endorsed, not only by Bismarck, but by the old Emperor himself, whose approval he used as a shield. Puttkamer claims the right to employ all his inferior officers for the benefit of the Government candidates, declares all their illegal interference with the election justified by their dependence on the Government, and threatens all those who refuse to follow strictly the ministerial orders and instructions with fines, punishments, and even dismissal. In former times, as in the days of the conflict with Bismarck (1862–1866), the opposing and even radical officers were only threatened with the disfavor of the Minister, or punished by being ejected from a good office to a less favorable one. In the new empire every officer is expected to exert himself in favor of a Governmental candidate, and to vote for him unconditionally, and for so doing is promised the practical thanks of the Emperor. Puttkamer, in his defence and attacks, forgot the dignity of his position, and degraded the Government by descending into the arena of party strife. The Administration ought not to be a partisan; it should rise above the personal altercations of party animosities. His various remarks therefore perfectly astounded his audience at the time, and the people after their publication, the more so as his opponents were much his superiors in the merits of the debate and in point of eloquence.

Benningsen's short answer was a masterpiece of rhetorical and political argumentation. Professor Mommsen, the historian, whom Puttkamer had drawn into the debate without cause, on account of a remark this learned member had made several months ago at a popular meeting, answered the Minister sharply. The latter, in falsely quoting a remark of Mommsen's on the association of the agrarians and ironmongers, had said: "This gentleman is too prone to speak in a lapidary style; he has taken his models from classical antiquity, but his speech reminds me more of Kleon than of Pericles"; whereupon Mommsen retorted:

"The Minister has said that I have followed Kleon rather than Pericles. I, of course, am far from expecting that he should handle his comparisons from Greek history with the same accomplished elegance to which he has accustomed us in other instances. While, however, as former Minister of Public Instruction, he did not look for a Pericles among Prussian professors, and still less find one, as far as Kleon is concerned I cannot believe that the Minister intended to charge me with the polemics of the representative of the Athenian mob. Herr von Puttkamer further says that I like to speak in a lapidary style. That may be so, but if I had known everything that I have heard to-day in this melancholy debate, my lapidary style would perhaps have become still more lapidary."

Mommsen, let me add here, was chosen in a second election at Coburg, and belongs to the Liberal party, the so-called Secessionists.

During the late elections, as in all former ones, the "Landräthe" were the most reckless agitators for the Government, but their mischief and misdeeds were defended by the Minister in every way. A Landrath, a sort of French subprefect, is an administrative and executive officer at the head of a county. This office was created in 1723 by Frederic William I. as a mediator between the country in its relation to the general Government and the King. To make the Landrath more independent of the royal pleasure he was required to possess a manorial estate, and his comparatively small salary was hardly sufficient to cover his office expenses. In the course of time the institution has dwindled down to a sinecure for poor and partly ignorant or even stupid noblemen, or to a transient station for ambitious young officers (*Streber*) of good connections. For the Landrath there in fact exists no law; he does as he pleases, and whenever (and very seldom it is) he is caught in a politically blamable act he falls back on the orders of the Minister, or on the pleasure of His Majesty. All over Prussia there is not a single Liberal Landrath, and every one of them expects to be promoted to the presidency of a whole circuit or even of a province, or one day to become Minister of State. I believe I am not mistaken in estimating that at least two-thirds of all Prussian Ministers have begun their career as Landräthe. We shall never have a constitutional government until this office is entirely abolished, or so much restricted that the Landräthe can do no more harm. While they themselves run as candidates and use the whole Governmental machine to further their election, they refrain from no calumniation of their Liberal opponents, intimidate the farmer and citizen of small towns, and even exclude the Liberal election advertisements from the county papers. They are seconded by the orthodox Protestant clergy and the gendarmes, who are at their command.

It is of course evident that this wild agitation of the Landräthe and the smaller fry under their orders is encouraged by Bismarck and the official press, for otherwise they would not dare to come out so openly. The Chancellor's inborn hatred of parliamentarism manifests itself too impatiently in his dictatorial longings. He will make war to the knife and may defeat his adversaries here and there, but in the long run he cannot triumph and will succumb to Liberalism, which, with the same energy as in former contests with Bismarck, in and out of Parliament, rouses itself into one united political party. Learning from their adversaries, the Progressists, the Liberals (the so-called Secessionists) and National Liberals at present harmoniously work together. Thus, they are preparing a common bill for the protection of workingmen against accidents. All former party quarrels have given way to a feeling of personal responsibility for the maintenance of our political liberties.

The negotiations with Rome are progressing, but still clouded in mystery. Where Herr von Schloezer left off, Dr. Busch, Assistant Secretary of State, has continued. He went to Rome on a so-called pleasure trip, but in fact with express orders to attend to Bismarck's business. The spirit with which the latter meets Roman demands is more than conciliatory, it is even subservient, and meets the Pope more than half way. Leo XIII. having appointed one Herr Kopp bishop of Fulda, the Berlin official organs—the *Provinzial-Correspondenz* marching of course at the head of them—announce his confirmation by the Government with the following comment: "In the interest of our Catholic fellow-citizens we are happy to state that, in consequence of the trusty and confidential advances made by the Roman See, the ordinary administration has been restored in yet another Episcopal seat." Indeed! The Government dispenses the new bishop from taking the oath of obedience required by law, although during the clerico-political conflict he assumed the same attitude toward the Government as all the other Ultramontane priests. The Government in this way makes it possible for the diocese to do away with the stoppage of the bishop's salary, although the position of the clergy toward the laws has not in the least been changed. The Government thus facilitates the filling of an episcopal chair, and its organs attribute this measure to the faithful advances of the Pope. If the mere acceptance of imperial concessions be sufficient to earn official praises, then of course Rome will show herself worthy of them to the greatest extent.

In the meantime the pourparlers and skirmishes between Bismarck and the party of the Centre go on. To-day they coax, to-morrow they fall out; sunshine and rain succeed in their mutual relations. One tries to dupe and outdo the other. In the Hamburg free-port question Windthorst sides with Bismarck, and makes himself as agreeable as possible in coming to his assistance at the head of the Clerical deputies. On the other hand, he introduces into the Reichstag a new bill, abolishing the law of May 4, 1874, which forbids disobedient and removed priests to perform clerical duties and banishes them for contravention. This is a mere feeler, however, and can of course not pass; but it is at the same time directed against the Conservatives to test their assurances of friendship for their Catholic brethren. The Chancellor again tries to arrive at a direct understanding with the Pope by negotiating with

him over the heads of the Centre; but it seems to me as if he were mistaken, and would not succeed in separating master and servant. In short, it is a sad, disgusting, and humiliating spectacle, a mean bargain and traffic, duplicity and falsehood on both sides; and, what is worst, the Chancellor will not only be the loser in this nefarious game if he persists in it, but will at the same time forfeit the last remnant of faith on the part of the Protestant majority.

† † †

MUZZLING THE EGYPTIAN PRESS.

ALEXANDRIA, December 20, 1881.

THE restlessness of the Government on the subject of the press has been manifesting itself in a new Khedivial decree which would lead an unsuspecting reader to imagine that the chief towns in Egypt were in a state of siege, and that the printing-offices were under the strictest surveillance of the military authority. The English newspaper, the *Egyptian Gazette*, is reported to have made a formal protest to the British Consul-General against the new law, as a breach of the Capitulations, which ensure to European residents in the Ottoman dominions the common rights of security to person and property.

According to the new decree, every printer must obtain a special license from the Minister of the Interior, and deposit caution-money to the amount of one hundred pounds. The license can be withdrawn at pleasure. Clandestine printing establishments can be closed, and the owners and occupiers of them fined up to the amount of £150. A printing-house not licensed is to be counted as a clandestine one. Perhaps the most remarkable clause is that which forbids a printer to print any paper whatever, or to sell or publish it, without declaring its nature to the proper authority and depositing five copies of it with the Minister of the Interior. These regulations are enforced by heavy sanctions in the way of seizure, fine, and confiscation. Another serious clause is the seventeenth, which empowers the Minister of the Interior to forbid absolutely the introduction into the country, the circulation, and the sale, of all journals or writings published outside Egypt. All distributors of books, writings, pamphlets, engravings, and lithographs, must be provided with a special license, supplied by the Prefect of Police, or the Provincial Governor, and these licenses can be withdrawn at pleasure by the authorities which granted them. No writing, either in manuscript, in print, engraved or lithographed, except notices issued by the Government, can be placarded in the streets or public places, if it purports to contain any public news.

Those who are familiar with the administrative processes conducted in countries subject even nominally to Oriental, and especially Ottoman, despotic rule, are not daunted by any amount of magniloquent precision in the drawing up of imperious state papers. General instructions as to the sort of thing wanted are supplied by the head of the Government department interested, and some accomplished French, Italian, or Greek scribe does his utmost to evolve the long series of minatory clauses. French draughtsmen, particularly, one of whom especially is credited with the composition of this impressive document, have a good deal of skill in satisfying the Eastern lust for the outward signs of a domination which exists only on paper. The numerous firmans of the Porte, its solemn protestations against acts of European interference, its precise treaty engagements, its innumerable constitutions, are all models of perspicacity and comprehensive codification. Egypt, hitherto, has, through its independent position and bona-fide submission to European influences, escaped this plague of documentary hypocrisy. In the present case the document itself is of the smallest possible practical importance; not because it says too much, but because it says too little. Where no one, whether native or foreigner, has any constitutional rights, it is superfluous to draw attention to one quarter or another in which the blank is grossly obvious. The only limitations to absolute autocracy in Egypt are the Capitulations, which protect the person and property of Europeans; the Mixed Tribunals, which guard the legal rights of Europeans as against the illegality of natives or the Egyptian Government; and the French and English Control, which furnishes a check on such legislative or executive extravagance as might imperil the continuance of the state of things for which the maintenance of the present Khedive on the throne is supposed to be the best guarantee.

The papers habitually published in Egypt for the use of the several branches of European settlers have long been almost worthless when viewed from an American or English standpoint. The *Égypte* attempted to introduce something like an announcement of real news, and even ventured on independent criticism. The instant result was, as already described, decisive and disastrous. The other papers continue to keep up a mild sort of buzz, and by detailing how a well-known pasha has gone from Cairo to Alexandria, and again has gone from Alexandria to Cairo; by one, or even two, serial novels; by lengthened discourses on the cholera and the cattle-plague; by an active correspondence on the unpunctuality of the railway trains, and even by occasional original poetry of an equally diluted nature with the news, contrive somehow or other to keep up the semblance of European newspapers. The result is that these printed slips serve well enough to occupy a small portion of the twenty minutes' journey from Alexandria to Ramleh, where most of the Europeans have their homes, and all real and serious news comes three times a week by the mail-boats from Europe.

It is supposed in some quarters that the meeting of the "notables" may have important constitutional and political effects. These notables are chosen with a show of representative forms, somewhat in the loose way in which representatives of English counties used to be chosen, at the meeting of the ancient county court, by the freeholders assembled by the sheriff. It is believed, however, by those competent to judge, that on this occasion the notables will seriously address themselves to consider the state of the country, and especially the charges on the national finances. It may be expected that the large sums paid to European officials will come under their criticism; and, if this be so, it will be difficult for the Government to resist an appeal proceeding from so dignified an assembly, where it takes the same form and language as that proceeding from military and religious revolutionaries. The result may be some overt act on the part of the Egyptian Government, which will either imperil the continuance of the European Control in its present form, or the tenure of power of the present Khedive. Writing here from Alexandria, I have no doubt that if occasion arises, the European governments will strongly assert themselves, and maintain the Control with or without the adhesion of the present Khedive. The only question debated here is whether an act of incipient armed intervention would be attended by a popular tumult, and whether England and France would succeed in coöperating in such an emergency. There are many, not merely Englishmen, who hold that while England has interests on behalf of her Indian Empire wholly out of proportion to any interests of France, France has tied her hands by her encroachments in Tunis. The consequence anticipated is that in the event of a serious need arising for the preservation of order in Egypt, the task of intervention will fall mainly on England. At the public banquet given last week to Mr. Charles Cookson, C. B., the Consul and Judge here, who had just been created a Companion of the Bath in recognition of his services at the time of the *émeute* in September last, the captain of the English man-of-war now in the harbor (the *Iris*) asserted that while British men-of-war were despatched less frequently to Alexandria than elsewhere, there was no port to which their crews and officers sailed with so much eagerness.

CLASSICAL AND NON-CLASSICAL.

TO THE EDITOR OF THE NATION:

SIR: The article in last week's *Nation* on "Classical and Non-Classical" gives rise to fresh consideration of an old problem which has called forth from the opposite camps a good deal of animosity. In connection with the report which expresses the experience and observation of such a weighty body as the Faculty of the University of Berlin, which necessarily deserves serious attention, I think that a few facts must be borne in mind before conclusive judgment is pronounced about the advantages of a classical education over the scientific. I mean to call attention to the merely relative value of this report—relating solely to the peculiar position of German real-schools and gymnasia to the universities, but not necessarily to all schools in general. Complaint is made of a certain *Blasiertheit* of the students from the real-schools, and of disappointing results from the latter, who in the beginning of their career promised a better development. These two facts are readily understood if we consider the peculiar character of the real-school instruction. These schools are frequented not only by men who wish to devote themselves to science, in which wider instruction is given there than in the gymnasium, but also by the great mass of future business men, who go there simply for a so-called liberal education. It is true, this is not the case exclusively; but the number of future business men in the real-schools is vastly greater than in the gymnasia, and also naturally much greater than the number of future scientists in the real-schools. The instruction is adapted to the greatest demand. Modern languages are taught to the neglect of Latin (Greek, I believe, is never taught), with an eye to practical use. The natural sciences are taken up earlier and carried further than at the gymnasium; and this very fact explains the *Blasiertheit* of the real-school student when he arrives at university instruction. He is far ahead of the student from the gymnasium in knowing many facts in physics, chemistry, and botany; and the instruction at the university, beginning necessarily with the most elementary principles again, does not come to him as fresh as to his comrades from the gymnasium, and does not impress him as much. He seems to know it all, appears *blasiert*, and does not give from the beginning his undivided enthusiasm to the subject which the other gives, who, with the additional fine training from the gymnasium, is soon carried up and beyond the real-school student. The instruction which the latter received in the natural sciences answered very well for a so-called liberal education, and is of a grade about equal to that of elementary courses in our colleges—"informing" the scholars very well,

but far from teaching independent work and scientific methods. Laboratory practice is rarely given.

It is palpable that such instruction cannot equal the mental discipline which is instilled by the thorough methods of classical training at the gymnasium; and hence the real-school student, although starting with a better knowledge, but not scientific, is in the end outdone by the finer training of the classical student. The report, then, seems to point rather to a deficiency in the real-school system than to an inferiority of the training to be derived from an early study of the natural sciences. Classical study is old, and has tempered, tested, and retempered its methods, while the study of the natural sciences is young, and, even at that, its methods hardly receive a fair test at the real-schools. Hence, although the report of the Faculty may express precisely the result of this ten years' experiment in regard to the admission of these students, and although it may be for the best interests of the University to call for a revocation of the fiat of the Government in opening the halls of the University, yet it does not prove that the future scientist must go for years out of his line to acquire training.

A. L. K. VOLKMANN.

CAMBRIDGE, MASS., Dec. 26, 1881.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to say a few words in your excellent paper concerning your editorial account, in the *Nation* for December 22, of a recent action by the Philosophical Faculty of Berlin University? In using the terms "Classical and Non-Classical Training for the Higher Education" for the title of your account, it seems to me that you, in a measure, misstate the question at issue. The Berlin University admits only such graduates of colleges as have had a considerable degree of "classical education," if by this is meant training in Latin and other languages. The difference between the graduates consists only in this, that Greek is omitted in the one and some scientific studies and modern languages in the other. In so far as the Faculty claim that the classical schools do better work in preparing students than the real-schools, they mean that the omission of Greek disqualifies the one class and qualifies the other to the degree indicated.

But it should be noticed, in a fair and impartial study of the subject, that it is claimed by prominent advocates of the real-school that the true reason of the relative inferiority of the real-school graduates is one that has nothing to do with the omission of the Greek from the curriculum. It is claimed, and I can myself testify that the claim is well founded, that as a consequence of a general and, until recently, all but unquestioned belief in the absolute perfection of the gymnasium, or "Latin and Greek" school, parents have, as a rule, sent their smartest sons to the latter school, and the inferior grade to the real-schools. The common belief that Latin and Greek are more difficult than modern languages, explains this prejudice. The manner of instruction in such languages being generally lax and incompetent, because given by teachers who are not specialists, and also because sufficient time is not allowed for it, one need not wonder that the less rigorous and systematized efforts produce less desirable results. It must also be noticed that the real-schools have some defects which time alone can rectify. At present too many things are taught, and there are not enough teachers who are competent in the same sense in which the gymnasium teachers are competent—that is, by thoroughness in a limited field.

These reasons, it seems to me, should be well considered by those who wish to form a fair judgment of the relative merits of the two classes of preparatory schools. Perhaps such a consideration would lead many to conclude that "the most powerful plea ever made in behalf of classical studies" is apt to meet sooner or later with a no less powerful counterplea in behalf of the studies of the real-school, provided the latter succeeds in carrying out the reforms its most competent advocates recommend, and, particularly, in removing the prejudice that has hitherto sent the best material to the gymnasium, reserving the poorest for the real-school.

Very respectfully, C. A. EGGERT.

STATE UNIVERSITY OF IOWA, IOWA CITY, January 6, 1882.

LAW-MAKING BY COMMISSION.

TO THE EDITOR OF THE NATION:

SIR: While nothing in Federal politics is more indisputable than the urgent need of prompt and systematic reconstruction of the tariff, there are serious objections to the method of doing it by means of an extra-Congressional Commission. If appointed by the President, then, so far as it acts, the result is to that extent legislative work prepared or performed by the Executive. But no matter by whom appointed, the Constitution of the United States has expressly provided for such purposes a representative commission chosen directly, frequently, and territorially by the people. If the Constitution be wrong, then it should be amended directly, but not by implication. If any Congressmen, after availing themselves, as usual, of expert or other testimony *ad libitum*, feel incompetent to vote upon a public question affecting the interests of every one of their constituents, they should not have accepted legislative responsibilities, or, having done so inadvertently, they should resign. To admit incompetence by voting the work upon an outside body not chosen by or responsible to the people, while still holding to their seats, would seem to amount rather to official infidelity than mere political humility. Again, the evil is constant and the necessity immediate. The present patched and incongruous tariff, expensive as it is to execute, is still more difficult of intelligible construction. The jumble of *specific* and *ad-valorem* duties, often mixed and duplicated on the same article, as special legislation or amendments could be got, requires judicial qualities in every responsible official. It has destroyed our shipping, almost abolished the export of American labor in the form of manufactured articles, is pressing upon agriculture, the basis of all interests, and is injuriously affecting many of the manufacturers and all of their consuming operatives.

What the country wants is not the opinion of the President, expressed through a body of his own selection, that the present tariff presses unequally on different industries and sections, because we know that already. The late tariff convention, mostly composed of or representing persons pecuniarily interested in high duties, themselves admitted it, and no well-informed publicist of any shade of opinion now denies it. No speedy relief can come from a commission. Such a body, unless omniscient, must inform itself by testimony that is equally open to Congressional committees, and we must patriotically suppose that their process of perfecting suitable legislation would not be quicker or more effectual than the action of those law-making and political experts upon whom the Constitution and people of the United States have specially devolved the duty.

Relief to some extent might be immediately obtained by some preliminary legislation, without waiting for a complete, well-digested, and final act. After the "fostering" of twenty years of high protection, there must be some limit to the necessity of future protection. Since the last Treasury report shows that the whole duties amounted to forty-three per cent. of the whole imports, such limit might be assumed at forty per cent. It would then be safe to enact immediately a law to take effect after, say, six months, providing that no import duty, whether *specific* or *ad valorem*, or both, should exceed the maximum amount of forty per cent. on cost, and that any excess over that rate now chargeable by existing law should be deducted by the Collector.

Such a measure would give temporary and saving relief to some interests that are being squeezed to death, like the shipping trade. But whether by independent enactment, or not, no such procrastinating contrivance as an extra-Congressional and extra-legal commission should be accepted or tolerated by the friends of personal and commercial freedom, unless in the same act its advocates will give earnest of their intentions by some immediate clipping of the enormous, complicated, and unintelligible import duties, which, surviving the necessities of a great war, are now imposed, and, like all redundant taxation, are to a considerable extent squandered.

I. J. WISTAR.

PHILADELPHIA, January 5, 1882.

THE PRIMARY.

TO THE EDITOR OF THE NATION:

SIR: If the nominating system be changed, so as to have the nominations made at an election occurring in the daytime, and managed, to a considerable extent, as a regular election, how long before you would have half a dozen primaries where you now have one? The friends of the Machine would want to run no risk, and would deem it necessary to hold a caucus to unite themselves firmly. And the Opposition, if they expected to make a successful resistance, would need beforehand to unite on one person, which could hardly be satisfactorily accomplished without a caucus.

In making the nominations for the minor State offices, there could not be expected a very full vote from "the better element"; they show little enough activity at the regular elections, and would certainly show less in making the nominations, whereas the bosses are in train for any and every office.

Would they not fare as well as ever?

C. G. WILLIAMS.

GUSTAVUS, O., Jan. 2, 1882.

[Yes; but no matter how many caucuses they held, their action would not be final. The voters who did not attend the caucus would still have their say. What difference would it make, for instance, in this city what nominations the 13,000 comprising the district associations made, if it were in the power of the 40,000 or 50,000 Republican voters who do not belong to these associations to make other nominations at the poll? The reason why bosses value the caucus so much now, and make such elaborate arrangements for fixing it, is, in short, that when it has spoken, the mouths of all others are closed, unless they choose to go to the trouble and expense of organizing a public bolt. Besides this, if the caucus knew that the outsiders had an easy remedy in case they did not approve its action, assuredly its nominations would be carefully made with reference to the tastes and opinions of the bulk of the party; in other words, the Jakes, Mikes, Barneys, and Guses would be dropped.—ED. NATION.]

UNSECTARIAN ETHICS IN OUR PUBLIC SCHOOLS.

To the Editor of The Nation:

Sir: A number of citizens of Chicago have recently submitted a petition to the Board of Education of this city, asking that instruction in unsectarian ethics be given in all grades of the public schools here.

The subject is, no doubt, of high importance. Intellectual culture must be supplemented by moral culture. Intellectual culture alone, if not controlled by moral principles, is liable to become a curse instead of a blessing. But have state authorities or communal authorities the right to provide the means for moral culture to go beyond providing for instruction in reading, writing, and arithmetic? We claim that they have, and we add that not only have they the *right*, but it is their *duty* to train the future citizen in good morals. This duty, however, is far too much neglected. Our schools suffer under the great fault that they pay too little attention to the *education* of the children, and lay all their stress upon *instruction*—upon instruction in so-called practical branches of study. "Utility" is the name of the guiding-star which directs the course of the majority of our schools. But vulgar utility ought not to be the chief end and object of the schools. They have not fulfilled their great and holy mission when they produce good arithmeticians, efficient bookkeepers, smart business men. They have not come up to their ideal height if they consider it their main aim and purpose so to bring up our youth that they may successfully run along in the race after riches. Our schools ought to strive after higher ideals. They should be among the most potential factors for elevating the nation to a higher plane of morality. The too materialistic character of our schools should be counterbalanced by introducing into them a number of studies such that, even if they be without any visible and measurable value in practical life, they will yet have the tendency and potency to ennoble the heart, to refine the sentiments, to purify the will, and to give to life a higher turn altogether.

A systematic and regular course in unsectarian ethics would be a great help to this end, while casual, well-meant remarks by the teacher would be of no particular educational value.

It is not difficult to grade properly the rich material of undenominational ethics. In the lower grades already it is possible to give instructive, impressive, and attractive lessons to the children on their duties toward their parents, teachers, schoolmates, toward older people, and so forth. In the next higher grade their hearts might be impressed with the duties of employers toward their employees, and of employees toward their employers, with the mutual relations of members of a family, with the duties of the citizen toward the State and the Government, etc. In another grade the children might be taught, to their mental and moral benefit, that while the ambition to raise one's self and to ameliorate the conditions of his life is praiseworthy, yet it becomes every person, under unalterable circumstances, to be satisfied with and reconciled to his station in life; that man ought to be just and honest in all his actions, true and reliable in all his utterances, faithful and diligent in whatever he is obliged to do, charitable and kind to those who are in need, etc. The character of the children might also receive a proper and lasting direction by showing them the moral beauty of having order in all things, of being temperate in various ways, of withstanding manfully all temptations to do wrong, etc. In the next grade the pupils might be advanced enough to pursue a systematized course of ethics, and now would be the proper time to generalize, and to define such conceptions as virtue and vice, equanimity and passion, good and evil, true and untrue, egoism and altruism, and so forth. For the highest grade of our schools we would recommend instruction in empirical psychology, analyzing of characters of men as they appear in every-day life, in history, and in fiction; and, no doubt, such instruction would be of the greatest advantage, intellectually and morally, to the pupils attending our schools.

In imparting such lessons it would be well for the theoretical instruction to be supported and illustrated by stories and examples, which would make these lessons doubly interesting and attractive to the children. In connection there with, classical sentences and aphorisms, full of true wisdom, and sayings and verses from the poets and other great master minds of all ages and nations would have to be explained to and memorized by the children. Their spiritual horizon would thus become greatly widened, and in their youthful days they would gather in a mental store of excellent wise sayings, which, in their advanced years, would be for them an invaluable, refreshing source of joy and happiness, and, possibly, a quickening power for a noble conduct of life.

Some may now admit systematic ethical instruction to be a most important, nay, a most urgent reform in our national system of education. Yet they may say, Where can the time be found for this new study? Our children are already overburdened. They are overburdened. Take off, then, those horrid, stupefying drills in spelling—in spelling even rarely used Greek and Latin words; diminish the useless stuff of geographical and historical details, of names and dates and numbers which the children have to cram into their minds; aim for mental development, and avoid pernicious one-sided cultivation of the memory; and then sufficient time will be found for ethical instruction. And ethical instruction will prove to be a means of ethical education.—Respectfully, B. F.

Chicago, December 23, 1881.

Notes.

G. P. Putnam's Sons have in press a series entitled "Science Ladders," edited by N. D'Anvers, and to be fully illustrated; a new edition of Crawfurd's 'Portugal'; 'Morocco and its People,' by Edmondo de Amicis; 'Garfield's Place in History,' by Henry C. Pedder; 'A History of the Naval War of 1812,' by Theodore Roosevelt; 'The Geological and Mineralogical Resources of the James River Valley of Virginia,' by J. L. Campbell; and 'Pen Pictures of Authors,' by William Shepard.——Houghton, Mifflin & Co. have in preparation a very full index to Hawthorne's complete works, uniform in size both with the Library edition of them and with the Little Classic.——I. K. Funk & Co. are about to reprint, with the author's consent, Spurgeon's 'Treasury of David,' in six octavo volumes.——'Salaminia (Cyprus): its History, Treasures, and Antiquities,' by Alexander Palma di Cesnola, illustrated with more than two hundred woodcuts, is announced by Trübner & Co., London. It will be a pity, by the way, if General di Cesnola's splendidly illustrated work on his own collection of Cypriote antiquities is to lack, as is rumored, the promised Introduction by Professor Sidney Colvin.——The *Monograph*, "a serial collection of indexed essays" (Bangor, Maine: Q. P. Index), makes a neat volume with its twenty-seven essays, of which two-thirds are biographical, the rest historical. Freeman, Seeley, Goldwin Smith, Hayward, Trollope, Karl Hillebrand, and Karl Blind are the principal foreign authors levied upon, besides some half dozen American. The range is extensive, but, with the exception of the essay on Cleopatra, modern. We are glad to observe that the type, like Dr. Holmes's Utopian berries, "grows bigger downwards" in the series.——Another useful serial completed last month its first volume: we refer to the Monthly Reference Lists issued by the Providence Public Library. The table of contents shows that bibliographical aid has been given not only in respect to current topics like the cession of Dulcigno, the revision of the Bible, comets, the French in Tunis, the centenary of Kant, the Fair-Trade movement, Yorktown, the inter-oceanic canal, Carlyle, and Dean Stanley, but in respect to biographical, historical, scientific, literary, and critical subjects of permanent interest. The lists will be published during the present year for $1 00 per annum in advance. They are adapted to any locality which contains a public library.——Beebe's 'Four-Place Tables' (New Haven: H. H. Peck) contains in a handy, even vest-pocket form, without sacrifice of clearness, the trigonometric functions, both natural and logarithmic, at intervals of ten minutes, with differences, and also the logarithms of numbers with their proportional parts. Four-place tables are sufficiently accurate for the solution of the great majority of practical problems, and this book, made with special reference to the convenience of students in their recitations and examinations, also forms an excellent introduction to Vega's seven and Gauss's five-place tables, inasmuch as it follows in all respects the arrangement of these standard works.——The December number of *Le Livre* (J.W. Bouton) contains interesting papers on the society of fifty known as "Les Amis des Livres," and on another smaller body of bibliophiles who maintain "Le Dîner des Spartiates." There is also a tribute on the literary side to the late collector, Baron James Édouard de Rothschild, with a portrait. The illustration *par excellence* is a likeness in blue of Voltaire. *Le Livre* states that the third volume of the Comte de Paris's History of our Civil War will appear shortly.

—"The librarian who reads is lost," we are told. What is to be said of librarians who write? Catalogues, of course, are expected from them. Systems of classification even, such as Mr. F. B. Perkins, of the San Francisco Public Library, has just published, are not out of the way. But Mr. Perkins's literary activity has not always been so much in the line of his profession. Several English librarians are authors, among others Mr. E. B. Nicholson, of the London Institution ('The Rights of an Animal: a New Essay in Ethics,' and 'The Gospel According to the Hebrews'), who has varied his philanthropic and theological authorship by a translation (in the *Academy* of Nov. 26) of Béranger's "Roi d'Yvetot" in the original measure. The officials at the British Museum, with their short hours of service, have ample time for other work, and their names are continually appearing on title-pages. It is enough to mention Emanuel Deutsch, George Smith, Dr. Samuel Birch, Richard Garnett, Russell Martineau, the late principal Librarian, Mr. Jones, and his successor, Sir E. A. Bond. German librarianships are supposed to be mostly sinecures for the benefit of learned authors—"endowments of research," as the English might say, except that in England it is scientific research chiefly that seeks endowment, and in Germany historical and philological work is more favored. France can show a long list of author-librarians, but their works have been to a considerable extent bibliographical in character. On this side the water, Harvard College Library alone has furnished in forty years Harris's 'Insects Injurious to

Vegetation,' Sibley's 'Harvard Graduates,' Abbot's edition of Smith's 'Bible Dictionary,' Fiske's 'Essays,' Scudder's 'Butterflies,' and Winsor's 'History of Boston.' The American Almanac of the Librarian of Congress is well known, and we were led into this survey of bibliothecarian writers by a pamphlet of his lately published by the Maryland Historical Society on 'The Founding of Washington City, with some considerations on the origin of cities and the location of national capitals,' which begins with some interesting statistics relating to the hypsometry of cities, but is mainly devoted to an abstract of the Congressional debate on the selection of the District of Columbia, and to the retrocession to Virginia and other subsequent action of Congress in regard to the city. Dr. J. H. Trumbull's work on Indian names in Connecticut is but the last of a considerable series of his writings, of the highest authority, of which several are books. Mr. Wm. Hand Browne, of the Johns Hopkins Library, whose excellent manual of English literature was published several years ago, has just given us a translation of Dr. Falke's 'Greece and Rome.' Mr. Wm. F. Poole's historical monographs are well known. The list might doubtless be swelled, and our readers have not forgotten the recent civil-service reform pamphlet prepared by Mr. W. E. Foster, of the Providence Library, nor that on the caucus system which we owe to Mr. J. N. Larned, the head of the Young Men's Library at Buffalo.

—The seventh volume of the Manchester (Eng.) Literary Club consists largely of critical papers. Besides these there are stories and poems, accounts of excursions, and what, for lack of a better term, we may call essays. They are necessarily of various degrees of merit. But the question naturally arises, Why put into this shape writings which if valuable in themselves would be certain to find a place in the periodical press, and, if then deemed worthy of preservation, would be collected into books? The idea of this publication is a good one; but the execution does not strike us as being equal to the plan. Works of this kind, which are destined to take their place on the shelves of libraries, ought not to be filled with essays which can find a lodgment anywhere else, still less with those which cannot. They should include the results of original investigation, or at any rate of useful compilation. Thus a bibliography of George Eliot's writings finds naturally a place in this volume; but the criticisms that follow on George Eliot as poet and as novelist have no reason to show for being included in the same collection. We say this utterly irrespective of the character of the criticisms themselves.

—In putting into print the annual report of its President, Yale College seems to have taken a new departure. The new Freshman Class is, we are told, somewhat smaller than that of the two previous years, while in other and less important colleges the contrary is the case. "Obvious reasons will suggest themselves for both these phenomena. It is hardly proper to suggest or discuss any of these reasons. It is believed however that the guardians of this college may profitably consider some of them." In the first place, there is room for improvement in the instruction given during the first half of the college course. "The general reputation of the College for scientific and literary activity and the presence in its Faculty of men of whom the nation is reasonably proud are no substitutes for the most thorough attention to the drill work of the earlier years, and to the personal culture of the students of the two lower classes." In the next place, when the Corporation have provided teaching merely and nothing else for the Sophomores and Freshmen, they have provided but a fraction of what it is incumbent on them to provide. The culture of the heart, the soul and the body—enthusiasm, diversion, religious fervor and health—remain.

"Whatever can be done to awaken and direct the kindling zeal of those youths who are not ashamed to be called 'college boys,' to vary the burdens and relieve the tedium of their life—whatever can be done to confirm their health, to refine their manners, to awaken their self respect and to stimulate and guide their faith in Duty, in Immortality and in God—not only comes fairly within the scope of the College but becomes a duty which rests upon its guardians."

Without making any specific recommendations in these directions, President Porter proceeds to suggest and discuss another reason why younger colleges attract so many students. "Not a few experiments in College discipline and management are announced in various quarters which promise to relieve students and especially younger students from the sense of constraint and the necessity of constant accountability to monitors and teachers." But this accountability, instead of being an evil, is held by all veterans in college government to be a decided good, and indeed something essential to the formation of character.

"The ease with which in public schools and colleges the plainest axioms of manners and morals are disregarded, and the accepted axioms of courtesy and truth are openly violated by specious casuistry is one of the constant wonders of college life. . . . The true and radical remedy for all these evils, so far as a change in circumstances can furnish any, in our view, is first of all holding the student to his duties as such with no mask or disguise, and next the introduction of as great a variety into the student's life as is practicable—making reasonable provision for attractive amusements and athletic activities."

"Personal care, especially for the two lower classes," is highly desirable, and for this reason additional dormitories should be built, so that Freshmen and Sophomores may not be compelled to take rooms in families.

"The moral and religious condition of the College has been as good as in former years. The manners of the students at the Chapel exercises have very steadily improved within the last few years." "The attendance was never more full, the behavior never more decorous, and the satisfaction with the arrangement [compulsory attendance at prayers and on Sunday] never more complete than at the present time. We should as soon think of abandoning compulsory attendance at the literary exercises as at the prescribed religious services." "It can neither be expected nor desired that they [the students] should not be more or less affected by the speculative and critical doubts which pervade the atmosphere of modern culture, but we are gratified to know that the majority of them are not disposed to form their opinions on these subjects without earnest and candid inquiry. . . . We do not meddle with their [our instructors'] temporary or permanent scepticisms. But we do require that no influences or instructions in any unchristian direction shall be allowed, whether directly or indirectly, and we expect that the public will hold us severely to this as our duty."

"The health of our students has for several years been exceptionally good. . . . The most serious foes to health are late hours, late suppers, insufficient clothing, and imprudent exposures to heat and dampness and cold. . . . The provisions for heating so many of our public and private apartments by steam is, and has proved to be, an important security against disease. The interest in athletic sports is, on the whole, an advantage to health and morals and good manners."

—Money for a physical laboratory has been promised, but the college still needs a new building for recitations, new dormitories for the two lower classes, increase of endowments for existing professorships, and additional funds for poor students and for scholarships assigned upon examination. "The Sheffield Scientific School is more prosperous than at any previous period. . . . Its thorough disciplinary work has been so recently characterized that I have no need to repeat what has been said already." The Theological Department has received from an old benefactor a new library-building.

"The apartments formerly devoted to the library will be applied to other important uses, and the two other constant friends of the Library have transferred their interest in the first apartment to the new. . . . We are not here called on to explain and defend the arrangement after which all theological seminaries in this country are managed. [This seems to allude to a thesis advanced in one of President Eliot's recent reports, viz., that theological training offered at the present low rates tempts lazy and stupid young men to seek a livelihood in the ministry.] No other at present seems to be practicable. If a wise discrimination is exercised by the guardians of these seminaries there is little danger of abuse. The fruits of the beneficiary system have justified all the labor and money that have been bestowed in helping candidates for the ministry to a thorough education. We find abundant occasion to honor the professors in our own Seminary for their self-denying and partially paid labors and to congratulate them on the learned and practical character of their labors to the Christian, the catholic and the missionary spirit of the students."

The Medical School "needs for its success that the incumbents of the Chairs of Physiology, Chemistry, Histology and Pathology should be released from the duties of medical practice and be able to devote themselves entirely to research and instruction." The Law School, the School of Fine Arts, and the Peabody Museum are in a prosperous condition. As for the Observatory, President Porter expresses the hope and belief "that it will soon be developed into new forms of activity and take that place in respect to astronomical research and observation which the rank of the University requires." The treasury of the University has actually had paid into it, in the way of gifts, during the past year, the very considerable sum of $335,000.

—The slow but solid growth of the sentiment favorable to, and solicitous for, the overthrow of the spoils system furnishes instructive points of contrast to the progress of the anti-slavery agitation, the temperance and kindred reforms. No man of marked power has yet arisen to lay aside all other earthly objects, and, courting neither notoriety nor applause, devote himself to enlightening the public upon the nature and magnitude of the evil, and denouncing in trumpet tones an hour's toleration of it. Probably we shall never see him. The temper of our time is adverse to moral and religious fervor; the remedy is not simple, like immediate emancipation by the slaveholder or total abstinence by the drunkard; and whatever political penalties have, until lately, been visited upon the civil-service reformer, he is exempt from the social odium which was at once the spur and the consolation of the ardent champion of unpopular ideas half a century ago. He has, moreover, resources in an independent press unknown then, and his cause is such as to call for less self-sacrifice and abstraction. He cannot, however, dispense with organization, the lack of which, for example, up to the year 1832, rendered all the anti-slavery sentiment of the country unavailable and futile. This, as our readers well know, has within the past three years changed the aspect of the opposition to patronage and the Machine, and given every thoughtful man an assurance of its ultimate and not distant triumph. The Boston and Cambridge associations began last year the publication of a broadside called the *Civil-Service Record*, of which the sixth number in this form bore date of October 22, 1881. The contents of this periodical were both original and selected, and the blank page invited editorial clipping and reproduction. With the seventh or December number a transformation has taken place. The *Record* now appears as an eight-page

monthly, of the size of the *Nation*, and is sent to subscribers at the nominal price of twenty-five cents per annum. The heading still contains the testimony of the late President against "the present system." On the first page Governor Long, of Massachusetts, manifests his adherence to the reform doctrine and measures, and the rest of the paper is occupied with articles and news in the same sense, and with cheering signs of the political influence of the civil-service reform organizations in various States. Thus the whole Rhode Island delegation, even to Senator Anthony, who was willing to unseat Secretary Burch in order to replace Gorham, is practically pledged to support the Pendleton Bill. The *Record* may be obtained by addressing Mr. William Simes, Treasurer, Box 3084, Boston, and a cheaper and more effective method of disseminating principles which it will soon become fashionable to avow, we do not know.

— The late Dr. John W. Draper, whose death occurred at Hastings on Wednesday week, anticipated the judgment of his compeers by issuing three years ago a volume of 'Scientific Memoirs.' In this collection of papers, as we pointed out at the time, it was easy to see "a disposition to show the scientific reader that one of the pioneers in the experimental study of the radiation of heat and light has been strangely overlooked." He preceded Kirchhoff in stating and attacking the problem of spectrum analysis, but missed the discovery which would have guaranteed his fame; he first used the daguerreotype process for taking portraits; he made the first photograph of a celestial object ever known to have been taken, and these are but a small part of his achievements. He was, however, a somewhat solitary worker, and in his publications sought reputation abroad rather than at home. His native country was indeed England, but he obtained his degree of Doctor of Medicine from the University of Pennsylvania in 1836, and almost immediately occupied, at the Hampden-Sidney College in Virginia, the professorship of chemistry, and began his experiments. Three years later he became permanently connected, as a professor, with the University of the City of New York. The breadth of his intellectual powers was shown in some ambitious works undertaken in quite different fields. His 'History of the Intellectual Development of Europe,' and 'History of the American Civil War' stamped him as an original and philosophic thinker, with a marked capacity for generalization ; yet neither brought him the distinction for which he probably looked, and which he felt he deserved, though the former was translated into several European languages. Dr. Draper's sons have already added to the scientific lustre of his name.

—Mr. Richard H. Dana, who died in Rome last week, was better known in the latter part of his life as a lawyer and through his connection with public affairs than as a literary man, but his earliest distinction was gained as a man of letters. His 'Two Years Before the Mast' is one of the most entertaining narratives of the kind in the language; indeed, it may be said to stand almost alone. Men of education and refinement usually make their acquaintance with the ocean in a less practical way, and a literary man's opportunities to acquire materials for describing life before the mast as sailors themselves know it are very rare. The forecastle has been generally studied and written about from the quarter-deck, and it is safe to assume that the quarter-deck has made a good many mistakes in the process. Mr. Dana for two years lived a seaman's life, and, having a remarkable power of observation and description, preserved a record of his adventures which will probably maintain its hold on the public as long as sea life and sea adventure and travel in strange countries retain their hold on the imagination. It is not far from fifty years since Mr. Dana, then a young man just grown up, made his voyage to California, and his account of it is all the more valuable now because such voyages already belong to the past. His ambition, however, was not literary, and his life was mainly devoted to the law, for certain departments of which he had a great aptitude. A good memory and a power of clear and accurate statement are enough to ensure success at the bar, and besides having both these to a remarkable degree, he possessed a rhetorical ability of no mean order. In his day the art of oratory was held in high esteem in New England, and the public men of Massachusetts were all more or less "finished speakers." There is nothing that passes away more completely than a fashion in oratory, unless it be a fashion in acting, and in a very few years it will be left to guesswork and vague tradition to preserve the memory of what was once a remarkable local school of public speaking. Mr. Dana, while he lived, was a connecting link between the rhetoric of our day and the classical period represented best, perhaps, by the frigid classicism of Everett. Webster and Choate profited by the existence of the school, but they were both geniuses, and cannot be reckoned among its products. Mr. Dana outlived the taste which made the school possible, and in his later days he could hardly be said to be successful as a public speaker. The ordinary audience, especially the ordinary accidental political audience, such as gathered to hear him in his canvass with Butler, found him too artificial and tainted with "dignity." Indeed, Butler, who, with the cunning of a true demagogue, succeeded in making the constituency imagine the contest to be between the people on one side and a haughty aristocrat on the other, was partly enabled to do so by the aid of Mr. Dana's rhetoric, which was a little too much that of a "gentleman of the old school" to be useful on the stump.

—Mr. Dana's name is connected with many well-known civil and criminal cases—the Shadrach and Burns slave cases, and the prize cases in the Supreme Court being perhaps the most important. He was also United States District Attorney in Boston from 1861 to 1866. His familiarity with questions of public law led, after the close of the war, to his preparation of an edition of 'Wheaton's International Law,' which proved a most unfortunate undertaking for him. The previous editions had been brought out by Mr. William Beach Lawrence, and on the publication of Mr. Dana's Wheaton he brought a suit against his successor for infringing his copyright. A long litigation ensued, and though Mr. Dana's character and standing made the suggestion of intentional plagiarism an absurdity, the charge of infringement was sustained. The explanation of this curious piece of ill luck commonly accepted among lawyers was, we believe, the great difficulty of stating legal propositions advanced by previous writers in original language. The words used become an essential part of the expression of the idea, and every new writer who goes over the ground is forced to expose himself to the charge of plagiarism, since he cannot always vary the phraseology. Anybody who will take the trouble to go over two or three of the newest law-books on any given subject, and compare a few pages of them critically with a classical work on the same topic, will have his eyes opened to the widespread possibilities of innocent plagiarism which legal literary production affords. In 1876 Mr. Dana was nominated as Minister to England to fill the vacancy caused by the resignation of General Schenck. He was eminently fitted for the position, but his suit with Mr. Lawrence was used by his enemies to defeat his confirmation. He did everything that he undertook well, and in private life his talents and accomplishments were very marked. He was an admirable story-teller, and an adept in the now pretty nearly lost art of conversation ; and conversation, as it was practised by our fathers and grandfathers, was a fine thing in its way, however superior we may find the easy-going "talk" that has taken its place in our day.

—One of the innovations introduced at the Wagner Festival at Bayreuth in 1876 consisted in the lowering during the performance of all the lights in the auditorium, so that the audience sat in comparative darkness. The principal object in doing so was to prevent the reading of the text-books, which constantly distracts the attention from the proceedings on the stage, and spoils the illusion. That this could be done with comparative impunity at Bayreuth was due to the fact that the vocalists had been selected with especial regard to their dramatic endowments, first among which is a distinct articulation. In the ordinary German opera-house it will still be found that a majority of the audience follow the performance of a Wagner music-drama with text-book in hand, so as not to miss the sense of gratification at the close correspondence everywhere between the words and the music. In Italian operas there is no such correspondence, the libretto being merely the peg on which the melodies are hung. If the small boy, nevertheless, finds it profitable to sell Italian-English libretti on the street and in the lobby of the opera-house, it is because many buy these little books for the sake of the synopsis of the plot which is usually contained in them, while few take the trouble to endeavor to follow the absurdly naïve words that underlie the songs. Under these circumstances nothing would seem more desirable, both for the sake of economy and convenience, than a small volume containing short synopses of the most popular operas, which could be read over before leaving one's house, thus refreshing the memory in regard to plots which the wofully inadequate acting of most Italian singers generally leaves in the densest obscurity. An operatic *vade-mecum* of this sort was published a few years ago by Boosey in London, edited by A. S. Gatty, and another has now been issued by "Notelrac," under the title, 'Operas : their Writers and their Plots' (Lippincott). Gatty's is the more comprehensive of the two, as it is intended to include all the operas habitually performed in England, while "Notelrac's" embraces "the operas now in use upon our American stage." So far as this latter volume goes, it seems to be well done and accurate throughout. Its shortcomings are an excessive brevity in some cases, and the omission of several operas, such as "Fidelio," "Hamlet," and "The Flying Dutchman," which have been heard in this country, and may be heard again any season. These might have been advantageously substituted for "Un Ballo in Maschera" and "Il Poliuto." The operas of each composer are preceded by brief biographical sketches.

—If the third concert of the Symphony Society had taken place two weeks later, it might have been supposed that the occasion had been chosen to celebrate the fortieth birthday of the opening piece—Mendelssohn's Scotch Symphony. Many of Mendelssohn's compositions have lost their freshness—notably his Songs without Words, of which the majority are flavored with a molasses-candy sweetness that soon cloys the appetite. But of those of his compositions which have stood the test of time and the changes in musical taste the Scotch Symphony is a good example. It is

one of the few fortunate works which were enthusiastically applauded at their first appearance and are equally sure of the appreciation of a cosmopolitan audience a century later. Dr. Damrosch conducted this work with an excellent appreciation of the author's intentions, and the result was a performance which, in delicacy and expression, left nothing to be desired. In the rendering of the last piece the orchestra was equally good. The fiery, stirring rhythms of Liszt's symphonic poem, "The Battle of the Huns," were brought out with great emphasis by the brass, while the strings and the organ furnished that striking contrast between the Christian spirit and Asiatic ferocity which helps to make this one of Liszt's most popular compositions, to judge from the applause it always receives. The poem was suggested by Kaulbach's picture of the same name, and is such a genuine inspiration, and so admirably reflects the spirit of that painting, that one can only wish that some of our modern composers would spend more of their time in picture-galleries. The scene from Wagner's "Siegfried"—"Waldweben"—which formed the only other orchestral selection, was not so satisfactorily played, so that the audience endeavored to have it repeated. The scene represents *Siegfried*, under a large tree in the forest, listening to the rustling of the leaves and the song of the bird which tells him where he can find *Brünnhilde*. The movement of the violins is so peculiar and novel, and the rhythm of the bird-song so free and quaint, that the proper effect is not easily obtained. To be more definite, we mean that the violins did not quite succeed in making their instruments whisper and blend in such a manner as to convert their notes into one general confused impression, as in the rustling of forest leaves. In the last bars of Berlioz's duo nocturne from "Beatrice and Benedick" the orchestra also failed to reveal the full charm of subdued color which at a previous performance had so vividly suggested the lingering traces of a gorgeous sunset. The vocal parts were sung by Miss Hattie L. Simms, who confirmed the good impression recently made in the "Messiah," and Mrs. Belle Cole. Miss Simms also sang with a firm, pure tone and correct expression one of Beethoven's songs, "Der Wachtelschlag." Beethoven, the great symphonist, is as a song writer far inferior to Schubert, Schumann, Robert Franz, and Rubinstein, his "Adelaide" being perhaps the only one of his songs that would deserve being bound in the same volume with Schubert's "Ausgewählte Lieder." "Der Wachtelschlag" is not even one of his best songs, and we can only wonder at the choice of such an empty piece for such an occasion. The orchestral accompaniment did not improve the quality of the piece at all, but rather injured it, just as at a previous concert of the society "Adelaide" was spoilt by the dethronement of the piano and the incorrect phrasing of Campanini.

—The Princess de Lesignano has had printed at Brussels 'Les Constitutions de tous les pays civilisés,' collected, arranged, and annotated by herself. It is a large volume, magnificently printed, and adorned with the portraits of the sovereigns who have granted the constitutions and of the authoress herself. Copies have been presented to all the public libraries in France, and probably to all the crowned heads in Europe and to the Pope. And now comes the Republican *Revue Politique* and cruelly points out that this costly work of a descendant of the Crusaders, in giving as the constitution of the Holy See the famous Syllabus of the 8th of December, 1864, has omitted the anathematical heading of the summary of the chief *errors* of our age; so that the Pope is represented as declaring that—

"ART. 1. There is no Supreme, Divine Being, perfect in his wisdom and his providence, distinct from this material universe. . . .

"ART. 5. Divine revelation is imperfect. . . .

"ART. 6. The Christian faith is contrary to human reason. . . .

"ART. 7. The prophecies and the miracles recounted in the Holy Scriptures are poets' fables.

"ART. 64. The violation of the most sacred oaths, the most criminal and shameful actions, and those most opposed to the eternal law, are not only not blamable, but on the contrary are entirely lawful and worthy of the greatest praise, when they are done for the love of one's country.

"ART. 65. It is by no means proved that Christ has raised marriage to the dignity of a sacrament."

Such is the bitterness of party feeling now in France, and such is the folly of mankind, that no doubt many an extreme Republican will hear of this with the keenest pleasure, and feel as if he had a new justification for his dislike of the Church; and many of the *cléricaux* or the *dévots* will be filled with bitter mortification at what is after all very likely only the blunder of a foreman in making up his pages. No doubt "cancels" will be forwarded by express to the libraries and the royal recipients, and the few copies that have got into irreverent hands and are suffered to preserve their "blasphemy" intact will take rank with the "vinegar" and the "breeches" Bibles, and that other which gives the Seventh Commandment as, "Thou shalt commit adultery," and when sold hereafter at the Hôtel Druot will bring fabulous prices. Bibliophiles have feared that by the gradual drifting of rare books into public libraries the market would be depleted—their occupation gone. It appears that the production still continues, not, however, we fear, in proportion to the demand. The few copies of the 'Constitutions de tous les pays' will do little toward satisfying the appetite which the late Sunderland sale shows to be greater than ever.

—The recent International Oriental Congress at Berlin, in its Semitic section, adopted a resolution expressive of its wish to see published the collection of photographs of eminent Persian monuments and inscriptions taken by Dr. Stolze in 1878, just before his return to Europe. The publication is now announced by A. Asher & Co., of Berlin, at the subscription price of one hundred dollars, for two solidly-bound volumes, containing a hundred and fifty largest-folio plates, with accompanying account of the inscriptions by Nöldeke, one of the foremost Semitic scholars of the day. The first volume will present most of the views from Persepolis, the second will add those from Istakhr, Pasargadæ, Shahpur, and elsewhere. Both are promised to appear in the course of this year, and the subscription-list is open until the 15th of March. It is much to be hoped that copies enough will be taken in this country to put the work within the reach of scholars and students of antiquity.

ABBOTT'S PRIMITIVE INDUSTRY.

Primitive Industry; or, Illustrations of the Handiwork, in Stone, Bone, and Clay, of the Native Races of the Northern Atlantic Seaboard of America. By Charles C. Abbott, M. D. Salem, Mass.: George A. Bates. 1881.

IN Thoreau's 'Journal' for 1859, the following characteristic entry occurs under date of May 2:

"I feel no desire to go to California or Pike's Peak, but I often think at night with inexpressible satisfaction and yearning of the arrow-headiferous sands of Concord. I have often spent whole afternoons, especially in the spring, pacing back and forth over a sandy field, looking for these relics of a race. This is the gold which our sands yield. The soil of that rocky spot of Simon Brown's land is quite ash-colored (now that the sod is turned up) from Indian fires, with numerous pieces of coal in it. There is a great deal of this ash-colored soil in the country. We do literally plough up the hearths of a people, and plant in their ashes. The ashes of their fires color much of our soil." (*Atlantic Monthly*, May, 1878, p. 570.)

To many it will be a new conception of Thoreau which is called up by this picture of the lonely transcendentalist "pacing back and forth over a sandy field," looking for arrow-heads; and yet it is entirely in keeping with all we know of his mental habits and style of life. Many a man more matter-of-fact than Thoreau was has "spent whole afternoons" in the same apparently useless employment, moved not by the acquisitiveness of the curiosity-hunter, but by the thought that he is gathering and preserving the "relics of a race." To this large and increasing class of students the author of 'Primitive Industry' evidently belongs. As he says in his preface, he lives "in a neighborhood once densely populated by the Indians, as attested by the thousands of stone implements that are scattered over the fields"; and he has elsewhere, from time to time, indicated the nature and extent of the work he has done in this rich archæological field. Some four years ago he had on record nearly 14,000 specimens gathered from an area of about 1,000 acres; and these accumulations (deposited in the Peabody Museum, Cambridge) have doubtless been largely increased since then.

Of the industrial condition of the "roving" (in distinction from the "village") Indians, ere, it had been touched by the influence of European civilization, a remarkably succinct account has been given by the late Lewis H. Morgan:

"They had developed many useful arts. They possessed the art of striking fire; of making the bow, with the string of sinew, and the arrow-head, both of flint and bone; of making vessels of pottery; of curing and tanning skins; of making moccasins and wearing apparel, together with various implements and utensils of stone, wood, and bone; of rope and net-making from filaments of bark; of finger-weaving, with warp and woof, the same materials into sashes, burden-straps, and other useful fabrics; of basket-making with osier, cane, and splints; of canoe-making—the skin, birch-bark, and dug-out; of constructing timber-frame lodges and skin tents; of shaping stone mauls, hammers, and chisels; of making fish-spears, nets, and bone hooks, implements for athletic games, musical instruments, such as the flute and the drum, weapons, and personal ornaments of shell, bone, and stone." (*North American Review, October*, 1868.)

For the filling up of the outline thus rapidly but accurately sketched, Dr. Abbott's book furnishes abundant materials. There is scarcely a point referred to here which he does not touch upon; and while from the nature of the case his immediate object is to describe the implements which remain—imperishable because of stone—yet the fact that they are implements leads us back to the uses to which they were put; and by degrees the primitive Indian life grows to a vivid picture before the mind of the reader. The volume is thus a valuable addition to the sum of our knowledge of the aboriginal man. As such, it is abundantly worthy of a place beside Colonel C. C. Jones's work on the 'Antiquities of the Southern Indians,' Professor Charles Rau's account of the 'Archæological Collection of the United States National Museum,' and Mr. Evans's elaborate treatise on the 'Ancient Stone Implements, etc., of Great Britain.' Its general resemblance to the last-named work—due allowance being made for the wide difference in the field of research—is very noticeable; and this resemblance is increased by the fact that both works contain at the end chapters on palæolithic implements.

To one who keeps the run of archæological research and authorship in America, it cannot escape observation that the substance of Dr. Abbott's volume has already appeared in other

forms—first, in various articles in the *American Naturalist* and other periodicals, and again in the Smithsonian Report for 1875, where, under the title of 'The Stone Age in New Jersey,' it occupied 135 pages—to say nothing of the fifty-odd pages of poor woodcuts at the end. We have not instituted a careful comparison between 'The Stone Age' and 'Primitive Industry' (Dr. Abbott would doubtless be glad to have the former work entirely forgotten); but we have gone far enough to perceive how great an improvement the new book is upon the old. It is specially to be regretted that in the new volume the old woodcuts should appear. When published by themselves, they looked sufficiently coarse and rude; but when placed side by side on the same page with those of a somewhat better style (as on pp. 101, 111, 203, 352, 353), the effect is incongruous and disagreeable.

The main title of Dr. Abbott's book suggests the criticism that a more careful classification of the various objects described might very well be made, or, rather, a classification upon a somewhat different basis. The author intimates that herein his method is the result of "following the references of the early writers to the utensils and weapons of the Indians" (p. 2). This simply accounts for the various groups of implements treated of in the successive chapters, such as "grooved axes," "celts, chisels and gouges," "mortars and pestles," etc. But it would have been in keeping with the object of the work, as indicated in its title, to group more definitely by themselves the implements and utensils of industry (with special reference to fishing, hunting, agricultural, and domestic uses); to place in a second group the various weapons of war; to throw together in a third class the various ornamental and ceremonial objects (including pipes), and to place in a fourth class the "tools," such as drills and pecking-stones, with which the other implements were manufactured. On a close examination of the so-called table of contents (which is, however, simply a list of chapter-headings, without any indication of the page on which a chapter begins), we conclude that such a grouping as this must have been in the author's mind; but if it had been brought out more distinctly in the "make-up" of the volume, a certain shapeliness would have been imparted, the picture of aboriginal life would have been more nearly complete, and a greater impressiveness would have been the result. And it would not have interfered with the execution of this plan if the large class of implements finished by chipping or flaking had been separated from all others, and thrown into a group by themselves (of course with proper subdivisions). At the same time, it is important to remember here what is true in every science, that classification is a strictly subjective process, and that it is very easy on the one hand to place together things that differ essentially, and on the other to "make a distinction where no difference exists."

'Primitive Industry' abounds of course in minute details, some of them interesting only to the specialist, others well fitted to catch the attention of the ordinary reader, and place him *en rapport* with the aboriginal life which the author so fondly depicts. We have marked various passages, but can quote only one or two which may be of interest to the general reader.

The migratory character of the Indian tribes, as revealed by the distribution of their stone relics, is well brought out, in the author's very unpretentious way, in the following:

"The frequent wars or wanderings of a community and bartering may have resulted in the commingling of the axes of a multitude of localities, many of them miles distant from each other. It is known, too, that tribes came from long distances to make autumnal visits to our sea-coast, and, of course, on such journeys they would always be provided with, and frequently lose, as they passed through the State, many specimens of both weapons and domestic implements. The routes taken by the Indians who annually crossed New Jersey, from their homes in the mountains of Pennsylvania, on their autumnal visit to the sea-coast, were well known to the early surveyors of the State; and several of the principal thoroughfares, extending from the Delaware River eastward, are the sites of those trails over which the Indians had been accustomed to pass for unknown centuries. It is in the immediate vicinity of these trails that we still find a great number of the various patterns of stone implements and fragments of pottery, which are largely the traces of those inland communities which passed yearly, by the same path, to their chosen locality on the coast. Year after year they camped at the same spot while en route, and left imperishable traces of their sojourn by the sea, in the well-known Indian shell-heaps" (p. 16).

At various points in the volume there are interesting accounts of "deposits" which have been discovered, especially in New Jersey, which seems to be peculiarly rich in archæological treasures. Take for example the following:

"In one case, in digging a cellar in Trenton, N. J., one hundred and twenty [axes] were found, 'all closely huddled together,' as described by the man who found them. They were about three feet below the surface, and a foot deep in the gravel underlying the soil. They were surrounded by, and entirely covered with, a bright brick-red powder. Again, in digging the receiving vault of the Riverview Cemetery, near Trenton, a bushel basketful of these axes was found, packed closely together, six feet deep in the ground. . . . In another case, fifty porphyry celts were found. These appeared to have been carefully deposited, and not thrown pell-mell into the hole dug to contain them. In all such cases of deposits of either axes or celts, there has been no commingling of a number of forms of implements, nor any trace of fire. The inference, judging from the conditions under which those in New Jersey were found, is that they have been buried for the purpose of temporarily concealing them." (p. 34).

The bearing of the abundance of relics upon the question of population is not lost sight of:

"In some localities, of several square miles in extent, there have been found from three to five axes in every one hundred acres, and still others are brought to light by the plough. Allowing but one-half of the smaller number to have been left lying in every one hundred acres of the State's area, when abandoned by the Indians, there would remain, for the benefit of archæologists, the enormous number of 125,000 stone axes. . . . It is quite within reason to believe that one-half that number were left by the resident Indians when they relinquished their territory to the founder of Philadelphia. However incorrect the above estimate of the abundance of axes in New Jersey may be, it is certain that there have been many hundreds gathered in the past, without any apparent diminution of their numbers. Yearly the plough upturns as many as in previous years, and the thoughtful observer who chances to seek for these scattered relics is amazed at their frequent occurrence. Supposing that these grooved axes, except such small examples as were probably toys, were used and owned only by men, does this great abundance of them indicate a larger population than is generally supposed to have existed at any one time? or may we take it as indicative of a smaller community whose occupancy extended over an immense lapse of time? . . . Several early authors mention the fact of the handing down from father to son of the cherished stone axe, to fashion which 'the life of a savage is often insufficient.' This shows that the custom of depositing them in graves was only occasional; and therefore it may be considered that such setting aside of a certain number would not materially affect any calculations based upon their numbers as now found scattered broadcast over the entire area of the State" (pp. 9, 10).

We might in this way go through the volume, picking out significant items or paragraphs of succinct description, calculated to increase the interest of the modern man in his aboriginal predecessor, and revealing at the same time the author's thorough study of his subject. While there are verbal inaccuracies and carelessly constructed sentences in every chapter, there is at the same time on every page evidence of painstaking labor and an almost ideal devotion on the part of the writer to his chosen theme. The result is a highly creditable and permanently valuable work—a noteworthy addition to that series of illustrated works on American antiquities which was begun sixty years ago, and has been steadily enlarging ever since. The list is one which by its length suggests a large constituency of readers.

It would be impossible, in a single notice, to follow the author through his detailed descriptions of axes, and hammers, and knives, and drills; of mortars, and pestles, and pots; of agricultural tools; of plummets and net-sinkers; of arrow-points, and spear-heads, and war-clubs; of pipes, and ornaments, and ceremonial objects. These things, and many more, are treated of in a series of twenty-seven chapters, occupying four hundred pages. After this comes a valuable chapter on copper implements, in which it is well remarked that the occurrence of such relics is "interesting in itself, but of no ethnological [and we may add, no chronological] significance." Next comes a chapter on some of the tools used by the Indians in manufacturing their implements—hand-hammers and rubbing-stones; and then the volume broadens out into a dissertation, a very excellent one, upon "flint chips"; a good account of the shell-heaps of the sea-coast and of inland rivers; and lastly, an elaborate discussion of the palæolithic implements found by the author in the gravel of the Delaware River near Trenton.

In regard to the shell-heaps, Dr. Abbott agrees with the late Professor Wyman and Professor Rau, that they afford no such tokens of antiquity, upon exploration, as do the "kitchen-middens" of northern Europe; yet he concludes from certain general considerations relating to these remains—their relative position, extent, etc.—that they suggest a period of occupancy of the Atlantic seaboard which must be measured by thousands of years. In the "open-air workshops," from which large gatherings of flint chippings have been made, he finds additional evidence of the antiquity of the Red man; and from many examinations of the sites and remains of such manufactories he constructs a vivid picture of the aboriginal industry popularly known as arrow-making. The description of one of these workshops, on pages 455 to 459, is well worth reading, as an illustration of the scientific method of research and the popular way of putting things. One of the minor conclusions drawn from the entire discussion, although familiar to students, may be a new discovery to many—namely, that implements chipped from stone "were made by comparatively few persons, who supplied the people of their respective tribes with such implements as they required" (p. 468).

About eighty pages are devoted to a discussion of the palæolithic implements, an amount of space fully justified by the importance of the subject. Dr. Abbott acknowledges frankly that in previous publications he has "probably ascribed too great an antiquity to these implements," having been misled by the chronological data of the geological "Reports"; but he considers them, nevertheless, as proving that man occupied the upper valley of the Delaware when "essentially glacial conditions" existed there. In order that the whole subject may be placed fairly before the inquirer, he is furnished with abundant data (together with illustrations of a dozen specimens) in Dr. Abbott's own chapter, and a strictly geological view in Mr. H. C. Lewis's treatise, in chapter xxxiii., on the "Antiquity and Origin of the Trenton Gravel." The author's conclusion may be summed up as follows: That these remains (the discovery of which *in situ*, let us say in passing, is still debated,

whether past question or not) are of artificial origin; that they belong practically to the glacial period; that they possess, therefore, a very high antiquity (although not so high as at first supposed); and that they probably belonged to a race represented to-day by the Eskimos. At the close Dr. Abbott puts forth the interesting but precarious hypothesis that the Eskimo race is of American, and the Indian race of Asiatic, origin, and so leaves his reader at an open door, looking out upon the broad expanse of prehistoric time.

One of the interesting features of the work is the confirmation of the author's views respecting the uses of implements by references to early writers, such as Kalm, Loskiel, etc. It would have been well to prefix to the volume a slight bibliography, giving some account of these men, and fixing the time at which their visits were made. It would have saved trouble not only to the reader, but to the author. To illustrate: In the middle of the volume, Kalm is introduced as "Peter Kalm, the Swede, who visited New Jersey in the middle of the last century, and has left us an excellent account of the resident tribes and their customs," etc. This is as far along as page 279, although Kalm has been repeatedly mentioned on previous pages. Another Swedish author, more frequently quoted than any other of his authorities, unfortunately appears in every instance as "Holm." We supposed it was by this time generally understood that "Thomas Campanius Holm," on the title-page of Du Ponceau's translation, meant Campanius of Stockholm. There are various other errors which a careful proof-reading ought to have excluded. The obsolete form "doubtlessly" constantly occurs instead of "doubtless"; and such mistakes as these are met with: "Three divisions, each antedating the other" (p. 3); "From the great number of axes already gathered, *and that remain to be gathered*, it is clear that this form of weapon was in constant use" (p. 9).

JOWETT'S THUCYDIDES.—II.

Thucydides. Translated into English, with Introduction, Marginal Analysis, Notes, and Indices, by B. Jowett, M.A., Master of Balliol College, Regius Professor of Greek in the University of Oxford, etc. 2 vols. Oxford: Clarendon Press; New York: Macmillan & Co.

"WHAT are all the Roman historians to the great Athenian? I do assure you that there is no prose composition in the world, not even the 'De Corona,' which I place as high as the seventh book of Thucydides. It is the *ne plus ultra* of human art. I was delighted to find in Gray's letters the other day to Wharton, 'the retreat from Syracuse—is it, or is it not, the finest thing you ever read in your life?'

"Most people read all the Greek that they ever read before they are five and twenty, . . . Accordingly, almost all their ideas of Greek literature are ideas formed while they were still very young. A young man, whatever his genius may be, is no judge of such a writer as Thucydides. I had no high opinion of him ten years ago. I have now been reading him with a mind accustomed to historical researches and to political affairs; and I am astonished at my own former blindness, and at his greatness."

Will the crowd of readers to whom Prof. Jowett has revealed Thucydides enter into the language in which Macaulay expresses his just enthusiasm for the "greatest historian that ever lived"? We doubt it. The thousands who have devoured Macaulay's own 'History of England' like a new novel will find it a task of difficulty to realize the charm of his idol. The retreat from Syracuse, the analysis of the revolutionary movement at Corcyra, or the funeral oration of Pericles, will, it may be hoped, make even dull readers feel that Thucydides was a master of the historical art. But whoever expects to find in the pages of the Athenian writer reading which is at once easy and brilliant, instructive and entertaining, is certain to meet with disappointment. The very beauties of classical writers are all but inconsistent with the diffuse and popular mode of narrative to which the present generation are accustomed, and among classical writers Thucydides is less suited than many others to entertain the general reader. Herodotus, Plutarch, Livy, Tacitus are each (though in very different ways) far more likely to catch popular taste than is the Athenian exile. Moreover, Macaulay's eulogies, true and well-founded as they are, may possibly lead students away from the true point of view whence to appreciate the genius of Thucydides.

Macaulay's admiration is kindled mainly by those qualities which the Englishman and the Grecian had in common—capacity for impressive narration, and experience in political affairs. In each of these qualities Thucydides, it is true, excelled, but they do not constitute the essential note of his genius. Historians may be roughly divided into two classes: they are either narrators or critics. The one body make it their main aim to draw a picture of the past, the other make it their main object to explain the causes of past events. The one class (among whom Macaulay himself would always occupy a high place) are essentially painters; the other class are essentially men of science. The extraordinary glory of Thucydides is that, endowed with unrivalled powers of narrative, he was also the first, and still remains the greatest, of critical or scientific historians. His story of the retreat from Syracuse will rank for ever among the immortal monuments of Greek art; but as an artist he has rivals, though he has no superior. As the inventor of genuine historical criticism and systematic historical research, he has stood so completely alone that we may well doubt whether among the ancients the true nature of his greatness was ever thoroughly understood. Modern science (we have been told by competent judges) establishes that Hippocrates was centuries beyond his age in genuine knowledge of medicine, or rather in knowledge of the way in which the art of healing should be studied. Modern conceptions of historical study have for the first time made men feel that Thucydides was as much before his age, or rather before the ages which followed him, as was his contemporary, the great physician. Each, in fact, represented the astounding advance made by Greek genius, in the days of its first freshness and its unexhausted strength, along paths of investigation which were ultimately left almost unexplored by the leading spirits of the classical world. If Thucydides is to be truly understood, he must be looked upon mainly as the first thinker who treated the history of man as a branch of knowledge, presenting not so much tales to be told with all the arts of literary grace as problems to be solved by all the means of rational thought and of careful investigation. At a time when the words "science" and "scientific" are constantly used so as to conceal looseness of thought under a pretentious show of accurate language, one is almost afraid to call Thucydides scientific lest one should simply stimulate the pernicious taste for "tall talk." The term, however, so completely suits the facts that it is hard to find a better, and the best service which reviewers can render to readers is to point out examples, lying on the very front of Thucydides' narrative, of his keen appreciation of what would now be called the science of history.

Thucydides, in the first twenty-three chapters of his work, sets forth indirectly, but none the less distinctly, his whole historical method; and students who read these chapters with care may easily convince themselves that the Athenian writer had mastered all the essential principles of investigation. He perceives, in the first place, what thousands of theorists have forgotten, that the study of history is at bottom merely the collection of facts and the examination into evidence. Hence his introductory chapters point with clearness to the true source of error as to the events of the past—namely, the credulity of mankind, who "do not discriminate, and are too ready to receive ancient traditions about their own as well as about other countries," and the indolent carelessness which makes "men take so little trouble in the search after truth, and so readily accept whatever comes first to hand." Aware of the true causes of error, he lays down the mode of proceeding by which he attempted to avoid or minimize mistakes:

"As to the speeches which were made either before or during the war, it was hard for me, and for others who reported them to me, to recollect the exact words. I have therefore put into the mouth of each speaker the sentiments proper to the occasion, expressed as I thought he would be likely to express them, while at the same time I endeavored, as nearly as I could, to give the general purport of what was actually said. Of the events of the war I have not ventured to speak from any chance information, nor according to any notion of my own; I have described nothing but what I either saw myself, or learned from others of whom I made the most careful and particular inquiry. The task was a laborious one, because eye-witnesses of the same occurrences gave different accounts of them, as they remembered or were interested in the actions of one side or the other."

This passage has been frequently quoted, but it is hardly possible for any one wishing to appreciate the high standard of historical truth set up by Thucydides to meditate too often on the words we have cited. Neither Livy, nor Plutarch, nor Tacitus, nor, indeed, any Greek or Roman author, has exhibited anything like the same desire to make his narrative correspond with actual fact. We may, indeed, go a great deal further than this, and safely assert that down to quite modern times historians did not attain to the conception of historical accuracy proposed to himself by Thucydides. The notion that a writer should not, so to speak, "improve" his narrative, and in fact treat history as a branch of moral rhetoric, is more or less a modern conception; and among authors who would now acknowledge that the method of Thucydides is the only true and justifiable mode of narrative, there are few who rigidly adhere in fact to principles which they own to be theoretically valid. The names, at least, of Froude, Lamartine, and Thiers suggest that even in the nineteenth century authors of great talent may be content to write mere "prize compositions," and cannot boast that they have never written "according to any notions of their own."

In the second place, Thucydides has clearly discovered the use of that "comparative method" which is often treated as something like a modern invention. He sees, that is to say, that the condition of more or less uncivilized races, or the surviving customs of earlier times, throw a distinct light upon the early history of what were in his day the civilized countries of the world. Thus, he points out that the unsettled condition of early Greece

"is proved by the practice of certain tribes on the mainland who, to the present day, glory in piratical exploits, and by the witness of the ancient poets, in whose verses the question is invariably asked of newly-arrived voyagers whether they are pirates; which implies that neither those who are questioned disclaim, nor those who are interested in knowing censure, the occupation. The land, too, was infested by robbers, and there are parts of Hellas in which the old practices still continue. . . . The fashion of wearing arms among these continental tribes is a relic of their old predatory habits. For in ancient times all the Hellenes carried weapons because their homes were undefended and inter-

course was unsafe; like the Barbarians, they went armed in their every-day life. *And the continuance of this custom in certain parts of the country proves that it once prevailed everywhere.*"

These last words contain the gist of the whole matter. When theorists draw from the condition and the laws of barbarous races, or from "survivals," inferences as to the past condition, say, of early England, or it may be of early Rome, they simply apply with more or less ingenuity to newly-noticed facts the canon that the continuance of a custom in certain parts of the world tends to prove that it once prevailed everywhere. Our latest investigators into the past have before them a far wider field of experience and of knowledge than that which opened itself to the gaze of Thucydides, but they have not advanced a step beyond his principles of historical comparison.

Thucydides, thirdly, from his use of the comparative method, shows, what is indeed apparent from other features in his work, his perception of the identity (or one should rather say similarity) of human nature among different races and peoples. This is the most extraordinary mark of his profound originality. All the principles, beliefs, and sentiments in which we are educated tend to impress upon us the unity of the human race. In this respect religious belief in the descent of all mankind from common parents has aided and facilitated scientific speculation; for it has made it easy for modern theorists to accept the fact that the condition of races in different stages of civilization throws light on the steps by which the civilization of the most civilized countries has been developed. There was, on the other hand, nothing except the insight of genius to suggest to an ancient Greek that all mankind were so united together that the state of uncivilized races illustrated, or might illustrate, the history of the Hellenic race. This perception of something which may almost be described as the unity of mankind, or at lowest the universal influence among all men and among all races of the same principles of action and of feeling, is closely connected with the constant attempt on the part of Thucydides to refer all events to "the order of human things"—or, to use modern expressions, to the laws of human nature. Happily, in his time the much-abused term "law" had not come into use as describing a real or supposed principle of science; but no human being can doubt that the whole mind of Thucydides was turned toward discovering the laws of history:

> "Very likely the strictly historical character of my narrative may be disappointing to the ear. But if he who desires to have before his eyes a true picture of the events which have happened, and of the like events which may be expected to happen hereafter in the order of human things, shall pronounce what I have written to be useful, then I shall be satisfied."

Here we have, ages before its time, the notion so prevalent in our own day, that from the past you can predict the future, and base a science of history on the knowledge of past events combined with an analysis of the motives of human action. How far this attempt to lay down historical laws will ever be practically successful, is a matter on which dogmatists of rival schools pronounce contradictory judgments with equal confidence. Sensible men will long, probably, prefer to leave the speculative question whether history can be made into a science unanswered, and at the same time to welcome with gratitude any plausible historical generalizations which can be shown, at any rate, not to be at variance with known facts. The one thing, however, which is certain is, that the only chance of giving any certainty to general historical conclusions is, that inquirers should enter upon historical investigations with the absolute calmness and impartiality which befits men whose sole object is the acquisition of knowledge. As regards this attitude of impartial indifference, Thucydides is assuredly the most scientific of all historical writers. To inquire, to know, and to present to the world the results of his knowledge appears, as far as modern readers can judge, to have been the sole aim and reward of his labors. To assert that he has been perfectly fair in his judgments or statements is, of course, absolutely impossible: you cannot, though men as able as Mr. Grote have attempted to do so, correct the assertions of your sole witness. But a critic will hardly go far wrong who assumes that in the main Thucydides preserved the attitude of a calm scientific observer. It is difficult to say whether his sympathies, if any, were really with Athens or with Sparta. If it were not for the funeral oration of Pericles, which is in reality a eulogy of Athenian freedom in contrast with the dull severity of Spartan discipline, one might suspect that Thucydides inclined to the view that the cause of the Lacedæmonians was, so to speak, the cause if not of justice yet of order, and that he looked upon that cause with something like the approval with which, toward the beginning of this century, all respectable persons regarded the opponents of revolutionary principles.

But, in truth, such conjectures are utterly vain. Thucydides remains for ever the model of the passionless historian. He analyzes the horrors of the Corcyrean reign of terror as calmly as he analyzes the symptoms of the plague at Athens. It is hardly possible to discover a trace of moral blame, or of moral eulogy, throughout his pages. Goodness and badness are each facts of human nature. He notes them as facts, and, having done this, has performed the task of scientific narration. Whether this attitude be an attitude which any writer of modern times, imbued with the moral sentiments which are the growth of centuries, can take up, may admit of doubt. What does not admit of doubt is that this attitude of genuine moral indifference is the only position which becomes a theorist who is honestly bent on treating the facts of human nature as simply an object of knowledge. For the science of history, as for every other science, you need the guidance of perfectly "dry light." Your observation must not be distorted by passion or sentiment. It is because Thucydides could bring this passionless analysis of facts to the study of events which had excited passions as violent as those kindled by any revolutionary era, that he not only anticipated historical principles of later ages, but also, in a certain sense, was a more scientific historian than any of the writers who have followed him. He invented a *novum organum* for the study of history which his contemporaries hardly valued, and which later ages have valued without possessing the power to give full effect to its canons.

He is the most solitary genius of the ancient world; and it should be fairly noticed that his fate has been the fate which inevitably befalls men greatly in advance of their age. His speculations assuredly did not guide the historical theories of Greek or Roman writers, nor have his works exerted anything like the influence on the modern world which has been exerted by the books of authors intellectually far his inferiors. Plutarch, Cicero, and Livy have each in different manners profoundly affected the sentiments and even the actions of later generations. They have guided, or have misguided, all the enthusiasts who fancied they could find a democratic Old Testament in the annals of the classical republics. Plutarch has at times been a real power in Europe. The lessons of Thucydides have roused no one's enthusiasm, and have given instruction only to thinkers here and there, such as Hobbes, who brought to the study of mankind a spirit congenial to the genius of the great Athenian. Nor does the fact of an author being before his age make him preëminently useful to future times. His principles by degrees become admitted, but he is inevitably wanting in the knowledge acquired by the generations who at last appreciate his principles. To modern investigators, a chronicler and traveller such as Herodotus presents information of far greater value than the speculations of Thucydides. Though his genius cannot be understood unless it be recognized as emphatically the genius of a man of science, it is by his art that Thucydides has lived and will live. He has accomplished his object: he has produced a work which "is an everlasting possession, not a prize composition which is heard and forgotten."

AYRES'S VERBALIST.

The Verbalist: A manual devoted to brief discussions of the right and the wrong use of words, etc. By Alfred Ayres. New York: D. Appleton & Co. 1882.

Of the many wretched works of this kind which have come under our observation, we are disposed on the whole to give this one the credit or discredit of being the most wretched. Its poorness of execution is made unusually conspicuous by the tone of pretension which runs through it. To prepare properly a work treating of correct usage would be one of the hardest of achievements. It would need not merely the most cultivated literary taste, but also a thorough acquaintance with the origin and history of the language, and the words and grammatical forms and idioms belonging to it; an intimate familiarity, moreover, with the usage of the best writers both in past and present times; and, in addition to all this, a certain degree of general knowledge of the principles of linguistic science, and a certain degree of special knowledge of the tongues allied to our own. As a matter of fact, works of this kind have usually, if not invariably, been written by men who had not the slightest claim to any of these qualifications. The author of this volume is no exception to the rule. He not only lacks the general or special knowledge that is required, he has not even the slightest conception that any such knowledge is required. He has accordingly pitchforked into this volume a lot of crude statements about words and idioms from every author he has come across, who has treated of the subject. Many of the writers he quotes are nearly, if not wholly, as ignorant as himself. Of course it would be impossible to get together such a collection of matter without its containing some things that were true, and a few things that were valuable. But the rubbish in this case immensely exceeds the portion which has any excellence, for if there is anything especially absurd that any one else has said, the author of this volume seems to have had an unerring instinct for getting hold of it and adopting it as his own.

This may seem harsh criticism, yet it is not only true, but it is needed. Books of this kind, compiled by men who have no real knowledge of the subject, are coming to be intolerable nuisances. They misstate facts, they lay down distinctions that do not exist, they teach the ignorant to criticise others without knowledge and to live themselves in mortal terror of their own tongue. We are told, for instance, in this volume, under "done," that "this past participle is often very inelegantly, if not improperly, used thus: 'He did not cry out as some have *done* against it.'" Of course the impropriety, if there be any, belongs to all parts of the verb *do*, and is not con

fined, as would be inferred from this extract, to the past participle. Now, the employment of *do* to supply the place of the preceding verb is a usage that goes back to the very beginning of the language. It is as common in the English of the ninth century as it is in that of the nineteenth. It gave rise after the Norman conquest to verb-phrases of the kind represented by "I do love," "I did love," though these inflections were never common till the fifteenth century. There is no writer of repute in any period who has not made use of this so-called impropriety, nor has probably any educated speaker failed to employ it who has spoken the English tongue during the past thousand years. We now learn that it is at any rate inelegant, if not worse. A similar statement may be made of the adverb *no* in the phrase "whether or no," though our limits do not allow us to go into its special history. But the special qualification of the author of this volume for deciding upon its correctness may be inferred from the fact that he calls the adjective *no* in "no grace of diction" an adverb. So, also, we are told that "at length" is often used instead of "at last," as if there were something extremely improper in attributing length to time as well as to space, and as if in good usage the phrase was not as a matter of fact far more often employed in the sense of "at last" than in that of "to the full extent," or "fully."

The author has a good deal to say in denunciation of a supposed prevalent fondness for the use of big words—a fondness which, so far as cultivated men are concerned, exists entirely in the imagination of men who write books like this. At the same time it is hard to find the line he draws. For instance, in the case of *loan* as a verb, we are informed that "it is quite certain that it is only those having a vulgar *penchant* for big words who will prefer it to its synonyme *lend*." There may be objections to the word; but this is certainly a singular reason for not using it. *Loan* and *lend* have each four letters; the former, indeed, could get along comfortably with three. They both come directly from the same Anglo-Saxon verb, *lænan*, "to lend," unless one is disposed to regard the former as coming from the corresponding noun *læn*. Of the two, *loan* is etymologically more correct: for *lend*, instead of being *len*, as it ought to be from the point of view of the purist, assumed in Early English a *d* to which it is not entitled, in consequence of a false analogy with *rend*, *send*, and similar words. This *d* it has since retained without protest, our amateur philologists not having as yet found out the fact of its intrusion. Similarly, we fail to see why *allude* is any bigger word than *refer*. The special signification of the former is breaking down, not on account of its size, but because the distinction conveyed by it is pretty certain to be missed by any one who is not familiar with the Latin primitive from which it came.

But it is not alone with the established idioms and usages of the language that Mr. Ayres wages relentless war. He is equally hostile to individuals—to persons as well as to that particular word. Under *Swosh* he exposes Ralph Waldo Emerson in a way that ought to make the admirers of the Concord philosopher hang their heads in shame. Under *Diction* he pounces upon Professor Dwight of Yale College, and shows that reverend theologian how to revise the Bible by revising for him one of his own paragraphs. Under *Amount of Perfection* he lets us know he could tear Matthew Arnold in pieces if he had the mind; the actual performance is doubtless reserved for a future edition. But it is toward Dr. L. T. Townsend, Professor of Sacred Rhetoric in Boston University, that he displays the greatest animosity—why, it is hard to see. The professor has written a treatise on the art of speech which exhibits a good deal of the same miscellaneous misinformation that is to be found in this volume. Emerson's writings assume for their appreciation a certain degree of ability and cultivation on the part of the reader. It is not so with the 'Art of Speech'; and as its author is just as accurate as some of the other authorities quoted in this work, we are at a loss to understand why he should be so persistently attacked.

We have given far more space to this volume than it deserves, because it is a specimen of a class which needs to be suppressed. They may, and do, furnish amusement to students, but they bring little but misery to the half-educated, who are the ones that consult them. Let him who wishes to use his own language properly study its greatest masters, both the living and the dead. What they say he may feel himself justified in saying, no matter how much it may be condemned by grammarians or newspaper correspondents, or those pests of domestic circles who concentrate their linguistic energies on the denunciation of some word or meaning or phrase to which they have taken a dislike, but the origin and history of which they do not make the slightest pretence to know.

SCHOULER'S UNITED STATES UNDER THE CONSTITUTION.

History of the United States of America under the Constitution. By James Schouler. Vol. i., 1783–1801. Washington: W. H. & O. H. Morrison. 1880.

With all its faults, Hildreth's has as yet kept its place at the head of our general histories of the United States, for our other historians have either copied or exaggerated the faults of Hildreth's method, while they have lacked his multifarious sources of supply or his painstaking completeness in the use of them. He and his imitators have given us beautifully articulated skeletons, every part in its exact place, every incident chronologically correct; but the spark of genius which shall yet make these dry bones live, is not there. He who reads Motley's histories rises at least with a tangible idea of the specific differences of feeling and thought, as well as of action, which distinguished the Dutchman from the Spaniard; but he may read all our histories of the United States without gaining any such living conception of the differences which distinguish the American people of 1870–80 from the American people of 1850–60, of 1820–30, or of 1790–1800. If he reads the declaration of Jay, that a king of the United States might be necessary as a last resort; of Hamilton, that corruption was the most valuable element in the British political system; or of Jefferson, that there was nothing objectionable in "a little rebellion now and then," since blood was "the natural manure of the tree of liberty," he will probably be impressed very much as if they had come from Edmunds, Blaine, or Bayard respectively, and be dumfounded or disgusted accordingly. He will find similar causes producing the most bewilderingly diverse effects at different periods, and will probably take final refuge in the conclusion that American history is, like the Ptolemaic system, a chaotic record of undigestible observations.

There are, however, strong indications that historical realism is soon to evolve the needed history of the United States. Dr. Draper's 'History of the Civil War,' in its introductory chapters, was the first effort to give the reader some clear idea of the life and limitations of the people of our earlier period before narrating their actions as a state; but the space was limited, and the effort can only be regarded as a first step on the road which our history must finally take. Since its publication, almost every year has been giving us such monographs as Johnston's on the Yorktown campaign, and Draper's on King's Mountain, which are very largely shaped by the same idea. Now, in Mr. Schouler's first volume, we have an attempt to make this principle of realism the foundation upon which a complete history of the United States shall be erected, and to carry the reader into the very centre of events, so that he may not only judge the results from the standpoint of the present, but may realize the moving causes from the standpoint of the past. Mr. Schouler enters in detail into the social and economical life of the people; their recreations; their habits of thought and action; their municipal arrangements; the character and influence of the immigration; the influence of classes and families upon the mass of voters; the difficulties of intercommunication; and the provincial peculiarities of the newspapers and other sources of popular information. And the result is a book which, though very far from perfection, is in many respects the most real history of the United States yet produced for the period which it covers. It would be difficult to show the prevailing tone of the volume without quoting too extensively, but the following extract (*anno* 1789) may serve as an example:

"One must admit that the venerating applause at this period of 'the man who united all hearts' had a modicum of foolish adulation. The tributes paid him in his day were quite often dictated by bad prosers and worse poets. Birthday and procession odes became the favorite doggerel of the day, many of them having that smack of Tate and Brady which bespoke a psalm-singing age. One song began:

> 'Arrayed in glory bright,
> Columbia's saviour comes.'

Another proceeded in like strain:

> 'His glory shines beyond the skies,
> From heaven proceeds.'

With stanzas like these, set to appropriate music, a choir would stand before the President when he appeared upon a public tour, and launch the loud pæan at a face which relaxed nothing of its habitual expression of calm serenity. This was an age over which the royal atmosphere still hung. Such ascriptions were heard as 'Long live George Washington!' or 'God bless your reign!' Religious, municipal, and social bodies continually preferred their addresses of congratulation for a gracious acknowledgment. All were obsequious. Indeed, the plain words with which the Quaker selectman of Salem welcomed the President to that town contrasted very strongly with the other speeches made upon his Eastern tour: 'Friend Washington, we are glad to see thee, and in behalf of the inhabitants bid thee a hearty welcome to Salem.'"

The period covered by the larger part of this volume (1789–1801) is in many respects the most important in our political history, and he who takes into consideration the shortness of the time must find some reason for wonder in the amount and thoroughness of the work which was done in it. Of no other people can it be said that in a single decade, and that too so early in its national history, it produced a written constitution so exactly suited to the genius of the people that there was no further apparent need for extensive change, except in the abnormal influences of slavery; an exhaustive constitutional commentary, which still stands at the head of works of its kind; a smoothly working national government complete in all its parts—in treasury, state, war, navy, and postal departments; and last, but not least, a plainly marked political line, on which two great parties could safely divide, so as to make permanent constitutional government not only possible, but almost a certainty. All this was secure before 1799. Succeeding generations, finding the work of organization done to their hand, and only the

work of administration left for them, naturally almost apotheosized the founders of the republic. "Inspiration" and "almost divine prescience," instead of plain common sense and political capacity, have been credited with the success of the experiment. The consequence is that the thoughtful political student is as apt to err in the opposite direction, by forming too low an estimate of them. Approaching them as demigods, he finds their human infirmities more glaring; had he approached them as men, he would have been more likely to rate them fairly.

The very permanence of their work, too, has done much to distort our ideas of them. To Jefferson, for example, the individual citizen is indebted for at least one-half of his political stature; but Jefferson was unfortunate in living so near the time of the organization of national government that he could see no *locus standi* for the defence of individual rights except in State sovereignty. There are therefore thousands who know Jefferson as the father of nullification and secession to one who knows him as the father of the democratic idea, to whose steady extension we owe exemption from class and family influence, the public-school system, universal suffrage, the abolition of slavery, national conventions, rotation in office, and countless other dispensations of more or less doubtful advantage, which have grown to seem, to the modern American, as natural as the air. Hildreth gives hardly any personal attention to the actors of the period of which he treats, with the exception of Jefferson; to his portraiture, mental and moral, he returns again and again, and is hardly willing to consider his work finished when its subject has formally retired from politics. Mr. Schouler, on the contrary, has attempted to make the men of the time real to the reader's eye, not lay figures. Hardly any one of importance is mentioned without a few touches of personal description, drawn apparently from the contemporary newspapers; and the characteristics of the leaders, Washington, Hamilton, Jefferson, Adams, and others, are treated minutely and largely. An extract from the dozen pages devoted to Washington will show the minuteness of the descriptions:

"It appears certain that Washington had neither wit nor a salty humor. He conversed sensibly and well with the guest at table, but a witty sally disturbed him, and to any thrust of ridicule he was keenly sensitive. No *bon mot* is known to have escaped his lips. Young ladies pleased him with their vivacity, and in one or two burlesque scenes on his plantation, which cannot be funnily described, he astonished the household by breaking out into a long and hearty laugh. Otherwise his face, unless he was angry, wore that calm and placid expression of repose with which his pictures make us so familiar. And yet a dry, almost sardonic, sense of humor peeps out of his correspondence in by-places, of a quality still better illustrated, perhaps, by the authenticated instance where he turned sharply upon a little boy who was running after him admiringly from his tailor's, through a retired street of Philadelphia, and, taking off his hat, made him a profound salutation. Unless the ludicrous aspect of the curiosity he everywhere excited sometimes amused the great man, he cannot have been human."

Mr. Schouler's style is sometimes harsh, as the extracts given will show; but his first volume has a higher merit in its exactness, its minuteness, and the realism with which it delineates the persons and places, as well as the events, of our first twelve years of national life.

Encyclopædia Britannica. Ninth edition, vol. xiii. Inf.-Kan. Boston: Little, Brown & Co.

A LARGER number of weighty contributions interesting to specialists and scholars will be found in this than in most of the preceding volumes. There are: "Italy," by five writers, including Symonds, Prof. Ascoli, and Prof. Bartoli; "Iron," by Dr. Wright; "Infinitesimal Calculus," by Prof. Williamson; "Ireland," by Henderson, Sullivan, and Bagwell (each of which articles would fill a small octavo volume); extensive articles on "Insanity," "Inscriptions," "Insects," "Insurance," "Japan," "Java," etc.; and numerous essays on Biblical subjects, all remarkable for familiarity with the latest results of inquiry, and some for original research. The biography of the volume is perhaps less rich than that of others, though including lives of Isæus and Isocrates, by Prof. Jebb; Jefferson, by Bigelow; Jenghiz Khan, by Prof. Douglas; Justinian, by Bryce; Juvenal, by Prof. Sellar; Kant, by Prof. Adamson; and Macaulay's "Johnson," a remnant of former editions. Among the more important geographical contributions are Henry Rawlinson's "Ispahan," Col. Yule's "Kafiristan," Capt. Holdich's "Kandahar," and "Jerusalem," by Lieut. Conder and Robertson Smith. The bibliography attached to the longer articles is generally very full and fresh, and marked by great typographical correctness in the foreign titles. Less satisfactory are most of the portions of reçent historical interest in geographical articles—a defect particularly striking in a cyclopædia excluding the lives of all living men. Thus, the history of Italy from 1861 to 1881 is quite too "briefly told" in one column, while the work contains no "Garibaldi," no King "Humbert," no "Depretis," etc., and "Victor Emanuel" is still so far off. Under "Kandahar" there is no mention of the battles fought before that town within the last few years, though "Afghanistan" was finished long before they took place, and the work will naturally ignore Gen. Roberts, as living, as it did the present Amir Abdurrahman and his enemy Ayub Khan, and thus probably leave the most interesting portion of recent Afghan history entirely untold.

A worse instance, but fortunately an exceptional one, of ignoring late events is the entering of "Ismail" as still "a town of Roumania," "in accordance with the treaty of Paris (1856), by which that part of Bessarabia in which Ismail was included was made over to Roumania"—though the town and the district were restored to Russia in 1878, in accordance with the treaty of Berlin. "Joséphine" is one of the old sketches left unrevised, we presume, in spite of much that is new on the subject in late publications on Napoleon I. and his court. "Inquisition" and "Isabella I." are other samples of inadequate treatment, while "Jackson" ("Stonewall") is a specimen of gross superficiality. In the whole sketch of the Confederate general, only two chronological dates referring to the campaign in Virginia are given, one of them contained in the following: "Jackson's first exploit in the war of secession was the capture, on May 3, 1861, of the Federal arsenal at Harper's Ferry"—a false statement from beginning to end, as Harper's Ferry was evacuated, after the burning of the arsenal, by Lieut. Jones, of the Federal Army, on April 18, 1861, and immediately occupied, without striking a blow, by the Virginia militia, before the secession of that State. Other notices of American subjects are much better, though "Johnson, Andrew," "Johnston, Albert Sidney," and a few more are rather meagre. Hindostan is particularly well represented under geographical titles. The worst omission in European geography is that of Jutland, which is not even entered in a reference to "Denmark." Lack of symmetry strikes one unpleasantly in some of the joint productions, especially in "Inscriptions," of which the Roman division, by Prof. E. Hübner, is exceedingly learned and comprehensive, while the Semitic, by Prof. Sayce, only rouses the reader's curiosity, without in the least satisfying it, by fugitive statements like this: "The earliest Hebrew inscriptions are three from Siloam, one of which is addressed to 'Baal of the temple,' a fragment found in the streets of Jerusalem by M. Vernes, and a boundary-stone discovered by M. Ganneau near Gezer."

On the whole, however, it is Hebrew subjects that have received the most careful elaboration. The editor of any cyclopædia not specially Biblical might justly be proud of such a series of articles in one volume as is formed here by Prof. Wellhausen's "Israel"; Cheyne's "Isaiah," "Jeremiah," and "Jonah"; Robertson Smith's "Joel" and "Judges"; Davidson's "Job," and Ginsburg's "Kabbalah"—to which may be added the unsigned smaller notices. "Jacob," "Jehovah," "Jephthah," "Joshua," "Judah," etc.—all breathing the same spirit of untrammelled critical investigation. The results are such as the editors of former editions of the 'Britannica' would never have thought of popularizing had they been then sufficiently matured. Wellhausen's "Israel" will be exceedingly welcome to all who possess the first volume of that learned author's 'Geschichte Israels' (Berlin, 1878)—a volume mainly introductory—and have been so long anxiously waiting for the appearance of the continuation. In the earlier history of the Hebrews he occupies a standpoint fully as radical as Kuenen's, as may be seen from the following:

"If the legislation of the Pentateuch cease as a whole to be regarded as an authentic source for our knowledge of what Mosaism was, it becomes a somewhat precarious matter to make any exception in favor of the Decalogue. In particular, the following arguments against its authenticity must be taken into account: (1) According to Ex. xxxiv., the commandments which stood upon the two tables were quite different. (2) The prohibition of images was during the older period quite unknown; Moses himself is said to have made a brazen serpent which down to Hezekiah's time continued to be worshipped at Jerusalem as an image of Jehovah. (3) The essentially and necessarily national character of the older phases of the religion of Jehovah completely disappears in the quite universal code of morals which is given in the Decalogue as the fundamental law of Israel; but the entire series of religious personalities throughout the period of the judges and the kings . . . make it very difficult to believe that the religion of Israel was from the outset one of a specifically moral character. . . . (4) It is extremely doubtful whether the actual monotheism . . . could have formed the foundation of a national religion. It was first developed out of the national religion at the downfall of the nation."

Cheyne and Robertson Smith virtually occupy the same radical standpoint, but their enunciation of critical results is cautiously slow, and almost timid, while Wellhausen's tone is always independent and energetic, and here and there, where much doubt is justified, exasperatingly positive. A diametrically opposite standpoint in religious history, it is hardly necessary to state, is that occupied by Canon Farrar in the article "Jesus Christ."

Cuban Sketches. By James W. Steele. New York: G. P. Putnam's Sons. 1881.

MR. STEELE'S sketches seem rightly named, in that they are of a free and light texture. It may be that they would have been more pleasing had they merited the designation of sketches at certain particular localities—"sketches on the spot." They are admitted to be the impressions that have abided with the author since his return to this country from the island, where he resided a number of years as a United States Consul. He therefore deals mainly in generalizations.

However, if somewhat wanting in truth to localities, he is not, judged by the sharpness of the characterizations in his light essays, without realism of a larger kind. His study of the Cuban seems to result in confirming what is probably the ordinary view of those enjoying but a slight acquaintance with the subject; which may either show that the author is not a profound investigator, or that the ordinary view is correct. "He [the typical young Cuban] appears to you at first a man all eyes, hair, teeth, and shirt-collar." He is an irreclaimable fop, has a rooted antipathy to labor, and is lacking generally in the positive and manly qualities. In particular the author finds, as other authors have found who have written about the inhabitants of Spanish-American countries, that he has not before him the ideal of "doing as he agrees." Now, there are plenty of us of the Anglo-Saxon race who do not do as we agree, and if a Spanish-American traveller should judge us by such a collection of instances as he might easily gather in a sojourn of moderate extent among us, we should not make an exemplary showing. At the same time, if there be any one virtue more than another that we aspire to cultivate, it is that of fidelity to a word; and to represent a class of people as without it is to give them as bad a character as we know how. The virtue or trait may have its support largely in our commercial necessities as well as in a higher morality, and may perhaps be expected to grow in other communities with the introduction of more extensive commercial dealings than have hitherto prevailed. Mr. Steele writes with a fatigued if not an openly ill-natured air. His opinions of almost everything are very unfavorable. The whole system of things in the island offers material enough for criticism, as everybody who has been there knows; at the same time this writer does not give the impression of looking for the best that is to be seen. He hardly does the scenery justice. He fails to except from his sweeping derogation even such charming bits as are to be found at Chorrera, Marianao, Tulipan, and the like suburban villages of Havana. A person with more of the artistic feeling would have let the bright colors and queer shapes of the place atone to him somewhat for its backwardness in the march of modern ideas. A more ingenious literary man, too, could perhaps have found further material, a little recondite—the poetry and poets of the island, for instance—which would not have been without interest. Mr. Steele has a mild vein of drollery and a quite vivid descriptive talent. His style is carefully elaborated.

Capturing a Locomotive: A History of Secret Service in the late War. By the Rev. William Pittenger. Philadelphia: J. B. Lippincott & Co. 1881.

THIS story is founded upon what was unquestionably one of the most remarkable of the minor incidents of the War. About the time of the battle of Shiloh, Mitchel's division of Buell's army was detached to advance from Nashville toward the railroad connecting Memphis with Chattanooga and Richmond. It was then planned to destroy the bridges on the railroad from Chattanooga to Atlanta, thus cutting off the former place from all reinforcements in Georgia and permitting its easy capture by Mitchel. If Mitchel could fortify and hold his position until reinforced, the connection between the eastern and western armies of the Rebels would be completely broken. The destruction of the railroad was entrusted to twenty-four soldiers, under the leadership of J. J. Andrews, a citizen of Kentucky. These men penetrated the Southern lines, in disguise, almost to Atlanta, and at a small station where there was no telegraph-office they seized a portion of the railway-train while its officials were at breakfast, and ran with it at full speed toward Chattanooga. They were pursued by the conductor and engineer, at first on foot, then in a hand-car, and finally with successive locomotives. But for delays caused by trains running out of the schedule time, it is probable that Andrews would have accomplished his purpose. But these delays at the stations were so great that he was unable to gain a sufficient start to be able to stop and destroy the bridges; his pursuers gained on him so rapidly that he was obliged to abandon the object of his expedition, and simply endeavor to escape. The chase continued for ninety-eight miles, and ended by the breakdown of Andrews's engine, about ten miles south of Chattanooga. Here his party dispersed and sought to regain the Union lines; but they were all captured. Andrews and seven others were hung; the rest were confined in various jails, loaded with chains, and subjected to every possible hardship and indignity, including flogging. Some of them escaped after six months of this torture, and the rest were finally exchanged five months later.

This bold enterprise is well characterized by the Comte de Paris as an example of "the peculiar kind of warfare which served as an interlude to the regular campaigns of the large armies," and as showing "what a handful of daring men could attempt in America." The story has been briefly told several times before; it is to be found in Moore's 'Rebellion Record' and in other publications. The author (one of the survivors) has himself told the story once before, in a book entitled 'Daring and Suffering; or, The Great Railroad Adventure,' which was published in 1863 by J. W. Daughaday, Philadelphia. This publishing house is, we believe, no longer in existence, and the first book is doubtless out of print. In rewriting it the author has retained some of the old illustrations and much of the original text; but he has enlarged and amplified the story, and has told it much better than he did twenty years ago.

The Sun. By C. A. Young, Ph.D., LL.D., Professor of Astronomy in the College of New Jersey. New York: D. Appleton & Co. 1881.

AMONG Prof. Young's earliest popular writings on the sun was a little pamphlet published some ten years ago ("University Series," No. 8, New Haven), being the substance of a lecture delivered before the Yale Scientific Club. The present work has fewer points in common with the earlier paper than might be expected: the order of treatment is more logical, and the greatly fuller presentation gives to a mere lecture quite the proper proportion of a compendious treatise. With an author who, like Prof. Young, has so little knowledge of his theme at second hand, we expect precisely that clearness of exposition which is a characteristic feature of this book. His profuseness of verbal illustration is notable, and the pleasing appropriateness of his comparisons is at times striking. What, for instance, could better describe in a word the scope of spectrum analysis than to say that the study of spectra has "added some such reach to our physics and chemistry as the telescope brought to vision"? In his evident anxiety lest the reader should miss his meaning, too many points may have been insisted upon by way of explanation of allied topics; but these are stated in accurate scientific language, and their insertion is probably much less harmful than their omission would have been. Occasionally we come upon the instance of a scientific specialist who is generous enough to devote a portion of his time to the making of a book for the people; but the work itself too often shows how fitful and desultory it was. It was a genuine pleasure to find that so little of this book—if we may judge by its speaking for itself—must have been written in intervals which otherwise would have been unoccupied. The soberest misfortune of the work is that it should have been issued so long after many of the more important portions were put in type. It seems to us hardly worth the while to send out a book which, almost at the moment of its issue, is, in very important points, as good as out of date; and those interested in the success of this book would have done better to apply the remedy of a few new plates—and printed signatures, if need be.

Much the most satisfactory chapters are those on the sun's light and heat, and the summary of facts and discussion of the constitution of the sun. The appendix containing Prof. Langley's account of his bolometric observations will have no little interest, as his method is yet so new, and the conclusions he derives are so remarkable. Most people, surely, are unprepared to be told that if they could see the sun as it really is, they would pronounce it to be *blue*. The chapters on the solar surface, the sun spots, their periodicity, etc., are excellent. The author's vigor of expression in setting aside (and yet most cautiously) no small number of theories of solar phenomena tends to make conviction sure, and is most characteristic of a man who knows of what he speaks. We should quote, if there were room, his belief as to the cause of the periodicity of the solar spots—that it is in the sun itself; and the outburst is only the necessary relief of the internal fury which is pent up during the gathering of deep-lying forces throughout a season of external quiescence; therefore not necessarily regular, as most maintain, nor likely to repeat itself according to given planetary positions.

The inaccuracies of the book are few. We note, page 43, that the 'British Nautical Almanac' dropped Le Verrier's value of the solar parallax, 8".95, more than three years ago, and has since used Newcomb's value—first in the volume for the year 1882, issued in the autumn of 1878; and that the date of publication of Newcomb's classic on the solar parallax is 1867, not 1865. These, however, are the merest trifles; and of the book as a whole we should say that, from a great mass of recent semi-popular scientific literature, it will give the best return for a careful perusal.

Prof. Young summarizes thus the belief of astronomers as to the constitution of the sun—we cannot forbear quoting it here:

"(1) The central portion is probably for the most part a mass of intensely heated gases. (2) The photosphere is a shell of luminous clouds, formed by the cooling and condensation of the condensible vapors at the surface, where exposed to the cold of outer space. (3) The chromosphere is composed mainly of uncondensible gases (conspicuously hydrogen) left behind by the formation of the photospheric clouds, and bearing something the same relation to them that the oxygen and nitrogen of our own atmosphere do to our own clouds. (4) The corona as yet has received no explanation which commands universal assent. It is certainly truly solar to some extent, and very possibly may be also to some extent meteoric."

And as for the future of solar physics, the fundamental problems now pressing for solution are, "first, a satisfactory explanation of the peculiar law of rotation of the sun's surface; second, an explanation of the periodicity of the spots, and their distribution; third, a determination of the variations in the amount of the solar radiation at different times and different points upon its surface; and fourth, a satisfactory explanation of the relations of the gases and other matters above the photosphere to the sun itself—the problem of the corona and the prominences."

HENRY HOLT & Co.

HAVE READY:

Symond's Renaissance in Italy.

Part I. *THE AGE OF THE DESPOTS.*

Part II. *THE REVIVAL OF LEARNING.* Both uniform with the volume on THE FINE ARTS (Part III.) previously published. Each part, 8vo, $3 50.

MRS. WALFORD'S New Novel,

Dick Netherby.

16mo (Leisure-Hour Series), $1.

Young Folks' History of the War for the Union.

By John D. Champlin, Jr., author of "The Young Folks' Cyclopædias."

FOR SALE.

OF THE DECEASED JURIST AND STATESMAN

Bluntschli,

Late Professor at the University of Heidelberg.

3,000 vols. on International and Public Law, etc.

For catalogue and information address

SAML. ROLFE MILLAR, Ph.D., Heidelberg.

Kalani of Oahu.

A THRILLING ROMANCE OF HAWAII.

By Dr. C. M. NEWELL, of Boston. 1 vol. 12mo, illustrated, 415 pp., $1 50.

"It is a strange, bewildering story, and in subject and execution is unique in literature. The author's style is luxuriant, and well befits the scenes he describes. His pages abound in glowing description and tropical imagery, and the various characters are painted in strong and effective colors. No one who reads the book will forget it, and it is not too much to say that a more distinct and definite idea of the ancient people of Hawaii, their customs and characteristics, and of the country itself, may be had from its perusal than from any so-called historical narrative yet published."—*Boston Transcript.*

For sale by CHARLES T. DILLINGHAM,
678 Broadway, New York.

HELIOTYPE.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

THE HELIOTYPE PRINTING COMPANY

Are producers of illustrations by the most approved Photo-Mechanical, Photo-Lithographic, and Photo Engraving Processes. Employed by the United States Government in illustrating Scientific and Medical reports; by Scientific, Historical, and other learned Societies; by the leading Publishers for illustrating Town and Family Histories, Catalogues, Show-Cards, etc. Fac-similes of Medals, Coins, Ancient Manuscripts, Paintings, Drawings, and Autograph Circulars, Views and Portraiture, Medical and Scientific Objects, Antiquities, etc. Estimates and specimens furnished on application.

THE HELIOTYPE PRINTING COMPANY,
Near Boylston Street. 211 Tremont Street, Boston.

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes.

Address Publisher of the *Nation.*

OLD POINT COMFORT, VIRGINIA.

THE HYGEIA HOTEL,

Situated 100 yards from Fort Monroe, open all the year. Equal to any hotel in the United States as a Winter Home or Seashore Resort. Send for pamphlet describing hygienic advantages, etc.

H. PHOEBUS, Proprietor.

A General Index to the Nation.

From July, 1865, to September, 1880.

Net price (no trade discount), $2 50. Purchasers will please remit with order. Address Publisher of the *Nation,* Box 794, New York, or Q. P. INDEX, Bangor, Maine.

D. Appleton & Co.

WILL PUBLISH JANUARY 14:

I.

The Elements of Economics.

By Henry Dunning MacLeod, M.A., of Trinity College, Cambridge, and the Inner Temple, Barrister-at-Law, selected by the Royal Commissioners for the Digest of the Law to Prepare the Digest of the Law of Bills of Exchange, Bank Notes, etc.; Lecturer on Political Economy in the University of Cambridge. In 2 vols. Vol. I. now ready. 12mo, cloth, $1 75.

"Mr. Macleod's works on economic science have one great merit—they belong to the class of books that assist inquiry by setting their readers thinking. The views they set forth are not only often valuable in themselves, but they are the generative cause of ideas which may also be valuable in their readers. His books, moreover, are written in the proper way. The subject is divided carefully in accordance with the opinions held by the author. All classifications when made are adhered to, and the descriptions and definitions adopted are admirable from his point of view, and in some cases from a wider standpoint."—*The Statist.*

II.

A Treatise on Chemistry.

By H. E. Roscoe, F.R.S., and C. Schorlemmer, F.R.S., Professors of Chemistry in the Victoria University, Owens College, Manchester. Vol. III. The Chemistry of the Hydrocarbons and their Derivatives, or Organic Chemistry. 8vo, cloth, price $5.

Vol. I. NEW METALLIC ELEMENTS. Cl., 8vo, price $5.

Vol. II. Part 1. METALS. Cloth, 8vo, price $3.

Vol. II. Part 2. METALS. Cloth, 8vo, price $3.

"Among the many excellent features of this elaborate treatise, the prominence everywhere given to the economic side of the science will be noted with special satisfaction. . . . The authors are evidently bent on making these books the finest systematic treatise on modern chemistry in the English language."—*London Athenæum.*

III.

ADOLPH STRECKER'S

Short Text-Book of Organic Chemistry.

By Dr. Johannes Wislicenus. Translated and edited, with extensive additions, by W. H. Hodgkinson, Ph.D., and A. J. Greenaway, F.I.C. 8vo, cloth, pp. 790, price $5.

IV.

New Edition, with numerous Additions.

The Origin of Civilization

AND THE PRIMITIVE CONDITION OF MAN. Mental and Social Conditions of Savages. By Sir John Lubbock, Bart., F.R.S., etc., President of the British Association. Fourth edition, with numerous additions. 8vo, cloth, price $5.

V.

The Farmer's Annual Hand-Book for 1882.

Prepared by H. P. Armsby, Ph.D., Professor of Agricultural Chemistry in the Storrs Agricultural School; and E. H. Jenkins, Ph.D., Chemist to the Connecticut Agricultural Experiment Station. 16mo, cloth, tuck, price, 50 cents.

VI.

Two Years in Oregon.

By Wallis Nash, author of 'Oregon, There and Back in 1877.' With illustrations. 12mo, cloth, $1 75.

D. APPLETON & CO., Publishers,
1, 3, and 5 Bond Street, New York.

G. P. Putnam's Sons,

27 and 29 W. Twenty-third St., New York,

HAVE NOW READY:

SUICIDE: Studies on its Philosophy, Causes, and Prevention. By James J. O'Dea, M.D. 8vo, cloth extra, $1 75.

Comprises a careful historical summary of the teachings and doctrines which have had an influence on suicide, and of the laws in regard to it which have been enacted from the earliest periods to the present time; an investigation into the several classes of causes, mental and physical, of suicide; and a careful consideration of the measures, legal, moral, and medical, employed or to be recommended for its prevention.

THE ORIGIN AND GROWTH of Religion, as Illustrated by the History of Indian Buddhism. By T. W. Rhys Davids. Being the Hibbert Lectures for 1881. 8vo, $2 50.

OPIUM-SMOKING in AMERICA and China. By W. H. Kane, M.D. A careful study of the prevalence and spread of the vice, and of its immediate and remote effects, moral, physiological, and financial, upon the individual and the nation. 12mo, cloth, $1.

SENSATION AND PAIN: An Essay. By C. Fayette Taylor, M.D. 16mo, cloth, 75 cents.

FIRST BOOK of KNOWLEDGE. By Prof. Fredk. Guthrie. A volume planned to give, in clear and comprehensive shape, the first information that is required by children concerning the nature and use of the common objects about them. 16mo, cloth extra, $1.

A New and Enlarged Edition of

The COMPREHENSIVE ATLAS of Modern, Historical, Classical, and Physical Geography. Comprising 130 maps, with very full descriptive letter-press, and Index containing upward of 50,000 names. Folio, half morocco extra, $25.

"Characterized by fulness of information and excellence of workmanship. . . . The maps are so clear that he who runs may read."—*London Times.*

LATELY PUBLISHED:

AUTHORS and AUTHORSHIP. By Wm. Shepard. 16mo, cloth extra, gilt top, $1 25.

A volume of special interest to beginners in literature, treating of the profession of literature, its struggles, temptations, drawbacks, and advantages; the relations of authors, editors, and publishers, etc., etc.

"A curious and interesting volume."—*N. Y. Mail and Express.*

The Nation.

NEW YORK, THURSDAY, JANUARY 19, 1882.

The Week.

In Wall Street, speculative interest was divided during the week between the affairs of the trunk-line railroads and the Reading election. The negotiations for a settlement of the railroad war were the foundation for all manner of reports, and at the close of the week, in the absence of official declaration, the utmost confusion prevailed as to the situation. The foreign bankers who have been prominent in the negotiations, confined their statements to such declarations as that there was more than reason for hoping for a settlement. Directors of the companies, who, however, speculate freely in stocks, asserted positively that a settlement had been reached; that it was in the form of "a money pool" for five years on the basis of the profitable business of the year 1880, and that an official announcement of the fact is withheld for the present for sufficient reasons which cannot be divulged. On the other hand, the minor but nevertheless important officers of the various companies have denied that there is even a prospect of a settlement; and what seems to confirm their utterances is the fact that on Monday west-bound freight rates were again heavily reduced. The week closes with nothing positively known on official authority respecting the situation, but with most diverse opinions held on the subject. The course of prices at the Stock Exchange varied as one opinion or the other prevailed, but at the close uncertainty was the chief feature of the stock market.

The election of the Philadelphia and Reading lasted for several days, and finally resulted in the triumph of Mr. F. B. Gowen, for whom Mr. Vanderbilt cast votes on about 80,000 shares, which gave Mr. Gowen for President a majority of about 48,000 shares. When the polls closed, the market price of the stock was about 67 per cent.; it has since fallen below 59 per cent., and this decline has surprised the partisans of Mr. Gowen, who charge it to the sales of the stock of the Messrs. McCalmont, of London, who held about 186,000 shares, which were voted for Mr. Frank Bond for President. On the other hand, it is said that Mr. Vanderbilt, having practically obtained control of the property, has no further use for his stock and has been selling it. Neither of these explanations is necessary to account for the decline. The money market is working very easily. Foreign exchange has advanced another point toward gold exports, but the latter are not imminent.

On Wednesday Mr. Orth made an attempt to have his resolution of inquiry into the expediency of providing a new mode for the appointment of the committees of the House of Representatives referred to the Committee on Civil Service Reform, of which he himself is chairman. The influence of the Speaker was, however, in spite of the general unpopularity of his appointments, strong enough to secure the reference of the resolution to the Committee on Rules, of which the Speaker himself is *ex-officio* chairman, and which counts among its members his friend Mr. Robeson. A favorable report upon Mr. Orth's resolution appears now out of the question, and we shall have to wait for a future Congress to accomplish a change in the methods of forming the committees which appears eminently desirable. It is to be hoped, however, that the movement started at this time may have the effect of making the next Speaker more cautious in his action, and especially in contracting obligations and striking bargains, before his election, by which his action might be bound.

Judge Cox's decision not to allow Guiteau to make a speech to the jury has not prevented its publication in full in the newspapers. It is of course a hideously ribald production, and contains nothing in the way of argument that is of any importance. Guiteau produces as part of his defence a quantity of letters expressing deep sympathy for him, some of which bear internal evidence of having been composed by the prisoner himself, as, for instance, one from a "high-toned American citizen," who tells him that his example "will go thundering down the ages and do more to extinguish gag-law than was ever done before." He insists with some plausibility that he is far more entitled to an acquittal on the ground of insanity than Sickles, McFarland, or Hiscock ever was, and if they were discharged why should he be hung? Why indeed? There is no doubt that his hanging will have a good incidental effect in preventing the recurrence of such verdicts for some time to come even in "women cases."

The force of Mr. Davidge's address to the jury in the Guiteau case on Thursday lay in the admirable manner in which he analyzed the formation of the criminal design in the prisoner's mind. It is, as he pointed out to the jury, very seldom that the proof of deliberation in a case of murder is so complete, while all the steps in the process seem to have been perfectly sane. On the 16th of May, just after he has been refused the Paris Consulship, the thought of getting the President out of the way flashes across his mind. Then he goes about for two weeks revolving it in his mind. Then, on the 23d of May he has an access of remorse, and thinks perhaps it would be better to make one more attempt to get an office. Therefore he urges the President to remove Mr. Blaine. Then he purchases the pistol, practises with it, dogs the President, is deterred from killing him on one occasion by the presence of his wife (a perfectly sane impulse), and finally shoots him down in cold blood. All this was well presented to the jury, and there has been nothing better in the case except Mr. Porter's skilful cross-examination of Guiteau, which may be said to have been the turning-point of the trial, so far as a successful demonstration of the man's responsibility goes.

We presume there is no serious intention in either Senate or House to adopt Senator Plumb's amendment to the Funding Bill providing for the disbursement of all the gold in the Treasury in excess of $100,000,000 in the purchase of bonds. The gold in the Treasury was accumulated as a greenback redemption fund. The Government is already getting its interest on this gold and a great deal more through its "demand notes" in the hands of the people. These notes were issued for value, and they stand to-day, as they have always stood, in the place of $356,000,000 of bonds. They are properly classified in the monthly Treasury statements as "debt bearing no interest." The Government is therefore deriving all the advantages from them that it is possible to derive, and the proposition to deplete or lessen the redemption fund is a device to put these advantages in jeopardy, by awakening distrust among the holders of greenbacks and prompting the public to present them at the Treasury for redemption. It must be borne in mind that Mr. Plumb's proposition if passed would not be a finality, but would lead more intrepid financiers to demand that the remainder of the gold reserve be disbursed in the same way. As we have frequently pointed out, the continued existence of greenbacks in the circulation, necessitating a gold reserve for their protection, will always give rise to political movements either for more greenbacks or for less gold. Since even the wisest man cannot tell with certainty what is the least amount of gold that will carry the business of the country safely through bad times as well as good, ample room is left for the imagination of fools to wander between zero and infinity. Mr. Plumb is not a fool, but he is paving the way for regiments of such to come after him.

Some of the "advanced thinkers" in the Senate of the United States, Mr. Plumb among the number, propose that whenever the amount of national-bank notes shall be diminished, either by liquidation or other process, the Secretary of the Treasury shall be required to issue an equivalent amount of greenbacks. The presumption is that the proposed new greenbacks are to be, like the old ones, legal-tender notes. To execute and issue such notes is no more difficult to the advanced thinkers than it was for Nick Bottom to play the lion: "it is nothing but roaring." The right of the Government to issue its notes and to make them legal tender has been adjudicated upon by the Supreme Court and declared to be a war power. The validity of the existing greenbacks rests upon the fact that they were issued in a time of war, and were deemed by Congress necessary to obtain the means for carrying on war. The Court did not explicitly declare that Congress could not issue legal-tender notes in time of peace, because that question was not before them, but all the reasoning and analogies of the decision went to that conclusion. If Congress should

do so extraordinary a thing as to issue a new lot of greenbacks, nobody would be obliged to accept them on a footing of equality with the old ones. They might pass for what they were supposed to be worth from day to day, but they would be nondescript uncurrent funds. Not being legal tender, the public creditors would not be obliged to receive them. In order to issue them at all the Secretary of the Treasury would be obliged to buy the four and four and a half per cent. bonds with them at a high premium. Mr. Plumb couples with this unique proposition another to disburse all the gold in the Treasury in excess of $100,000,000; that is, to increase the gold liabilities of the Treasury and to diminish its resources at the same time. This also is probably "nothing but roaring."

There probably has never been a question more thoroughly discussed than the revival of American shipping. The Chamber of Commerce takes a little turn at it nearly every year. It took one on Monday. It proposed to ask for the abolition of the tax on capital and the removal of all disadvantages of every kind under which American shipowners now labor as compared with foreign shipowners, including the admission of shipbuilding materials free of duty. These materials of course include iron, and any recommendation of this kind is pretty sure to be opposed by the iron interest with sufficient vigor to secure its failure. The iron interest is also strongly in favor of the revival of American shipping, but it would revive it through bounties pure and simple. It would not allow any man to get his ships cheap, but if after they were built they were found to be too dear to be sailed at a profit, it would pay him a salary for sailing them at a loss. In opposing remissions of duty for the benefit of any one industry there is no doubt the iron men are right from their point of view. There is no room in the protectionist system for exceptions in favor of a particular manufacture. Why should shipbuilders be allowed to have cheap iron any more than railroad men?

The Chamber of Commerce also recommended not subsidies, but high pay to steamboats for carrying the mails—following in this, the report said, the example of England. It is to be observed, however, that England never paid highly for carrying the mails any longer than was necessary in order to get the mails carried. All the highly-paid English lines were so paid only as long as they had no competitors which could be relied on to do the service with promptness and regularity, or, in other words, only as long as the commercial demands of the route would not have supported a line of steamers. Our subsidy plans are entirely different. Their object is not to establish communication where none exists, but to give some American capitalist a chance to make money in a losing business. There is no difficulty in getting our mails carried regularly and cheaply to any point to which any American shipbuilder or owner would like to run a line, or with which there is any pressing need of communication. It is not necessary, either, to employ foreigners to run it. All we need is to let Americans know that, if they appear on the line with a proper fleet, they shall have the carriage of the mails at the market rate, and no questions will be asked as to where they get the ships. The report of the committee concluded with a paragraph in which the high rate of interest in this country, as compared with England, is mentioned as a great difficulty which American shipowners will have to contend with, even if all the suggestions of the Chamber be adopted; and it apparently considers this insurmountable. But why should it be so considered? Why cannot the Government lend money to shipowners at the English market rate, or at the rate at which the Clyde shipbuilders borrow? If it be objected that if it began lending money to shipowners to be used in their business, it would have to lend to others, the answer is that it does what is the equivalent of this for other industries by giving them exclusive command of the American market. It really makes no difference in principle whether a government puts prohibitory duties on foreign products, or lends the native manufacturer capital at a low rate of interest, or pays him a salary, in the shape of a bounty, for carrying on his business at a loss. What is most needed now in the shipping agitation is some decision by those who are interested in the renewal of American shipping as to which they desire more—the encouragement of American sailors, or of American iron workers. Progress is much obstructed by the practice of treating them as if they were identical, and as if one could not be had without the other.

The debate on the Arrears of Pensions Act in the Senate on Monday was partly emotional and partly critical. What Mr. Voorhees said about paying the widow "from the day and hour when her husband sealed his measureless devotion to the Government with his death," and about the duty of that Government not "to haggle with its preservers about the price of their blood," may be fairly described as sentimental. Mr. Beck's reference to the fact that the bill had passed the House of Representatives under a suspension of the rules, that it was pressed upon the eve of adjournment, that in the Senate nobody knew what amount of money was involved, the highest estimate there being $20,000,000, and that he himself was induced to vote for it by representations which afterward turned out to be unfounded, was more practical; and his views are likely to be shared by the country. The cost of this extravagant measure exceeds even the figures of some of its determined opponents outside of Congress. The people are quite as sensitive as any Senator can be to the claims upon their sympathy of the widows and orphans whose husbands and fathers perished for the Union, and they put as high a value upon the blood shed for it, but they are not willing to be taxed hundreds of millions of dollars, of which, in the words of Mr. Beck, ten per cent. "would be paid out in fraudulent claims"; while as to cases which have some foundation in truth, it is impossible to say how much of the appropriation would go to the soldiers' representatives, and how much to agents by whom the Senate, about the time of the passage of the law, "was flooded with petitions with printed headings, purporting to come from various parts of the country."

Judges who think that the power to punish for contempt of court is obsolete, will be interested in the proceedings which took place in the Randall murder case in Mount Vernon, Kentucky, on Wednesday. John Mullins came into court somewhat the worse for drink and leaned against the bar. Judge Bradly asked him if he were not a witness, and John replied in the affirmative. On being further asked what he was doing in the court-room, he answered, "Standing here, I reckon." The Judge regarded this as insulting and fined John ten dollars; but John, who had no doubt been reading the Guiteau trial, apparently thought the fine a joke, and made another insulting remark, for which the Judge fined him ten dollars more. Even this did not convince John that the Judge was in earnest, for he insulted the Court again. On this the Court ordered him to be taken into custody, when John, finding that matters were really becoming serious, ran out of the court, pursued by the jailer and two deputy-sheriffs. He shortly turned and fired upon them, but they were armed and gave him as good as he sent. After a short chase John was captured and brought back accompanied by his father, "Champ" Mullins, said to be "one of the most powerful of men physically," and also drunk. When "Champ" saw John being actually carried off to jail his feelings were too much for him, and he resisted. The crowd in the court-room broke out into the wildest disorder. The Court left the bench and shouted, "I call on every man in this house to help arrest these men, and I'll assist myself," and he did too. Men were knocked down, pistols drawn, the guards ran in with shotguns, the jury in the Randall case became "scattered," and the Mullinses fought their way through the crowd to the door, where they were again arrested. Nobody was hurt, strange to say, and it is the general opinion in Mount Vernon that the power to punish for contempt will not be questioned in Judge Bradly's court for some time. We trust that the Philadelphia correspondent of the London *Times* will not fail to draw the attention of the English public to the case, and point out how differently it would have been conducted in the Queen's Bench.

The King of Italy, in receiving the Chambers on New Year's Day, took occasion to say that, while he had no reason to believe that anybody meant to make any suggestion disrespectful to Italy, it was well to make known, in order to prevent all misunderstanding, that the Italian Government was firmly resolved not to permit the slightest discussion with outsiders about the internal affairs of the kingdom. The King's words are said to have produced a great sensation. They are substantially notice to Prince Bismarck that it is useless to talk of an international guarantee for the Pope's benefit as long as he remains in Italy, and notice to the Pope that if he means to remain in Italy and be happy, he must come to terms with the Italian Government. Apropos

of all this the latest reports of the condition of the Italian army describe it as becoming, even in the estimation of French critics, very formidable.

Prince Bismarck, in trying to make peace with the Church, and so to attach the Clericals to his policy as with their aid to build up a reliable majority in the German Reichstag and the Prussian Legislature, or Landtag, finds a difficulty in his way which it seems almost impossible to overcome. To satisfy the Clericals he will have to concede to the Church all it asks for—that is, all the rights and privileges it enjoyed before the "Kulturkampf." But by making this concession he will offend a strong public sentiment, and dissatisfy so large a number of people who are not Clericals that the Conservative vote will be cut down and the opposition vote increased in consequence, and the much desired majority will not be obtained. If, on the other hand, he defers to any appreciable extent to the strong anti-church sentiment, he will fail in satisfying the Clericals, and the coalition between the latter and the Government party will come to naught. This difficulty is fairly illustrated by the reception the Ecclesiastical Bill prepared by the Prussian Government for the Landtag is encountering. A bill authorizing the Government to dispense with the oath of allegiance from bishops, readmitting the deposed bishops to their benefices, providing for the resumption of the monetary grants from the state to ecclesiastical establishments and limiting the power of the state to reject the appointments of priests, is just the thing to displease the Liberals by too large, and the Clericals by too small, a measure of concession. It would not be surprising if it sometimes occurred to Prince Bismarck, in his vain attempts to construct a faithful majority, that after all he could have secured steady, reliable, and well-organized support only through a faithful alliance with the Liberal sentiment of the country, and by shaping his measures for the consolidation of the German Empire in the utmost possible harmony with that sentiment, which, if well treated, would not have been unreasonably exacting. As it is, the Chancellor is constantly swimming against the stream, and although he is a strong swimmer, he has also to do with a strong stream. His recent outgivings, especially the famous "rescript," indicate a deplorable relapse into the narrow absolutistic views and the violent prejudices of his younger days. Such a relapse in old age, after his long flirtations with Liberal sentiments, reminds us of the English Chief Justice, of Scottish birth, who when a barrister took the utmost pains to acquire a correct English pronunciation, and succeeded perfectly after a regular course of training under an experienced elocutionist. But when he sat on the bench in his old age the old Scotch accent came back to his tongue with all its native hardness, as if he had never had any other.

The motion of Mr. Windthorst, the leader of the Clericals in the German Reichstag, to abrogate the law forbidding the exercise of ecclesiastical functions without Government authorization, one of the principal points of the so-called Falk Laws, has, like the turning of a kaleidoscope, suddenly changed the aspect of party combinations. It was supposed that there was a prospect of cordial coöperation on all important questions between the Conservatives and the Clericals, and that the different "fractions" of the Liberal party would also act together as a united Liberal opposition. The reception Mr. Windthorst's motion met with has shown the uncertainty of political alliances in Germany. The leader of the Conservatives rose in opposition to the motion of the leader of the Clericals, and in that opposition he was joined by the spokesman of the National Liberals. On the other hand, Professor Virchow, in the name of the Progressists, the more advanced wing of the Liberals, supported the motion of the Clericals. The motives at the bottom of these apparently strange combinations are probably the following: The Conservatives do not want to give up the power of the state to regulate the exercise of ecclesiastical functions. The National Liberals, under whose auspices the Falk laws were made, do not want to abandon what was in great part their work and thus give up the point gained against the clerical power. Hence the Conservatives and National Liberals act together on this question. On the other hand, the Progressists, or more advanced Liberals, are in favor of the divorce of church and state on principle, and therefore on this occasion take sides with the Clericals who want to escape from Government control. The Government, through the Imperial Secretary of State for the Interior, spoke in an uncertain manner, committing itself neither way, and will, before taking a decided attitude, probably wait until it appears with sufficient clearness which combination is the strongest in the Reichstag. Evidently, the day of united and powerful political parties in Germany has not yet come.

The Austrians, after an occupation of three years, have decided on introducing their conscription into Bosnia and Herzegovina, and find themselves face to face with an insurrection calling, according to the latest accounts, for the despatch of a corps d'armée. Their conscription is obnoxious to the Christians, because they have for centuries escaped it under Turkish rule, this exemption being the benefit which they derived from this rule. It is obnoxious to the Mussulmans, who, in Bosnia, form nearly half the population, because Mussulmans in that part of the world have never served under Christian officers or flag, and still think it foul scorn to do so. In India, however, they find no difficulty in doing so, and make some of the best troops in the British service, and they will come to it cheerfully in Bosnia after a few good thrashings from the Austrians. They have, however, a diplomatic as well as a religious question at their back. Bosnia and Herzegovina were transferred to Austria by the Berlin Treaty to be "administered" simply. Everybody knew what this really meant; but the Porte has always contended that it only meant temporary occupation, and that the people are its subjects. Accordingly the men contend, with a certain technical justification, that they are not liable to Austrian conscription.

In consequence of the trouble the Pope has with the Italian Government and with the Roman populace, it is from time to time reported that he wants to leave the city of Rome and seek some other more comfortable place of residence, where his dignity will not be exposed to any disrespectful demonstrations. It has also been suggested that he might perhaps find in the United States as suitable an abode as anywhere. It would be well, however, for the Pope to consider carefully before taking so risky a step. A despatch from Indianapolis informs us that "Dennis O'Donahue, a Catholic parish priest of Brownsburg, Ind., has instituted a suit for $5,000 damages against Bishop Chatard, of that diocese, for suspending him from his priestly duties, as alleged, without just cause." It would be an awkward thing for the Pope to reside in a country where he might be sued for damages if he deprived a priest of his living in the way of church discipline, and where his very tiara might be attached for debt unless exempted as one of the necessary parts of his professional outfit.

It has long been a cardinal maxim of English Tory politics that the foreign policy should be quarrelsome, and that it should be more quarrelsome with Russia and the United States than with any other power. On this view the Treaty of Washington was a humiliating mistake, and friendliness toward either the Czar or the United States a sign of weakness. This also explains in a large degree the strong ground taken by the *Standard* against the American claim to the exclusive protectorate of the Panama Canal, as it explained the recent indignant protest of the *St. James's Gazette* against the cordial manifestations of feeling called forth in England by President Garfield's death. If the Canal question should be settled amicably by the Liberals, it would form a favorite topic of denunciation in Tory papers along with "the surrender" to the Boers and the abandonment of Candahar. One of the worst features of the discussion raised by Mr. Blaine was its prematureness. Beginning it now, before the money is raised to dig the Canal, and beginning it in this acrimonious tone, is likely to scare capitalists away from the enterprise. The American claim will, when the Canal is nearly finished, be just as good as, and will undoubtedly be more difficult to resist than, it is now. So that the late Secretary's spirited exploit is a fresh illustration of the inexpediency of "hallooing before you are out of the wood," and also of "fording a river before you come to it," not to speak of other adages ancient and modern. It also resembles the quarrel and separation of the young couple, immediately after the birth of their first boy, over the question as to whether he should go to Yale or to Harvard. The latest accounts of the Lesseps scheme are very dismal, and make the prospect of a canal to be controlled by any power very remote. Admiral Ammen writes to the *Herald* that, in his opinion, if the Canal is constructed with foreign money, it would be piratical to attempt to control it; that it must be dug with American money.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

On Thursday, Mr. Davidge began his address to the jury in the Guiteau case. He reviewed the evidence on both sides, and said that the testimony for the defence had merely shown slight collateral, and not hereditary, insanity in Guiteau's family. He declared that there had been no evidence to show that Guiteau was irresponsible. He reviewed Guiteau's whole career, and said that a more uniform life had never come under his observation, and the "culminating act of wickedness" was a fit sequel to it. Some excitement was caused on this day by Guiteau's request to be allowed to make the closing speech in the case himself. The prosecution protested vehemently against his being allowed this privilege, and some discussion ensued. Judge Cox seemed at first inclined to permit Guiteau to address the jury, but did not render any formal decision. Mr. Davidge concluded his address on Saturday. He dwelt with considerable effect on the testimony of John W. Guiteau, and reviewed one by one the list of witnesses who had seen nothing insane in the prisoner. He pointed out that the defence had failed in endeavoring to show that Guiteau was a "moral and kindly" man and that the assassination was in contradiction to his whole life. He concluded by exposing the claim of "divine pressure." On Saturday Judge Cox announced his decision not to permit Guiteau to address the jury. This enraged Guiteau greatly, and, for the first time in the trial, he abused Judge Cox. Mr. Reed then delivered his address to the jury, which is reported to have been very effective, principally owing to Mr. Reed's earnestness of manner and sincerity. He said that Guiteau's conviction and execution "would be an infamy beyond description—an indelible stain on American jurisprudence and American juries.' On Monday Mr. Scoville began his address. He charged that there was a conspiracy on the part of the counsel for the prosecution and the expert witnesses, Drs. Hamilton, MacDonald, Kempster, Gray, and Worcester, to hang the defendant, and he was particularly severe on Judge Porter. His speech was long and rambling, and will probably last one or two days longer. On Sunday Guiteau gave the address he had prepared, in expectation of being permitted to address the jury, to the Associated Press for publication. It is just such a one as might have been expected, containing some cunning, much nonsense and blasphemy, and displaying throughout the extraordinary egotism which is one of the prisoner's most prominent characteristics. In continuing his argument on Tuesday, Mr. Scoville dealt largely in personalities. He attacked the opposing counsel, accusing them of having been unfair and dishonest in their review of the evidence. Mr. Scoville warned the jury against Judge Porter, who is to speak after him; he wanted the jury to take into consideration the fact that he "had come here for a large fee, and was prostituting his fine attainments in an effort to hang an insane man."

A bill was introduced into the Senate on Tuesday by Mr. Blair, proposing to grant a pension of $5,000 a year from September 19, 1881, to Mrs. Garfield, the wife of the late President.

Mr. Wolf, Consul-General of the United States at Cairo, has forwarded to Treasurer Gilfillan another contribution of 3,800 francs for the Garfield Memorial Hospital at Washington, making a total of about $1,200 subscribed by the Khedive and other persons in Egypt.

The President has approved the joint resolution tendering the thanks of the people to the Khedive of Egypt for the gift of the Obelisk.

Senator Sherman's Funding Bill occupied the Senate on Wednesday and Thursday. On Wednesday Senator Vest, of Missouri, delivered a long speech denouncing both the bill and the national banks, and demanding the remonetization of silver. On Thursday Messrs. Garland and Plumb also made speeches in opposition, and a number of amendments were offered. The Senate then adjourned till Monday.

In the House on Wednesday Mr. Orth followed up his recent remonstrance against the committee assignments by offering a resolution instructing the Committee on Civil-Service Reform, of which he is chairman, to inquire into the expediency of providing a new mode for the appointment of the committees of the House. The Speaker, however, decided that the resolution must be referred to the Committee on Rules, of which he is the chairman. This ends the matter for the present session. On Thursday, the committees not yet having prepared sufficient business, the House adjourned until Monday.

The first appropriation bill of the session was passed on Thursday without amendment and with scarcely any opposition. It was the bill to appropriate $450,000 to complete the work of the Tenth Census.

Notice has been given by the committee appointed to audit the bills incurred during President Garfield's illness that all claims must be presented before February 10th. Dr. Bliss and the other physicians will, it is said, present no bills, but are content to receive whatever Congress may decide to give them.

A bill has been introduced into the Senate providing that Justice Hunt, of the Supreme Court, who has been physically disabled from fulfilling the duties of his office, shall receive the regular pension to which the judges of the Supreme Court are entitled if disabled after serving ten years. Justice Hunt has not yet served the prescribed time.

In the House on Monday a motion for immediate action on Mr. Robeson's bill to increase the membership of fourteen of the most important standing committees and to create a new one, was defeated.

In the Senate on the same day Senator Voorhees made a speech in defence of the Arrears of Pensions Bill. He attacked the bondholders vigorously, and announced that they were in league to secure the repeal of the act. Senator Beck replied to him and continued his speech on Tuesday.

More than four hundred bills and joint resolutions were offered in the House of Representatives on Monday. The House has now about 3,300 measures on hand.

The widow of A. O. P. Nicholson, of Tennessee, who was one of the United States Senators expelled from the Senate in July, 1861, on the ground that they were engaged in a conspiracy to destroy the Government, has petitioned Congress for whatever salary may be due to him. His term would have expired March 4, 1865.

A memorial, signed by six of the chiefs of the Sisseton Sioux, of Dakota, was presented in both houses of Congress on Monday. The memorial sets forth the advance made by the tribe in civilization, and asks that they may have lands granted to them in severalty, and that they may be treated with common fairness and honesty.

On Wednesday proceedings were begun in the Police Court at Washington against the persons arrested for having conspired to defraud the Government by means of worthless bonds guaranteeing bids for the Star-route contracts.

Mr. Ivan Petroff, special agent for the Census Bureau for Alaska, who completed his work in September, has reached Washington, and an account of his experiences was published in the New York *Tribune* on Tuesday. He made a journey of 8,000 miles in Alaska and the Aleutian Islands, 2,500 miles of which was through a portion of Alaska never before penetrated by civilized man. He had a number of hairbreadth escapes and was a prisoner with a tribe of Indians, known as the Koloshes, from the 8th of August till the 28th of September. Mr. Petroff examined the islands and the western portion of the peninsula as far as Cook inlet, and secured the data required for the census publications.

The circulation of standard silver dollars for the week ending January 14 was $80,500, against $118,984 for the corresponding period of 1881.

The smallpox has been steadily spreading in the West. The disease is said to be extending southward, following the main lines of railroad travel between Chicago and St. Louis and along the Mississippi River. The Illinois State Board of Health is enforcing a rigid isolation and quarantine of patients, and the result is said to be very satisfactory.

A disastrous accident, causing the death of eight persons, occurred on the New York Central and Hudson River Railroad on Friday. The Albany express for New York was run into by a local train at Spuyten Duyvil. The six rear cars of the express train were Wagner drawing-room cars, two of which were telescoped and set on fire. Among the killed were Senator Webster Wagner, the inventor of the drawing-room cars. The accident seems to have been due to the carelessness of the brakeman of the rear car, whose duty it was, the moment the train stopped, to go back for half a mile with a red signal to stop any approaching train; this he omitted to do.

Governor Cornell, of New York, sent his annual message, which is a very full account of the affairs of the State for the past year, to the Legislature on Wednesday. Some of the facts in regard to the financial condition of the State which Governor Cornell sets forth, have already been published. It is expected that, with sound economy, the rate of taxation can be still further reduced for the coming year. A reform in the laws relative to assessment and taxation, and a constitutional amendment relieving the restriction on canal expenditure, are urged by the Governor. The number of scholars in attendance at the public schools fell off more than ten thousand during the past year. Governor Cornell ascribes this fact to the increased demand for labor. For the first time in their history, the State prisons have been self-supporting. Biennial legislative sessions are recommended.

Governor Murray's message to the Territorial Legislature of Utah states "that political power is wielded by church authority throughout Utah; that officers of the church exercise authority in temporal affairs; that the sovereignty of the church is supreme, and its practices are followed." In regard to polygamy he recommends State legislation in conformity with the act of Congress of 1862, which denounces this system of plural wives as a crime.

The last act in the settlement of the old railroad debt of the State of Minnesota was completed on Monday, by the burning of the redeemed bonds by the State Auditor, in the presence of the Governor and other State officers.

There has been a great exodus of colored people from certain counties, particularly the county of Edgfield, in South Carolina. The incident has created much excitement in the State, and it is feared that the agricultural interests of the entire State will suffer great injury the coming season through lack of labor. The total number of persons who have emigrated thus far is estimated at 10,000, two-thirds of whom are represented as able-bodied men above the age of twenty-one. A "prominent representative of the colored race" attributes the exodus to the fact that "our people are suffering under a worse bondage in this State than they did before the war." Other causes assigned are the enactment of the Stock Law, high rents, short crops, and heavy and unjust liens.

The committee of thirteen, appointed at the

last meeting of the general committee of citizens on the project of having a World's Fair in Boston, to consider ways and means, has reported against the project for the present, on account of the failure to receive sufficient subscriptions to warrant the undertaking.

The annual report of the President of Harvard University states that the financial condition of the College proper gives much concern to the corporation. The deficit for 1880-1881, amounting to $34,469 19, is the largest which the College has ever incurred.

FOREIGN.

Despatches from Paris on Wednesday and Thursday indicated that Gambetta was anxious to bring matters to a crisis in regard to his bill for the revision of the Constitution. The Ministerial papers stated that he had decided to tender his resignation should the Chamber of Deputies reject the proposal for the establishment of the *scrutin de liste* system. The opposition to the proposed revision, however, seems to be very strong, and many of the members of the Chamber of Deputies who were elected on the revision ticket are reported to have written to their constituents asking to be released from their pledge. The ground taken by the opponents of the measure is that the revision is unnecessary, now that the Senate is in harmony with the Chamber of Deputies. On Saturday M. Gambetta read his bill to the Chamber of Deputies. The preamble states that France has manifested by the recent election a desire for a revision of the Constitution; that the principle of *scrutin de liste* is a corollary of universal suffrage; that it is therefore necessary to settle this matter promptly, but that the matters of detail and application are reserved for the end of the present legislative session. The principal points of the bill itself are as follows: The election of Senators who are to sit for nine years, instead of for life as at present, by both chambers voting separately, instead of by the Senate alone; the Senatorial delegates to be chosen one by each 500 electors, instead of by the Communes; the adoption of the *scrutin de liste*; and the Senate to be deprived of the power of restoring items stricken from the budget by the Chamber of Deputies. M. Gambetta said that he did not ask for urgency, but that they could decide as to that after the preliminary consideration of the bill A committee of thirty-three, namely, three members from each bureau of the Chamber of Deputies, has been appointed to examine the bill.

On Monday the French Government introduced its bill in the Chamber of Deputies prescribing regulations for the admission of foreign pork. It provides that the pork must be accompanied by certificates from the French consular agents at the place from which it comes, attesting that it has been fully prepared, and is of the description known as "fully cured." The importation of uncooked chopped meat, such as sausages, remains absolutely prohibited.

General Campenon, Minister of War, has announced the proposed modification of the French military system. It contemplates the reduction of the term of service to a minimum of three years, with a more equitable distribution of military service. General Campenon also asks power to call out the reserve without the sanction of Parliament.

It is stated that the utmost that can now be hoped from the negotiations for an Anglo-French Treaty of Commerce is a temporary renewal of the existing treaty.

The census of Paris, taken on the 18th of December, gives a population of 2,225,900, against 1,988,800 in 1876.

The Austrian Government has been informed that a general rising has been planned in the northwest of the Balkan Peninsula. The situation in the southern part of Herzegovina is said to be very grave. The Vienna *Presse* says that 1,000 insurgents on Thursday overpowered the military posts near Nevesinye. The Government will ask for two million pounds for the expenses of the campaign, and extra military precautions will be taken immediately.

It is stated that there has been an active interchange of despatches between the German and Austrian Cabinets, with reference to the Anglo-French note to Egypt, and that Austria regards the understanding between France and England with disfavor. It is also said that the German Foreign Office regards the note as a "grave diplomatic mistake."

The Porte has addressed a note to the Powers declaring that foreign governments have no right of intervention in Egypt, and demanding an explanation of the Anglo-French note.

The Sultan of Turkey has deputed a number of German officials to reorganize the Turkish *gendarmerie*.

The Alexandria correspondent of the London *Times* telegraphed on Monday that the situation in Egypt is becoming very grave. The Parliament refuses to surrender the right of voting the budget, and if it persists in its attitude, it is asserted that Sherif Pasha, the Prime Minister, will resign. The Anglo-French note has not overawed the national party, and precipitate action on the part of England and France "might produce danger."

General Logerot has seized several prominent men at Sfax as hostages for the payment of the war indemnity exacted by France. He threatens severe measures if the money is not forthcoming by January.

A sensation has been caused in Tunis by the arrest of the second brother of the Bey on the charge of conspiring against the Government.

In the German Reichstag on Wednesday, Herr Windthorst introduced a motion abrogating the law forbidding the exercise of ecclesiastical functions without Government authorization. The Progressists supported, and the Conservatives and National Liberals opposed, the motion. It was carried through the second reading on Friday by a vote of 233 to 115.

It is stated that, at the instance of the Prussian Ministry, Prince Bismarck has resolved not to submit the rescript to the Reichstag. It is also said, notwithstanding statements to the contrary, that the Crown Prince Frederic William was only apprised of the rescript by its appearance in the official gazette.

The Prussian Parliament was opened on Saturday. Herr Puttkamer read the royal speech, which set forth the continued improvement in the financial situation; made congratulatory reference to the friendly relations existing between Prussia and the Vatican; announced a moderate loan for productive works, and an ecclesiatical bill similar to that known as the July law, granting the Government discretionary powers.

The ecclesiastical bill to be presented in the Prussian Landtag permits the Government to dispense with the oath of allegiance from bishops, readmits the deposed bishops to their benefices, allows foreign priests to assume ecclesiastical functions, and provides for the resumption of the monetary grants from the state. The bill is said to give satisfaction in no quarter. It does not go far enough to satisfy the Centre, and makes too many concessions to please the Liberals.

It is stated that Germany has made certain demands on Holland in regard to the navigation of the Rhine and the protection of the German fisheries on the river. The demands were coldly received. The German Minister at the Hague has been recalled on account of his want of firmness in supporting the demands.

A despatch from Rome says that the Pope declined to comply with the law requiring him to fill up a census paper; but a monsignore filled it out, showing that there were 500 persons living in the Vatican, one-third of whom are women.

At a banquet given in honor of veteran soldiers at Rome, the Mayor of the city declared that the people of Rome would rather see the city laid in ashes than again subject to Papal domination.

The King and Queen of Spain have been making a visit to the King and Queen of Portugal at Lisbon, where there have been great festivities during the week in honor of the royal guests.

The censorship at Madrid has removed the restriction upon the transmission of cipher despatches by cable.

Little news has been received from Ireland during the week. Disturbances still continue, but Land League outrages do not seem to be as frequent as they have been. A large force of military and constabulary went to Edenberry, County Kings, on Thursday, to protect persons engaged in carting oats bought at a sheriff's sale, and a mob there tore up the road and destroyed the bridges. This is the only disturbance of importance reported during the week.

Mr. Gladstone, speaking at Hawarden on Thursday, compared the condition of agriculture in England before and since the establishment of free trade, and said that the results of free trade would be sufficient to arm the farmers against the efforts to revive protection. He deprecated the proposal to introduce the principle of the Irish Land Court Bill into England, but said it was necessary to cheapen and facilitate the transfer of land. The reform of Parliamentary procedure he considered the first and most important question to be taken up by Parliament.

Mr. Gladstone is reported to have again remitted ten per cent. of the rentals on his Hawarden estates.

On Thursday Mr. Frelinghuysen received a despatch from the American Chargé d'Affaires at St. Petersburg saying that Lieutenant Danenhauer, of the *Jeannette*, with five sailors, had arrived at Yakutsk, and that Melville and six men were expected soon. Captain De Long and the crew of the first cutter have not been heard from since November 16. The despatch also states that it is reported that the *Jeannette* was caught in an ice pack about the 1st of October, 1879, and drifted with the winds and currents until June last, when she was abandoned.

It is stated that Professor Nordenksiöld's arrangements for his polar expedition will not be finished before 1884, as a vessel cannot be got ready before that time. The King of Sweden and Oscar Dickson will each contribute one-third of the expenses.

Lord Lorne, the Governor-General of Canada, sailed for Halifax on Wednesday. The Princess Louise did not accompany him.

Despatches from South America announce that the American Commissioners have left Lima for Chili. The Peruvians had built great expectations on the arrival of the Commissioners, but they gave no indication of their intended course in the Chili-Peru complication before leaving Lima. The Chilians are reported to be determined to carry out their schemes of territorial acquisition at the expense of Peru. Work on the Panama Canal has been wholly interrupted during the week ending January 8, owing to a general strike among the laborers.

Señor Martinez, the Chilian Minister at Washington, has received advices from Santiago giving an account of the unusual demonstration which occurred in that city on the occasion of the funeral of General Kilpatrick, late United States Minister to Chili. The funeral ceremonies were ordered by the Chilian Government, and conducted by the Chilian Secretary of State, assisted by the President of the Chilian House of Representatives and others.

TUESDAY, January 17, 1882.

THE FUNDING BILL AND THE NATIONAL BANKS.

How the national-banking system may be kept alive after the public debt is paid, is a problem now engaging attention at Washington. Senator Sherman's Funding Bill is not so much a bill for refunding the three and one-half per cent. bonds at a lower rate of interest as for extending by a definite period the national-bank note system. This is a laudable end, but it is only a temporary makeshift. It postpones for a time—perhaps five years, possibly longer—a definite solution of the problem. The proposed repeal of taxes on bank circulation, capital, and deposits is likewise a concession in favor of the continuance of the system. If the $7,000,000 per annum now paid into the National Treasury by the banks is remitted to them, they can issue notes on bonds bearing a correspondingly lower rate of interest, but no remission of taxes can enable them to go on as at present after all the bonds are paid off. Therefore the proposed repeal of taxes is only another temporary makeshift. But even though the present bank-note system should come to an end by the gradual calling in of the bonds held as security for circulation, a large part of the National Banking Act should remain in force. The Government ought never to release its hold upon the machinery of bank issues even though the security for such issues be something different from its own bonds. The people will never be content with any banking system under which any question can arise as to the solvency of the circulating notes. They ought never to be content with any system under which the rate of exchange between different points can exceed the cost of transporting the notes between the same points, plus a trifling commission for the banker's services. Heterogeneousness in banking as it existed before the war ought never to be tolerated again, and probably never will be.

So long as Government bonds are obtainable at rates which make it profitable for banks to issue notes upon them, we need do nothing except renew the charters which are soon to expire. That this will be done by Congress we have no doubt, since the necessity of finding something to take the place of the present system before abandoning it, or allowing it to lapse, is imperative. Looking, however, to a not remote future, we may inquire whether there is any available method to ensure perfect solvency of bank notes, and as much uniformity of value as now exists, without the pledge of Government bonds. It is obvious that if a bank held in its own vaults the capital represented by its Government bonds now on deposit at Washington, its ability to redeem its outstanding notes would be unimpeachable. It would have the same amount of property to accomplish that object which the Government now has, with this difference, that instead of lending it to the Government for an indefinite time at three and a half per cent. it would lend it to its customers for short periods at a somewhat higher rate. Aside from this the only difference is that at present the Government undertakes not to lose any part of the capital pledged for the security of bank notes, while banks themselves do sometimes lose not a part merely but the whole.

In order therefore to perfect a system in which the security of Government bonds is wanting it is needful to arrange so that either (1) the bank's capital shall not be lost or impaired, or (2) that if lost or impaired the deficiency shall at once be made good, or (3) that any failure to make it good shall not result in loss to the noteholders. We think it is quite feasible to attain this end with the machinery of the present National Banking Act. In requiring a pledge of Government bonds as security for circulating notes, the law gives a preference to the noteholder over all other creditors of a bank. This is entirely proper, but we believe it is a fact shown by the reports of the Currency Bureau that if the law had exacted no pledge of bonds, but had merely given the noteholder a preference in the distribution of the assets of banks, all the notes of suspended banks, since the National Banking Act went into force, would have been paid in full out of the assets of the institutions and the personal liability of the shareholders. Moreover, under the act as it now stands, no delay or inconvenience could have happened to the noteholders, since all the notes are receivable for all dues to any and all national banks. This provision of law amounts to a mutual insurance of the national banks by and for each other so far as their circulating notes are concerned, but it rests of course upon the higher security of the bonds held in pledge by the Treasury at Washington. Whether this system of mutual insurance could be continued without such security cannot be affirmed, but it exists practically in Scotland, where bank failures never result in discrediting the notes of the suspended institutions. Among the Scotch banks, however, the liability of shareholders is unlimited. In this country it is fixed at a sum equal to the shareholder's interest in the bank, in addition to the amount of his shares. But the National Banking Act might be so amended that the liability of shareholders as to bank notes outstanding should be unlimited. As the right to issue notes to take the place of money is a valuable franchise, there would be no injustice in such a provision. It would not compel any bank to issue notes, but if any should choose to issue them, it would put directors and shareholders under greater responsibility, and would tend to make them more watchful than they have been heretofore.

No analogy can be drawn, as to the workings of such a law, from the condition of things existing before the war. Bank-note systems were then as numerous and various as the States and Territories which authorized them. The Western States ran wild on the subject of "free banking," which they construed to mean the right of every man to issue notes who could buy or borrow a few State bonds to pledge with the local Auditor or Comptroller. Capital was not deemed necessary to the establishment of a bank. Banks in that quarter were, with few exceptions, institutions not to lend money to the public, but to borrow from them. Such abuses would be and are impossible under the National Banking Act. Errors may occur, frauds may be committed, under and in spite of the act, but they are reduced to the minimum, as is shown by the fact that all the losses incurred through bank failures, by depositors and all other creditors of national banks since its system went into operation, eighteen years ago, have been less than $7,000,000. No loss has occurred to noteholders, nor would any have occurred even without the bond security if the noteholders had been made in all cases preferred creditors. We are, therefore, of opinion that while the Funding Bill may be useful to bridge the national-banking system over a few years' time, it is not essential to the maintenance of what is most valuable in the system.

YALE AND HARVARD.

YALE COLLEGE has apparently taken up the practice begun by Harvard of issuing an annual report, in which the president not only gives an account of the actual condition of the college, but briefly discusses various university problems. The appearance of the two reports simultaneously will hereafter furnish those who are interested in the higher education with materials for a very instructive comparison of what may be called the two rival methods in university administration. The prominent part which Harvard has taken in introducing the elective system and the system (among the higher classes at least) of voluntary recitation, makes her in a certain sense the representative of those who think that the true function of a university is simply to provide the means of learning for those who wish to learn, and that no part of the energy or ability of its instructors should be expended either in stimulating the stupid or inert, or in bringing to punitive justice those who neglect their opportunities.

Yale, on the other hand, has hitherto represented, and, if we may judge by President Porter's report, still represents, those who consider a university a place for general training, moral as well as intellectual, in which the professor should stand literally *in loco parentis*, and not only provide the student with the means of instruction, but see that he gets it whether he likes it or not. The former is the European idea, and it is to the European type that Harvard is gradually approximating. The latter may be called the American idea, and in preaching it President Porter seeks to uphold what may be called the distinctively American college. There is nothing on the Continent exactly like the Yale view of the "college boy," and nothing in England except in the public schools. The relation of the professors to the students which President Porter upholds in the report before us, resembles nothing so much as the relation of the assistant master toward the boys at Eton, or Rugby, or Harrow. There could not be a better description of the rôle of the English assistant master, who teaches classics and mathematics in school hours, and afterward superintends the cricket and boating, than President Porter gives when he says that "the true and radical remedy" for the tendency in public schools and colleges to disregard "the plainest axioms of manners and morals," and to violate "the accepted axioms of courtesy and truth," is, first, to "hold the student to his duties in no mask or

disguise," and then to introduce as "great variety into the student's life as practicable—making reasonable provision for attractive amusements and athletic activities."

Harvard, on the other hand, seems to aim more and more at leaving the student to take as much or as little of the advantages in the direction of learning which the place offers him as he pleases, and at withdrawing more and more from any charge of his morals and manners which is not necessary to the maintenance of public decency and good order. The elective system, in which the student picks out, within certain very wide limits, the course of study he will pursue, and the system of voluntary recitation, in which the student of the upper classes—also within certain very wide limits—uses attendance on recitations as an aid to his studies or not as he pleases, are leading features in a régime which takes for granted that a young man who goes to college begins life, and becomes his own master, to the same degree and in the same sense as a young man who gets a clerkship in the city, and leaves his parents in order to earn his bread. That this régime is found to give satisfaction we conclude from President Eliot's assertion that—

"Whoever reads the history of the development of the elective system, as it is recorded in the successive annual reports of the dean of the college faculty since 1870, will arrive at the well-grounded conviction that every extension of the system has been a gain to the individual student, to the college, and to every interest of education and learning; and will also see reason to believe that the time is not far distant when the few subjects still prescribed for all students will in their turn become elective."

We have called President Porter's idea of the duties of a university toward the undergraduates the American idea; but it is becoming every day more and more doubtful whether it will remain so, and for several reasons. One is that no large college seems to be able to play successfully the part either of the schoolmaster or parent. Yale has long plumed herself on being emphatically what religious parents would consider a "safe" college, or a college in which exemplary care was taken of the students' morals. Nevertheless, President Porter almost confesses that parents have begun to lose confidence in her from this point of view, and that those who wish to have their sons well looked after are beginning to prefer the smaller colleges; and apropos of this he reads his own staff a long lecture on the need of stricter discipline and closer attention to faith and morals. If Yale cannot succeed in the rôle of a guardian, no large college can. In fact, we venture to assert that, allowing for numbers and opportunity, the standard of conduct, or what may be called the tone, is—if there be any difference—higher among students in the colleges which allow them largest liberty than in the colleges which take most pains to exert a direct influence on character either by exhortation or fines and penalties. In managing all large bodies of young men by means of restraint, if the restraint be mild and easily evaded, it constitutes in itself, owing to one of the best-known peculiarities of human nature, a strong incentive to excess or disobedience. To be effective, therefore, it has to be overwhelmingly powerful and fortified by the sternest sanctions, such as those of military discipline. But no college can use any such discipline, and, therefore, every college which attempts to treat youths of eighteen as children through its rules fails lamentably in securing their enforcement. That a very large body of parents prefer colleges which promise large control of conduct is quite true. But if they are now finding out, as President Porter hints, that the large colleges at least cannot keep this promise, they are simply coming to a kind of knowledge which has long been within the reach of those who know anything of college life. There is no American college which, in order to provide adequate supervision of morals and manners on the parental theory, would not need double its present force of officers, and a very different kind of officers from those who now fill its chairs. The present professors would make poor policemen, or drill-sergeants, even if their time were not fully occupied with their duties as instructors.

Taking all this in connection with the dismal complaints of poverty which both universities make, we cannot help inclining to the belief that the American college of the future will belong rather to the European or Harvard type than to the present American or Yale one. No efficient seat of learning can, with any endowment which any American college now possesses or hopes to possess, undertake anything approaching to parental care of the students. They will all soon cease to promise anything of the kind. Parents are already beginning to discover that such promises mean very little, and they will gradually give up looking for a college for their sons where they will be kept out of harm's way and made to work at their lessons. The result will be greater care in the selection of boys for college education. It will cease to be a matter of course to send boys to college whenever the father can afford it. Boys who have no strong love of study, and whose self-control is defective, will not be sent there, or, if sent under a false impression, will be more readily taken away when found out. The time and attention of college administrators will then be reserved for instruction exclusively, and the enormous sums now spent by parents on dunces and drones who go to college to learn, and learn nothing, and by college instructors in keeping up a necessarily sham supervision of conduct and progress, will be saved. In short, the American father will be unable to find anybody willing to undertake for a small sum the preservation of his son's purity and the building up of his character between sixteen and twenty, and both he and the son will be the better for it.

MATTHEWS'S FRENCH DRAMATISTS.

PARIS, December 25, 1881.

FRENCH influence is not yet on the wane, and the most powerful instruments of this influence are perhaps the stage and the novel. Our plays, our novels are translated, or imitated, everywhere; and the "Société des Gens de Lettres" has been specially instituted to protect the rights of our littérateurs against piracy. Still, I confess having felt some astonishment when I received from America a book on the 'French Dramatists of the Nineteenth Century,' by Mr. Brander Matthews.* I could hardly believe that on the other side of the Atlantic so much interest could be felt on such a subject. During my journey in the United States, which lasted several months, I never went to the play but twice—once in order to admire Booth in "Hamlet," and a second time, in Washington, in company with Mr. Lincoln, a short time before his assassination. To be sure, such grave events engrossed the public attention that it is not wonderful if nobody ever mentioned theatres and new pieces in conversation; it seemed to me, however, that the old Puritans had left their mark on the community, and that the theatre played very little part in the social life. Things must have changed, as they have changed in my lifetime in England. London cares now as much as we do ourselves for a new play by Dumas; London is interested in the health of Mademoiselle Croizette, in the movements of Sarah Bernhardt.

Such a phenomenon could not be explained if there had not been in France a literary revolution worthy the attention even of the philosopher and of the scholar. Society, the world, is only the flower of a tree; fashion is the outward phase of a deep transformation. I tried to explain lately the extraordinary prosperity of the French Theatre; I explained it by what might be called objective causes, derived from the general state of society. This prosperity has also subjective causes; there has been really in our age a new school of theatre. The form of the seventeenth century is a thing of the past; the eighteenth century has imitated its predecessor. We have, in our time, seen new ideas, new literary doctrines; and, it may almost be said, new passions find their highest expression on the stage. Mr. Matthews says that "We can see clearly enough that it is in the drama that the French have mounted highest. If we seek to know why this is, why they have done better work in the drama than in any other department of literature, it is easy (although perhaps not altogether sufficient) to answer that it is because the dramatic is the form best suited for the expression of certain qualities in which the French excel the men of other races. Chief among these national characteristics are a lively wit; a love of effect for its own sake; a gift for writing beautiful prose; and a passion for order and symmetry and clearness." The work before us is extremely interesting; it contains an elaborate analysis of the theatrical works of Victor Hugo; of Alexandre Dumas the father; of Eugène Scribe; of Émile Augier; of Alexandre Dumas the son; of Victorien Sardou; of Octave Feuillet; of Eugène Labiche; of Meilhac and Halévy. It is to be regretted that in this great picture of the modern French stage the author has not made a place for Casimir Delavigne; for Alfred de Musset; for Ponsard; and for Sandeau. Alfred de Musset, the author of "On ne badine pas avec l'amour" (the most Shaksperean of all French plays); of "Lorenzaccio," a drama which, I hope, will some time be played at the French Theatre; of so many other fine comedies and dramas, is one of the greatest figures in our dramatic history.

Mr. Matthews shows a real independence of thought in his judgments; he is not led away by current opinions. He refuses, for instance, to Victor Hugo the dramatic faculty, and treats him as a merely lyrical poet. "Victor Hugo is a great poet, although not a great dramatic poet. It is because his plays, while they are melodramas in structure, are the work of an artist in words. The melodramatist, when he has once constructed the play, calls on the poet to write it; for in Hugo are two men, a melodramatist doubled by a lyric poet. . . . Although his plays are immensely effective in performance, and his characters wear at times the externals

* New York: Charles Scribner's Sons.

of poetic conception, Victor Hugo is not that rare thing, a great dramatic poet." What is he then? He is a "master-singer of lyrics, and a master-maker of satires." His characters seem to Mr. Matthews unreal, too colossal, sometimes too abstract. We cannot agree with him when he says that Victor Hugo has "wit in abundance and to spare." All French judges will tell him that the wit of Hugo is ponderous; that it always touches the ridiculous. We cannot agree with him, either, when he pronounces "Ruy Blas" the "finest play" of Hugo's. We prefer "Hernani"; and we find the last scene of it very dramatic. "The catastrophe would be revolting if it were not so extravagant." If Goethe ever called "Hernani" "an absurd composition," it is a pity; he forgot that Spanish pride rendered the end a necessity. When Hugo wrote "Hernani" he was full of the Romancero.

The director of the Français told me lately that the part of *Don Carlos* had always seemed absurd and tiresome till it was played by Worms. "Hernani" might now be called "Ambition." It was the dream of Molière to write a piece under the name "L'Ambitieux," after the "Misanthrope." Surely, young *Don Carlos*, when he delivers his monologues; when he pardons his enemies; when he sacrifices his love, and bends all his soul toward glory and the Government, is an almost sublime personification of the "ambitious." How will you describe the poet who writes such things? Is he merely lyrical? Is not *Don Carlos* dramatic enough? How many other parts of the dramatic work of Hugo could I not cite where the lyric is completely blended with the dramatic?

I will not dilate any longer on this subject. I will also pass over Alexandre Dumas, the father, and Scribe. The latter was a mere impressionist; he painted a state of society which exists no longer; he is now unreadable, and he will soon be forgotten. Let us come at once to the living, to Augier and to Dumas, *fils*. Mr. Matthews confesses a great admiration for Augier, who is, to his mind, the foremost of the French dramatists of our day. "M. Augier inherits the best traditions of French comedy. He is a true child of Beaumarchais, a true grandchild of Molière." The "Gendre de M. Poirier" is certainly a wonderful comedy; it will remain, perhaps, longer on the French stage than the "Demi-Monde" and the "Dame aux Camélias," which may be considered the masterpieces of Dumas, *fils*. I can remember the time when Augier was first spoken of. He had received an excellent education, and seemed to have incarnated the best traditions of Greek and Latin and French literature. Some of his first verses had the terseness and simplicity of Corneille, others had all the grace and fluidity of Terence. I heard the other day "L'Aventurière," and I admired its versification—so robust, so perfect, worthy of the poet of the seventeenth century; and I wondered why the glory of Augier did not ascend to the very zenith. We say currently that people have the defects of their qualities; Augier has evidently always been classic in his admirations. His form is excellent, but he often places himself outside of real life. The "Aventurière," for instance, is not realistic enough; Dumas has treated the same subject in a very different manner. Augier is not modern, or rather he was not modern at the time when he could work the hardest. His "Gendre de M. Poirier," the most modern of his comedies, is also the best. If he had always treated such subjects with his marvellous style and force, he would have made a greater name for himself. But he has been often too unreal; the "Ciguë," the "Aventurière," and many others have no real life.

We fully agree with Mr. Matthews when he says that the "'Gendre de M. Poirier' is the model modern comedy of manners. Its only competitor for the foremost place, the 'Demi-Monde' of M. Dumas, is fatally weighted by its subject." The "Gendre de M. Poirier" puts two worlds, two ideals, face to face—the rich bourgeoisie, issued from the Revolution, and the old nobility. The contrast is admirably drawn, and the effect is wonderful. Jules Sandeau's "Mademoiselle de La Seiglière" also places two ideals in contrast. It is a pity Mr. Matthews does not mention this wonderful play; it always reminds me of Sir Walter Scott, and of those fascinating novels in which the Puritans and the Cavaliers fight for their opposite causes. In "Mademoiselle de La Seiglière" the French *émigré* and the young officer of the Empire are brought together; their characters, as well as all the incidental characters, especially the lawyer—an admirable type—are painted with great perfection.

The "Demi-Monde" only came after the "Dame aux Camélias." It was a bold idea to rehabilitate and to place on the stage the forlorn woman, the outcast of society, the Laïs of modern times. These two pieces represent well the character and the rôle of Dumas, *fils*. "Et l'amour m'a refait une virginité," says the poet. Dumas had tried to make a virgin of the prostitute; he had idealized her, transformed her by the operation of love, in the "Dame aux Camélias." He saw afterward that this was a futile attempt; that love was a forbidden fruit for some natures; that they may long for its divine emotions without being able to reach them; that society has its just laws, founded on nature, on religion, on the most sacred sentiments, and that it must protect them against all comers; and he wrote the "Demi-Monde"—the best piece of his répertoire, the most profound, the most correct, as it shows the struggle of society against the most dangerous of its offenders.

Mr. Matthews was quite right in giving a place in his volume to Labiche, the most naturally comical genius of our time, the most healthy moralist, though he only wrote *farces* for the Palais Royal. On the whole, we must compliment Mr. Matthews on his intimate knowledge of our theatre, and thank him for his kind and sympathetic judgments.

Correspondence.

THE CLIMATE AND THE RULER OF MATABELE LAND.

To the Editor of The Nation:

Sir: In a criticism in the *Nation* of December 1 last on a book I have recently edited ('Matabele Land and the Victoria Falls'), the writer has fallen into one or two apparent misconceptions which perhaps you would allow me to correct.

And here, in passing, I am anxious to remark, what I have seemingly failed in the preface to make clear, that the volume in question was published without any claim whatever to be a record of original discovery. Other writers, from the time of Livingstone downward, have traversed and retraversed the country treated of, and it was precisely *because* they had done so, and given to the world the results of their somewhat hasty journeyings, that it was felt by myself and my advisers in this matter that a record of travel which filled in somewhat in detail what they had dealt with *in extenso* might possibly prove of interest to more than merely a "small circle of friends," if indeed it were not of some positive value to future travellers. "Even in a country comparatively familiar to naturalists," a writer in the *Times* has since remarked, "Frank Oates's observations on the people, natives and Boers, and the natural history will be found to contain much that is fresh and original."

The misconceptions, however, in your article to which I chiefly allude have reference to matters of fact of some importance. The difficulties which my brother encountered in reaching the Zambesi were not, I would submit, attributable, as stated in your article, "chiefly to the climate," or even in any great measure to it, but, as frequently insisted on in the volume itself, to the obstructiveness of native character—whether actuated by a lust for gain, or a not unnatural suspicion of one whose objects were wholly unintelligible to them, I cannot pretend to say; perhaps by both. It is certain at all events that the King and his subjects threw every possible obstacle in the way of his advance; and the fair seeming of Lobengula's early conduct, so pointedly alluded to in your article, was unfortunately not supported by later experience. There appeared, in fact, only too much reason to suspect the sincerity of the monarch and his subjects, and I may add, as corroborative of this opinion, that there is now unhappily but little doubt in the minds of most men in this country that the late spirited explorer, Captain Patterson, who, with all his followers, perished some years since in the Matabele country, was treacherously poisoned by order of that specious potentate. With traders and hunters the case perhaps is different, as Lobengula is too shrewd to discourage trade; but for those visiting the country with objects of a different character, there are dangers to be encountered more serious than those presented by the climate.

Again, as regards the climate, your article, as it seems to me, leaves room for misapprehension in a reader's mind. The climate almost of the entire country, it should be explained, is healthy in a remarkable degree; so much so that, as a matter of fact, at least one-half of the traders and settlers who are met with there are men of broken health or constitutions who have been tempted from their own country by representations of its extreme salubrity, which in almost every instance are sustained by fact, and especially in cases of pulmonary disorder. It is only the neighborhood of the larger rivers, and notably of the Zambesi and Ramaqueban, that is unhealthy, and this only at certain seasons, which are perfectly well known to every one, and can always be avoided where a traveller is not impelled, as in the case of my brother, to pursue his course for purposes of inquiry or research at an improper time. Traders, hunters, and settlers, who can choose their own time, have next to nothing to fear in this respect, but may expect a climate which will well repay them for a long journey in pursuit of it.

With regard to my brother's claim to "especial notice either as a traveller or a naturalist," it is not for me to speak; but I am anxious at least that his dear-bought experience should be turned to the use of others; and, as questions of climate and native character are of first importance in any country regarded as a field for future enterprise, I trust you will give a place to this communication in your columns.

I am, sir, your obedient servant,

C. G. Oates.

New University Club, London, Dec. 24, 1881.

THE PAINTER RICHTER.

To the Editor of The Nation:

Sir: In your issue of January 5 you name Gustav Richter, painter, among the dead of the year. It seems that the cable-message of September 2 which announced the artist's death was an error. A private letter from an Ameri-

can art-student in Berlin, dated November 24, runs as follows:

"I read with much surprise, in the October number of the *Review*, the obituary of Gustav Richter, the artist, as he was in very good health (for a man who suffers as he does from gout) yesterday. . . . He entertained yesterday at dinner a party of artists, one of whom, my master, Prof. Gussors, spoke of him as being exceptionally entertaining."

Respectfully, S. R. KOEHLER.

BEECH GLEN AVE., ROXBURY, Jan. 10, 1882.

PLAGIARISM ON A PLAGIARIST.

TO THE EDITOR OF THE NATION:

SIR: In the last number of the *Nation*, I observe a criticism of the latest novel of Thomas Hardy, entitled 'A Laodicean,' and in yesterday's *Tribune* "G. W. S.," the London correspondent of that paper, withdrawing his opera-glass for the moment from the contemplation of Mrs. Langtry, alludes to an alleged plagiarism by a dramatic author named Pinero from one of Hardy's earlier novels, 'Far from the Madding Crowd.'

I am reminded thereby of a somewhat curious plagiarism of which Hardy has himself been guilty in 'A Laodicean.' It occurs in the description of Sir William De Stancy, a decayed baronet and whilom "plunger" of the British turf. In chapter v. of 'A Laodicean' Hardy pictures De Stancy as follows:

"He was the star, as I may say, of fashion forty years ago. . . . I can seem to see now the exact style of his clothes. They were always of a very light color—a neat white hat, white trousers, white silk handkerchief; aye, and his handsome face, as white as his clothes with keeping late hours. There was nothing black about him but his hair and his eyes—he wore no beard at that time—and they were black indeed. The like of his style of coming on the racecourse was never seen there before nor since. He drove his barouche himself, and it was always drawn by four beautiful white horses, with two outriders on matches to 'em, rode in harness-bridles. In his rear was a saddle-horse groom, leading a thoroughbred hack, and at the rubbing-post was another groom—all in splendid liveries—waiting with another hack. What a 'stablishment he kept up at that time! I remember him, sir, with thirty race-horses in training at once, seventeen coach-horses, twelve hunters at his box t' other side of London, four chargers at Budmouth, and ever so many hacks. . . . So 'twas no surprise that the castle that bears his name passed into other hands. . . . 'Tis quite recently since his illness that he came to that little place within sight of the buildings that once were the pride of his ancestors and himself."

Compare with the above the following description of Colonel Mellish, apparently a former ornament of British racing circles, taken from a very readable article entitled "The Turf," published in 1833 in the *Quarterly Review* (English), vol. xlix. of that publication, page 331, etc.; and there is, to say the least, a striking similarity apparent:

"The star of the racecourse of modern times was the late Colonel Mellish, certainly the cleverest man of his day as regards the science and practice of the turf. . . . We remember even the style of his dress, peculiar for its lightness of hue: his neat white hat, white trousers, white silk stockings—aye, and we may add his white but handsome face. There was nothing black about him but his hair and his mustachios, which he wore by virtue of his commission, and which to him were an ornament. The like of his style of coming on the racecourse at Newmarket was never witnessed there before him nor since. He drove his barouche himself, drawn by four beautiful white horses, with two outriders on matches to them, ridden in harness-bridles. In his rear was a saddle-horse groom, leading a thoroughbred hack, and at the rubbing-post on the heath was another groom—all in crimson liveries—waiting with a second hack. But we marvel when we think of his establishment. We remember him with thirty-eight race-horses in training, seventeen coach-horses, twelve hunters in Leicester, four chargers at Brighton, and not a few hacks. . . . We are not surprised that the domain of Blythe passed into other hands. . . . Colonel Mellish ended his days, not in poverty, for he acquired a competency with his lady, but in a small house within sight of the mansion which had been the pride of his ancestors and himself."

I do not criticise the use made of the scissors in the above instance by Mr. Hardy, but call attention to it as a specimen of the manner in which the inventive labors of novelists are doubtless often abridged, and as an illustration of the danger attending such abridgment.

I am, sir, very respectfully yours,

CHARLES T. F. SPOOR.

JANUARY 9, 1882.

CANADIAN COPYRIGHT.

TO THE EDITOR OF THE NATION:

SIR: Your issue of the 5th instant, under the heading, "Mark Twain's Visit to Canada," contains the statement that "a Canadian copyright cannot be obtained unless the author is domiciled in Canada," and you express the opinion that "A treaty between England and the United States which left the status of copyright in Canada undetermined, might lead to complications of a serious character."

Now, section 4 of the Canadian Copyright Act of 1875 provides that "Any person domiciled in Canada, or in any part of the British Possessions, *or being a citizen of any country having an international copyright treaty with the United Kingdom*," may obtain a Canadian copyright under the act. So that if Mark Twain and other American authors find themselves excluded from the benefit of this very liberal clause, they must blame their own Government, which has so long resisted the efforts of the British Government to establish an international copyright treaty. Should such a treaty ever be arranged, special provisions respecting "the status of copyright in Canada" would seem to be superfluous, as American authors could immediately claim the benefit of the act above cited.—Yours respectfully,

E. LAFLEUR.

10 EXCHANGE COURT, HOSPITAL STREET, MONTREAL, January 14, 1882.

[The Canadian copyright question is much more complicated than our correspondent seems to imagine. At present Canadian copyright cannot be obtained by an American citizen unless he is domiciled in Canada, or at any rate has a British domicile. Our statement was, we admit, too narrow. It is very true, also, that under the act of 1875 the ratification of a treaty between the United States and England would enable American citizens to secure copyright in Canada, but the trouble is that what the Canadians want, and have wanted for years, is much less international copyright than "cheap books." When the system of pirating English books sprang up in this country the Canadians began to hanker after American reprints, much preferring them to dear English editions. A curious sort of compromise was arrived at, the full history of which our correspondent will find stated in the report of the late royal commission, by which the Canadians were to be allowed to import American (pirated) copies of English books into Canada, and to recompense the English author by an import duty of 12½ per cent., which was to be collected in the Canadian custom-houses and paid to him in lieu of a royalty. The system was a beautiful one on paper, but it did not work in practice, because the reprints instead of coming through the custom-houses came round them, the duties were not paid, and while the Canadian public got cheap books, the British author did not get his 12½ per cent. The statistics given by the commission show that in ten years, in all the colonies to which the system applies, only a few hundred pounds were collected and paid over. What Canada wants with regard to the proposed treaty now we do not know. The act of 1875 would very likely, as our correspondent says, be quite enough to protect the American author; but the Canadians' desire to protect foreign authors has always been colored by their love of cheap books, and it has been publicly announced that they desire to be represented in the pending negotiations, so that they do not themselves seem to consider that the law of 1875 covers the ground. Possibly the Canadian publishers may now think that the law of 1875 went too far; that what is good enough for England and the United States is good enough for them, and that if Canada gives a foreign author a copyright, he ought to have his book manufactured in Canada. Whatever authors may think, no American publisher "can ask fairer" than that.—ED. NATION.]

TARIFF TINKERING.

TO THE EDITOR OF THE NATION:

SIR: If so intelligent a man as your correspondent I. J. Wistar is can see no better way to amend the tariff than the plan proposed by him, what can you expect of the average Congressman with interested parties behind him using every appliance, legitimate and illegitimate, to influence him? It is a strong argument for a commission of experts when such a man as Mr. Wistar has no better plan to propose. Let us look at it a moment:

"It would be safe to enact immediately a law, to take effect in six months, that no import duty should exceed the maximum of forty per cent."

The passage of such a law would (according to the theory that duties add just so much to the value of an article) reduce at once the value of the property of an innocent holder of merchandise, in some cases equal to twenty or thirty per cent. Such an unsettling of values would not be tolerated for a moment in any other country.

Again. Duties on raw wool average from fifty to sixty per cent. This plan would reduce them to forty. The manufacturer would not only have to bear the shrinkage upon all his wool, yarn, and goods, but would have to pay a duty on his wool of forty per cent., and receive protection on his product of only forty per cent. Such an act would bring widespread ruin in its train. What is true of wool and woollens is true of many other interests. The fact that we are in the condition we are should not lead us to leap before we look, but it calls for the wisest consideration of the best minds in the country, so that the inevitable change, when it comes, shall deprive no home of the necessaries of life, but shall be a gradual one, and interfere as little as possible with the industries of the country, which have grown to such huge proportions under the present tariff.

I, for one, do not believe in the kind of re vision which would be made by the timber we have in Congress. C.

BOSTON, January 14, 1882.

THE GUITEAU CASE — "REASONABLE DOUBT AS TO INSANITY."

To the Editor of The Nation:

Sir: In your comment upon "S. J.'s" communication in the last number (862) of the *Nation*, you say, as to the question of "reasonable doubt":

"Precisely what this means no judge has ever been able to explain to any jury, and the rule itself is capable of two widely different interpretations. It may mean either that the prisoner is entitled to have the judge tell the jury that to convict they must be satisfied of his *guilt* beyond a reasonable doubt, or that they must be satisfied beyond a reasonable doubt as to every particular fact which goes to make up the guilt—*e.g.*, sanity, identity, presence at the time of the commission of the crime."

The true rule, and the only one that I know of at this writing, is that laid down by the Supreme Court of this State (Missouri), and uniformly followed, in the case of the State *vs.* Evans, 55 Mo., 460, where the court instructs the jury and defines "reasonable doubt" as follows: "That if, from all the evidence in the case, they have a reasonable doubt of defendant's guilt, they will acquit; but such a doubt to authorize an acquittal must be a real and substantial doubt of defendant's guilt, and not a mere possibility of his innocence." This was a case where insanity was not a defence. The same instruction has been given in Ohio and other States, and whether this "explains" any more to the jury is a question that might admit of some metaphysical hair-splitting.

The same instruction has been given in a case (53 Mo., 267) where insanity was set up as a defence, and the jury are told that "all the facts," "all the circumstances and facts," must be considered by them, and instructions calling attention to and *singling out particular facts* are expressly denied (see 18 Mo., 419, 31 Mo., 147, and 34 Mo., 200). The rule as stated seems certainly in consonance with reason, and a necessary safeguard and protection to a defendant when life and liberty are in jeopardy.

As to the question of burden of proof when insanity is a defence, there is great conflict among the American decisions. The majority of the earlier decisions, and probably the preponderance numerically, hold that the defendant in such cases must satisfy the jury by a preponderance of evidence; but a large number, and the best-reasoned modern authorities, hold that where insanity is set up by the defendant the burden is not shifted, but the jury must acquit if, from *all the evidence*, they have a reasonable doubt that defendant was insane at the time of the act.

The Supreme Court of Michigan, being one of the ablest in the country, thus speaks, through Chief-Justice Cooley, one of the greatest American jurists and law-writers, in reference to the question of the burden of proof and the cases which hold it to be upon the defendant: "They overlook or disregard an important and necessary ingredient in the crime of murder, and they strip the defendant of that presumption of innocence which the humanity of the law casts over him, and which attends him from the initiation of the proceedings until the verdict is rendered." Here he defines murder as being committed by a person of sound mind and discretion, etc., and says that the prosecution must prove not only killing, but the malicious intent: "There is no such thing in law as a separation of the ingredients of the offence so as to leave a part to be established by the prosecution, while as to the rest the defendant takes upon himself the burden of proving a negative. The idea that the burden of proof shifts in these cases is unphilosophical, and at war with the fundamental principles of criminal law. The presumption of innocence is a shield to the defendant throughout the proceedings, until the verdict of the jury establishes the fact that, beyond a reasonable doubt, he not only committed the act, but that he did so with malicious intent" (17 Mich., 9, and 38 Mich., 482).

In this multitude of counsellors and conflict, the position of Judge Cox in the Guiteau case is a most difficult one. If in doubt, he should certainly lean to mercy. Albert Young.

Kansas City, Mo.

THE FRUITS OF THE PACIFIC COAST.

To the Editor of The Nation:

Sir: If it be admissible to add another to the communications called forth by your criticism of Mrs. Dall's book on California, I would call attention to a fatal flaw in Mr. Elliott's comparison of California grapes with those produced in the East. He compares that which is not comparable, since the grape varieties he mentions—the Delaware, Catawba, and Concord—are specifically as distinct from the Old-World grapes grown almost exclusively in California as the apricot is from the peach, or the pear from the apple. The American grape varieties are not to be found in the general market of this State as yet; and, while few will differ from Mr. Elliott in awarding to them the prize as the best eating-grapes, on account of their agreeable "musky" flavor, those who, like myself, have had an opportunity of comparing the same varieties of California growth will as unhesitatingly award the prize to the latter, as against those of the Lake Shore or of Missouri. There is good reason why this should be so, as the bunches *always* ripen uniformly here, and may take as much time for it as they please.

As the Atlantic and Mississippi Valley States produce no Muscats, Hamburgs, Sweetwaters, Rieslings, or any other grapes of the European stock, no comparisons with the "average" crop of California are possible.

As to the general issue, I would remark that, while Eastern growers of fruit have long ago determined which are the best localities for growing each fruit, so that the inferior products have been driven out of the market one or two generations ago, the *average* fruit-crop of California is as yet in the tentative stage. It is only when experience shall have excluded the unsuitable localities and varieties that a fair comparison as to ultimate capabilities and excellence is possible to any but those who have made a comparative local study of the subject.

E. W. Hilgard.

Notes.

The Free Circulating Library, in this city, is making very satisfactory progress. We have before now called attention to the importance of this attempt to establish the nucleus for a public library in New York, and the support with which it has met already in the short time of its existence shows that the views of its promoters are sound, and that the need of such an institution is real. It is the only circulating library in the city that is absolutely free to all classes without distinction, and it is the only library the growth and increase of which have been solely regulated by the actual demand. That is to say, the managers, with a few shelves full of books, put to a practical test the question so often asked, but never before answered, whether the absence of any great public circulating library in New York was due to the fact that the people of the city did not care for one, or because no serious attempt had ever been set on foot to make one accessible to them. They therefore offered to circulate their scanty collection among those who cared enough about it to come and get the books. The demand was immediately proved to exist, and in the course of a few months another fact was demonstrated about which a good deal of doubt was entertained at the start—that the circulation of books in this way did not result in their loss either by carelessness or theft. During the past year 69,230 volumes (counting each time any book is taken out) have been circulated, and only six have disappeared. It is interesting to learn, also, that but sixty-four per cent. of the circulation is of works of fiction—a much smaller percentage than in most other libraries. The trustees have decided, as the means at their disposal increase, to establish small libraries all over the city, in the centres of the poorest and most thickly-settled districts. The books are to be specially selected with reference to the wants of the community to be supplied, and reading-rooms are to be attached to each library. What the trustees need now is a small fund to secure the erection of the first of these, and a public meeting will soon be held at which their plans will be fully stated. The trustees and managers are well known in New York, and their names are identified with honest philanthropic work, not dilettante charity. What they propose is very different from those benevolent enterprises so common nowadays, which are galvanized into a sickly vitality by the desire of a few idle people to find something that has a benevolent look with which to occupy their time. It is a real effort to make the dull, squalid life of the poor in New York a little brighter, and more happy, and less ignorant than it is now; to bring the means of this to their doors; to give them actually, so far as it can be done, those opportunities for intellectual improvement and recreation the abstract beauty and value of which everybody is ready to admit, and indeed so fond of moralizing and dreaming over, but which we make after all few sacrifices to forward.

—The revision of 'Appletons' Cyclopædia, which was in active progress during 1881, was in large part suspended on the 31st of December in order to await the publication of the Tenth U. S. Census, from which of course many of its data will be derived. The appearance of the Census is expected for about the first of next July; but in view of the fact that it has long been postponed already, as well as of the notorious delays of Government book-making in general, it may be doubted whether the Messrs. Appleton will find that part of their material ready to hand for many months to come. The delay, meanwhile, should inure to the benefit of their forthcoming third edition, for it gives opportunity for a more careful revision than would otherwise be possible of what we may call the permanent element of the 'Cyclopædia'—the completed biography and history of remoter past times. These are subjects in which, as all students know, thoroughness is too often lacking in a popular cyclopædia. We learn that care is to be taken, in accordance with our recent suggestion (*Nation*, Dec. 29), to facilitate, by a full use of paragraphs, side-titles (as in the 'Encyclopædia Britannica'), and other printer's devices, the work of readers in searching the longer articles of the 'Cyclopædia.'

—Timbuctoo, according to the *Revue de Géographie*, is supposed to contain a number of private collections of manuscripts, and now that the mines of Mount Athos have been found to be utterly exhausted, the hunter for classical gems must turn his attention further south. He cannot

expect to find originals in the heart of Africa; but even Arabic translations of the lost books of Livy's History, and of the 'Annals' of Tacitus, would be worth a journey through the Sudan. Any such find would be welcome for more than one reason. In comparison with the vast field open to scientific observers, classical studies begin to show some signs of being overcrowded and overworked. It would be a novel occupation (with a plentiful chance of controversy) to re-translate the recovered treasures from the flowery Arabic into the concise and nervous style of the historian of the Empire, or even into the flowing periods of the historian of the Republic. Livy would be easy enough; but Tacitus would furnish a longer amusement. As we were deluged a decade ago with translations of the 'Iliad' and 'Odyssey,' and since then with rival versions of the greater Greek dramatists, we should probably have half a dozen simultaneous claimants for the honor of relating the events of the reigns of Caligula and Claudius in the original Latin.

—By the way, why should not the poet Payne, whose complete translation of the 'Arabian Nights,' rumor says, is to be decidedly improper, veil its nakedness in a learned tongue, and draw his language not from a well of English defiled but from the tanks of Apuleius, or, when necessary, of Petronius Arbiter? Neither would be very difficult to imitate, and there are verses in Petronius as there are in the 'Thousand and One Nights.' Mr. Payne, who is vouched for as an accomplished Arabic scholar, must have an aptitude for languages. But, to speak more seriously, Payne's translation will be an important addition to English literature. He is a master of English. His poems have achieved a reputation in an age when the amount of public attention to be divided among poetry is diminishing as much as the number of poets increases. His translation of Villon is warmly commended by those who have been fortunate enough to see the very limited edition. He will give us the graceful Arabic verses with which Alif Laila is thickly bestrewn (as Lane first showed the Western world), not, as Lane did, in prose distinguished from the rest only by its small type, but as English poetry. Perhaps in England the Villon Society, under whose auspices the very few copies of the work are to be issued for the benefit of a select few, will not allow any mutilated edition to be published; but in this country, if a copyright law has not first been passed, some enterprising publisher will no doubt seize upon the work, and by omissions and easy changes render it fit for a public of children and of persons who object to seeing a spade called a spade. The admirers of Walt Whitman may protest against a squeamishness which makes such expurgation necessary; but the general public will gladly welcome a presentation of the famous Arabian romance more adequate in the poetical portions, and possibly more exact in the prose.

—The *Revue Internationale d'Enseignement*, published by the Société de l'Enseignement supérieur, under the editorship of M. Dreyfus-Brisac, has completed its first year, second volume, and twelfth number. The relations of American scholars with Germany are so much closer than those with France that this review has not attracted so much attention in this country as it deserves. The French element is naturally prominent in it; the co-editors are among the most distinguished men of France—men such as Pasteur, just elected a member of the Academy in the place of Littré; Boissier, the author of 'Cicéron et ses Amis'; Michel Bréal, Janet, Monod, Taine; but the list of foreign correspondents is large, and their connection with the *Revue* is not nominal—witness the elaborate articles on Harvard. Many important questions have been discussed with fulness and vivacity. So, among others, the problem of the *Gymnasium* and *Realschule*, the statement of which in the *Nation* of December 22, 1881, has excited the liveliest interest in American educational circles. The last number of the *Revue* (December 15, 1881) contains, among other articles, a subacid criticism by M. Henry Martin of M. Guerrier's life of Madame Guyon, with a graphic sketch of the career of that problematical saint, and a vindication of Bossuet against Fénelon. M. Dreyfus-Brissac continues his "Instruction publique sous la Révolution." M. Pelet makes a plea for the establishment of chairs of Biblical Geography and Archæology in the Protestant faculties of theology, and for the foundation of an *École de Jérusalem* like the *École de Rome* and the *École d'Athènes*. At least, says M. Pelet, let us send our young pastors to travel in the Holy Land. M. Renan, commenting on M. Pelet's letter, thinks that the *École de Jérusalem* is half realized in the *École de Caire*, which embraces the exploration of Syria and Palestine; but he warmly seconds the other projects, especially the bursary for travelling in the East, "which would be infinitely more useful to young pastors than sojourn at foreign schools, where very often no original instruction is to be found."

—In the retrospective section of the *Revue*, an extract from the memoirs of Marmontel gives a vivid picture of the life of a *collégien* in the eighteenth century and, by the way, a sensible vindication of the old-fashioned course of study. "The study of Latin," he says, "in the upper classes constituted a course of elementary philosophy far richer, more extensive, and more really useful than those think who complain that nothing but Latin is taught in the high schools" (*colléges*). Among the correspondents, Dr. Steinbart, of the *Realschule* at Duisburg, attacks the positions of Richter and Hollenberg, and will not suffer the successes gained by the pupils of the *Realschule* in the state examinations to be explained away. The account of M. Bert's official reception is not without interest nor without amusement. The obligatory phrase-making did not prevent the new Minister of Public Instruction from making some good points, such as would be impossible in the sweet accord of our Machine politics. When we have a Minister of Public Instruction, the "Stalwart" secretary will address only "Stalwart" professors of mathematics, and there will be no danger of sly hits at "Half-Breed" arithmeticians. The *Revue* appears monthly, and is published at 24 francs a year, the year making two volumes of more than 600 pages each (Paris: G. Masson). For the character of the periodical, it cannot be considered dear.

—It might be added that French school-books are often surprisingly cheap. M. Weil's 'Morceaux choisis d'Eschyle' (Hachette, 1881), containing nearly the whole of the "Prometheus," with long extracts from the other pieces, except the "Supplices"—the foot-notes clear, terse, sensible, the work of a master who does not need to parade erudition, with a *bonne-bouche* of emendations for the philological reader—fairly bound and clearly printed (231 pages), sells for one franc. With all our hopefulness for the future of the classics in America, there is no prospect of any demand here that would make such a publication possible among us.

—The success of Mr. Sims's "Lights o' London" at the Union Square Theatre has proved so great that it is likely to run all winter. This fact, coupled with the previous run of the play in London, is significant of the general condition of the dramatic art in both countries. The peculiarity of the "Lights o' London"—which is put down on the bills as a "powerful melodrama, in five acts and eleven scenes"—is, that it is not, in any sense of the word hitherto recognized, a play at all. It contains a story, a pathetic plot, in the adventures of *Harold Armytage* (Mr. C. R. Thorne, jr.), wrongfully suspected of crime, and his faithful wife, *Bess Marks* (Miss Sara Jewett). There is a villain in *Clifford Armytage* (Mr. F. de Belleville), who pursues *Harold* and his poor wife with merciless, unrelenting hate from one end of the play to the other, and to accomplish his base designs endeavors to compass their destruction by the foulest means, but is baffled of his prey at the last. Indeed, for pure innocence, unredeemed villany, rapid pursuit, and the complete failure of the pursuer, we can recall nothing like it in the legitimate drama; and to any one who has not been to the Union Square we can only give a faint idea of the impression it produces by saying that it reminded us a little of the thrilling ballad, "The Villain still pursued her," which used to be sung with such effect by the San Francisco Minstrels. There are twenty-nine characters in the play, to say nothing of the policemen, grooms, countrymen, costermongers, and maids—amounting to "over one hundred supernumeraries"—who, when they appear in force on the pretty little stage of the Union Square for the purpose of representing a street crowd, create a scene of confusion which beggars description and hugely delights the audience. With regard to incident, there is enough in the "Lights o' London" for at least eleven plays of five acts each—some of it tragic, some comic, some pathetic, some criminal, some vulgar, some refined, but all exciting. There is a murder in the first act, a realistic second-story communicating-room fight in the last; there is an attempted drowning and a rescue, with a very good piece of cold-and-starvation acting by Miss Jewett. These, however, are mere hints of the dramatic feast provided by Mr. Sims. Whether he meant to take a leaf out of Mr. Oscar Wilde's book, and give the public a picture of what is known among the æsthetes as a "broad national life," we do not know; but, if he did, it is unfair to him that so narrow a stage should have been selected for the purpose. But the chief peculiarity of the piece is that it is not a play. It has absolutely no construction. The incidents and scenes of which it is made up follow one another in a chronological, not a dramatic order, somewhat in the manner in which a good special pleader fifty years ago would have narrated the events constituting his "cause of action." If it had been done on a theory, it might be said to be an application of the doctrines of the naturalistic school to dramatic form. It really contains a suggestion which any clever young writer who wants to make a reputation by starting a brand-new idea might make a great deal of. The traditional notion of a play involves the idea of an intrigue, or complication introduced into the situation of the characters, and the correlated dénouement which unravels it. But this is not the way things happen in real life. In real life, when we are accused of murdering and robbing our aged father, we always know whether the accusation is just or not, and there is no need of any mystery about it. If the evidence is against us, what we do is to give "leg-bail," and very surprising adventures we may have in giving it. Attempts may be made to shoot, drown, or starve us, and finally to convict us by perjured evidence in a court of justice; and these thing may all be successively represented on the stage. The representation, too, if well done, will be sure to excite interest; for there is nothing mankind likes better than a hunt of any kind, and a human hunt is best of all. If the

prey escapes the cruel pursuer at the end, it will be a melodrama; if he is run down and killed, it will be a tragedy, which would then be a sort of theatrical version of what the newspapers give, when a murderer is hanged, under the head of "history of the crime." In this way the theatre of the future would burst through the fetters imposed by tradition and usage, and become something entirely new, in which dramatic form would have no more place than it has in the adventures of "Billy the Kid" or those of a band of Texas "road-agents."

—At the Thalia Theatre last Friday a large audience witnessed the first performance in this country of the new operetta, "Apajune, der Wassermann," the music of which was written by Milloecker and the libretto by Zell and Genée, the indefatigable couple who, besides writing operettas of their own, furnish the text-books for nearly all the comic operas of the Viennese school. We say comic operas advisedly, for one of the principal characteristics of this school is that its works often exceed the proper limits of operetta and encroach on the domain of comic opera by their grand finales, embellished arias, and rich instrumentation. "Apajune" is no exception to this rule, and a successful performance of it is therefore only possible at a theatre that has an able artistic manager and can furnish a strong cast, which is fortunately the case at the Thalia. Zell and Genée, who have shortened the life of many an operetta by failing to supply a good plot and entertaining dialogue, have in the present case furnished a story of more than ordinary interest. It is based on a superstition, supposed to be prevalent among the peasants of Wallachia, that a newly-married bride can secure a valuable present from the water-sprite *Apajune*, if on her wedding day she visits him in his grotto by the fountain. The Rumanian boyars or princes (*Prutshesko*) take advantage of this superstition, to which they owe many a romantic episode in their lives. During the absence of the present Boyar at Paris, where he secures the hand of a robust ex-landlady valued at several millions, the custodian of his estates, *Alexandri*, passes himself off as the Boyar and assumes all his functions. Coming into the village where the marriage of the peasant *Marcu* is just being celebrated, he commands the bridegroom, in accordance with the established custom of the country, to call on him in the course of the day with his bride. While *Marcu*, who suspects his intentions, meditates on some plan of avoiding this danger, he opportunely falls in with two men disguised as females, who are on their way to the castle. The happy thought strikes him that he might introduce one of these persons as his wife and the other as his aunt, and thus deceive *Alexandri*. The disguised men are two officers, one of whom is the lover of the real Boyar's niece, who is expected at the castle that day, and with whom he intends to elope, since the Boyar and his wife are opposed to the match. They proceed to the castle, where a series of amusing scenes ensue, too complicated to narrate. Meanwhile the fair *Natalitza, Marcu's* bride, misses her husband, and hearing that he has been seen going toward the castle with two females, starts in jealous pursuit of him. At the castle she meets the Boyar, who endeavors to console her for her lover's perfidy, and advises her to carry out her intended plan of visiting *Apajune's* grotto. Meanwhile the Boyar's niece has effected her escape with her disguised lover, and when the fact becomes known *Marcu* is accused of having assisted them and is thrown into a dungeon. The dungeon leads into a subterranean passage which *Marcu* follows until he suddenly finds himself near *Apajune's* grotto. To his surprise he beholds *Alexandri*, who, having heard of the Boyar's return, had resolved on flight, but previously determined to carry out his plan of duping *Natalitza*. *Marcu* puts him to flight, and then, finding that he has left his Apajune costume behind, resolves to put it on in order to test his bride's fidelity, if she comes. He has hardly retired when a third *Apajune*, this time the Boyar, makes his appearance. *Marcu* encounters him, too, and treats him to an involuntary bath in the fountain, on emerging from which he not only consents to leave the peasant couple in peace, but agrees to the marriage of his niece with the young officer. Milloecker's musical setting of this plot is of that sensuous, semi-Oriental quality which, combined with honest German workmanship, makes Viennese operettas so refreshing to listen to. That there are numerous passages which suggest the work of some of his colleagues cannot be denied. But there are others of that incisive originality which fixes them at once in the memory of the hearer, and causes them to be whistled and hummed in the street after a first hearing. The stirring march in the first act would be quite worthy of Suppé, while a waltz and a polka which recurs as a sort of leading motive would do honor to Strauss. The performance was so excellent in every respect that it would be superfluous to specify the merits of each actor. Suffice it to say that the audience was highly amused and very enthusiastic in its applause throughout the evening. "Apajune" will be repeated until further notice. It deserves a long and prosperous career.

—Mr. Remenyi's plan of giving a solo-violin concert without the assistance of another instrument throughout the evening is one of those tricks of virtuosity which are sure to draw a large audience on account of their novelty. Steinway Hall was so crowded on the evening of the 11th inst. that it would have been difficult to find a square foot of standing-room. The audience suggested in appearance those seen at Koster & Bial's and similar places, and applause was bestowed on everything without much discrimination. Mr. Remenyi played in the first part of the concert three pieces from Bach's violin sonatas. The second part consisted of arrangements and original compositions, and the third of four *capriccios* from Paganini's twenty-four studies. Mr. Remenyi has been so long before the public that all his merits, defects, and eccentricities are well known. He is at his best in those wild and unmethodical Hungarian pieces which, according to Liszt, his countrymen owe to the Gypsies. Classical music he plays like an amateur, and not even a good amateur. That he so frequently plays out of tune is not to be wondered at in view of the fact that when he is tuning his violin and has succeeded in getting it all right, he turns the screw a little more and gets it all wrong again before he begins to play. His intonation, it is true, is never so shockingly defective as that of some opera singers recently heard at the Academy of Music, and a person who has not sharpened his hearing by playing on a string instrument himself would not notice it in many cases. But a great violinist who aspires to give a concert by himself, should play so as to satisfy the most delicate ear, since this is a feat which thousands of amateurs can accomplish. More annoying than his uncertain pitch is the roughness of his bowing in loud passages. It may be partly the fault of his instrument, but the coarse, rattling sound of his G string, as played by him, is often annoying and mars some of his best effects. However, if it offended against certain critical principles, Mr. Remenyi's concert must yet be pronounced a popular success, and it is only to be feared that some other violinist will now be tempted to give a concert on the G string alone.

—Haydn, Beethoven, and Schumann, in chronological order, were represented on the programme of the fourth Philharmonic concert on Saturday evening. Haydn's D major Symphony, the twelfth of those which he composed in England, is an excellent illustration of its author's inexhaustible source of melody and spontaneous workmanship. Haydn's proper sphere was the string quartet, a department in which he has been surpassed only by Beethoven. In all his symphonies the string quartet gives the predominant color, and he even expressed his regrets to a friend in his old age that now, when he was about to leave the world, he had only just learned the use of wind instruments. Yet he does make charming use of them on occasion, but not sufficiently to give his works that kaleidoscopic variety of color we are accustomed to in modern works. What atones for this in Haydn's best symphonies is the exquisite finish of detail. To hear one of them is like strolling through a meadow filled with flowers and grasses. To one who takes only a bird's-eye view the meadow will seem monotonous; but the connoisseur who examines the individual grasses, ferns, and flowers will discover in them an inexhaustible variety of beautiful forms and hues. In the second selection, Beethoven's Concerto in G major op. 58, Mr. Thomas's orchestra had the assistance of Mr. Joseffy, who had never before been heard in this composition in New York. The cadenzas were Rubinstein's. Joseffy's playing was deficient in impetuosity where this quality was called for; but it was characterized by such a marvellous perfection of execution, a distinctness of touch, and soulful dwelling on sustained notes, that the applause accorded him by the audience was fully justified. An encore, which is usually such a nuisance, was not out of place here, since a piano solo offered an agreeable contrast to the other numbers, all of which were orchestral. Of Schumann's Rhenish Symphony, which brought the concert to a close, nothing need here be said, as it was discussed in connection with the last Brooklyn Philharmonic concert. The magic wand of Mr. Thomas, as usual, succeeded in conjuring a compact volume of sound such as can be heard in this country only at our Philharmonic concerts. At the next concert a new symphony, "Tell," by Hans Huber, will be the novelty, the other pieces being Mozart's D major Symphony No. 5 and two movements of Beethoven's String Quartet No. 9 in C.

NAPOLEON BONAPARTE.—I.

Memoirs of Count Miot de Melito, 1788–1815. Edited by General Fleischmann. From the French, by Mrs. Cashel Hoey and Mr. John Lillie. 2 vols. London: Sampson Low & Co.; New York: Chas. Scribner's Sons. 1881.

THE 'Memoirs of Count Miot de Melito' are not remarkable for that vivacity of style and picturesque portraiture of character which French memoirs generally exhibit. They give us no such living panorama of the court of Napoleon as is to be found in the 'Memoirs of Madame de Rémusat.' Count Miot de Melito was, apparently, a steady-going official, of strictly business habits—such a man as heads of governments and departments love to have about them—executing all works entrusted to him with careful diligence, strong in statistical information, and so forth, but certainly not a literary artist. However, any man is welcome to students of history who has anything to tell us, directly from his own personal experience, of the first Napoleon. Mean and repulsive as was the character of the Corsican soldier, he possesses the

inexhaustible attractiveness of genius. We are always willing to read about him, because we recognize that there was that in his nature which our ordinary human plummets are unable to fathom. The gulf which divides him from what we may term the "measurable" man comes out clearly enough when we place him in contrast with his great military rival, the Duke of Wellington. There are no mysteries, so to speak, in the character of the Duke: we can catalogue his qualities, and account for the man. Not so with Napoleon. Shelley's wonderful lines, written when he heard that the conqueror was dead in his far-off place of banishment, represent very truly the effect wrought upon the imagination by his meteoric career—

"A torrent of ruin and death from his birth"—

as if some immeasurable cosmic force had taken human shape. Count Miot de Melito had special opportunities to give us information about Napoleon. He was thrown into intimate relations with him during his first Italian campaigns; subsequently he became the close friend and confidential adviser of Napoleon's brother Joseph, and from this source obtained much knowledge of the inner workings of the Emperor's restless and ambitious mind to which the world was a stranger. He was, moreover, greatly trusted by Napoleon himself, and when he became sole master of France Count Miot de Melito was employed by him for the transaction of much important and difficult business. These memoirs, accordingly, present us with a portrait of Napoleon which possesses that fresh and living interest which nearly always attaches to the record of what a man has himself seen and known.

Count Miot de Melito was the French Ambassador at Florence when he first became acquainted with Napoleon, who had then just received the command of the Army of Italy. This army, without clothes, without food, and without commissariat, could barely hold its own against the combined forces of Austria and Piedmont. In two years from the date of his assuming command, Napoleon, as all the world knows, had utterly destroyed the armies both of Piedmont and Austria. It is unnecessary to recount the story of this perhaps the greatest in point of generalship of all Napoleon's campaigns; but what is startlingly brought out in the 'Memoirs' before us is the clearness with which Napoleon apprehended, at this opening stage of his career, the goal at which he was to arrive. While still only General of the Army of Italy, he had determined to become Emperor of France and supreme controller of the destinies of Europe. It was in the month of April, 1796, that Bonaparte, having arrived at Nice, wrote his first letter to the French Ambassador at Florence, announcing that he was about to put the army in motion and asking for information on the state of Italy.

"I saw," writes the Count, "at once by his style, which was concise and animated, although careless and incorrect, that he was no ordinary man. I was struck with a breadth and depth of view on military and political subjects such as I had not found in any correspondence which I had held up to that time with the generals of our Army of Italy. I predicted, therefore, either great success or great reverses. My uncertainty did not last long. The campaign was opened, and a series of victories as dazzling as they were unexpected, succeeding each other with surprising quickness, raised the glory of our French soldiers, and that of the great captain who led them daily to fresh triumphs, to the highest. . . . The news reached to the centre of Italy, and the bulletins giving descriptions of these wonderful deeds of our troops, at first contradicted, produced sheer bewilderment, when the force of truth convinced the most incredulous. Nothing was then thought of but how the torrent of war was to be turned away from regions it had not yet reached."

A few months later the Count had his first interview with the French general at Brescia. Napoleon was at that time about to begin the siege of Mantua, having driven the Austrians, under Beaulieu, across the Adige.

"I was quite astonished at his appearance. Nothing could be more unlike the idea my imagination had formed of him. In the midst of a numerous staff, I saw a man below the middle height and of an extremely spare figure. His powdered hair, oddly cut, and falling squarely below the ears, reached down to his shoulders. He was dressed in a straight coat, buttoned up to the chin, and edged with very narrow gold embroidery, and he wore a tri-colored feather in his hat. At first sight he did not strike me as handsome; but his strongly-marked features, his quick and piercing eyes, his brusque and animated gestures, revealed an ardent spirit, while his wide and thoughtful brow was that of a profound thinker. He made me sit near him, and we talked of Italy. He spoke in short sentences, and at that time of his life very incorrectly. . . . He crossed the rooms adjoining that in which he had received me, and gave some order to Murat, Lannes, and Junot, his aides-de-camp, and the other officers in attendance. Every one maintained toward him an attitude of respect, and I may even say of admiration. I saw none of those marks of familiarity between him and his companions that I had observed in other cases, and which was consonant with republican equality. He had already assumed his own place, and kept others at a distance. I . . . returned to my hotel, greatly struck and in some sort bewildered by what had just taken place."

Napoleon was then hardly five-and-twenty. He had held command of the Army of Italy but a few months; but he made no concealment of his determination to regulate his conduct in complete independence of the Government at Paris. "The Commissioners of the Directory," he told Count Miot de Melito, "count for nothing in my policy. Let them busy themselves, and welcome, with the administration of the public revenues, for the moment at least; the rest does not concern them." The full disclosure, however, of Bonaparte's far-reaching ambition was not made to the Count until some time later. Mantua had then fallen, and Austria was soliciting peace. The young General (it was in the summer of 1797) was at Montebello, where he kept up a brilliant court rather than the headquarters of an army.

"Strict etiquette already reigned around him; his aides-de-camp and his officers were no longer received at his table, and he had become fastidious in the choice of the guests whom he admitted to it. An invitation was an honor eagerly sought, and obtained with great difficulty. He dined, so to speak, in public; the inhabitants of the country were admitted to the room in which he was eating, and allowed to gaze at him with a keen curiosity. He was in nowise embarrassed or confused by these excessive honors, but received them as though he had been accustomed to them all his life. His reception-rooms and an immense tent pitched in front of the palace were constantly full of a crowd of generals, administrators, and great contractors, besides members of the highest nobility and the most distinguished men in Italy, who came to solicit the favor of a momentary glance or the briefest interview."

Here it was that one day, as the Count was walking in the garden of the palace with Bonaparte and an Italian noble, the future Emperor of France, as if the thick-crowding thoughts in his mind compelled him to give them speech, disclosed his future projects to the pair of astonished auditors:

"What I have done up to this," he said, "is nothing. I am only at the beginning of the course I must run. Do you imagine that I triumph in Italy in order to aggrandize the pack of lawyers who form the Directory, and men like Carnot and Barras? What an idea! A republic of thirty million men! and with our manners, our vices! How is it possible? That is a theory of which the French are at present full, but it will pass away like all the others. What they want is glory and gratified vanity; but as for liberty, they do not understand what it means. Look at the army! the victories we have just won have already restored the French soldier to his true character. To him I am everything. Let the Directory try to take the command from me, and they will see who is master. The nation must have a chief, and a chief rendered illustrious by glory, not by theories of government, by phrases, by didactic speeches which Frenchmen do not understand. Give them baubles—that suffices them; they will be amused, and will let themselves be led so long as the end toward which they are going is skilfully hidden from them."

Napoleon, however, miscalculated the extent of his power at this time. Very shortly after this discourse the Directory did what he had dared them to do. They removed him from the command of the Army of Italy, and Napoleon found that he had no alternative but to obey. It was then that the idea of an expedition to Egypt flashed across his mind. It was a sphere in which he would recover his independence of action, and electrify afresh the imaginations of the French nation by another series of brilliant exploits. The Directory, on its side, was anxious to remove to a distance so formidable and ambitious a competitor for power, and, with so important an object in view, did not scruple to devote an army of French soldiers to needless and unprofitable carnage. Bonaparte went to Egypt, and during his absence matters went on at home precisely as his ambition desired. The Directory showed its incapacity to sustain the honor of the French arms abroad, or to preserve tranquillity and order in France. In Italy the tide of success was completely turned. Suwarrow and the Archduke Charles sent the French armies out of Italy; and had the latter general loyally supported his Russian ally, France itself would have been invaded. In France, the Government, by its weakness, corruption, and utter incapacity, had fallen into the deepest contempt when Napoleon reappeared upon the scene. The revolution of the 18th Brumaire followed, and Napoleon assumed the office of First Consul of the French Republic. The victory of Marengo, which followed soon after, and which recovered the whole of Italy from the Austrians, raised Napoleon to the highest pinnacle of greatness. He was supreme master of France. The people, wearied of the long and rapid succession of weak and incapable rulers, desired nothing better than to have a firm and capable ruler over them. They were attracted toward Napoleon not only by his surpassing genius, but by the not less surpassing good fortune which seemed to attend upon all which he attempted. No man in history ever had such an opportunity for benefiting his fellow-man as Napoleon at this crisis of his career, and for a time, it must be acknowledged, the course of events seemed to promise well. The egoism of Napoleon, detaching him as it did from all parties indifferently, appeared to work as a great healing and reconciling agency, suddenly coming into operation in the distracted politics of France. Wherever he detected an able man he set him to do the work for which his abilities best fitted him, no matter what his political antecedents might have been. Thus, while he gave health and vigor to every department of the administration, he caused all parties to suspend hostilities against the Government till they saw what its future policy was to be. None cared to oppose a Government the action of which had imparted hopes to each one of them.

Bonaparte, too, was no less indefatigable as an administrator in his Cabinet than he had been as a general in the field. "It must not, however," says Count Miot de Melito, "be supposed that, absorbed in the delights which the flexibility of the French nation so easily accorded to him, he neglected public business. His indefatigable activity was more than ever apparent." The poet Coleridge was at this time earning a precarious living as a writer of lead-

ing articles for the London *Morning Post*, and these articles of his show in a very interesting way the admiration and hope with which intelligent men in England were watching the proceedings of the First Consul. After condemning the manner in which the revolution of the 18th Brumaire had been accomplished, Coleridge goes on to say :

"Meantime, it is undeniable that already his (Napoleon's) commanding genius has introduced a new tone of morality into France, and that it is now fashionable to assume the rigid and simple character of the First Consul. . . . In his individual character and conduct the Chief Consul has hitherto supported the part of a man ambitious of greatness : too intensely preoccupied to be otherwise than austere in morals ; too confident in his predestined future to be suspicious or cruel ; too ambitious of a new greatness for the ordinary ambition of conquest or despotism. He has opened the prisons and the churches ; he has recalled the zealots if only they were lovers of their country, and the priests if only they were quietists ; and both by consular edict and private example has endeavored to persuade his fellow-citizens not to yield themselves up to their dissensions as politicians till they have first submitted themselves to the kindly operation of their common sympathies as men. In this usurpation Bonaparte stabbed his honesty in the vitals : it has perished—we admit that it has perished—but the mausoleum where it lies interred is among the wonders of the world."

Napoleon, however, was too complete an egoist to find happiness or even satisfaction in promoting the well-being of his fellow-men. The sole object of his life was to assert himself, to compel obedience to his will simply as such ; and the consequence was that as soon as he had brought France into a condition where its forty millions of people were but the exponents of his single will, he could find no rest until he had reduced the whole of Europe to a like state. It is in vain to attempt to educe any general plan from the politics of Napoleon. He had none beyond this assertion of self ; and had he succeeded in subduing all Europe to his will, he would then have set about the subjection of Asia, still with no ulterior aim beyond that of gratification of self. What distinguished him from the Genghis Khans and Tamerlanes of Asiatic history was his clear perception of the manner in which the war power of a nation depends upon a sound and vigorous civil administration.

MEMORIAL HISTORY OF BOSTON, VOL. III.

The Memorial History of Boston, Massachusetts. Edited by Justin Winsor, Librarian of Harvard University. Vol. iii. The Revolutionary Period, and Part i. of the Last Hundred Years. Boston: J. R. Osgood & Co. 1881.

VARIOUS hands, out of the staff of seventy writers employed on this history, make their first appearance in the present volume. The first is the Rev. Edward G. Porter, who may be recollected for his interest in the story of Lexington and Concord, as manifested during the centennial of those events, and from him we have the chapter on the beginning of the Revolution, from the agitation over the writs of assistance in 1760-61 to the outbreak of April 19, 1775. Boston was never before and probably has never been since the centre of such widespread observation here and in Europe as during this time and the year following, covering the interval of active hostilities. It is the epic chapter of her existence, and while there is little new to be told, in a history like this, the old must be retold with such pictorial illustration as the plan of the book admits of. Fortunately, there was much of interest of the latter kind still left to be produced, like the portrait of Thomas Cushing, who was brought into somewhat factitious prominence as Speaker of the House of Representatives, and consequent signer of many of the important state papers which the patriots gave forth; that of Josiah Quincy, jr., painted, to be sure, after death by Stuart, but to the family's satisfaction; that of Andrew Oliver, the Lieutenant-Governor under Hutchinson; that of Lord Percy, a somewhat brilliant, if not altogether strong personality; and those of General Warren and his wife, neither of which has been before engraved, though Copley's smaller picture of Warren is familiar.

The chapter on the Federalist era of the town fell naturally to Henry Cabot Lodge, who has worked it up skilfully. Here, too, among illustrations not wholly new, we find others, not before known in engravings, like Copley's James Bowdoin, a refined and thoughtful head, showing a sensitiveness, partly caused by his ill-health, which kept him so much in the background during the heated work of the Revolution ; but this proved to be joined with a right-headed courage, when he later confronted the evil days of Shays's Rebellion. It is a pity nothing could be found of George Cabot in his maturer days. The figure given of him is of his younger aspect.

The longest chapter in the volume tells the story of "Boston under the Mayors," and it is very well written by James M. Bugbee, a gentleman not well known, perhaps, away from Boston, but who in that city is associated in the minds of all with long and excellent service in the municipality's behalf, and as representing the best elements in city politics. He tells the story fearlessly, and though he awards integrity to all of the twenty-three persons who have so far held the executive office under the charter, he does not fail to point out amiable weaknesses which have characterized some of them. The later mayors are not given to the eye, but of the earlier ones, several of whom are of more than local historical interest, we have the first mayor, John Phillips (father of Wendell Phillips), Josiah Quincy, better known as President Quincy, Harrison Gray Otis, whose silvery oratory is a tradition in Boston, Col. Theodore Lyman, and Samuel A. Eliot, the father of President Eliot.

Governor Long comes next, with a paper on "Boston and the Commonwealth under the City Charter." General Francis W. Palfrey tells the story of the part Boston and its soldiery played in the Mexican and in the Civil War. It is, in parts, a severe arraignment of the policy adopted by Governor Andrew, in regard to enlistments, and has elicited some censure from the Governor's admirers. It is to be feared that the epoch called sometimes for action according to the standard of the best possible, rather than what was theoretically best. Rear-Admiral Preble takes charge of the part of Boston on the sea in these wars, and the history of the Navy Yard. Very temperately and cautiously does James Freeman Clarke recount the trying scenes of the rise and progress of the anti-slavery movement in Boston, and the typical faces of Garrison, Sumner, and Parker peer out of his pages. Next we have other writers, new to this book, who go over the denominational aspects of Boston's religious history for the past century—Dr. Increase N. Tarbox on the Trinitarian Congregationalists; Dr. H. M. King on the Baptists; Dr. Daniel Dorchester on the Methodists ; Dr. Phillips Brooks on the Episcopalians ; Dr. Andrew P. Peabody on the Unitarians ; Dr. Miner on the Universalists ; Rev. James Reed on the New Jerusalem Church ; Vicar-General Byrne on the Roman Catholics ; and there are some strong characteristic faces scattered through these chapters—Lyman Beecher, Dr. Stillman, Dr. Gardiner, of old Trinity ; Dr. Freeman, who so sturdily ordained himself at King's Chapel; the eloquent Buckminster ; Murray and Ballou, of the Universalists ; and Bishop Cheverus, whose memory is a benediction even among Protestants in Boston. The final chapter, on the press and literature of the last hundred years, is an admirable one. In a well-compacted essay the salient points are brought out conspicuously, and the minor events grouped skilfully. The writer is a well-known Boston architect, Mr. Charles A. Cummings, and he gives to the work of his pen the finished taste and repose of his buildings. The illustrations of this chapter are interesting. There is the likeness of Col. Benjamin Russell, of the old *Massachusetts Centinel* days; Milmore's statuette of George Ticknor; Stuart Newton's portrait of Edward Everett, in his gown as minister of the Brattle Square Church, never before engraved; views of the libraries of Prescott and Ticknor; a facsimile of the first draft of Longfellow's 'Excelsior,' closing, "September 28, 1841. Half-past three o'clock—morning. Now to bed"; and a fragment of Lowell's "Courtin'," also in facsimile.

Of the writers whom we have known in previous volumes, those in the Revolutionary period may be singled out for their readable presentations. Dr. Edward E. Hale takes a subject he is identified with in the "Siege of Boston" ; the late Mr. Goddard, of the *Daily Advertiser*, gives the quality of the pulpit, press, and literature of that period ; and Mr. Horace E. Scudder resumes his old topic, the life of the people. The illustrations in these chapters are numerous : a striking head of Paul Revere ; a well-known one of Knox ; Stuart's Washington at Dorchester Heights ; a facsimile of a pen-and-ink portrait drawn by Kosciuszko ; General Ward and Joseph Green, the wit of his day. Then for contemporary views we have two from Beacon Hill of great interest, both by British officers, taken during the siege: one of the burning of Charlestown during the battle of Bunker Hill, the original of which is in the collection of Dr. Emmet of this city, and came from the sale of the Marquis of Hastings, who was the representative of Lord Rawdon, then on Gage's staff, for whom the drawing was made; the other is a series of four views from the same eminence, toward the cardinal points of the compass, following a contemporary copy (given some years since by Mr. J. Carson Brevoort to the Massachusetts Historical Society), the originals of which were sent to George III. and are now in the King's library in the British Museum.

It fell to the editor to furnish the essay on the maps of Boston of the Revolutionary and later dates, and to supplement at some length the chapter of the Revolutionary period, besides annotating those of the later period. It is understood that the fourth and concluding volume of this commemorative history is completed, and will soon be published.

MEYER'S FACH-LEXIKA.

THE publishing house of H. J. Meyer in Leipsic, widely known as *Bibliographisches Institut*, has started a new cyclopedic collection under the title of 'Meyers Fach-Lexika' (New York : B. Westermann & Co.). Together, these special lexica are to form a general cyclopædia broken up into parts. Each part is to consist of one volume (small 8vo), to embrace one branch of knowledge, and to be complete in itself, and thus singly procurable as an independent work. Uniformity is to be observed in plan, style, and external appearance, and no doubt care will be taken, by avoiding repetition as far as possible, to make the parts complete each other, and ultimately form a harmonious whole. The alphabetic distribution, or rather subdivision, of matter, is to prevail throughout, as indicated by the title. The precise number of volumes to appear is not stated, but a prospective list, which may

or may not eventually prove to be complete, announces thirty-nine parts, with the names of the authors, and the prices, which vary from four to ten marks, including the binding. The titles are the following: 'Universal History,' 'Ancient History,' 'German History,' 'Philosophy,' 'Education,' 'Theology,' 'Geography,' 'Travels and Discoveries,' 'German Literature,' 'General Literature,' 'Dictionary of Authors,' 'Antiquities' (classical), 'Fine Arts,' 'Art Industries,' 'Dictionary of Artists,' 'Music,' 'The Theatre,' 'Hygiene,' 'Zoölogy,' 'Botany,' 'Mineralogy and Geology,' 'Physics and Meteorology,' 'Astronomy,' 'Applied Chemistry,' 'Chemical Technology,' 'Mechanical Technology,' 'Inventions,' 'Agriculture,' 'Horticulture,' etc.; 'Veterinary Science,' 'Hunting,' 'Political Dictionary,' 'Criminal Law,' 'Military Dictionary,' 'The Law of Commerce and Industry,' 'Political Economy,' 'Commercial Geography,' 'Commercial Science,' and 'Stocks,' etc. Of these, about one-fourth have already made their appearance, in very rapid succession, including the 'Dictionary of Universal History,' by Dr. K. Hermann; the 'Dictionary of German History,' by Dr. H. Brosien; the 'Dictionary of Artists,' by Dr. H. A. Müller; and the 'Dictionary of Commercial Geography,' by Dr. K. E. Jung.

The volume on universal history is naturally the bulkiest. It is mainly biographical, marked by brevity throughout, most satisfactory in articles referring to modern events, and exceedingly meagre—in fact, very defective—in topics of ancient history, to which a separate volume is devoted. Thus exactly as little space is allotted to the whole history of ancient Egypt (outside of biographies) as to the "Egyptian Expedition of the French in 1798–1801"; "Babylonia" and "Assyria" together do not fill a short page; Chaldea is not noticed even in a reference; and all the history of the Jews, from the destruction of Jerusalem by Nebuchadnezzar to its destruction by Titus, occupies a few lines. The subsequent history of the same people, though in the main no longer ancient, is covered by this sentence: "Since then they have lived in dispersion among other nations." Roman history, disjointedly sketched in numerous biographies, occasionally shrinks under "Roman Empire" into a mere mention of names and dates, thus: "Titus (79–81), Domitian (81–96), Nerva (96–98), Trajan (98–117), Hadrian (117–138), Antoninus (138–161), Marcus Aurelius (161–180)." There is no article on "Jesus," "Christ," or "Christianity," the reader being tacitly referred to the volume on 'Theology.' Under "Moses" no explanation is given for the choice of a date widely differing from the usual Biblical one; the same is the case under "David" and "Ahab." The author has, we know, critical reasons for his chronology, but he has no room even to allude to them. Such defects are inherent in the fragmentary lexicographical arrangement, which, on the other hand, has the great advantage of facilitating the finding of topics and of concisely grouping points belonging to the same topic. Very poor as a manual of history, the book before us is an excellent addition to a good history, in the absence of a large general cyclopædia. The choice of titles, in a work which is too small to aim at completeness, must naturally be, or appear, arbitrary; and not American readers alone will be surprised to find that, while the military engagements of the Eurymedon, Jankau, Kaiserslautern, and Castelfidardo are duly noticed under their respective heads, Yorktown, Vicksburg, and Gettysburg are not. These names are of course given in the article "United States," and so are Antietam and Fredericksburg, but Chancellorsville and Atlanta occur nowhere, not even under "Lee" and "Sherman." What is much worse, though quite exceptionally bad, is that Lee, the date of whose surrender, April 9, is correctly given under "United States," is under his own title made to surrender on April 10, and under "Grant" on April 12. Sharp strictures on the administration of General Grant, the diplomacy of Ignatieff, the character of Isabella II., etc., show that the author does not refrain from pronouncing judgment in a very decided tone.

Dr. Brosien's 'Lexikon der Deutschen Geschichte' has, of course, much more space for treating single topics, and is less liable to fall into error from imperfect familiarity with the subjects. Yet even here we notice that, while "the battle" of Bronnzell, Nov. 8, 1850, is given, the only victim of which was that famous horse "der Schimmel von Bronnzell," the terrific battle with the Mongols, fought at Wahlstatt, near Liegnitz, in April, 1241, is not only ignored under "Liegnitz," but totally forgotten. Of ancient German tribes we find the Ubii, Bructeri, and Tenchteri, but not the more important Chauci. Under "Posen," the insurrection of 1848 is forgotten; under "Laon," the occupation by the Germans in 1870, with the destructive explosion which accompanied it. Similar omissions are frequent. The biography includes the historians of Germany, old and new—Jeroschin and Jaffé facing each other—but excludes purely literary characters (not excepting Schiller and Goethe), whom the reader will have to find in the 'Lexikon der Deutschen Literatur.' Alexander von Humboldt must be sought there, while his brother Wilhelm, as a politician, has a place here. Rare terms of German historical interest are explained, down to *Leudes* and *Kipper und Wipper;* yet we miss *Secessionisten*, a designation of much interest in recent German politics. Luther, Zwingli, and the Reformation are not left entirely to the 'Lexikon der Theologie.' Some of the notices, like "Faustrecht" and "Femgerichte," are much too brief. "Varnbüler," compared with "Lasker," is long enough, but it happens to be shorter than the notice of the same politician in the 'Dictionary of Universal History,' where he hardly deserves a place. According to the latter book, he was born in 1809; according to the other, he is a year older. Of Dr. Jung's 'Lexikon der Handelsgeographie,' which is devoted to the commercial and industrial conditions of all civilized and semi-civilized countries, and includes statistics of population, exports, imports, production, revenues, public debt, etc., we can, for want of space, only say that it is very fresh and very comprehensive. Its comprehensiveness may be judged from any number of successive titles. Thus, opening a page at random, we find, following each other, notices of Simonstown (Cape Colony), Singapore, Sistova (Bulgaria), Siut (Egypt), Skelleftea (Sweden), Scutari, Smyrna, Söderhamn (Sweden), Solingen (Prussia), Sonneberg (Saxe-Meiningen), and Sophia. The work is apparently very correct, but examination of accuracy in this field is not easy. We consider this volume the best of the three before us, but all will be found fully worth their price. The external appearance of the collection is very pleasing, and its typographical correctness is of a high order.

Kate Comerford; or, Sketches of Garrison Life. By Teresa A. Thornet. Philadelphia: J. B. Lippincott & Co. 1881.

Frühlingsboten. Von E. Werner. [Deutsche Library.] New York: George Munro.

'John Barlow's Ward' makes a false start, or perhaps a double start. The true hero—*i. e.*, the man who marries the heroine—does not appear until the middle of the book. We confess to a feeling of disappointment that a story which begins with a very pleasant reminder of Mrs. Gaskell's 'North and South' should turn out a tale of married infelicity, the scholar buried in his books, and seeing his sweet young wife only through the unkind eyes of his sister. The reader will reasonably doubt whether he suffered sufficiently before winning his final reward of happiness.

'The Vicar's People' are the inhabitants of a Cornish village, half mining, half fishing. Thither comes a young engineer, bright, steady, and sturdy. How he won friends and enemies, suffered doubts of the most cruel kind, but finally triumphed over everything—even the powers of nature itself—makes a very interesting story. The novelty in its setting is in the great ruins of the deserted mines down which fortune after fortune has gone. "Wheal Carnac" seems as real a monster, devouring men, bodies and souls, as any dragon of mediæval legend. Why should a series which can command such healthy, right-minded stories as these, have recourse to the extreme sensationalism of French novels not even of the first class?

There has been so recent occasion to review Mr. Blackmore's work at length in these columns that it need only be said of 'Christowell' that it is worthy to come after some of his best works. There is no danger that the reader will drop the book, or that he will skip the pages. Perhaps the author has nowhere brought together stronger contrasts—the quiet pleasure of the father and daughter among their vines in the garden, the wild life on the moor, the placid routine of village life, and the awful visitation of the lightning and the flame. Yet once under the spell of the story-teller, we find it all true and real. There is a striking instance of that insight which detects the same fact or the same feeling under very different aspects. Mr. Wrey is "a very nice old gentleman, a squire in a poor way now, but rich with long descent of education." On the other hand, when John Sage, of Christowell, who was famous for shedding his own light on things, was told that a nobleman (too well known in that neighborhood) was of very long descent, he shook his head, and said that he could understand it now. "'He hath not dooed it of a zudden, then,' said John; 'he hath a' been coomin' down all that wai.'" There never was a better portrait of a dog than the picture of the setter "Nous" in the "anguish" of Sunday, with his master "too full of eloquence to talk to a dog." It is needless to add that he is the pet of a clergyman.

'The Braes of Yarrow' is a stormy story of the troublous times in Scotland after the battle of Flodden. "A sword in every line" is no exaggeration. There are incidents enough for a whole new set of Waverley novels, but perforce, for want of room, no study of character. It is quite above a dime novel, but he must have a strong head who can read it without being dazed and deafened.

'A Christmas Day at Sea' is made up from the stories told by a party of naval officers after

dinner at sea on Christmas day. The book is intended to be the first of a series of Christmas annuals, written by officers of the army and navy, and to be published by the proprietors of the *United Service Magazine*. The stories are entertaining, and there has been nothing for years so suggestive of that delightful book of the last generation, Basil Hall's 'Fragments of Voyages and Travels.'

'Kate Comerford' is a story of the life of officers' families at remote army posts in Texas. The characters are the Colonel and his pretty daughter, the captains and their wives and children, and the young bachelor lieutenants. In the monotonous existence of a dozen of people, cut off from civilization and society—which is the unfortunate fate of officers and their families on the frontier—it would be hard indeed to find the materials for a novel. The authoress disarms criticism of the poverty of incident in her story by expressly stating that she is not writing a novel. The description of garrison life is quite faithful, and a slim thread of romance and feminine intrigue runs through the successive chapters.

A German novel in which the interest never flags, whose characters are natural and well drawn, and which is free alike from sentimentality and literary pretence, is a phenomenon rare enough to be worth noting. All these virtues, and more, are offered to the reader of "E. Werner's" 'Frühlingsboten,' which may be read, by persons whose eyes are above suspicion, in the "Deutsche Library" published by George Munro in this city. The plot is the old one of a contested inheritance, complicated by the fact that the possessor and the claimant have been brought up as brothers, and are very fond of each other, and by the additional circumstance that both love the same woman. The heroes are as opposite in appearance and character as they are in fortune: the one handsome, light-hearted, careless, and affectionate; the other distinguished-looking, industrious, firm-willed, imposing. How he discovered the flaw in his cousin's title to wealth and station need not be detailed here. The enforcement of his claim would involve the forfeiture not merely on the young Count's part of his position, but the sacrifice, also, not of personal but of family honor. The rightful heir, therefore, resolves upon silence. But of course the young Count discovers the secret, and, as the only way out of the difficulty, allows himself to be run away with and hurled over a precipice. The tale thus becomes a tragedy, but, given the circumstances, both the end and the steps which lead to it are natural. The dénouement is not suspected till one comes upon it in the last chapter, and one rises from the book without feeling any of the disgust often produced by the blue lights and other melodramatic devices by which the real pathos of such a story is too often obscured.

Indigestion, Biliousness, and Gout in its Protean Aspects. Part I. Indigestion and Biliousness. By J. Milner Fothergill, M.D. New York: Wm. Wood & Co. 1881. 8vo, pp. 320.

In this volume Dr. Fothergill makes a reasonably successful attempt to place before the medical profession the results of recent investigations in physiological chemistry as far as they have a bearing upon the treatment of diseases of the digestive organs and of the liver. In spite of the obscurity which still involves the physiology of these organs, the work cannot fail to exert a very beneficial effect in checking the tendency of physicians to fall into routine practice in the treatment of the disorders in question. Dr. Fothergill also calls attention to the injurious effects of mental worry and emotion upon various nutritive processes. His views upon this subject are best given in his own words:

"It is the old Anglo-Saxon plan to find out what can be done by overdoing, and so learning the extreme limit. A butcher's boy was spokesman for his race, when summoned before the magistrates at Teddington for furious driving; the constable stated that the mare was going thirteen miles an hour, when the boy triumphantly refuted him by saying: 'She can't do it; she has not got it in her.' He evidently knew to a nicety what she could do, by noting what she could not do. So it is in the present pace of life. It is faster! faster! Our steeple-chasers gallop faster than their old-fashioned half-bred predecessors; our fox-hounds run faster than of yore, till our hunters have to be nearly thoroughbred to keep pace with them. It is the pace at which we live that overtaxes our organic processes, and the digestive processes breaking down under the strain."

This well-marked tendency of modern life, especially as manifested in large cities, leads the writer to take a very gloomy view of the future of the Anglo-Saxon race, particularly in America. Here, again, the author's language is so forcible that only a quotation will do it justice:

"The red man's grave is covered with the white man's buildings, solid, massive, immense; but his first-born die in them. . . . The waning Indian had to vacate his possessions for the Yengees, that they might increase and multiply on the face of the earth. And now what is the result? The Anglo-Saxon is a dying race, perishing beside the tomb of the red man, whom he slew. It is 'Naboth's vineyard' in the nineteenth century! . . . It seems that the threatened extinction of the old population, so immediate for Massachusetts, is being inaugurated in Ohio. The nutrition of the American-born woman is often unequal to feeding a second organism, or, if that second organism has successfully struggled into an independent existence, it is unequal to its maintenance for long. . . . The angel of death is smiting the usurper in turn. If this be so, the American has the sorry consolation of knowing that in his old home, in the cradle of his race, the same phenomenon is to be observed; only not yet to so distinct and terrible an extent. The Anglo-Saxon exterminated the native British. . . . Where the wattled huts of the ancient Briton once stood, amidst sacred groves devoted to druidical rites, now we see the many-storied mill, the long chimney belching forth smoke, the endless rows of cottages inhabited by the toilers who work in the mill. The angel of death is busy still."

The remedy for this evil is to be sought, according to Dr. Fothergill, in a comprehensive united effort to provide means for bringing up the children of city parents in the country.

"The parent may have to consent to separation from the child; children may have to grow up no longer under the parent's eye, except at intermittent periods, but under the skilled supervision of guardians bound to them by no tie of blood. All this may be very repulsive; but unfortunately it is unavoidable! Some such practice, which will enable children to be reared in the country, must be adopted before long."

It will thus be seen that Dr. Fothergill abandons in advance all hope of making large cities healthy abodes for the human race. Such a decision seems, to say the least, premature, for the question is at the present time engaging the attention of some of the best investigators and writers upon medical subjects, and, in view of the results which seem to have been reached in the cities of the ancient world and of the progress made in modern times, there appears to be reason to hope that the intellect of man will yet suffice to determine the conditions under which he may follow his gregarious and social instincts without running the risk of self-extermination.

As to Dr. Fothergill's gloomy vaticinations in regard to the future of the Anglo-Saxon race in this country, it is impossible, as no authorities are quoted, to determine the basis upon which his predictions rest. As an antidote, however, to the feeling of despondency which their perusal is likely to create in the minds of American readers, it is well to bear in mind that several important statistical investigations have led to results which give no support to the theory of the gradual deterioration of the Anglo-Saxon race in America. Thus, Dr. Edward Jarvis finds (*Atlantic Monthly*, April, 1872) that "the natural increase is at a lower rate in the foreign than in the American families"; Dr. T. B. Curtis, in his report on the sanitary condition of Boston (report of a medical commission, 1875) shows that throughout the United States "our foreign population, though undoubtedly more prolific than the natives, still more surpasses the latter in mortality"; while actual measurements of the Boston school children (Eighth Report Massachusetts State Board of Health, 1877, p. 275) have proved that the physique of boys in certain selected schools is by no means inferior to that of the pupils in schools of corresponding character in England. Here also deserves to be mentioned the mortuary experience of the Mutual Life Insurance Company of this city. The statistics published by the company show that the experience of this office is that its rates of mortality, at nearly every age, are considerably lower than those in the English life-tables; whereas in most English offices the experienced mortality exceeds the life-table rates. In inquiring into the causes which could bring about this result, the London *Lancet* of February 23, 1878, rejects the hypothesis of a more careful selection of risks in the American office, and concludes that "the low mortality experience of the New York Mutual Life Insurance Company appears to indicate a generally lower rate of mortality among the American than among the English population."

In view of all these facts, one is led to suspect that Dr. Fothergill may, in his gloomy anticipations, have afforded an example of a prominent symptom of the disease which forms the subject of his treatise.

Thomas Corwin. A Sketch. By A. P. Russell. Cincinnati: Robert Clarke & Co. 1881.

Corwin's evil star still overhangs his reputation. He feared he should be remembered, if at all, by posterity only as a jester, and no biographer has yet succeeded in establishing his fame on a more solid foundation. Mr. Russell's sketch, rightly so called, of "the wagon-boy," though it contains six times as much matter as the portion of a chapter devoted to Corwin in Mansfield's 'Personal Memories,' gives hardly as many particulars of his life, and leaves a less distinct and less favorable impression of his powers. Sentences like these, too, suggest doubts as to Mr. Russell's capacity for the analysis of character: "He seemed a compound of incompatibles to his nearest friends who saw him often, and made his friend sometimes walk round him before approaching him" (p. 10). "His fancy, when not on the wing, played upon everything like a flame, or penetrated it like a subtile force" (p. 12). "Every day that he grew in favor he increased in intellectual stature, until it seemed that the possibilities of his genius were without limit."

Corwin's gifts, such as they were, were not stintedly rewarded by his constituents and the country. He sat for a long time in the Ohio Legislature; he became Governor of the State, was frequently returned to the lower house in Congress, was elected Senator, was made Secretary of the Treasury by Fillmore, and Minister to Mexico by Lincoln. He thought himself equal to the Presidency, and his failure to be even a defeated candidate, like that other Senatorial jester, John P. Hale, was a source of melancholy to him. Southern-born and Western-bred, he opposed the Mexican war, and this, the only considerable and most honorable of his public acts, made him "unavailable" even with his own party, which chose the hero of the war to succeed the instiga-

tor of it. He was already a disappointed man when the decline of the Whig party set in, and he could not enter helpfully or prominently into the new party that rose upon its ruins. He was a natural delegate to the impotent Peace Congress, in which men whom the times had left behind them conferred together in the vain hope to block and to reverse the inexorable wheel of progress. His absence from the country prevented him from being identified with the history of the civil war which could not be staved off, and the present generation needs to be informed at all points as to his public employment, his abilities, and the judgment of his contemporaries upon him. This information, as we have implied, Mr. Russell does not give; or if he has exhausted his resources, it is clear that he vastly overestimates the greatness of Corwin. He relates a number of anecdotes illustrating Corwin's goodness of heart, his gifts of repartee and facial mimicry, and his sympathetic mastery of his audiences, but not a line upon which to base an exalted opinion of his mental equipment, or to show in what he differed greatly (as he did) from the "Bob" Ingersolls of our day.

The truth is that this sketch is chiefly useful in proving once more the American fondness for "oratory," especially stump oratory, and especially at the West; and the transitoriness of reputations built upon this sort of eloquence. Henry Clay, indeed, exerted the greatest influence upon the course of events by repeatedly postponing the gathering and inevitable crisis, and he may still be placed at the head of American orators by those who defer to tradition; but who now turns to his speeches for instruction in any principle of government or public policy, or can understand the idolatry of which he was so long the object? Corwin cannot be ranked with Clay as a speaker or an opportunist statesman, though morally beyond all comparison his superior. He deserves to be remembered with respect rather than with reverence and the sort of awe which Mr. Russell manifests toward him. The frontispiece, an excellent steel engraving of Corwin, is worth the price of the volume.

A Biography of David Cox, with Remarks on his Works and Genius. By William Hall. Edited, with additions, by John Thackray Bunce. New York: Cassell, Petter, Galpin & Co. 1881. 8vo, pp. 268–xv.

David Cox was a genuine artist, and hence his career, although quite without the striking incidents that usually mark the lives of great men, continues to have a considerable interest. The main outlines of his life were given in 1875 by Mr. Solly in his 'Memoirs of David Cox,' and have been repeated in many books; and Cox's place among English landscape-painters is well established in popular and professional respect. Still, there is room for Mr. Hall's memoir, not so much for its new matter as for the writer's peculiar interest in his subject. Mr. Hall, though nearly thirty years younger, was one of Cox's most intimate companions during the last twelve years of his life. He was a meritorious worker in the same branch of painting as his distinguished friend, and his book shows him to be a master of simple, straightforward narrative and description. He was therefore well fitted to tell the homely story of Cox's life with accuracy, feeling, and good taste, and it was most natural that he should have been chosen to prepare the biographical sketch for the catalogue of the great exhibition of Cox's works at Liverpool in 1875, and that he should have expanded his sketch into the present memoir.

In view of his slender material, it is surprising how charming Mr. Hall has made his account of the painter's early life as apprentice and scene-painter at Birmingham (1783–1804); of his uncertain and toilsome struggle as an humble teacher at London and Hereford (1804–1841); of his later life in comparative comfort at Harborne (1841–1859); of his annual trips for nearly half a century to the now famous "Royal Oak" at Bettws-y-coed; of his habits and peculiarities; and of his sterling moral qualities, as well as of his technical methods and his successive "styles," and of his rank among painters. Trifling incidents are of course dwelt upon, somewhat to the exclusion of more important matter. The most interesting part of the book is that given to descriptions of Bettws-y-coed, and of Cox's almost autocratic life there. The story of his undertaking painting in oils is also remarkable—his sudden determination, his meagre course of study with William Müller, and his curious timidity about his work in this department.

Mr. Hall naturally makes much of the change in the popular estimate of Cox's abilities, which occurred about a dozen years after his death, and of the consequent rise in the money-value of his works. The oil painting, "The Outskirts of the Wood," for example, was originally sold for £40, but in "the memorable year 1872" it commanded nearly sixty times as much. We wish that Mr. Hall had discussed the merits of more of Cox's pictures, though perhaps what Mr. Solly had done deterred him from the attempt. Our author is not so happy in describing Cox the mature artist as he is Cox the student and the man. What he says is usually true enough, but it lacks in crisp characterization. He emphasizes very justly Cox's broad, suggestive manner, and his truthful insight into Nature, but compares him too eulogistically with his contemporary Turner, with whom "he will almost rank in the expression of the qualities of light, space, and air," whom "he surpassed in rendering the every-day aspects of Nature," and than whom he was "more natural in color, treatment, and effect." Beside this we would set the pithy remark of a recent critic, that if Turner and Cox are to be compared, the one must be likened to "a full orchestral band," and the other to a performer "given to solos and soliloquies sometimes subdued to a monotone."

The book is enriched with a fine artotype of Cox, who resembled Sir Walter Scott in person as he did somewhat in character, though not in mind. The style of the book would be without blemish but for an occasional feminine effusiveness—as in the triple repetition on a single page of the epithet "dear old"—and the introduction of three prosy descriptions in verse by the author. The chapter appended by the editor gives some interesting additional matter, with several needless repetitions of previous statements. Here and there in the body of the book we detect an unnecessary anxiety to free Cox from the charge of blotchiness and haste in his painting; and we recall a remark of Ruskin's: "The foliage of David Cox . . . is altogether exquisite in color and in its impressions of coolness, shade, and mass; of its drawing I cannot say anything *but that I should be sorry to see it better.*"

Ornamental Trees for Massachusetts Plantations. Boston.

This is a paper read last winter before the Massachusetts State Board of Agriculture, by Mr. John Robinson, of the Arnold Arboretum, and now reprinted from the Twenty-eighth Annual Report of the Secretary of that body. Mr. Robinson's remarks, although specially intended to treat of Massachusetts plantations, will equally apply to all the Northern and Middle States. He very properly takes the ground that, except in exceptional cases, the species native to any locality are better adapted to reach maturity and produce satisfactory results in that locality than any exotic species can be; and that the planter makes a serious and often fatal mistake who neglects, in favor of little-known foreign species, the trees growing within sight of his own home; thus sacrificing the advantages of adaptability, or constitutional fitness to thrive in that particular locality or climate, which the plant has acquired through the inexorable test of natural selection to which it has been subjected. Happily, the New England planter has a long list of native trees to select from, and if among his pines, spruces, oaks, ashes, maples, or hickories he cannot find sufficient variety, he may safely choose material for his plantations from the whole Appalachian sylva, the most varied, beautiful, and, economically, the most valuable collection of trees existing in the north temperate zone.

But the enthusiastic planter will hardly be satisfied with native or neighboring trees alone. One of the never-failing delights in arboriculture consists in watching the development of little-known or strange forms of tree life. Half the pleasure in planting comes from the desire to increase by experiment the knowledge of trees; and the laudable desire to introduce new or valuable plants into cultivation has always been one of the strongest and most attractive stimulants to horticultural enterprise. There are, however, certain limits within which such experiments can be made with some prospect of success, and a good part of Mr. Robinson's paper is devoted to discussing what these limits should be. He finds that, by actual experiment, all the trees tested from certain regions with climatic conditions not dissimilar to those of New England, thrive in Massachusetts, so that the planter to be in a position safely to select exotic species must have some knowledge of the climate and physical geography of the region to which he looks to enrich his plantations, unless, indeed, he is prepared for serious disappointment and loss of time. The climate of the Pacific coast is very different from that of eastern America, and the trees of the Pacific forest do not thrive when transferred to this side of the continent; although the few Pacific species which also reach the Rocky Mountain region proper, where the climate approaches nearer to that of the Atlantic than the Pacific coast, find themselves perfectly at home on the Atlantic sea-board. European trees do not, it is found, succeed here as a general rule, and should not, save in a few exceptional cases, be selected in preference to their American congeners.

It is, however, to eastern Asia that we must look for the principal additions to our ornamental plantations. The resemblance between the floras of eastern America and eastern Asia is very striking. These two floras, widely separated geographically, contain many identical forms of plant life, and approach each other remarkably in the number and resemblance of their trees. This would indicate that these two floras have been subjected to similar climatic conditions, and that trees transferred from northern China and Japan to New England would find themselves surrounded by favorable conditions for growth. Experiment has already proved this, and north-eastern Asia has actually contributed more trees than all the rest of the world together, with the exception of our own Appalachian region, to add variety to our plantations; and it is now to the partially explored northern islands of Japan, and to the almost botanically unknown mountainous regions of northern China, that we may look with the greatest hope of success for additions to our gardens and plantations. The Caucasus and Turkistan—rather a new field—have given us several useful species, and others may well be expected, especially from Turkistan

and possibly Tibet. Mr. Robinson treats primarily of ornamental trees, and is justified in urging the importance of securing as great variety as possible in ornamental plantations; but it is well to bear in mind, now that the necessity of replanting and protecting our disappearing forests is receiving some attention, that in all planting operations undertaken with the view of producing valuable timber it is best to plant native trees, which may be depended on to produce certain results at the end of a given number of years.

The description of the Harvard Arboretum with which Mr. Robinson is connected will be found interesting to all whose business or pleasure associates them in any way with the study or cultivation of trees; and his vigorous protest against the absurd fashion—natural outgrowth of the bedding-out mania in flower-gardening—which now prevails, of perpetuating a host of abnormal and variegated leaf-forms of trees and shrubs, deserves the thanks of all lovers of the natural in gardening. An appendix, containing lists of little-known trees which might with advantage be more generally cultivated in Massachusetts, concludes this interesting and instructive paper.

The Twit-Twats. A Christmas allegorical story of birds connected with the introduction of sparrows into the New World. By Rev. Aug. J. Théobaud, S. J. New York: Catholic Publication Society Co. 4to, pp. 100. Illustrated. 1881.

THE wisdom of *ne sutor* is never more forcibly illustrated than when a really great cobbler goes *ultra crepidam*, as Father Théobaud has certainly done. We recall a similar escapade of which Mr. John Ruskin was guilty a few years ago, as the *Nation* pointed out at the time, that eminent art-critic having drawn upon birds to illustrate certain principles of art, with such success that if the merit of his treatise did not lie "in the application," it could not be found elsewhere. Few writers, however great in their own grooves, can point a moral successfully, or accomplish any similar purpose, with materials which come unhandy to them, however available in other respects; and Father Théobaud—an eminent divine, and an author of great weight in Catholic literature, who here utilizes sparrows in the interests of religion, just as Ruskin applied swallows to the ends of art—is not among them. His avowed purpose of inculcating good Catholic doctrine is distinctively within his clerical province, and therefore perfectly appropriate; but he uses unaccustomed tools so awkwardly that sparrows seem unlikely to become a means of grace at his hands.

We find no fault with the learned author's description of these little feathered *gamins*, long become ubiquitous and irrepressible in our streets, his observations of their habits and manners being such as any sinner could make for himself. But the "allegory" being ostensibly based upon facts of natural history, and in that respect open to criticism from a non-ecclesiastical standpoint, we may say that while the way sparrows look and behave is reflected faithfully enough, the author gives no sign of possessing a single idea to be called ornithological by any stretch of courtesy. Every fact of any scientific significance in connection with the introduction and naturalization of *Passer domesticus* in America is ignored. Viewed simply as a Christmas story with a moral, the book is too didactic, too doctrinal, and altogether too thinly disguised a sermon to compete successfully with the literature of the season, and so accomplish its own end. In fine, it is a church tract, of remarkably cumbrous proportions and unskilful workmanship to come from hands so eminent.

We may seem to take the author too seriously; but it is impossible to overrate the seriousness with which he captures sparrows for politico-religious purposes, or the earnestness with which he uses them as eligible defenders of the faith. For instance, a chapter headed "A description of some strange natural habits of the Twit-Twats considered as types of human beings," promises well, and might be made both entertaining and instructive; but it turns out to be simply the antagonism of the Know-Nothings to Catholic immigration, as exemplified by the quarrelling between native birds and this imported species. Aside from any question of good taste or appropriateness, we protest against the irrationality and futility of perverting natural history, under whatever disguise, to such an extent as is witnessed by the following extract, which may be theology, but which seems to us only an example of a way in which the beauty and force of true allegory may be lost in brisk business allegation:

"They [sparrows] are certainly creatures of God: their Maker has imposed upon them laws which they sacredly respect and obey. Since they have 'no sins to deplore,' they are in one sense more acceptable to God than those monstrous sinners who continue to prevaricate as long as they live, and leap into eternity without a sigh of repentance or a single cry for mercy. But there is much more than this. Read the Psalms of holy David. . . . The sparrows themselves, consequently, are invited by the Holy Ghost himself—the true inspirer of David and Daniel—'to bless the Lord, to praise and exalt him above all forever.' Will anybody accuse me after this of gross anthropomorphism—nay, of idolatry, and perhaps fetichism—if I tell my readers that in the great winter festival I am going to describe, the Twit-Twats actually 'blessed the Lord, and praised and exalted him above all forever'? They were therefore, to a certain extent, good theologians."

If we are mistaken after all—if Father Théobaud only amused himself in writing a Christmas allegory—still we cannot forget what kind of reading "easy writing" was said by an unregenerate wit to make.

Sir Richard Whittington, Lord Mayor of London. By Walter Besant and James Rice. [The New Plutarch Series.] New York: G. P. Putnam's Sons. 1881. 12mo, pp. 222.

THE book before us was projected by Mr. Rice; but when illness prevented him from carrying out his plans, he transferred his materials to his "friend and collaborateur," who has made very good use of them. No doubt, to many, a biography of the hero of the cat and the Bow-bells rhyme of their infancy will seem as strange as if it were Fortunatus or Valentine. In this point of view, the materials must be pronounced abundant out of which a volume of over 200 pages has grown. For an historical character, however, they are really rather scanty, and the requisite number of pages has been made out only by an enormous amount of padding. The padding, to be sure, is excellent and instructive, so that the volume presents a very good picture of life in London in the fourteenth century; but we should say that not more than half of it is really devoted to the life of Whittington. The introduction treats of the charters of London; only three of the four appendices are concerned with Whittington; and of the seven chapters, two—"The City of London" and "The Companies and Trades of London"—have absolutely nothing to do with him directly; while only two—"Birth and Boyhood" and "The Story of the Cat"—are exclusively devoted to him. The chapter on "The 'Prentice-Boy" takes Dick Whittington as its text; but as nothing whatever is known of his 'prentice life, it is really as general in its character as any. So with his "Public Life" and "Private Life": these chapters are mostly made up of general history, with a few incidents about the hero, and a good many surmises as to what he did—or did not do.

The Rev. Samuel Lysons, we are told, had already "rescued Whittington from the realm of legend," and had established the fact that he was born at Pauntley, in Gloucestershire, the younger son of a gentleman's family of wealth and good descent. The story of the "poor 'prentice-boy" is therefore exploded, and one would suppose the story of the cat would go with it. Mr. Lysons, however, has proved the great antiquity of the story, and it seems evident, from various circumstances, that the great London merchant did have some special association with a cat. Mr. Besant is inclined to believe that—"the sentimental rubbish of the legend" being set aside—the story is essentially true as it stands. "If a sailor said in the boy's hearing that a cat could be exchanged among the Moors for a large profit, he would be quick enough to go and buy that cat, and entrust his friend to carry it for him and bring him back honestly what it might fetch—good mousing guaranteed" (p. 139). This is probably as far in the direction of proof as it will ever be possible to go.

Der Feldzug in Nord-Virginien im August, 1862. Von F. Mangold, Major im Westfälischen Fuss-Artillerie-Regiment, No. 7. Hannover: Helwing'sche Verlagsbuchhandlung; New York: B. Westermann & Co.

MAJOR MANGOLD'S work is an account of Pope's campaign, written by a German artillery officer for the Germans. Evidently the writer has studied all that has been written on both sides about this wonderful campaign, and carefully digested it before writing his history. The result is a book of some three hundred pages, well arranged, well printed, and furnished with maps. Although treating of controverted matters largely, our author writes as an historian, not as an advocate. To introduce his subject, the campaign of the Peninsula is first rapidly considered; and the political situation at Washington, with McClellan's relation to the powers there—Halleck and Stanton newly come to preferment—is made clear. The story of the campaign itself follows. Several chapters at the end of his book are devoted to the Fitz-John Porter case—the court-martial and the Board of Revision. It was the completeness of the testimony brought out in the reports of these trials, which threw so much more light upon this campaign than on any other of our war, that induced Major Mangold to take this up out of regular order; for he intends writing a complete history of our civil war, and has already written one book before this.

Of the campaign proper the account is very full and accurate, each step being viewed from all standpoints. The reader is made acquainted with each general's alternatives, and shown what might have been done and what was done. He is led with each army in its moves naturally, and without confusing breaks. Lee is shown watchful, eager, and decided, seeing through Pope's want of plan and taking prompt advantage of his indecision; relying upon his adversary's irresolution and want of generalship to make a most hazardous move—risking all to gain all. Pope, on the other side, appears pushed and pulled hither and thither by Lee and Halleck; issuing orders only to countermand them; groping blindly for inspiration which never came; trusting some subordinates too much, others too little; alternately elated and depressed without cause; frittering away the strength of his troops in useless efforts; and

destroying what little confidence his officers ever placed in him. Never really comprehending Lee's strategy, he lost the one great opportunity offered; and after the battle had begun which was not only to make or mar his reputation, but perhaps to decide his country's fate, we find him with troops scattered all over the country, not ready to meet the massed forces of his able antagonist, and yet unwilling to accept the inevitable and withdraw to a better position. The consequence was precisely what it should have been. Our writer compares this inability to recognize events in their true meaning to color-blindness. Behind all this he depicts Halleck overbearing, envious, self-reliant; finally dumfounded at the misfortunes rushing to overwhelm him and his plans, apparently assuming the responsibility only to shirk the burden when it became too heavy; McClellan disappointed, called reluctantly and with difficulty toward the scene, deprived of his troops, not anxious to help Pope, and even suggesting to some minds that he would rejoice in his destruction; in the background, Washington and the North wrought almost to distraction by forebodings which later news justified too well.

All this in great detail is given in well-arranged chapters, and in clear, soldierly style. In the field Major Mangold marches with all the troops, but more particularly with Porter's corps, giving his orders and many of his despatches, leading up to the concluding chapters, in which the court-martial and its consequences are considered. He accepts, as all must do to-day, the report of the Board of Revision as final, at the same time commenting on the spirit of insubordination shown in the army. Throughout his book are evidences of the use Major Mangold has made of the writings of others on the same subject—notably of General Gordon's, following his text in places pretty closely. The maps are fair—the smaller ones the least so. One cannot help asking why it is thought necessary to make a war map so large that the folding and unfolding render it a nuisance rather than a help; and, again, why so much engraving to represent hills and valleys is put in. Charitably, in some instances, it covers a multitude of sins. It certainly makes it almost impossible to read the lettering: many a map is rather "a nocturne in black and white" than a guide. On the whole, Major Mangold's book is as good a history of the campaign as we have, and the Germans are to be congratulated on the prospect of a history of our civil war from the same pen.

Some Topics in English Grammar. For the Pupil, the Teacher, and the General Reader. Edited by Arthur Hinds, lately Teacher of Grammar in the Westfield (Mass.) State Normal School. New York. 1881. 12mo, pp. 141.

FROM the preface of the present work it appears that the substance of the system of grammar which it teaches is due to Mr. J. G. Scott, of whom Mr. Hinds was formerly a pupil. Hence Mr. Hinds, with a modesty somewhat rare, calls himself the editor, although it is also apparent that he might, with as much propriety as is usually the case, call himself the author. The book is evidently the product of much patient and careful thought, and we should advise teachers to read it for what it suggests rather than for what it directly inculcates. Mr. Hinds invites criticism of his system, but any general discussion of it would altogether exceed our limits. We shall notice only two points. The first is a matter of form. The book is divided into two parts of equal extent. The first part, entitled "Topics," is intended to embrace the essentials of English grammar. The pupil is supposed to master it thoroughly, and make it a part of the furniture of his mind. The second part is entitled "Helps," and contains such additional remarks, illustrations, etc., as the editor regards necessary to the complete comprehension of the first part. It will at once be seen that the two parts correspond very closely to what is generally presented in text-books in the form of "coarse print" and "fine print." The division into two distinct parts in different places in the volume does not seem a happy one. In reading the first part we are continually obliged, or at least tempted, to turn to the second part for further illustration and explanation of anything striking or peculiar, and this continual turning back and forth breaks the continuity of thought, distracts the attention, is always inconvenient and sometimes irritating. The departures from the ordinary grammatical nomenclature are very numerous, and many common grammatical terms are used in a sense wholly inconsistent with ordinary usage. It must be understood, however, that this is done intentionally, not from want of knowledge. The result is, however, that a person whose only knowledge of grammar had been obtained from this book would be exposed, in conversing upon the subject, to continued misapprehension on the part of those unacquainted with it, and should he attempt to push his studies any further, or to learn any other language, he would be obliged to reject a large portion of what he had laboriously acquired.

Text Book to Kant. By James Hutchison Stirling, LL.D. New York: G. P. Putnam's Sons. 1882. Pp. xxviii.-548.

THIS last addition to the new Kantian literature of England, considerable as it is in bulk, requires but brief notice. Adding little to the critical understanding of Kant, it may still, through its positive style and frequent felicity of phrase, be of good service in stimulating the interest of younger students. Dr. Stirling's peculiar views of Kant have been set forth several times during the last three years, in papers published in the *Princeton Review* and *St. Louis Journal of Speculative Philosophy*. The virtues and vices of his Carlylese English have long been familiar to the reading public through his valuable translation of 'Schwegler's Handbook,' and his fragmentary notes of Hegelian study entitled 'The Secret of Hegel.' The most important portion of the present volume is the translation of nearly one-half of the 'Critique of Pure Reason,' including the whole of the Introduction and "Æsthetik," and all of the "Analytik" except the last chapter. The version is as close as that of Meiklejohn, but it is executed in general with decidedly more intelligence and skill. Opinions will differ as to the wisdom of the rendering of technical terms—*Perception* for *Anschauung*, *the Complex* for *das Mannigfaltige*. But, after all, where no English word exists for a German term of constant occurrence, if a translator offer something not positively misleading, and adheres to it with reasonable strictness, he has done as much as can fairly be required of him. So much and more Dr. Stirling has done. His work is never mechanical, and often by ingenious turns of phrase he leads the reader securely through the mazes of tangled argument. If the long sentences of the original had been more frequently recast, the result would have been better. What Dr. Stirling regards as extreme instances of license in this direction may be seen on pp. 193 and 204. In a biographical introduction the aspects of Kant's whimsical, plain, and dutiful life are vivaciously presented in the form of an imaginary picture of a single day's employments and thoughts.

Kant came from Locke through the avenue of Hume, and went toward Hegel—*i. e.*, he was leaving that view of knowledge which supposes an existent organized world distinct from receptive thought, and was moving toward the recognition of an active function in thought creative of the very world known. How far he had advanced along this line is not easily made out. His utterances have the inconsistent variety and the value of the words of a pioneer. Objects as empirically given are alluded to in the very pages where an elaborate machinery is undergoing construction with a view to their idealistic production. The commentator, therefore, in search of a system is often puzzled whether to call the empiricism the fundamental doctrine and the idealism an excrescence, or whether it would not be wiser, regarding Kant in the development of history, to treat his empiric modes of thought as rudimentary survivals from a past, and his idealism, with all its imperfections, as that which is most characteristically his own. Dr. Stirling does not hesitate. Kant's categories as well as his sensuous forms of thought can only be applicable to an already completed world—pp. 346 and 427. The categories are to be used one now and one by and by (pp. 501 and 527), and there must be some extra-mental suggestion to indicate which is fittest for the occasion. A kind of pre-established harmony (p. 528) between the two worlds of thought and of reality is the result.

These interpretations and corrections of Kant are stated in 200 pp. of commentary. To prove that they are no novel opinions adopted in reference to the exigencies of recent combat, an appendix is added, with extensive extracts from Dr. Stirling's old note-books. These amply demonstrate that the discussions of the last quarter of a century have produced little alteration in their author's understanding of Kant. An admirable index completes the work, unless the 28 pp. of eulogy of Dr. Stirling's other writings, which the publisher has inserted, should be reckoned a part of the volume.

HAVE READY:

Germany.

PRESENT AND PAST.

By S. Baring-Gould, M.A. 8vo, $3.

"*It gives a* précis *of just those very things a student requires to know about a foreign nation, and on which it is most difficult to obtain information in a compact space. We can only advise all readers who sincerely desire to inform themselves concerning Germany to read Mr. Baring-Gould's volume.*" — LONDON ATHENÆUM.

Symonds's Renaissance in Italy.

Part I. *THE AGE OF THE DESPOTS.* 8vo, $3 50.

Part II. *THE REVIVAL OF LEARNING.* 8vo, $3 50.

Both uniform with the volume on THE FINE ARTS (Part III.) previously published.

Dick Netherby.

By L. B. Walford, author of 'Mr. Smith.' 16mo (Leisure-Hour Series), $1.

Kalani of Oahu.

A THRILLING ROMA... HAWAII.

By Dr. C. M. NEWELL, of Bo... 12mo, illustrated, 415 pp., $1 ...

"It is a strange, bewildering story, and in subject and execution is unique in literature. The author's style is luxuriant, and well befits the scenes he describes. His pages abound in glowing description and tropical imagery, and the various characters are painted in strong and effective colors. No one who reads the book will forget it, and it is not too much to say that a more distinct and definite idea of the ancient people of Hawaii, their customs and characteristics, and of the country itself, may be had from its perusal than from any so-called historical narrative yet published."—*Boston Transcript.*

THE

Verbalist:

A Manual devoted to Brief Discussions of the Right and the Wrong Use of Words, and to some other Matters of Interest to those who would Speak and Write with Propriety, including a Treatise on Punctuation. By ALFRED AYRES, author of 'The Orthöepist.'

"It is wisely written, and, like its predecessor, will become an authority."—*Episcopal Register.*

"The author's views are sound, sensible, and concisely and clearly stated."—*Boston Courier.*

"This is the best kind of an English grammar. It teaches the right use of our mother-tongue by giving instances of the wrong use of it, and showing why they are wrong."—*The Churchman.*

"To those who have any taste for such study this little volume will have all the interest of a novel. It is evidently the outgrowth of conscientious and congenial study. It is full of various and entertaining learning. Mr. Ayres is sometimes dogmatic, but he is thoroughly trustworthy."—*Christian Union.*

"Mr. Alfred Ayres, who published, about a year ago, a useful little manual called 'The Orthöepist,' has added to his laurels as an accomplished oralist the crown of correctness in composition by another little manual called 'The Verbalist.'"—*The Mail and Express.*

"One cannot open at random upon a page of this valuable little manual without being struck by its thoughtfulness and excellence in the work it so well undertakes."—*Hartford Daily Times.*

"Every one can learn something from this volume, and most of us a great deal."—*Springfield Republican.*

"It is bright, sensible, accurate, and helpful. Mr. Ayres makes numerous citations to illustrate his points, and his criticisms are keen and searching."—*Boston Journal.*

"We have had successively a spelling and a pronouncing craze, and this little book, we fancy, is destined to work up an equally useful mania on the subject of correct speech. It is astonishing how many gross and absurd errors in speech are in common use. If you don't believe it, get 'The Verbalist.'"—*Buffalo Courier.*

"Mr. Ayres is the author of a little book published about a year ago, whose title is 'The Orthöepist,' and which has had an exceptionally large sale on account of its usefulness and of the good judgment displayed in its decisions of knotty points in pronunciation. His later volume may be looked upon as supplementary to that, since it endeavors to point out the correct use of words and phrases in speaking and writing, and throws out innumerable suggestions that may prove valuable even to those who are the best informed and most correct in their habits of speech."—*Utica Morning Herald.*

"A great deal that is worth knowing, and of which not even all educated people are aware, is to be learned from this well-digested little book."—*Phila. North American.*

"Mr. Ayres's lessons are conveyed in sharp and crisp English, and are an example of good as well as a warning against bad writing and speaking."—*Washington Star.*

"This manual, like the earlier volume, cannot fail to obtain a kindly welcome from all who desire to use the English language correctly."—*Providence Press.*

"Reading this book, one is surprised to see how many bad mistakes are daily made."—*Buffalo Commercial Advertiser.*

ASPASIA.

A ROMANCE

Of Art and Love in Ancient Hellas,

BY

ROBERT HAMERLING.

From the German by MARY J. SAFFORD.

Opinions of the Press in Germany.

"It is one of the great excellences of this romance, this lofty song of the genius of the Greeks, that it is composed with perfect artistic symmetry in the treatment of the different parts, and from the first word to the last is thoroughly harmonious in tone and coloring. Therefore, in 'Aspasia' we are given a book which could only proceed from the union of an artistic nature and a thoughtful mind—a book that does not depict fiery passions in dramatic conflict, but with dignified composure leads the conflicts therein described to the final catastrophe."—*Allgemeine Zeitung, Augsburg.*

The Nation.

NEW YORK, THURSDAY, JANUARY 26, 1882.

The Week.

DURING the week it was officially announced by Commissioner Fink, on behalf of the trunk-line railroads, that the railroad war had been settled by an agreement to advance rates to the figures which obtained before the close of the summer, and to refer the question of differential rates and other matters about which there is a radical difference to commissioners, who are to report what they think each of the companies should do. The report of the commissioners will be simply in the nature of advice, and any one of the companies in interest is at liberty to accept or reject it. This result, while it secures important advantages to the trunk-line roads, such as the advance in rates, which occurred on Monday last, was nevertheless disappointing, and its effect in the stock market was to cause a fall rather than a rise in prices; Wall Street not being disposed to credit the managers of the trunk-line roads with anything except tricky designs where they are not absolutely bound by a written agreement.

The advices from Paris early in the week were to the effect that the wild speculation which had been raging there for so long had at last been forced to begin liquidating. At first this was regarded as chiefly of local significance; but before the week closed, its influence in London was felt, and considerable amounts of gold were drawn from London to Paris. The connections here of Paris houses were also called upon for remittances, and some of these were made direct, while others were made through London. As this demand for short-date remittances on London came in competition with buying bills to transfer the proceeds of recent sales of Reading stock in this market, and also with the demand for short-date bills, to effect settlements of maturing sixty-day drafts which were borrowed by stock brokers here late last year to obtain time money when the money market was stringent, the grand result was that the posted rate for demand bills on London advanced to 4.90 from 4.87, and the actual rate followed, so that at the close of the week gold could be exported if not at a profit at least with little or no loss. This is the first time since the resumption of specie payments in this country that we have been so near to gold exports. The New York banks are relatively strong, having a surplus reserve of about $9,674,375; nevertheless, the danger of gold exports sends a cold chill through the business community.

The latest accounts of the financial disturbances in Paris and Vienna betoken merely a reaction in the wild stock speculation which has been going on in both cities during the past year. It does not appear that general trade has been much affected by it, or that any apprehensions of a commercial crisis are felt. The speculation in Austria has been on a smaller scale than in France, but has nevertheless been sufficient to advance the prices of the principal bank and railway shares within twelve months from eleven to eighty-five florins, the latter being the rise of the Hungarian Credit Bank. The Ferdinand Railway has advanced 75 florins, the Crédit Anstalt 64, the Bank of Deposits 72, the Southern Railway 39. The Hungarian Gold Rentes (6 per cent.), which sold at 111.30 one year ago, advanced to 119.90 at the beginning of the present year. The decline in the prices of securities during the past three months has been general in both Europe and America, but has been much less severe in New York and London than in the principal Continental exchanges. The railroad war in this country has undoubtedly had a beneficial effect in tending to "reduce the swelling" which had begun to show itself in the Stock Exchange last summer.

The House Committee on Banking and Currency having voted by nine to two in favor of extending the charters of the national banks, it is safe to assume that such a measure will be passed by Congress at the present session. The uproar against the banks which has formed so large a part of public declamation during some years, grows faint as the practical question comes to be solved, "What will you do without them?" Banks of some sort must exist. Business cannot go on without them. They are as indispensable as the railway, the telegraph, the newspaper. The question is not whether we shall have banks, but what kind we shall have. In our history as a nation we have tried every kind of bank known to the human race. We have had a Bank of the United States—two of them; we have had every variety of local bank working under State charters, and we have had the present system of national banks. Of all the sorts and conditions of banks we have tried which has given the best satisfaction? Undoubtedly the present system. But if it were otherwise it would still be necessary to continue the system until a new one could be devised to take its place. The forced liquidation of 2,100 banks, with $500,000,000 of capital and double that amount of outstanding loans employed in conducting the exchanges of the country and keeping the wheels of industry busy, would put a stricture on trade which would be felt disastrously in every haunt of traffic, from the beer saloon of Justus Schwab to the counting-room of the millionaire. It is true that not all would go into liquidation at once. The first platoon would be 376 in number—about one-sixth of the whole, with perhaps one hundred and fifty million dollars of loans to be called in, and the proceeds distributed to shareholders and depositors—the remainder falling in from time to time. Such an operation would be a very serious disturbing element to every description of business, and we should not like to stand in the shoes of any member of Congress who might be held responsible to his constituents for bringing it about.

Senator Hill, of Georgia, in the debate on the Funding Bill on Thursday took the extraordinary ground that Mr. Windom, as Secretary of the Treasury, had no more legal or constitutional right to extend the five and six per cent. maturing bonds at a lower rate of interest than he would have had to extend them at a higher rate. Senator Hill's doctrine, regarded from a merely legal point of view, is exposed to the *reductio ad absurdum* in many ways. The deacon who takes up collections at church has no more right, legally or constitutionally, to rob the contribution box than Secretary Windom had to extend the six per cent. bonds at six and a half per cent. But he has the legal and constitutional right to add any sum he pleases to the joint donative of the congregation. Certain Federal officeholders are prohibited by law from levying political assessments on their subordinates, but each one has the right to make as many Christmas presents as he pleases to his assistants and underlings. Railroad companies are not allowed at common law to make unreasonably high charges for transporting persons and property, but they may make them unreasonably low, even to the point of carrying for nothing. It may be granted that Secretary Windom had no right to execute and issue a new bond without authority of law, even at a lower rate of interest; but he had the undoubted right to say to the holders of the five and six per cent. maturing bonds, "You may continue to hold this bond till the Government gets ready to pay it, provided you will accept three and a half per cent. interest instead of six." Senator Hill's method apparently would have been to continue paying six per cent., although he would not advise returning the difference to those bondholders who have accepted the lower rate. The ways of the Democratic party in dealing with the public finances are generally bad, but they do not often run in the direction of paying the bondholder more than he thinks he ought to have.

A Greenback Representative, Mr. Hazeltine, of Missouri, has introduced a bill "to establish a uniform paper currency, to be coined, issued, and regulated directly by the United States Government." As greenbacks come not from the mint but from the press, it may be wondered why Mr. Hazeltine did not say "printed" instead of "coined." The reason probably is that the Constitution provides that Congress shall have power, not to print any paper substitute for money, but "to coin money, regulate the value thereof, and of foreign coin"; and Mr. Hazeltine hopes that, by applying the constitutional word "coin" to a process to which it cannot be applied according to the Constitution or the English language, he may make his paper dollars pass current in the Supreme Court as well as throughout the country. Mr. Hazeltine seems to think that by pretending to see something in the Constitution which is not there, and using a constitutional word to describe it, he can make the Supreme Court see it too.

The *Times* has been interviewing several clergymen of this city apropos of an anti-Mormon movement set on foot by the Presbyterian Ministerial Association of Cincinnati, and in id of which a meeting will probably shortly be held here. The answers made to the reporter by our local ministers touching their plan for the suppression of Mormonism were not very encouraging, and one of them, that of Dr. Crosby, was, if correctly rendered, not only discouraging, but somewhat alarming. He said very truly that "his views on the subject were very decided." He would put Mormonism down by force; and if the present army was not sufficient for the purpose, he would "recruit fresh troops." He would then put 15,000 men under the command of "Phil" Sheridan, and send him into the Territory to "stamp the evil out"—of course after the passage of an act for the suppression of Mormonism by Congress, and proclamation by the President calling on the people to give it up. How Phil Sheridan would "stamp it out" Dr. Crosby refused to describe in detail, but he admitted that the process, whatever it is, would "to some extent involve bloodshed, but he would not hesitate on that account." We infer from this that what he has in mind is a dragonnade after the fashion of Louis XIV.'s plan for "stamping out" heresy in southern France. In other words, when Phil Sheridan came on a Mormon accused of polygamy he would have him shot or sabred with or without inquiry. We do not like to push our conclusion so far as to say that Dr. Crosby would like to have the same treatment applied to the women. We prefer to believe that the reporter has done him some injustice throughout.

It is a relief, after reading this, to turn to the interviews with the other ministers—Dr. Bevan, Dr. Parkhurst, Dr. Burchard, and Dr. Hall—and find that they have no plan for the suppression of polygamy whatever. It is infinitely better for a minister to keep his mind a perfect blank on any subject than to fill it with schemes for letting soldiery loose on a community which, polygamist though it be, is peaceful and industrious, and has, through its very ignorance and delusion, the strongest claim on the reasonableness and charity of those who know better and live more purely. We would suggest, too, that ministers who hold "very decided views" on Mormonism, or any other social or political subject, should, before speaking on it, make themselves a little familiar with the limitations put on the powers both of Congress and the President by the United States Constitution. It is well for those who want to sabre and shoot the Mormons to remember that Congress cannot set up a military despotism in the Territories any more than in the States. The inhabitants of Territories are citizens of the United States, and live under the Constitution, and the Constitution gives them a right to trial for all offences before a jury; to exemption from unreasonable searches and seizures, from having troops quartered on them in time of peace, and from cruel or unusual punishments. There is no provision made for dragonnades in the Territories. We can hang Mormons for having more wives than one after a jury trial, but we cannot try them by court-martial for it, or waste their farms or burn their houses. It is high time that the indignation against Mormonism began to take some practical shape, and we hope the Ministerial Conference in Cincinnati will bring to the subject something more useful than a fiery hatred of licentious cohabitation. What is needed now is a plan which the Government can embody in legislation, and carry out without bringing discredit on the Christian religion and on the American name. There is no question that Congress can legislate for the suppression of polygamy. We have heard this often enough. What we need to know now is, what kind of legislation can be carried into effect. We are glad to see that some of the New England ministers, including Mr. Bacon, of Norwich, are calling for a reform in the marriage laws of some of our States, as an excellent preparation for the effectual correction of Mormon manners and excesses.

When Mr. Bentley, the late Commissioner of Pensions, year after year, with the approval and recommendation of the Secretary of the Interior, urged upon Congress the necessity of so changing the laws under which pension claims were examined, that the numerous frauds known to have been practised could be discovered and their repetition prevented, he was turned away as one who wanted to interfere with the "just rights of the pensioners." The claim agents succeeded even in having him "investigated" as an "enemy of the crippled soldier." Now our statesmen in Congress are groping about for some means to stop, or at least to circumscribe within reasonable limits, the fraudulent practices the extent and daring character of which have, since the passage of the Arrears Act, exceeded all bounds. One of the propositions made is to have the names of all the pensioners publicly placarded in some public resort—for instance, the post-office—of their place of residence. It is thought that in this way those who draw pensions without being entitled to them would become known to their neighbors, and their discovery by the agents of the Pension Bureau would thereby be greatly facilitated. That such a measure will aid in some degree the detection of fraud is probable. But most of those who draw pensions are already known as pensioners to their neighbors, especially in the country districts, where everybody knows everybody. But this circumstance has afforded comparatively little aid to the Government in the detection of fraud. There are undoubtedly a great many persons drawing pensions without being entitled to them against whom their neighbors would dislike to turn informers, either from motives of sympathy or of fear. If Congress wants to apply a really effective remedy to this crying evil, let it substitute for the present system of adjudicating pension claims upon mere *ex-parte* testimony one which makes a cross-examination of the claimant and his witnesses by a competent officer of the Government possible, and which subjects pensioners suspected of fraud to a thorough overhauling in the same way.

There comes from Washington to the *Tribune* the remarkable announcement that

> "one of the most curious developments connected with the Guiteau trial is the evidence received there of intense feeling against Guiteau in the insane asylums throughout the country. Mention was made the other day of the feeling among some of the inmates of the Government Insane Hospital. Letters have since been received here from the inmates of other asylums, asking that if Guiteau is adjudged insane he be sent to the institution in which the writer is incarcerated, and saying in plain terms that concerted measures have been prepared for killing him. These indications leave little doubt that if Guiteau should ever be acquitted as an insane man, he would hardly be safe in any lunatic asylum in the country without special protection."

It is fair to infer from this that the insane feel that Guiteau has brought discredit on the whole class by his denials of his insanity and his attempts to prove himself sane. There is no other just ground on which any reasonable lunatic could find fault with him. No class can avoid disliking a man who, while apparently a member of it, is eager to repudiate connection with it.

This manifestation of the insane against Guiteau is, however, more important than it seems. If there is anything like community of feeling or opinion on public questions growing up among the lunatics of the country, so that the various asylums are swept by the same political likes, dislikes, or desires, it will not be possible very long to maintain the existing disqualification of lunatics for the exercise of the franchise. The numerous asylums will combine to demand its restoration to those who have been deprived of it for what the majority consider oddities of behavior, and they will use this correctness of sentiment of the lunatic element on the Guiteau case as a strong, and with many an irresistible, argument in support of the claim. Already there is much speculation as to what will be the effect on the verdict of the jury of the fact that two or three of the jurors "have insanity in their families," and thus probably sympathize with or feel kindly toward the insane view of political events, and think it, however disagreeable to some, entitled to respectful consideration at least. Should those who have insanity in their families make common cause with the insane, and were both reinforced by the eccentric and queer, the combination would be an exceedingly powerful one, which politicians would have to take into account. There would be a conciliatory plank for lunatics in the platforms promising reforms in the management of asylums, and a certain class of statesmen would announce from the stump that their fathers were considered insane by all their neighbors, and that they themselves had been insane in their boyhood, and had continued so till their fifteenth or twentieth year, and that to this hour the opinion of a raging lunatic was worth more in their eyes than that of a score of so-called philosophers.

Mr. David A. Wells has written a letter to the *Times* in which he tries to perform the *reductio ad absurdum* on Mr. Foster A. Higgins of the Chamber of Commerce, who has been giving Mr. Wells what he calls the "historic lie" about British subsidies to

ocean steamers. Mr. Wells shows easily that ever since 1833—that is, ever since steam came into use at sea—what the British Government has paid shipowners for is the carriage of the mails, and that just as soon as it has found it possible to get the mails carried more cheaply by competition it has reduced its payments, while what Mr. Higgins wants from the American Government is payments to enable somebody to carry on the shipping business at a loss without going into bankruptcy. But then if Mr. Wells thinks he can reduce Mr. Higgins or any one of his school to silence by reducing him to absurdity, he is mistaken. The strong tower of the school is its imperviousness to the absurdity argument. If that argument had any effect on it, it would have disappeared thirty years ago. There is probably nothing more ridiculous in the world to a logical mind than the spectacle of a Protectionist clamoring for a reduction of freight with foreign countries by means of Government subsidies; but, then, it is so great an absurdity that a man who was capable of seeing absurdity at all would not be guilty of it. He is not a man who only needs to have his attention called to the inconsistency of his conduct. He is a man who could not see it, no matter how much it was pointed out to him, or by whom. In fact, he thinks that any one who points it out to him is making game of him, or trying to cheat him. To many this state of mind is simply contemptible; to us there is something very solemn and touching about it. A Protectionist trying to lower the cost of bringing foreign goods to this country by means of gifts to shipowners from the Treasury, while at the same time shouting for higher duties at the port of entry, has one most pathetic and mysterious title to the kindness and forbearance of his more fortunate fellows.

Gambetta is in serious trouble, and at this moment is threatened with overthrow after having been only a few weeks in power. The trouble is this: Amendments to the Constitution are made by the two Chambers in joint convention. He holds that the particular articles to be amended, and even the amendments to be made, should be indicated beforehand by the Chambers, or in other words, that the jurisdiction of the convention should be settled before it meets. His opponents hold, on the other hand, that when a revising convention meets there is no limit to its powers—that it may amend anything it pleases in the Constitution. They have carried their point in the election of the Committee of the Chamber of Deputies to prepare the amendments. This Committee contains a large majority opposed to the Gambetta view of the power of the convention, and also to the particular scheme of revision propounded by the Government. This scheme affects Article I., describing the composition of the Senate; Article IV., fixing the mode of election; Article VII., creating life senatorships; and Article VIII., defining the legislative powers of the Senate. Gambetta proposes to abolish the life senatorships, and to take away the power of the Senate over money bills, and to substitute a general ticket (*scrutin de liste*) for a district ticket (*scrutin d'arrondissement*) in the election of members of the lower House. The Committee declares itself dead against the *scrutin de liste*, which is Gambetta's pet plan, and in favor of the unlimited amending power of the convention, which the Gambetta men say is equivalent to the power of abolishing the Senate altogether. He is still confident of final triumph, but this second check, coming after the refusal of the last Senate to entertain his *scrutin de liste* measure, indicates unmistakably that there is a very large body of Republicans who are not afraid of him, and do not consider him a necessary man; and in France a man who is not considered necessary is always very near being pronounced unnecessary.

Gambetta has been injudicious enough to say that if the Constitutional Convention refused to be bound by the limitations placed on its powers beforehand by the Chambers, it would place itself in a revolutionary attitude, calling for some action, which he did not define, on the part of the President. This has, naturally enough in France, brought on him the charge of meditating some kind of *coup d'état*, and the charge derives a certain support from the report of the Committee on Revision, which, in rejecting the *scrutin de liste*, half accuses him of aiming at some sort of dictatorship. He now explains that he merely meant that the President would have to refer the whole project of revision back to the Chamber, or, in other words, take it out of the hands of the Convention. But this is a lame explanation, because it is difficult to see whence the President would derive his right to interfere, or what would be the use of asking the two houses sitting separately to repudiate action taken by the two houses in joint session. The probabilities are that he said something which was intended to have the effect of a threat, but threatened nothing. It is supposed the Ministry will resign if the *scrutin de liste* is finally rejected, in which case the crisis would probably be serious as well as prolonged. The one important fact evolved by the situation thus far is that Gambetta is not the overshadowing figure in French politics which a year ago he was supposed to be.

When, early in December, we first referred to the bursting of the speculative bubble in Paris, we suggested that it might have an unfortunate influence on the standing of the Gambetta Ministry, and this apprehension seems to be widely felt. A very large proportion of the French people are still in the stage of political development in which a man measures the goodness of the Government by "the goodness of the times," or, in other words, by the price of what he himself has for sale. Nothing did more to discredit the Republic of 1848 and prepare the way for the Empire than the protracted cheapness of agricultural produce which followed the Revolution. Now that the peasantry have begun to go into stocks, they will, unless their education has made remarkable progress, be disposed to think meanly of a Government under which the best shares tumble thirty or forty per cent. in a day and the worst find no buyers at any price.

Another stage, and a very important one, has been reached in the working of the Irish Land Act. The Sub-Commissioners have decided between 500 and 600 cases, making an average reduction of twenty-five per cent. in the rentals, and spreading consternation among the landlords, who have attacked the Commissioners savagely, and have appealed in nearly every case. One of them, Lord Carrington, has, however, shown that this reduction brings the rent to what Sir Richard Griffith, who made the famous Griffith's valuation forty years ago, said would be a fair rent; and to the objection that this leaves out of account the rise in the value of land since then, he answers that the English landlords are obtaining no higher rent for farms now than they obtained forty years ago, and the reduction which is being made in Ireland judicially is no greater than has been made in England voluntarily. The first appeal to the full Commission has now been decided, and the majority of the three Commissioners has confirmed the decision of the Sub-Commissioners by reducing the rent of a holding from £36 to £30. The most important point decided was one, however, which remedies a great defect of the Land Act of 1870, which it was feared might appear in the present one. The courts held that under the former act a tenant who claimed compensation for his improvements must claim under the exact tenure under which he made them. If, for instance, having had no lease when he made the improvements, he had taken one subsequently, or if his farm had undergone either diminution or increase, it was decided that his claim would not be valid. In the case now decided on appeal, the landlord set up the change of tenure from a leasehold to a tenancy at will, since the improvements were made, as a bar to a reduction of rent on account of the improvements, and has been beaten. There is still one other appeal to the regular law court in Dublin, but the decision will probably be sustained, and lead to the settlement of a large number of cases out of court.

The large majority with which Mr. Windthorst, the leader of the Clericals in the German Reichstag, carried his motion for a third reading of the bill abrogating the law which forbids the exercise of ecclesiastical functions by certain classes of persons without Government authorization, is not only significant as putting the final adoption of the bill beyond doubt, but because the success of the Clericals is achieved without the aid of the Government. The Clericals may henceforth feel much less than heretofore in need of Prince Bismarck's countenance, and they may therefore see much less reason to aid the Chancellor in his policy in the way of *quid pro quo*. If this be so, the whole situation changes, and Prince Bismarck may see his schemes of forming coalitions foiled in a manner which he did not anticipate, as there is certainly no consideration that could induce the Clericals to serve him except the necessity of bargaining with him for the accomplishment of certain ends of their own.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

Mr. Scoville continued his address to the jury in the Guiteau case, on Wednesday. His argument up to that day had been tedious and wanting in force, but on Wednesday he created a sensation by attacking Mr. Conkling, General Grant, and President Arthur. He began his remarks by saying that if there were not "other reasons back of this prosecution," Guiteau would never have been brought into court, but would have been sent to an insane asylum, and that the men behind this prosecution were those persons who seek to hide their own infamy by casting the blame upon this insane man. He then "raised his voice higher and higher and showed increased excitement," and said, "those persons" were "such men as Conkling, and Grant, and Arthur—those who made war on the dead President—who fomented the strife and instigated that state of things, and manufactured such a public feeling that it preyed upon this man's weak mind until reason left its throne." On Friday Mr. Scoville continued; he bitterly denounced Mr. Corkhill, and claimed that no motive had been shown for Guiteau's act. On Friday he attacked the Government experts, and accused them of unfair dealing. This was the fifth and last day of Mr. Scoville's address. He closed in the morning, and "seemed much exhausted." On this day permission was given to the prisoner to read his speech to the jury, the counsel for the prosecution having withdrawn their objection, so that the possibility of a new trial on this ground might be avoided. Judge Cox wished Guiteau to read his speech that afternoon, but he objected, saying that his "mind was not in a proper condition." On Saturday he read his speech, which had already been published in the newspapers. He read in a "stilted and most absurd manner," and at one time almost broke down; "his face began to quiver, but he put his hand up to his cheek, and in a moment seemed to control himself." He read the whole speech from beginning to end from one of the newspapers in which it had been published. On Monday Mr. Porter began the closing address to the jury. The court-room was crowded to excess, and great interest was manifested. Mr. Porter was not well, and was obliged to suspend his speech early in the afternoon. He was very effective, however, and was listened to with close attention. He denounced the prisoner as a coward, a fiend, a hypocrite, a swindler, etc. He denounced the attempt of Guiteau's counsel to pervert the testimony, and said that their efforts were evidently directed with the view of inducing one or two of the jurors to disagree with the others. He was frequently interrupted by Guiteau and Mr. Scoville, the latter trying to prevent Mr. Porter from correcting Guiteau's often-repeated statement that public opinion was on his side. Mr. Porter continued in the same strain on Tuesday, but on his attempting a second time to bring before the jury evidence to contradict the prisoner's assertion that public sympathy was with him, Mr. Scoville promptly excepted, and Judge Cox supported the exceptions, instructing Mr. Porter, with some sternness, to keep within the proper limits. Mr. Porter then continued his argument to show that the prisoner alone was responsible for his act.

In the Senate on Monday eulogies were delivered on the late Senator Burnside. In the House a number of new bills were introduced, and a resolution reported requesting the President to obtain from the British Government a list of Americans imprisoned by its orders, together with a statement of the causes of their arrest.

Interest was added to the debate of the Sherman Funding Bill in the Senate on Thursday by a short speech from Mr. Windom against the bill. He said he thought the finances of the country were in an excellent condition, and he regarded it as a safe general principle of action in regard to proposed financial legislation, when no decided advantage could be effected by a change, to let things remain as they were and get the positive advantages of stability. Senator Hill, of Georgia, followed in a speech denouncing the Windom refunding scheme.

The bill for the retirement with a pension of Justice Hunt of the Supreme Court was passed by the Senate on Thursday by a vote of 41 to 13.

The Senate Committee on Pensions on Saturday unanimously agreed to report a bill granting Mrs. Abraham Lincoln $15,000 in cash, to be available immediately, and also providing that from the enactment of this bill her pension shall be at the rate of $5,000 per annum, instead of her present pension of $3,000.

In the House on Wednesday the debate on Mr. Robeson's proposition to enlarge some of the standing committees was continued, but on Thursday a motion to refer the measure back to the Committee on Rules was carried by a decided majority. On Friday the House devoted its attention to legislative business, and disposed of a number of private bills. It then adjourned until Monday.

Secretary Kirkwood has prepared a bill for the improvement of the condition of uncivilized Indians, of which the principal objects are, he says, to make the Indians eventually self-supporting, to give them title to their lands in severalty, and to educate and civilize them. The bill provides for the appointment of a commission of three members, to be known as the Commission on Indian Civilization. This commission is to visit the various tribes, and to bring about in various ways the objects of the bill as above stated.

The Commissioner of Pensions has issued certain rules to govern the issue of pensions, which are as follows: When it is shown that a soldier was captured in the line of duty, and it appears that he was afterward an inmate of a Rebel prison, and has not since been heard from, his death shall be presumed to have occurred in the service and line of duty, and the day after he was last seen or heard from may be accepted as the date of his death. If he was released from a Rebel prison, and was found to be disabled when released, the origin of such disability may be assumed to have been in the service and in the line of duty.

It is understood that there will be a heavy reduction in the number of employees in the Post-office Department at Washington in February. The entire department is said to be overrun with delegations, each pressing its own candidate for some office.

In March, 1881, Congress directed the Secretary of War to report the condition of the fortifications on the seacoast. An examination of these fortifications was therefore made by Generals Tower, Newton, and Abbot, and the result of their inquiries submitted to Secretary Lincoln. The report shows that nearly all the forts are antiquated, and of little use against modern ordnance.

The Government prosecuting officers who have been preparing the information in the Star-route cases have nearly completed the work, and are now awaiting the termination of the Guiteau trial to bring the matter before the Grand Jury. The cases which have been selected are said to be, as far as possible, representative of the different degrees of fraud alleged to have been committed.

Mr. J. P. Benjamin, of London, formerly Secretary of State of the Confederate States, has written a letter to a gentleman in New York in reply to an inquiry as to the truth of the rumor that there are large sums of money belonging to the Confederate States deposited in the Bank of England and elsewhere in Europe. Mr. Benjamin says that he does not believe that there is "one penny to be found anywhere in Europe of the assets of the defunct Confederacy." He also says that if anything can ever be recovered by the bondholders, it can only be by Government action in the United States.

Secretary Frelinghuysen has received word from the American Minister at Paris that the Under Secretary of State thinks that the bill recently introduced in the French Chambers will result practically in the free admission of American salted meats. He had hopes that it would pass both Houses at an early date.

Mr. Frelinghuysen has received despatches from St. Petersburg, reporting the continued activity of the Russian authorities in aid of the survivors of the *Jeannette*. The Imperial telegraphs have been placed at the disposal of Mr. Hoffman, American Chargé d'Affaires at St. Petersburg, and every effort is being made to find the crew of the lost boat, and to assist the rescued men.

Advices from St. Petersburg state that the search made by Engineer Melville for Lieutenant DeLong and his comrades in an easterly direction from the mouth of the Lena, has been fruitless, although some of Lieutenant DeLong's letters, as well as the ship's log and various instruments, have been found in abandoned camps. The places in which these were found have been indicated by the erection of cairns.

On Friday afternoon the Executive Committee of the National Board of Health declared smallpox to be epidemic in the United States. An order was made directing an inspection of several of the most important quarantine stations in the country, to see if the rules and regulations of the board, approved by the President in November, 1881, are being properly enforced.

There have been destructive floods in the West. At Nashville, Tennessee, a great number of persons have been thrown out of employment by a cessation of operations in mills and factories on account of the floods. Acres of crops have been ruined, and many persons driven from their homes.

A meeting was held at Willard's Hall in Washington, on the evening of Wednesday, the 18th, to celebrate the hundredth anniversary of the birth of Daniel Webster. Commissioner Loring was empowered to appoint a committee of seven to procure a local monument to Webster, the necessary funds for the purpose having already been obtained. On the same evening the Marshfield Club of Boston held a meeting to celebrate the event. There were a number of prominent men present.

The population of the city of Chicago is reported to be 630,000, an increase of 125,000 since the census of 1880.

Ex-Governor Alexander Hamilton Bullock, of Massachusetts, died on Tuesday, the 17th. On Sunday, Major-General Silas Casey died in Brooklyn, N. Y., at the age of seventy-five. He was a graduate of West Point, and served with distinction in the Mexican war and in the Rebellion. He compiled and edited a system of "Infantry Tactics," based on the French ordinances of 1831 and 1845, which was adopted in the United States service. Mr. Clarkson N. Potter, a well-known New York lawyer, died on Monday. He served in Congress for some time, and is particularly well known in that connection from his having been one of the most prominent members of the investigating committee appointed to inquire into the frauds practised in Louisiana in the Presidential election of 1876. Charles Blanc, the well-known French art-critic, died on Tuesday, the 17th.

FOREIGN.

The question of the revision of the Constitution continues to excite great interest in France. The Committee of Thirty-three to examine the bill of revision has been selected. It contains a large number of advocates of a general, as opposed to a restricted, revision. This majority is also said to be opposed to the insertion of the principles of the *scrutin de liste* in the Constitution. Thirty-two of the thirty-three were reported to be opposed to the bill introduced by the Government, and M.

Gambetta is said to have been urged by his friends to resign immediately. He is stated, however, to have said that he awaited the final issue with confidence. On Saturday M. Gambetta attended a meeting of the Committee, at which he declared that the Chambers could not legally go beyond the scheme for revision previously adopted by the Senate and Chamber of Deputies without placing themselves in a revolutionary position, which would require the intervention of the President as the guardian of the Constitution. A resolution declaring that there is ground for the revision was then passed by a vote of 24 to 3, five members having abstained from voting. This resolution, however, is now regarded with dissatisfaction by the Cabinet, as it does not provide for the adoption of the *scrutin de liste*, and is generally obscure. M. Gambetta's remarks at the meeting on Saturday have created no little sensation in France. His opponents construe them as a "distinct threat." On Monday the Committee of Thirty-three presented their report, in which they reject the proposal to insert the principle of *scrutin de liste* in the Constitution, and maintain that the powers of the Congress cannot be limited by the previous decision of either Chamber. It was decided to appoint Thursday next for the consideration of the bill in the Chamber of Deputies. The latest advices state that the defeat of the Ministry is regarded as almost certain, in which case M. Gambetta will resign.

Another matter which has caused great excitement in Paris has been a panic on the Bourse, resulting from a decline of 225 francs in Union Générale shares on Thursday. The panic resulted in several failures. By Friday, however, confidence was partially restored and securities of all kinds rose. The despatches on Tuesday announced that arrangements had been made between the Union Générale and various financial establishments which will enable the Union to pay all its depositors and take over securities purchased from the corporations of brokers, thus putting the brokers in a position to face their losses. "Thousands of families" are reported to have been ruined by the panic, and one despatch from Vienna announces that there have been "many suicides" there in consequence of it.

Prince Bismarck made a speech on the recent Imperial rescript in the Reichstag on Thursday. He said it did not aim to create a new Constitution; that the maxim, "the King reigns but does not govern," did not apply in Germany, and that the expression, "Constitutional absolutism of the Ministry," was absurd. Prince Bismarck said he was aware of the responsibility he incurred in signing the rescript, and that he was answerable for all the acts of the sovereign. He added that it was to the King, and not to Parliament, that Germany owed the position she enjoyed. In conclusion, he said that the accusation which had been made that he sought to escape responsibility by bringing forward the name of the King, was a charge of cowardice, and he now wanted to know whether there was any one of the members who dared bring such a charge. The despatches say, rather paradoxically, that Bismarck's speech being a direct challenge to the Reichstag, and very aggressive in tone, caused a "tremendous uproar," although otherwise it made a favorable impression.

In the German Reichstag on Saturday the clause of the bill for the incorporation of Hamburg in the Zollverein, granting 40,000,000 marks from the Imperial funds to defray the expense, was adopted by a vote of 171 to 102. The remainder of the bill passed without modification.

In the Reichstag on Wednesday the bill abrogating the law forbidding the exercise of ecclesiastical functions without Government authorization was read a third time; the majority was as large as at the second reading last week.

Notice has been given in the Reichstag of a motion, on the third reading of the Imperial budget, urging the Government to come to an understanding with the other powers in regard to the introduction of an international bimetallic currency. It is said that many members of the Conservative, Free Conservative, and Centre parties have joined the Association for the Promotion of Bimetallic Currency in Germany.

In the Prussian Landtag recently the Government presented a bill providing for the buying up of six private railways, at a cost of 477,000,000 marks, mostly payable in Treasury bonds.

In Berlin the police confiscated the copies of the last number of the London *Punch* in consequence of a cartoon bearing on the recent Imperial rescript.

A proclamation has been issued at Berlin, announcing that the cattle plague has been eradicated throughout the empire.

The insurrection in Herzegovina has been assuming formidable proportions. A well-organized conspiracy against Austrian rule is said to be in existence there. It is stated that on Tuesday, the 17th, a skirmish took place between the Austrians and the insurgents, in which the latter were routed. On Saturday, advices were received announcing that ten Austrian soldiers had been killed, and their quarters burned. On Sunday, there were reports of much hard fighting in various parts of Herzegovina, and particularly near the Montenegrin frontier. The insurgents were pretty generally worsted. The Prince of Montenegro informed a deputation of Herzegovinians, who asked him to support them in their struggle against Austria, that they must not count on Montenegrin support.

Egyptian matters continue to occupy the attention of diplomatic circles in Europe. Italy and Germany are opposed to the proposed Anglo-French interference in Egyptian affairs in case of a political crisis in that country. Italy holds that in case armed intervention becomes necessary, it should be effected by Turkish troops, and Prince Bismarck has informed the Porte that it will do well to await the explanation he has asked of England and France relative to their proposed joint action in Egypt before taking further action. Meanwhile it is stated that there is some indication that the Egyptian Chamber of Notables will waive their claims to the exclusive right of voting the budget, but will claim the right to vote it conjointly with the Ministers. It is stated that unless the Notables give up their pretensions on this point there is little hope of a settlement.

It is reported upon good authority that notwithstanding M. Gambetta's statement that the deaths among the troops in Tunis amounted only to 1,000, they are nearer 3,000, but that the fact is concealed by the removal of invalids.

The Emperor of Morocco, in compliance with the representations of France, has decided to take energetic measures to prevent Bou Amena and other insurgent chiefs, from organizing, on Moorish territory, raids upon Algeria.

At the Cork Assizes on Thursday the outlaw leader Connell pleaded guilty to the various charges against him. Connell has been the leader of a band which rendered the district of Millbank one of the most notorious in Ireland by their outrages. He was arrested last December after a hard struggle, and papers were found on him implicating a number of others. The first appeal to the Court of Appeals under the Land Act was decided on Wednesday, the 18th. The appellant claimed that by change in the nature of the tenant's holding from a lease to a yearly tenancy, his improvements could not be considered as made by the tenant or his predecessors in title. The Court decided against the appellant on all the points and affirmed the decision of the lower courts. Messrs. Parnell, Dillon, O'Kelly, and O'Brien have received notice that they have all been remanded to prison for a further period of three months. Miss Reynolds, of the Ladies' Land League, who was sentenced to one month's imprisonment for aiding and abetting a criminal conspiracy to prevent the payment of rent, has been released from prison, her term having expired. There are now said to be 70,000 claims for the fixing of fair rents before the Land Court. Archbishop McCabe issued a pastoral letter, which was read in all the Catholic chapels on Sunday, enjoining the people not to listen to abettors of violence.

Earl Grey has written a letter to Mr. Downey, the Conservative candidate for the vacancy in the House of Commons for the North Riding of Yorkshire, in which he says he cannot understand why all who are interested in land do not take the same view as Lord Zetland, and refuse to continue to support Mr. Gladstone, who, on every really important occasion, acts against the opinions of all the Whig leaders of the old days. Earl Grey is a veteran member of the Liberal party and a large landowner, and his letter shows how much the land question has affected the old division of parties.

Dr. Lyon Playfair, in a speech at Edinburgh, said that he did not believe the Conservatives would interpose obstacles to really necessary rules of Parliamentary procedure. Referring to the trade question, he said that it was undoubtedly true that only a very small free-trade party exists in the United States, but that it includes the philosophical political thinkers. The workingmen of America, he said, still share the delusion that protection and high wages are synonymous. He believed that if the United States were to shake off protective trammels, it would become the greatest manufacturing country in the world.

Mr. Henry Stafford Northcote, member of Parliament, who has recently returned from America, addressing his constituency at Exeter, said he did not believe in the decrease of American competition in the food market. He thought it idle to talk of the exhaustion of American land, for the supply of land for many years to come in the great Northwest would be boundless.

Great interest is manifested in South America in regard to the mission of Messrs. Trescott and Blaine. While they were in Peru every word that fell from their lips was eagerly listened to, in hopes that it might afford some indication of the probable course they would pursue. The Peruvians do not, however, seem to have been able to gather any information on the subject whatsoever. The first matter which they will consider on their arrival at Santiago will be the arrest and deportation by Chili of the constitutional President of Peru, Señor Calderon. It is stated that the Commissioners may be obliged to await the result of the Chilian Congressional election, which occurs in February, as a majority in Congress is necessary to sanction the acts of the Executive, and it is feared that the strong military element which now exists in Chili may be in a majority in the next Congress, in which case the annexation of a portion of Peruvian territory, which is the greatest stumbling block in the way of a treaty of peace, may be insisted upon, and it may then be very difficult to bring matters to a settlement, as the Peruvians are strongly opposed to a cession of territory.

The Government Commissioners of the National Bank of Mexico have signed a declaration that all the shares of the bank have been subscribed for, and that over $3,000,000 have been paid up. The last week in February has been appointed for the opening of the bank; 18,000 shares are held in Mexico, 12,000 in New York, and 50,000 in Paris.

TUESDAY, January 24, 1882.

CLAIMS IN CONGRESS.

Mr. Springer on Friday last made a speech in the House of Representatives on the injustice and absurdity of Congress being called upon to act judicially with regard to private claims against the Government. He took as the text of his discourse a private claim for $85 for the loss of two steers, which ever since the close of the war has been occupying the time and attention of the committees of Congress and the executive departments, has cost the Government thousands of dollars in money and days and weeks of valuable time, and has not been settled yet. Mr. Springer thinks there ought to be a constitutional amendment prohibiting Congress from special legislation; but, "pending the passage of such an amendment," he thinks that much relief might be afforded by turning over to the departments claims which specially affect them and grow out of their operations; and with this end in view he says that the Committee on Post-offices and Post-roads will bring in a bill turning over all small claims made by postmasters for losses incurred through the carelessness or misconduct of clerks to the Post-office Department.

Mr. Springer's idea of a constitutional amendment is drawn from similar provisions of law adopted within the past thirty or forty years by most of the States. Such an amendment would of course relieve Congress of the consideration of all claims to which it related; and the chance of getting it adopted by the Legislatures of three-quarters of the States is not perhaps so small as to make the attempt useless. The Legislatures of all the States which have similar clauses in their local constitutions would probably pass it without hesitation, and the general feeling throughout the country with regard to the abuses arising from special legislation is so strong that there would be little opposition to it anywhere.

But the amendment, if not supplemented by other measures with regard to claims, would be almost as arbitrary and oppressive a way of getting over the difficulty presented by claims in Congress as the present system is wasteful, and cumbrous, and unjust. A very large proportion of the private bills introduced at Washington are for the redress of alleged wrongs done by the Government or its officers to private individuals. They are not different in any respect from the claims which are made the foundations of law-suits against persons or corporations in courts of justice, except that they are claims against the Government. Their proper settlement depends upon the application of principles of law to the facts of the case as ascertained by the examination of witnesses or by written testimony, which is a purely judicial process. This is already recognized by the legislation constituting the Court of Claims, which now has jurisdiction of all claims against the Government founded on any law of Congress, or upon any contract, express or implied, with the Government.

Many classes of claims, however, fall outside this limit, and as a scandalous illustration of the way in which Congress may deal with such cases we may refer to the notorious instance of the Geneva Award, which is now once more before the Judiciary Committee of the House, and which involves not only an enormous sum of money, but the administration of justice by the Government among its citizens and the good name of the country itself. The Geneva Award consists of some $10,000,000, the balance of a sum of $15,000,000 damages paid by the English Government to our Government after the close of the war for injuries done by Confederate cruisers during the Rebellion. The fund, after being received by our Government, was held for some time subject to action by Congress. Several sets of claimants upon it appeared, known respectively as the shipowners, the insurance men, the "war premium" men, and the "exculpated cruiser" men. The shipowners put in claims for ships and cargo destroyed by the *Alabama* and other cruisers for whose acts the Geneva tribunal had found the British Government responsible and directed it to pay the $15,000,000 as damages, but these claims only amounted to about $5,000,000. The rest of the fund was claimed by the other classes on various grounds, into the merits of which we do not propose to go here. But now what did the Government—the trustee which collected the money for whatever persons might be justly entitled to it—actually do? It began by turning over the matter involved to the Court of Claims, but inserted in the act passed for the purpose a clause preventing it from considering any but the first class of claims. The rest of the money it kept, and after the claims had been for some years regularly referred to the Judiciary Committees of the two Houses, and dozens of hearings had, and arguments made, and bills introduced, and referred, and reported, and debated, and nothing accomplished, the Government took the money and applied it to the payment of the national debt.

The withdrawal of the power of special legislation from Congress would not redress such wrongs as these unless it were supplemented by enlarging the jurisdiction of the Court of Claims, so as to cover all claims against the Government of whatever nature. There is no leading modern nation in the world which has provided its subjects such insufficient redress against wrongs committed by its Government as the United States. The first thing to be done by Congress is to recognize, as it has already done in the case of Government contracts, that all disputes between a Government and its citizens which consist of a money demand against the Government based on the assumption by it of a liability or duty, or the invasion by its agents and employees of private rights, should be settled not by the haphazard action of committees consisting of men selected to perform widely different duties, or the reckless votes of an indifferent, lazy, or biased legislative body, but by officers selected to administer justice and adjudicate upon questions of private right in accordance with the fixed rules of law.

What is needed is not merely to relieve Congress of a totally unnecessary duty, and to shut its doors against claims of a fraudulent character, but to furnish claimants who have a just foundation of some sort for their demands a means of redress. To stop all special legislation would do the first, but not the second. There is nothing more certain than that a man with a just claim would far rather present it to a court than to such a body as Congress; and the first result of the general transfer of the jurisdiction of all claims to the judiciary would be that the great bulk of meritorious claims would never show their faces in Congress again.

THE PROLONGATION OF PARNELL'S IMPRISONMENT.

The announcement that the English Ministry mean to keep Parnell and O'Brien, two members of Parliament, in jail for three months longer is in some ways a very serious matter. Four members of Parliament have been arrested under the Coercion Act, but not until the session had closed, and it was generally understood that they would be liberated before the House of Commons again met. It was felt from the beginning by a considerable portion of the Liberal party that the imprisonment of members of Parliament arbitrarily, on charges which were not, and were not meant to be, submitted to a jury, was in itself a grievous scandal, which nothing but the exceeding gravity of the crisis in Ireland made bearable to any friend of constitutional government. But it has until now been maintained that the scandal would not be pushed to the point of preventing any of the prisoners from taking their places in the House when Parliament met, because this would amount to depriving the Opposition of some of its leaders and of some votes. This last step, however, the Ministry has now decided to take in the case of two of the suspects. It is made all the harder for good Liberals by the fact that if Parnell and O'Brien had chosen to stay in England they would not have been arrested, except for the purpose of trying them, and would even then have been admitted to bail. It is really their going over to Ireland to come into personal contact with their constituents, which may fairly be called a part, and an important part, of a Parliament man's duty, that has put them in the power of the Government. They might have said in England all that they have said in Ireland without exposing themselves to molestation; and although it may be true that the condition of Ireland requires that there should be one law for that country and another for England, it will be difficult to reconcile people to the idea that there should be one law for one member of Parliament and another law for another. We doubt if since the Revolution of 1688 any member has been prevented from taking his seat through arrest for an offence which was not indictable, and for which there was no intention of producing him before any court.

The continued detention of members of Parliament when Parliament is sitting is made all the more serious by the fact that the condition of Ireland is undoubtedly improving. One of the excuses for arresting Parnell was the fear that he would dissuade the people from resorting to the Land Court. But they have resorted to it in such numbers as to make the machinery of the court seem ridiculously

inadequate, and the result has thus far been so satisfactory that there is no likelihood that anything he could now say would stop the rush for "a judicial rent." Moreover, the arrests under the Coercion Act have not diminished the number of outrages, while the court records show that the ordinary criminal procedure is by no means so ineffective as the Tories and the landlords have tried to make out. During the last half year the convictions before juries at the Assizes, even for agrarian offences, were, considering the difficulty of getting good evidence, fully up to the English and Scotch standard. In fact, the juries seem to be doing their work quite satisfactorily, and the Government has just acknowledged that it has not been properly executing the law for the protection of life and property, by refusing any longer to permit the police to be used in assisting the sheriff at ejectments This duty is now assigned to the soldiers, and the police are left free for their proper work of detecting and arresting criminals.

It is true that there is still a great deal of refusal to pay rent in cases of undoubted ability to do so, and this refusal is supported with the ridiculous excuse that "the leaders of the people" are in jail. But it must be borne in mind that this failure to pay, dishonest as it is, is an almost inevitable consequence of the formal and solemn, though only implied, confession made by the Land Act, that in the great majority of cases the Irish landlord's bargain with his tenant is unjust. The whole Liberal party has been saying this vehemently for the past two years, and has provided legal machinery for setting this bargain aside. It is folly to ask the tenantry, after all this, to go on paying up as cheerfully and promptly as before. Probably no body of men in the same stage of social training would do so in any country in the world. When the French peasantry reached the conclusion about their landlords to which the Irish have now come, they knocked them on the head or burnt their houses. In Prussia and Russia the Government wisely put the relation of landlord and tenant on a sound basis before the peasantry had begun to think. The English Government never takes time by the forelock in this way. It holds that it is the better plan not to reform until those who suffer from the abuse lose patience. This is probably a better plan, politically considered, than the other, but it necessitates great forbearance with the malcontents. They cannot be expected to come into court smiling and considerate when the court was not opened until their fury had begun to alarm the authorities.

The Tories are, as might be expected, making vigorous use of the charge of inconsistency against the Liberals, for which the resort on so great a scale to arbitrary imprisonment affords so much material. They say, and say truly, that if anything of this sort had been done by the Beaconsfield Ministry while in power, the air would have been filled with Liberal denunciations. This is quite true; but then it is also true that, in judging a resort to coercive measures, we are very properly influenced by the question, Who makes it? If the Tories coerce, either in Ireland or anywhere else, they coerce as men who believe, and have always believed, in coercion as a permanent means of government, and who never have supplemented or accompanied it with any other policy. The Liberals, on the other hand, are notoriously averse to it, and do undoubtedly resort to it not as a policy, but as a rare remedy. The difference between the two parties in this matter is, in fact, very like the difference between Napoleon and the Republic in France. He could not resort without serious discredit to measures of repression which the Republic can use without any discredit at all, because in his case even the preservation of order was open to the suspicion of selfishness. It makes all the difference in the world whether a man is arbitrarily locked up in Ireland in order to enable the landlords to have their own old way, or is locked up to ensure the success of a measure which gives the tenant his independence.

MEN'S CLOTHES.

THE effect which the æsthetic movement has already produced, for good or evil, in women's dress has set many earnest reformers thinking as to the possibility of an improvement in male attire; and the appearance of Mr. Oscar Wilde on the platform in a peculiar and original costume of his own devising seems to be generally regarded as an indication that a serious attempt will be made to modify the uniform evening dress which the laws of society now prescribe for men. The *Evening Post* published last week a letter from an artist—in the present state of things the impetus for such a movement would have to be given by art—who strongly urged the immediate introduction of "color" into men's evening dress. With the caution which marks the difference between the practical reformer and the fanatic, he suggested that the first step should be made with the least important part of the masculine uniform, and proposed that, while black coats and trousers should be retained, the Philistines should not be allowed any longer to prevent the children of light from doing what they pleased with their vests, cravats, and gloves, and indicated that a pleasing and beautiful thing for them to do would be to make use of gay-colored silks for vests, with gloves and cravats "to match." This, he thinks, would give us some individuality, and break up the present dull, stupid uniformity, which makes men of fashion indistinguishable by dress, as they already, alas! occasionally are in other respects, from waiters. He mentions in corroboration of his theory of reform that a young, handsome fellow of his acquaintance had "a rose-colored silk vest and tie made, and put them on with a black coat and trousers, and the effect was rich, tasteful, and festal-looking in the extreme."

This proposal, on its face, has nothing wild or impracticable about it, and falls far short of Oscar Wilde's extravagant attempt to get society to go back to knee-breeches and buckles. In judging of schemes of reform in the interest of the beautiful in fashion we must not, of course, let our zeal blind us to the fact that there are many points of difference between them and previous movements for the improvement of the condition of the race. The latter have generally been inspired by a love of human liberty; the former seem to be the product of an intellectual conviction that the moral nature will be elevated by an effort to gratify the taste. Reform of the old kind was humanitarian in character, and sprang from a desire for equality of rights and position. Reform of the new kind seems based on a belief that existing taste is hopelessly debased and vulgar, and can only be elevated by showing man how low, and mean, and degraded he really is. Philanthropists, again, urged reform as a means of progress, while the fundamental article of the æsthetic creed is retrogression. It may be an exaggeration to make æsthetes insist that

> "Art stopped short in the cultivated court
> Of the Empress Josephine."

But for those who cherish an earnest wish for reform in decoration or dress, the first step is not to look forward with hope, but back with regret, to put aside the new and reintroduce the old, whether in china or costume. Fifty years ago, when philanthropy was still young, the author of 'Sartor Resartus' could find no better vehicle for an exposure of the shams of life than a satire upon dress, and though he grew very weary of philanthropy before his death, he never, to his dying day, showed the slightest indication of recognizing that the modification of dress could ever become a serious matter of human interest. But it will not do to be deterred from bringing a little color into our lives because of what Carlyle might have thought of Oscar Wilde, and we only mention the subject because it brings out in a striking way the difference between the reformatory spirit of his day and our own. It is in their zeal, their spirit of self-sacrifice, their willingness to expose themselves to ridicule, that the tie between the æsthete of today and the political reformer of the earlier period must be found. One was glad to be a martyr; the other is happy in being a butt.

It is impossible not to sympathize with the spirit which is at the bottom of the desire to improve the appearance of men's evening costume. No one pretends that any part of it is pleasing to the eye of man, or, what is much more to the purpose, of woman. When girls say, as they sometimes do, in moments of confidential expansion, of a male acquaintance, "He looks lovely in his dress-coat," this is, we believe, always taken among experienced women to be a proof rather of infatuation, or, at any rate, ardent admiration, than as evidence that his beauty or attractiveness is increased by a garment which has none of the recognized elements of beauty to recommend it. But in measuring the possibility of any æsthetic reform of this sort it is important to consider first the causes which have made it what it is in modern times. That these causes must be very powerful and deep-rooted we can see at a glance, for everybody knows that the evening uniform, now the badge of civilization all the world over, is only a couple of generations old. If we go back to the last century and inquire what sort of dress gentlemen wore in society, we find that they made use of colors and variety of stuffs exactly as women now do, and with precisely the same end in view—to render their appearance attractive. Society has a corporate existence in Anglo-Saxon countries, mainly, if not altogether, for the purpose of marrying and giving in marriage, and all students of the mysterious laws by which the race has arrived at its present advanced stage of evolution and progress know that in matrimony selection plays an important part. Among birds, beasts, and fishes the selection is purely natural. Some lion's cub, for instance, has a somewhat gaudier leonine beauty than the others in the same jungle, and this æsthetic advantage is reproduced in his descendants and becomes a permanent mark of the breed, or strain, giving its representatives always the standing of the most favored suitors in the jungle, and thus a permanent superiority in the struggle for existence. In the process of time the great law

of selection makes the male animal in the jungle more and more magnificent and effective in appearance (though it must be confessed that the law produces mainly primary colors), while the female, curiously enough, does not get the benefit of the law at all. In human society, however, we find that civilization at its highest pitch produces exactly the opposite effect. The law of matrimonial selection which we see in such effective operation around us leads to greater and greater effort at attractiveness and display in women's dress, while men's has become tame and uniform. Man being still the active matrimonial party, and the proposal of marriage still being made by him, it seems extraordinary that the law of selection itself should not lead him to give himself as good a position in the matrimonial market as possible by the same adventitious and artificial aids resorted to by women.

So, indeed, he did down to a very recent period. The dress of a fine gentleman two centuries ago in England and France was full of color, and designed to show off the figure, and to render it as attractive as possible in the eyes of the beholder. The dress of the court of Charles II. or Louis XIV. may not have been in itself calculated to inspire the mind with as pure a joy as the Florentine or English of an earlier period; but it was as gaudy and pretty as the tailors of the day could make it; and there was room in it for variety and invention, through which the law of selection could freely play. The old state of affairs lasted with certain modifications down to the present century, and it was really not until the steam and railroad period that the dress-coat began its triumphal progress all over the world; so that the establishment of the present evening costume must be regarded as in some way connected with the establishment of the modern industrial community. And this we imagine to be the fact. What modern society is based upon is the notion of equality. There would be a certain absurdity in making all men equal before the law, and then permitting the assertion of superiority through dress. Women have never been admitted to the suffrage, and still belong to the antique world in this respect. Display of any kind is foreign to our modern notion of the pertectly well-bred man; but display in the case of women we expect and like. Again, the effect of democracy has been to produce in society a great tenderness for all sensitiveness of feeling, which was unknown while color and variety in men's dress prevailed. The beaux of a century ago dressed themselves up to the eyes, while country gentlemen wore russet, and other gentlemen, starving in Grub Street, whose names have since become famous, had to go into company in a shabby condition. No one who reads Boswell's account of Dr. Johnson's relations with the society of his day can fail to see that his deficient manners were partly due to his bad clothes. He resorted to the only means he had to redress the inequality in appearance which his purse did not allow him to do away with. Carlyle, to whom we have already referred, belongs to the interregnum between the period of the dress-coat and that which preceded it, and 'Sartor Resartus' may be regarded as the protest of the new spirit against the old régime; he never forgot through his life the bitter feeling inspired in his mind by the fine clothes in which the world still dressed itself when he was a boy.

Another cause which has doubtless had to do with the universal introduction of the present uniform is the saving of time effected. The gentlemen of the last century belonged to an idle class, and dressed partly to kill time. What is needed by men in a modern community, in which time has a commercial value, is a costume which can be rapidly changed, and for rapidity the world has never known one, off the stage, which takes less time for a complete metamorphosis than the present fashion. For these reasons the æsthetic struggle over a reform in men's evening dress seems likely to be, for the present at least, a losing battle. Anything which involves great trouble, or gives room for inequality or display, or suggests the reintroduction of the detested spirit of caste, is unlikely to make its way in modern society. The march of the present social uniform is really the march of modern industrial civilization, which in its relentless strides apparently paralyzes or changes the action even of laws of nature which held their own in society till within the memory of men now living. Black may be the color of the Philistine, and knee-breeches the true breeches of the children of light; but the present social organization of the world seems to forbid the indulgence of the hope that we are on the eve of a great revival in color and form in the dress of men.

THE GRANDSON OF MADAME DE SÉVIGNÉ.

PARIS, January 5, 1882.

THERE is no well-educated Frenchman who does not feel a sort of friendship and of gratitude for Madame de Sévigné. Her mind has become a part of our mind; we have lived with her, and travelled with her to Aix, to Brittany; we have received her letters; we love her, and feel as if we belonged to her family. Her family, alas! is no more. M. Frédéric Masson, who has been for some time the Librarian of our Foreign Office, has written an interesting book on the short life of her grandson, the Marquis of Grignan.

The Grignans were a great family, and fully deserved all the epithets which Madame de Sévigné liked to bestow upon them. They belonged to Provence. The husband of Mademoiselle de Sévigné was Francis Ademar, Count of Grignan. She was his third wife. Her son was born on the 17th of November, 1671, at Lambesc, and received his name from the newly-assembled States of Provence. Madame de Sévigné went to Provence in 1672, and remained there a year with her grandson. The child was sickly; the great concern of his mother was that he should grow up handsome. She, "plus jolie fille de France," thought much of beauty. The young Marquis had a preceptor at a very early age; he was to be a prodigy. He was sent to the fashionable college, that of Clermont, in Paris—"Collegium Ludovici Magni." The great event of a nobleman's youth at that time was the presentation to the King. The Marquis made his début at fourteen; he was admitted to the King's mass; he held what was called "l'appartement"; he danced in a fancy ball in Indian dress, and was much admired. Madame de Lafayette writes to Madame de Sevigné: "This is a great winter for him; he must play a great part at fourteen. . . . He presented himself to the King, and was much observed. His face seemed agreeable, and his physiognomy has nothing common."

Our poor Marquis had, in fact, no childhood; everything was turned to that single point, the King's favor. The great offices of the state were in the gift of the King, and every mother wished for a son the *survivance* of the office of his father. The survivance was the promise of the place after the death of the occupant. The court and the army formed the two horizons of a nobleman's life. There was always some war going on in Flanders or in Germany, and at the age of seventeen young Grignan began to feel that he must win his spurs. "I have a grandson," writes Madame de Sévigné to Bussy-Rabutin, "who dares to be seventeen. People say that it is the fine age for going to war, and this is why I wish he were older, in order to bear the fatigues, or younger, so as not to be exposed to them; but it is an evil without a remedy." Everybody was on the way to Philippsbourg—the King's son, Monsieur, the Duc du Maine, a number of Princes, all the glories of Versailles. The Marquis left Versailles with the Dauphin, and made his début in the infantry regiment called Champagne. There was no more famous or more disciplined regiment in the French army, no better school of arms. The siege of Philippsbourg was a serious affair: the poor boy had to go to the trenches. "What an epoch," writes Madame de Sévigné: "to have shared in the first occasion on which Monseigneur begins to play the part of conqueror; to have ducked before the same shells, and to have been the first companion in arms of our future King." Such ideas almost consoled her for her uneasiness.

After Philippsbourg, Mannheim was besieged; and the young Marquis was happy enough to receive a wound, or rather a slight contusion. How proud the whole family is! What a joy! Madame de Sévigné is complimented on it by the whole court. The Marquis was in the trenches before Mannheim, talking with the Count de Guiche. A bomb fell, and a part of it struck him just on the sword; the sword preserved him, and he only received a shock. Still, the young Marquis's name is in every mouth, and his father has at once the benefit of the King's attention; he is made *chevalier de l'ordre*, a title which gives the bearer parity with the greatest lords of the court.

Who will tell us better than Madame de Sévigné herself how the young hero was received on his return? "I found him," she writes to her daughter, "very cheerful, very pretty; he kissed me five or six times with the best grace. He wished to kiss my hands; I wanted to kiss his cheeks, which led to a contest. I took possession of his head, and kissed it at my pleasure. I wished to see his contusion, but as it is on the left leg, I did not find it proper to oblige him to show it." She makes him tell the history of his three sieges and the exploits of Monseigneur. She sends him about, and chooses all the places where he must visit and show himself. After his visits he must return to his company at Châlons, for he has now become captain of *chevau-légers* by means of his mother, who has herself chosen the horses and the men. We have but three letters of the Marquis's, one having been written on this occasion:

"Here I am arrived, madame, and I have been to see Monsieur de Lamoignon, Madame de Coulanges, and Madame de Bagnols. Is not this the action of a man who has just seen three sieges? I talked with Monsieur de Lamoignon at his fireside; I took coffee with Madame de Bagnols. You cannot believe what pleasure I have in the possession of such a fine company, which I owe to you. I will go and see it at Châlons. There is a good company, a good lieutenant, a good *maréchal des logis*. As for the captain, he is young, but I answer for him. Adieu, madame. I kiss both your hands most respectfully."

The Marquis is now seventeen; he goes to Versailles, he sees the King, the Princes, M. de Montausier. He sees "Andromaque" played in its novelty; he sees all the best fashion; he dances at the best balls. After the Carnival, he leaves the Hôtel Carnavalet, where he has spent such a pleasant winter with his grandmother and the Chevalier de Grignan, and goes to Philippeville, where the Grignan regiment is in garrison. None of the letters which Madame de Sevigné wrote to the young officer have been found. He was good, he was amiable, he was very lazy, and himself wrote very little. He probably threw in the fire those letters of his grandmother which we should

now be so happy to read, even after two centuries.

The campaign of 1689 began; the regiment of Grignan, in which young Grignan served, was in the army of the Duke of Duras and under the direct orders of the Marquis de Boufflers. The Chevalier de Grignan was colonel, but he did not serve; the King decided that all the honorary colonels must be replaced by active colonels, and great efforts were made to have the colonelcy given to the Marquis. The Grignans were very great personages in Provence. The Chevalier was poor; he had conquered his colonelcy at the point of the sword; he was now gouty and could not fight any more. He was to be indemnified with 2,000 louis; he sacrificed himself once more for the Grignans. He knew that a regiment was a costly affair, and that the Grignans, though they lived in great style in Provence, were always embarrassed. He made everything easy; he even gave his signature to help them raise money. Was not every sacrifice called for in order that the Marquis might be colonel at eighteen, and the colonel of a regiment which bore his own name—Grignan Cavalerie—a fine regiment of forty masters (companies)? The Chevalier was happy enough when he heard the beloved Marquise, speaking of her grandson, say: "The colonel; our colonel; your colonel."

He was sent to Kaiserslautern for his headquarters. He was not fond of reading, which threw his grandmother into constant despair, and spent his time sleeping in this dull garrison. Alas! he also liked to play—the poor young Marquis. Did not everybody play at Versailles? Did not they play at his grandmother's and at his father's house? Is there an easier way of killing time, a more convenient mode of destroying a few hours in a semi-sociable way, not fatiguing for the mind, requiring no great mental effort, no will, no decision? Play becomes as necessary as eating and drinking to some lazy people, who like to feel themselves the toys of chance and to swim like buoys on the undulations of fortune. The poor grandmother gets alarmed. "I tell him that it is his ruin, and that it will teach him a thousand bad things which he had better be ignorant of. If he plays little, he will lose little, but it is a little rain which wets. If he plays badly, he will be cheated; he will have to pay, and if he has no money, either he will not keep his word, or he will encroach upon the necessaries of life." Madame de Sévigné advises reading instead of gaming: "Oh, the pretty, the happy disposition! it places us above tedium and idleness—two bad beasts!"

The Grignans found themselves in such a sea of financial troubles that the Marquis, at the age of twenty-three, was induced to make a *mésalliance*. He married the daughter of a contractor who had become *fermier-général*—a Mlle. de Saint-Amans, a poor girl of eighteen, well-educated, pretty, amiable. Her father paid all the debts of the Grignans; the thing was concluded between him and the Count de Grignan. The colonel was with his regiment, and he came back for the ceremony. Saint-Simon tells us that the mother, Madame de Grignan, alluding to the marriage, said: "It is necessary to put manure on the best land." To do the young Marquis justice, he adopted the family of his wife. He was civil to his father-in-law, whom he found very convenient and useful. He had no more trouble to take; he kept no more accounts; he stayed with him in Paris as much as he could. He seems to have behaved much better than the young Duke in the "Gendre de M. Poirier." He was gentle, kindly, brave, and thoughtless. What relieved such a life as his and gave to it a little halo was a constant willingness to die for his King and his country. Grignan did not miss a campaign up to 1698. He always behaved well in the army; he was made a brigadier in 1702; he was taken ill, and died of smallpox at Thionville, a short time after the battle of Hochstaedt, in which he had behaved with the greatest bravery. His loss was hardly felt. France was defeated; our armies had been obliged to evacuate Germany. This young Grignan, once the favorite of fortune, surrounded in his early years by all that was fair, died in a soldier's hospital, leaving nothing behind him. The race of Grignan died with him, with all its ambition and its brilliant folly.

Correspondence.

THE POWERS OF A QUORUM.

TO THE EDITOR OF THE NATION:

SIR: I desire to ask of your readers the solution of a question of great public importance, which is not settled by any authority to which I have access. It is this:

Can the majority of a quorum of a body pass a vote if the minority refrain from voting; and, if so, can less than a majority so act under the same circumstances?

For example, the Common Council of the city of Boston consists of 72 members, and by law a majority of them constitutes a quorum to do business. Therefore 36 members in their places, with the president, who is also a member, form a quorum. A motion is made, but one or more members decline to vote (we will imagine that one is obstinate). The vote, taken by yeas and nays, shows but 36 votes, including the president—all yeas. The member not voting rises and calls attention to the fact that only 36 votes have been cast; and the question is, whether the chair can declare the vote carried.

There is a further refinement sometimes suggested—viz., that 19 vote yea and 17 nay, the 19 being a majority of the 37 votes which would make a quorum; there still being one member present and not voting.

It is conceded that when only 36 are present nothing can be done; but some contend that the *presence* of a quorum, though less than a quorum vote, will legalize all the votes passed by a majority of those voting. The broadest form of this assertion is, that if 1 member vote and 36 sit silent, the vote is passed; the next claim is that at least a majority of a quorum, 19, must vote; the other ground is, of course, that 37 must vote or all proceedings are illegal.

I understand, perhaps wrongly, that in Congress a quorum must vote. Thus, in the 'Digest of the Rules and Practice of the House of Representatives,' it is stated, under the head of "Quorum": "When, from counting the House on a division, it appears that there is not a quorum, the matter continues exactly in the state in which it was before the division." The authority quoted is Jefferson's Manual, § 36, last clause but one.

Again, the same Manual says, § 4: "And whenever, during business, it is observed that a quorum is not present, any member may call for the House to be counted, and being found deficient, business is suspended."

So again, under "Yeas and Nays," the 'Digest' states: "'One-fifth of those present' has always been construed to mean one-fifth of those who vote on the question of ordering the yeas and nays, regardless of the fact as to whether or not a quorum is present."

It is to be noted that in the case presumed *notice is taken* of the fact that no quorum has voted.

Cushing, §§ 369 and 1396, leaves the matter in doubt, as his remarks are all based on the English practice. In the House of Commons, it appears that no one can be present and not vote on a division, as there the members actually go out into two lobbies, and are counted on their return. I do not see any suggestion that any member can refuse to go into one lobby or the other. But by our system of *viva-voce* voting, members can sit mute, and thus the question first stated has arisen. In another form it is: Does a member vote by his presence as well as by his voice; and, if so, does his silence give consent?

A legal friend has kindly given me the following references to authorities: 1 Dillon's Municipal Corporations, §§ 216, 217; 1 Kyd on Corporations, 418–425; 5 Dane's Abridgment, 150; 2 Kent's Commentaries, 293; Sargent *v.* Webster, 13 Metcalf, 504; 7 Cowen, 402 and 526; 10 Wendell, 658; 16 Iowa, 658. Also, he cites the opinion of Speaker Sanford, Mass. House of Rep., June 1, 1874, and the opinion of the Supreme Court of Maine, 70 Maine, 562, 563.

I have carefully examined these, and it seems to me that the English cases merely settle the point that the majority of a quorum has the full powers of the quorum, on the presumption that all the quorum vote. Dane (Abridgment) says: "On these principles, if the charter, for instance, requires twelve common-councilmen, etc., to elect or do an act, seven of them at least must be present, though four of the seven may give the vote; and if three of the twelve die, still seven, a major part of the whole twelve, must meet." Here Dane does not anticipate the case of four voting and three refusing to vote.

In 1874 Speaker Sanford met the case fairly, and decided that, a quorum being present, a part being silent, the votes of the remainder carried the measure. The Supreme Court of Maine, during the exciting hours of the Garcelon fight, had to make out a case, for political reasons, to prove that three aldermen or selectmen had the full powers of seven. They argued thus: Four is a quorum of seven; three out of four dominate the fourth man, whether voting or not; hence, when a return is signed by three men, the Court infers the fourth man was present, because "on the return the law presumes a quorum was present." I presume no man, not a lawyer, can read this decision without feeling devoutly thankful that the law always presumes that enough votes are present to be beaten and yet to make a quorum. The Court would probably infer from a bung-hole that a barrel was present, that it was full of whiskey, and that the owner had broken the Maine law. The Court indeed cites Dane, as above, and says that in the Maine House of Representatives 76 members make a quorum. "If there is actually that number present, and a majority of them (that is, 39 members) vote in the affirmative, a valid law can thereby be enacted or other business transacted. . . . This is familiar law, . . . and shows how and why a return signed by less than a majority of the whole number may be, and so far as the Governor and Council is concerned, is, conclusively pronounced to be valid."

This is "familiar law" no doubt, but of that kind of familiarity which breeds contempt. A few citations from the journals of the Legislature showing instances of laws passed by 39 votes, with none in the negative, would certainly have been more satisfactory.

I venture to ask those of your readers who are versed in parliamentary law to give some light on the matter. As a matter of argument, it may be said that in this country silence is neither consent nor dissent. It is conceded that a member cannot be forced to vote, neither can he be prevented from leaving his seat unless the body possess the power to make laws. That is to say,

Congress and legislatures claim the power to compel the presence of members, though this power is often disputed. Lesser assemblies, as councils in cities, cannot do even this.

When a yea-and-nay vote is taken, each member is asked to vote; if he refuse, how can he be deemed to have acted? He can leave the room, or he may withdraw to a place within sight and hearing, and so evade voting. Why can he not remain in his seat and still decline to vote?

We need, indeed, in this country some code of parliamentary law suited to our customs. Cushing's great book is useful in some respects, but its rules and precedents are English. We see to-day that Parliament is ages behind us in these matters. A little knot of malcontents can stop all proceedings, because Parliament is afraid of our measures for closing debate. In England they cling to the absurd form of dividing the House by actually sending members out of the room. Rising votes, and especially yea-and-nay votes, are American, and the use of them calls for new rules and decisions.

I should not trouble you with a purely theoretical case, but our city councils often have to pass votes aggregating millions of dollars. It is strange, but true, that thus far the question of what the legal definition of "voting" in such an assembly is has not been settled.

Yours very respectfully,
WILLIAM H. WHITMORE.

BOSTON, January, 1882.

TARIFF REFORM.

TO THE EDITOR OF THE NATION:

SIR: I dislike to trespass too often on your kindness, but, in reply to the anonymous criticism in your last issue of my communication published January 12, would beg leave to say that after nearly twenty years of "protective" taxation, so called, neither I nor any one supposes that we can get back to sound principles without hurting anybody. Radical errors can rarely be committed with impunity in private, and never in public affairs. There exists no way of escaping the economic errors of "protective" taxation without some loss to the innocent holders of tariff-inflated merchandise. Such loss may be reduced to a minimum by making the remedial measures of prospective operation, as I suggested, but cannot be entirely escaped. It will have been partially compensated by the equally undeserved profit realized when the inflation of such values occurred. That the persons affected may not be entirely identical is no fault of the publicist, whose business is to indicate sound principles for the social mass, and not to peddle out justice among individuals. It is better that a small number of capitalists should surrender their monopolies, and divide a moderate loss among them, than that the country's industry should be indefinitely crippled by taxing 50,000,000 of population to create and maintain a few æsthetic millionaires.

But however that may be, we have no option. Irresistible natural laws are slowly asserting themselves, and will prevail whether we like it or not. We may by prompt measures guide and influence, but cannot stop them. Our manufacturing capacity, moving forward with giant strides, will soon overtake and exceed the domestic market; while the tariff, by augmenting cost of production without benefiting the laborer, excludes our labor in the form of manufactured articles from all others. When that point is reached, our foreign exclusion remaining as at present, our factories must close and their owners and operatives suffer, or we must regain access to foreign markets by the only possible method—viz., by the removal of unnecessary commercial restrictions.

Whether it is better to do that by the Executive, through an extra-Congressional commission, or by the constitutionally-designated persons elected for the purpose, is a subject for a fair difference of opinion. I formerly, by your favor, gave mine in your columns, with my reasons, and on that point have nothing more to add.

Respectfully, I. J. WISTAR.

PHILADELPHIA, January 23, 1882.

MEXICAN PRECAUTIONS AGAINST AMERICAN INTERFERENCE.

TO THE EDITOR OF THE NATION:

SIR: It may be useful for those who are inclined to support Mr. Whitthorne's resolution proposing that the United States should offer to assist in the government of Mexico, under the pretext of protecting American interests there, to know that Mexico, in making grants to railroad companies representing foreign capital, has carefully guarded herself against opening the door to any such interference. The following is a translation of an article in the contract made by the Mexican Government with General Grant, representing the Southern Mexican Railroad Company, and a similar provision is included in (I believe) all similar contracts recently made by that Government, including those described in Mr. Whitthorne's resolution, for the construction of railroads running from our boundary line to the Pacific:

"Art. 4. The Company shall always be a Mexican company, notwithstanding all or any of its members shall be foreigners, and it shall be subject exclusively to the jurisdiction of the Courts of the Republic in all matters and causes of action occurring at any place within its territory. The same and all foreign persons and their successors having any concern in its business, whether as stockholders, or employees, or in any other character whatever, shall be considered as Mexicans in everything that relates to it. They shall never be permitted to allege, with respect to any matter relating to said railroad, any rights as foreign citizens under any pretext whatever. They shall have only such rights and remedies as the laws of this Republic give to Mexican citizens, and it shall therefore not be competent for them to call for the intervention of any foreign diplomatic agent."

This stipulation, thus solemnly agreed to by those accepting grants and entering into contracts with Mexico for the investment of American capital in that country, is but one expression of the extreme jealousy of that Government and of the Mexican people of American interference and American influence. The same feeling is constantly expressed in a variety of forms, and nothing is better calculated to make it burst into a flame than such a measure as Mr. Whitthorne's resolution proposes. C.

TOLEDO, O., January 16, 1882.

THE PRIMARY IN CALIFORNIA.

TO THE EDITOR OF THE NATION:

SIR: Referring to your article of December 22 on "The Regeneration of the Primary," it may be interesting news to some of your readers that in California the election law has taken cognizance of primary elections ever since 1866. Under the present codes, which were adopted in 1872, it is competent for the recognized authority of any voluntary political association calling a primary election to state by resolution that such primary will be held under the provisions of the law for general elections; at the same time the resolution, which is required to be published, must state what qualifications, in addition to those demanded for an elector at the general election, must be possessed by voters at the proposed primary, and persons must be designated to constitute boards of election. These boards are then required to proceed in the same manner as to receiving ballots, hearing and determining challenges, and canvassing as the boards at the general elections; all the penalties of the penal code which are applicable to a violation of duty in the one case being equally applicable in the other.

Thus it will be seen that if the extension of legal safeguards to the primary election were all that is needed to perfect that institution, the desired result would long ago have been attained in this State. It may also be stated that, contrary to what seems to be the custom in New York and the East generally, primaries are here invariably held in the daytime, so that "business men" are at liberty to "consult their own convenience as to the hour" of voting.

Now, when we come to inquire whether these innovations, which some seem to suppose are all that is required for "the regeneration of the primary," have materially altered its character or made it more satisfactory in California than it is in other places, we are obliged to recognize the fact that they have not. The primary works here about as it does everywhere else—viz., with reasonably fair results in the country, and in the cities in a way which is well-nigh the despair of good citizens. When we say the results of the primary are good in the country, we mean the ultimate result of getting candidates of a respectable class; it is not meant that this is brought about by obtaining a full and explicit expression of the party will, for, as a rule, only about one out of ten of the members of a party attends the primary.

The estimation in which primaries are held in San Francisco may be judged from the fact that they are sometimes dispensed with entirely, the county committee appointing a lot of prominent citizens to constitute a nominating convention. A primary is the sure precursor of dissensions, and not infrequently of bolts and rival conventions. At the Democratic primary previous to the election of last year the whole machine broke to pieces; two conventions were held and separate nominations made. Although the differences were compromised on the eve of election, harmony has not been restored, and the leaders are even now discussing ways and means to reconstitute their shattered organization.

Before attempting any explanation of the manifold failures of the primary, let me say that the plan of voting directly for the party nominees instead of for the members of a convention that will select them (which is the plan you seem to regard so hopefully in your editorial of the 22d ult.) has been often tried in the country districts of California, where it is known as "the Crawford County plan," but has not been found to work well. It leads to giving too much importance to local considerations; the average voter will vote for his own townsman, with whom he is acquainted, rather than for a candidate from some other town concerning whom he knows little or nothing. Consequently, if there is one large town in the county, it will usually get all the candidates, and completely shut out the smaller towns. This will infallibly make trouble in the party ranks, and probably defeat the ticket when the general election comes off. Or, if there is no one town that overshadows the rest of the county, there may be a large number of candidates who have received so nearly an equal number of votes that to give the nomination to the one who has received two or three more than anybody else, on the claim that he is the choice of the people, appears absurd. It will frequently happen, too, that the person who gets this meagre plurality is precisely the most objectionable and

weakest candidate in the lot, but who has been able, by unenviable means, to mass the worst elements in the party, and outvote any single one of his more respectable competitors. So, after all the dissatisfaction with county conventions, they seem to be the lesser of two evils.

The favorite theory of professional politicians for accounting for the slim attendance at primaries—viz., laziness or indifference of the voters—will not hold water. If voters had a definite object in view, and knew just how to accomplish it, they would be as eager to attend primaries as the general election. If they saw a clearly-defined issue, to be decided by their votes one way or the other, no exhortation would be needed to induce them to go to the polls. This is shown by the occasional full votes at primaries when there is a "contest" between two men or measures, and when it is known to every voter, beyond the possibility of mistake, exactly what the difference is between voting for one list of delegates or the other. But usually there is no such contest. Frequently there is only one ticket in the field, and when there are two the non-professional politician can seldom tell what is at stake, or what difference it will make if he votes for one rather than the other. He believes the "workers" have some interest in the decision, and that depending upon that decision is a choice of nominees; but he does not understand between whom the choice is to be made, and is quite sure that it is merely a personal contest, involving no political principle. The fact is, so much has local politics become a matter of intrigue that a majority of all the "movements" are now carried on in the dark—a concealment which makes them virtual conspiracies. After the election in this State in 1880 it was announced by the newspapers that the Republican primaries, the nominating convention, and the subsequent election of members of the Legislature in San Francisco had all been carried in the interest of a certain candidate for United States Senator, and yet while this work was in progress the mass of voters were in profound ignorance of the whole scheme. The vast and complicated intrigue, wire-pulling, and log-rolling necessary to accomplish this result had been carried on under the very noses of the voters without exposing what was in progress. Such things are a remarkable example of what can be accomplished in secrecy in this age of newspapers and supposed universal publicity.

Under such conditions as these, the average voter prefers not to vote at all at primaries, and I, for one, say he does exactly right. Rather than not vote understandingly, a person had better not vote at all. "The sacred obligation of the ballot" has been so cried up that a majority of writers and public speakers seem to consider it a merit to vote at random rather than not at all. But there is no virtue in the mere act of voting, as such. If the quality is the same, a large vote is no better than a small one; a full vote, if it is not an intelligent one, has nothing in it preservative of a republic.

It is evident that the main difficulty in the primaries lies a long distance back. Even if every voter knew exactly the sentiments of each of the would-be delegates to the convention toward every declared candidate, there would still remain two serious obstacles. First, the candidates are generally unknown men, selected from mercantile or other pursuits in which they have not come prominently before the people, and consequently their relative fitness for the various positions is unknown. The newspaper discussion, which the *Nation* truly says is the principal guide to the voter at the general election, affords no assistance at the primary, for, except in occasional instances, it has no existence. The party newspapers do not care to criticise unfavorably the men whom, by the decision of the convention, they may afterward have to support and praise, and consequently they keep quiet until after the nominations are made, when they declare that they are all excellent, and it is left for the opposition or independent papers to point out the defects in the ticket.

Secondly, if the voter knew just the candidates he wished to vote for, and the delegates he must support to do it in each particular instance, he is still involved in perplexities occasioned by the multitude of offices to be filled. He may be able to make up a ticket of delegates who will all be favorable to any one of the candidates he desires to see nominated, but, such is the variety of opinions, he will find it impossible to compose a list of delegates who will be unanimously favorable to his choice for every one out of the twenty-five or thirty offices to be filled.

All this only illustrates the practical difficulties in the working of the best-devised system of political machinery, and emphasizes the fact that, after all, the great reliance of the voter for good party nominations is on his power to bolt and defeat the party when it makes bad ones. This is no late discovery. Fisher Ames perceived that "one man making a business of politics can have more influence than six who do not"; and he proclaimed the fact before this Government was twenty years old. If, with the additional experience of eighty years more, all our editors could be brought to see and acknowledge it, we should hear no more in support of that stupendous fraud, "reform within the party."—Respectfully, A. B. Nye.

San Francisco, Jan. 6, 1882.

CLASSICAL AND NON-CLASSICAL.

To the Editor of The Nation:

Sir: In speaking of the gymnasium and the real-school, C. A. Eggert says, in No. 863 of the *Nation*:

"The difference between the graduates consists only in this, that Greek is omitted in the one and some scientific studies and modern languages in the other. In so far as the Faculty claim that the classical schools do better work in preparing students than the real-schools, they mean that the omission of Greek disqualifies the one class and qualifies the other to the degree indicated."

This language is misleading, for it implies that the course in Latin is the same in both gymnasium and real-school. There is before me a copy of the "Gesetz über die Gymnasien, Realschulen und Seminare, vom 22 August, 1876" (published in Leipzig in 1877), giving the laws of Saxony governing these schools. Pages 72 and 73 show the time devoted to Latin in the gymnasium, and pages 110 and 111 the time devoted to it in the real-school:

In the Gymnasium:		In the Real-school:	
1st year,	10 hours a week.	1st year,	8 hours a week.
2d "	10 " "	2d "	5 " "
3d "	10 " "	3d "	4 " "
4th "	10 " "	4th "	4 " "
5th "	10 " "	5th "	4 " "
6th "	10 " "	6th "	3 " "
7th "	10 " "	7th "	3 " "
8th "	8 to 9 " "	8th "	3 " "
9th "	8 to 9 " "		

It thus appears that the boy in the gymnasium devotes to Latin more than two and one-half times as many hours as the boy in the real-school. But this does not represent the whole difference between the acquirements of the two; for one's acquirements in a study increase in a geometrical ratio to the time devoted to it.

Again, pages 74 and 75 of the work above named state the degree of proficiency expected of those graduating from the gymnasium as follows:

"Am Schlusse des Gymnasialcursus ist zu fordern, dass der Schüler ohne Hilfe der Grammatik und des lateinisch-deutschen Lexicons correct und wenigstens von groben Fehlern frei lateinisch zu schreiben, dass er mit einiger Fertigkeit und Gewandtheit über Fragen und Gegenstände, welche den altclassichen Studien angehören, lateinisch zu sprechen im Stande, und dass ihm durch die Kenntniss der lateinischen Sprache auch das Verständniss für den Geist des römischen Alterthums aufgeschlossen worden sei."

And page 111 states the degree of proficiency expected of those graduating from the real-school, as follows:

"Kenntniss der Formenlehre und der Syntax, so dass der Schüler mit Hilfe des Lexicons ein nicht zu schweres deutsches Pensum ohne grobe Fehler in's Lateinische übersetzen kann; die Fähigkeit einen leichteren Abschnitt aus den bezeichneten Schriftstellern ohne Lexicon, einen schwierigeren mit Hilfe des Lexicons richtig zu übersetzen."

Respectfully, Lucius Heritage.

Madison, Wis., Jan. 16, 1882.

PATERNAL COLLEGE GOVERNMENT.

To the Editor of The Nation:

Sir: The article entitled "Yale and Harvard" in the last *Nation* suggests to me one consideration which often escapes the attention of fathers choosing a college for their sons.

I know of no institution in which the doors of the dormitories are locked and the windows barred at night, to keep the students in, nor of any in which either periodical visits or visits at unexpected hours are made on the students in their rooms. Nor is there any in which the college officers who lodge in the dormitories are forbidden to absent themselves as long and as often as they choose—at lectures, concerts, etc., or in each other's rooms, etc., etc. Further, the best modern dormitories are so constructed as to hinder as much as possible the passage of sounds from one floor or one room to another. The "college officers responsible for good order in their respective entries" are just as efficient watchmen of students' conduct as the police of a great city would be of the conduct of the people in the streets, if the police were deaf, were not divided into reliefs, but went on and off their beats whenever they felt like it, and had each policeman a quarter of a mile square to attend to. A college officer knows no more of what goes on for good or evil inside the rooms of his entry than a policeman does of what goes on inside the houses on his beat.

If my son can, wherever I send him, do with his evenings in a college building, or who knows where else, what he chooses, and with all th time he spends in his own room or anybody else's what he chooses, in what important particular are his morals safer under the most than under the least paternal of college governments? Does any one pretend to say that the examinations in the paternal colleges are stricter, and that in this way they exercise a more effective control over the use their students make of the time spent outside the recitation-room?

Yours truly, A Father.

January 21, 1882.

P. S.—What, in particular, does President Porter mean by the Faculty's providing for "attractive amusements and athletic activities"? You cite the phrase, and the alliteration makes it a noticeable one. But athletic activity is, we should suppose, quite out of the line of most of those who are here called upon to take it in charge. Then, again, though the Faculty at Yale may at rare intervals afford the students amusements, to ask them or any other faculty to undertake the business of providing regularly attractive amusements is—no joke.

FRUITS OF THE PACIFIC COAST.

To the Editor of The Nation:

Sir: I did not believe that a single Californian would endorse my criticism of the flavor of the grapes grown in the Golden State; it is, however, in this special case, a mere matter of taste between us, and, as such, the good opinion of Californians as to their vintage is entitled to as much consideration as my own, and justly so.

Your correspondent, Prof. Hilgard, in replying to my comparisons, touches upon another subject, perhaps inadvertently, which is one of vital interest to himself and his neighbors of California: he apparently anticipates a steady improvement in the average quality of the Pacific Coast fruit-crop. I do not; indeed, I am confident that the best Californian average exists to-day, and that the future will rate lower, for the following reasons: The history of pomological enterprise and investment shows clearly that the cleanest and best crops of all kinds of fruit are those which are gathered from newly settled and planted districts, wide apart or far from old and long-continued industry of this character. That result is due to the simple fact that such new orchards and distant ones are for many years free, substantially, from the infinite variety of insect and fungoid pests which always settle upon and remain with old orchards and vineyards. They are never wholly subdued by us, and work sad havoc with a high average yield. I do not think the question of climate has anything to do with this trouble, either to cause or abate the nuisance and consequent deterioration, except as the weather substitutes, when it varies, one severe annoyance for another.

The fruit-growers of California will not escape these plagues; they will be compelled to suffer sooner or later, just as we do here, and the excellent average of their fruit-crop, now so deservedly noticed, will drop rather than rise under the impending inflictions.

Henry W. Elliott.

Smithsonian Institution, Jan. 20, 1882.

Notes.

Harper & Bros. have in press a 'Manual of Historical Literature,' by Professor Charles Kendall Adams, of the University of Michigan.——D. Appleton & Co. have in preparation a fine library edition of the prose and poetical works of the late William C. Bryant, edited by Parke Godwin. Two of the six octavo volumes contemplated will consist of a biography, with extracts from the poet's correspondence. The same firm will publish Professor Robertson Smith's recent lectures in Edinburgh and Glasgow, on "The Prophets"; and a new edition of the late Tom. Hood's 'The Rules of Rhyme.'——G. P. Putnam's Sons have issued the third of the five volumes containing the 'Life of Washington' in their handsome Geoffrey Crayon edition of Irving.——Miss Alcott has issued a new edition of 'Moods' (Boston: Roberts Bros.), revised in the sense of her original conception of the story, which was "an attempt to show the mistakes of a moody nature, guided by impulse, not principle."——The first edition of Newcomb and Holden's 'Astronomy' (Henry Holt & Co.) has been already noticed by us. The third edition, which has recently appeared, is an improvement upon the first in many respects, notably in the mechanical execution of the printing of the woodcuts. The revision is, we find on examination, a real one, and the new matter is inserted chiefly for the purpose of giving more definitions of fundamental terms. The first twenty-eight pages have been entirely rewritten, and we would suggest to the accomplished authors of the book, and to the publishers, the propriety of altering the index at the end of the book to correspond. Such work as this is also included under the term revision.——'Seneca and Kant,' by Rev. W. T. Jackson, issued by the United Brethren Publishing House, Dayton, Ohio, shows that its author has read some of the ethical writings of Kant and of Seneca, that he has looked up the references in Ueberweg, Schwegler, and Teller, and that he is an admiring reader of Cousin, Hickok, Professor Joseph Haven, and President Noah Porter. The ordinary modicum of praise is given to Kant's stoicism, that it sounds good, but doesn't mean much, and beyond this there is little sign of scholarship or acumen in the book. Its one effect in the world of letters is likely to be to increase the number of applicants for the degree of Ph. D. at the University of Michigan, which gave that honor to Mr. Jackson on the easy terms of this essay.——The most important special feature in I. K. Funk & Co.'s handy little 'Revised Version of Mark's Gospel' (from their Teachers' Edition) is the marking of the terminations of verses so distinctly (by "full-face" periods) that the verses, though not paragraphed as in King James's Bible, are almost as easy to find as if they were; in contrast with other paragraphed Bibles, which hide entirely the verse divisions. Among the maps is a "bird's-eye view," which is much more graphic than the prevalent flat plans.——A report of the dedicatory exercises in the hall of the Boston Medical Library Association (founded in 1875) contains a noteworthy list of the loan collection of medical portraits, some of which were subsequently presented to the society. Dr. James R. Chadwick, the librarian, by the way, has reprinted from the Boston *Medical and Surgical Journal* his quantitative and qualitative analysis of obstetric and gynæcological literature for 1876–80. He gives his own country the foremost place in this branch of medical science.——The *Magazine of American History* for December continues its contributions to the Yorktown centennial, by giving a copy of General Getty's topographical map of the battlefield made in 1880, with military details superadded in red ink, and by further reprints of contemporary documents. A portrait of George Clinton, a St.-Mémin vignette, and an etching, are also among the adornments of this number.——We have received from Ralph Trautmann, 312 Broadway, a neatly-enveloped series of steel engravings of American Presidents, and another of "Eminent Authors and Poets." We regret that we cannot praise them as works of art or as likenesses. The second series is absurdly heterogeneous.

—During the past year the number of German bookstores in Germany and in foreign countries increased from 5,540 to 5,750, distributed among 1,333 cities, Germany having 4,376 firms in 987 cities; Austria, 207 in 648 cities; America, 25 in 78 cities; Africa, 4 in 4 cities; Australia 3 in 3 cities, etc.——A son of the late Professor Lotze has just printed an abstract of his father's last course of lectures, which will be of great interest to those who were anxious to know the final form of his opinions. It is entitled 'Grundzüge der Psychologie' (Leipzig: Hirzel, 1881, pp. 100), and covers, in the very brief way of dictata, the entire field of psychology.——Part 1 of the first volume of Wilhelm Wundt's *Philosophische Studien* (1881, pp. 147) contains four articles of great interest to psychologists, as follows: 1. Psychologic methods, by Wundt; 2. Time of apperception by simple and composite concepts, by M. Friedrich; 3. Investigations on the sense of time, J. Kollert; 4. Mathematical induction, by Wundt. Numbers two and three are special investigations conducted in Wundt's psycho-physic laboratory and reported here as scientific investigations are reported in archives—a new departure in philosophical methods of some importance.——From L. W. Schmidt we have the first instalment of an important work edited by F. Strehlke, 'Goethe's Briefe.' This is an index to the poet's correspondence, with source, date, place, and first words, and the volume will also include some unpublished letters. The arrangement is alphabetical as regards the person addressed, about whom enough is told to indicate the nature or occasion of the correspondence. Not less than twenty-two pages are occupied with a mere enumeration of the sources.——From B. Westermann & Co. come two volumes of part 1 ("Schiller") of 'Schiller and Goethe as Judged by their Contemporaries' (*im Urtheile ihrer Zeitgenossen*), put forth by the publishing house of Bernhard Schlicke, in Leipzig, and edited with the greatest care and patience by Julius W. Braun. It is a simple, uncommented arrangement, year by year, of the criticisms of the periodical press of Germany, with a scrupulous regard to the accuracy of the text, even to the orthography of the time. Goethe will fill part 2, and a Lessing is to follow. No one can deny the instructiveness of such a record as this, in which we watch the growth at once of reputations and of criticism, and learn in an impressive way the chronology of the literary productions of the three geniuses in question.——F. W. Christern sends us specimen pages of Paul Lacroix's 'XVIIme Siècle—Lettres, Sciences et Arts: France, 1590–1700,' a profusely and splendidly illustrated work of biography and antiquarianism, with seventeen full-page chromolithographs setting off the 300 woodcuts in the text. It is supplementary to the volume on the same century published two years ago, the two forming, in the author's plan, a connecting link between his well-known and highly-esteemed work on the manners and customs of the Middle Age period, and that on France in the eighteenth century.——'Les Actrices de Paris' is the rather catchpenny title of a subscription work now appearing in Paris in weekly parts, each of which is to contain four pages of biography from the pen of one of the many dramatic and musical critics of France, adorned by a vignette in which scenes from the chief successes of the fair histrionic artist are to be commemorated. With each part also goes a portrait of the subject of the sketch, etched by M. E. de Liphart. Among the ladies who are to sit for their portraits are the chief actresses of the Comédie-Française and the chief lyric artists, including Mmes. Carvalho, Nilsson, Patti, Krauss, Jeanne Granier, Judic, and Miss Van Zandt. The specimen portrait we have seen is of Mme. Nilsson; it is a hard, cold etching from a photograph, and is altogether lacking in charm. The vignette is graceful.——The far more important and critically valuable 'Comédiens et Comédiennes' of M. Francisque Sarcey is now well on in its second series. The latest number is devoted to M. St.-Germain of the Gymnase, one of the finest comic actors of Paris—perhaps the finest outside the walls of the Théâtre-Français. His portrait is here etched by M. Gaucherel.——The other series which M. Jouaust publishes, 'Acteurs et Actrices du temps passé,' is also getting on, and portraits on copper and in words have already appeared of Baron, Grandval, Sarrazin, Poisson, and of Mmes. Le Couvreur, Quinault, Raisin, Duclos, and Champmeslé. It is a useful and entertaining work, although it has far less authority than M. Sarcey's.

—Both the *Century* and *Harper's* for February join in the celebration of the hundredth anniversary of Daniel Webster's birth, the one by a general article (by Professor W. C. Wilkin-

son, of Rochester), and the other by personal recollections, contributed by Mr. John H. B. Latrobe, of Baltimore. Mr. Latrobe's first meeting with Webster occurred in the winter of 1830-31, and all his intercourse with him sprang from their professional relations, so that his narrative, which, short as it is, abounds in interesting anecdotes, has no political bearing whatever. It consists mainly of the impressions made by the social *abandon* of a lawyer and statesman whose fame was of the solidest, with incidental glimpses of his manner of preparing himself for a trial. Professor Wilkinson, on the other hand, who, for aught that appears, may never have seen Webster, pictures the extraordinary hold he acquired upon the generation of which Mr. Latrobe is a lingering representative, and then, acknowledging the sudden and complete ruin of his reputation wrought by his 7th of March speech, asks some one to explain what he calls "the case," the "remarkable" case, and evidently, in the writer's mind, the hard case. A clergyman and a moralist, however, might excusably see nothing mysterious or unjust in Webster's fate. Bluntly but truthfully put, his last public act was that of a political gambler, whose ambition to be President, long insensibly wasting his moral fibre, at last sapped the professional conscience of the "expounder of the Constitution," and led him to give his sanction to an act not more shocking to the humanity of the new North than it was objectionable to any one who judged it from a purely legal and constitutional standpoint. We may be surprised and grieved that so great a man could "give himself away"; but the motive was sufficient, and our history is full of instances of self-abasement and mortification caused by the Presidential mania.

"The bubble floats before, the spectre stalks behind."

That is "the case," and it was already an old case when Webster exemplified it afresh. What made his downfall so startling was the revelation it gave of the growth of anti-slavery feeling, and the fact that his adhesion to the Fugitive Slave Law was, however much feared, unexpected—incredible. On this point Mr. Oliver Johnson has just made public, in a letter to the Boston *Herald*, a fact, derived in confidence from the late Joshua R. Giddings, which sheds a flood of light on "the case." Some time before March, 1850, Mr. Webster communicated to Mr. Giddings, through the late George Ashmun, of Massachusetts, the brief (such a one, doubtless, as Mr. Latrobe describes) of a speech *in opposition* to the Fugitive Slave Law, with the inquiry whether it "would satisfy the anti-slavery sentiment of the North." Of course he was told it would, and he was even fortified with historical references by Mr. Giddings, whose anxiety about his course was completely allayed. The speech actually delivered, as every one knows, was calculated for the other side of Mason and Dixon's line. We commend to Mr. Wilkinson Mr. Cabot Lodge's judgment of Webster in the current *Atlantic*.

—The most important paper in the *Century* is Mr. Edward Atkinson's "Significant Aspects of the Atlanta Exposition," in which Senator Hammond, of South Carolina, famous for his designation of Northern workingmen as "mudsills," is exhumed to show the economic infatuation of Southern slaveholders as to the dependence of the North and the rest of the world on Southern cotton, and the effect of converting the slave into a free laborer. Mr. Atkinson is able to quote most felicitously the testimony of two grandsons of John C. Calhoun, that if he and his associates had had their knowledge from experience of the negro, "there would have been neither slavery nor war." A glance at the cotton machinery in particular (though the exhibition was "neither an international nor a cotton exposition in the ordinary sense of the term"); some statistics of the mixed as opposed to the "all-cotton" planting, with an extract from the writer's pamphlet advocating the former in 1861; a hint of the new era for fine spinning from the roller-gin superseding the saw-gin in the treatment of the green-seed or common cotton of commerce; and the correction of some social and sentimental errors in the intercourse of Northerners and Southerners, form the bulk of Mr. Atkinson's rational discourse. In *Harper's* there are some attractive portraits of the French political leaders of the present time. Mr. Bishop, in his second paper on Mexico, praises the state educational and charitable establishments, and the native art. Mr. G. P. Lathrop depicts some of the obvious features of Philadelphia life and customs, and devotes one line to the University of Pennsylvania. Mr. John Fiske gives us another chapter from his presumable popular history of the United States, "The Romance of the Spanish and French Explorers." Of La Salle he concludes: "America will in the future revere him as one of the chief among her early heroes, and mankind will not refuse him that meed of praise which is accorded to those that endure to the end." We have before us a circular issued by the Chicago Historical Society proposing a joint celebration at New Orleans, by the historical societies of the Mississippi basin, of La Salle's discovery of the mouth of the Mississippi on April 9, 1682; and a petition asking Congress to associate itself with the occasion by a representative delegation and otherwise. The request seems eminently proper, as Congress has already employed the historian, Pierre Margry, to make a collection of historical documents pertaining to La Salle and his prodigious achievements.

—If Bismarck reads the *Atlantic Monthly*, he will be interested in an account of himself given in the February number by Mr. Herbert Tuttle. Mr. Tuttle first saw the German statesman about ten years ago, and the encounter was interesting, as it afforded "a singular illustration of the nervousness which may be bred in the strongest natures by the constant presence of known though invisible dangers." It was at the close of a session of the Reichstag, when Mr. Tuttle happened to hurry down the stairs just before the adjournment, and to "shoot out somewhat abruptly through a public door, just as the Chancellor emerged from an adjoining private entrance, alone and busy with his thoughts." As he saw Mr. Tuttle, "he gave an involuntary start, and seemed almost to shrink back within the passage, but recovered himself instantly, of course, and moved on." The explanation of this start suggested by Mr. Tuttle is that the Prince had the risk of assassination constantly before his mind, and "the recollection of past perils and the apprehension of others, certain though hidden, would not make a brave man timid, but they would make him watchful and suspicious." He thinks that the plan of blowing his brains out on the battlefield, had Sadowa been lost, attributed to Bismarck by a popular legend, was "worthy of him," and "not improbable"; but whether this is so seems to be of less consequence when we learn that the Prince has himself stated that "his more reasonable purpose was to flee to America in case of disaster, and found a new existence this side of the Atlantic," where he would have had a better chance of growing up with the country than Germany could possibly have afforded him in his fallen state. "What a field of speculation," says Mr. Tuttle, "is opened by the thought of so illustrious an exile! What a 'commotion' would have been caused among the crude triflers of American politics if this martial figure had stalked upon the scene with helmet and sabre, and cavalry boots!"

—The second instalment of "Studies in the South" gives, in a picture of a Louisiana negro planter, a suggestion of a type hitherto undreamt of in the South, or for that matter anywhere in the world. He is described as a man in middle life, the son of an African prince or chief, who was captured and sold to traders and brought to America as a slave. Here the father married a young woman of like origin and blood; so that the planter seems to have been of a pure negro strain, though born here. When he found himself free at the end of the war, he had nothing. He went to work as a teamster, and laid the foundation of his fortune by the purchase of a mule. He was evidently a man of great natural capacity and shrewdness, and had the white man's art of making others work for him, and getting the utmost out of them. He knew when to make innovations and when to adopt the practices common among his neighbors. He "saved manure," which is mentioned as having been a thing unheard of before his time, and also introduced great economies by producing as many things in the way of supplies and tools on his own land as possible. He was always ready to pay a little more than the usual wages for a little more than the usual work. Altogether the type is indistinguishable from that of the shrewd, saving, "go-ahead" white man. More curious than all the rest, he was a reading man, and his conversation, as reported by Mr. Harrison, or whoever is the author of these sketches, shows plenty of traces of a very original turn of mind. He had some familiarity with Greek literature through translations, and especially Plato. His study of Plato had led him to the conclusion, which many better Grecians have probably secretly come to without the courage to avow their opinions, that while Socrates was a very sensible man, Plato "talked too much. If he had a big thing to talk about, he talked all the time, and if it was a little thing, he talked just the same." We regret to be obliged to add that the climax is capped by a comparison of Plato to "one of those newspaper men," in whom this negro philosopher thinks he detects the same lack of a sense of rhetorical proportion. He makes the droll suggestion that a meeting between Socrates, Lincoln, and Carlyle would result in "more fun than ever was in the world at one time." Extracts are given also from the conversation of another negro planter of a lower type, which are very instructive as to the relations existing in parts of the South between a certain kind of minister of the Gospel and his congregation:

"After supper the woman went away with the baby, and as we rose from the table I saw a double-barrelled shot-gun standing in the corner of the room, and inquired whether there was much game in that part of the country. 'Dat ain't fuh no game. Dat's fuh dem damned niggah preachahs.' 'What's the matter with the preachers?' 'S'pose I want 'em comin' 'roun hyah to see my wife, when I's 'way from home?'"

The writer has something to say about the use of the term "Bourbon" in the South, the word having no longer, according to him, among the Southerners, any distinct signification: "It is applied indiscriminately by all classes of politicians to anybody who differs from them. It is there a convenient though empty epithet or name of reproach. Every politician insists that his party is the party of progress, of improvement—the representative and embodiment of the only ideas by which society can exist or civilization be maintained; and he is of course entitled to stigmatize his opponents as Bourbons." This can hardly be true, however, except in the more remote and unlettered regions. It is

impossible to imagine a Virginia Readjuster denounced as a Bourbon by a Bourbon.

—*Lippincott's* for February opens with an illustrated article called "On the Gulf Coast," the writer of which advocates the division of the State of Florida between Georgia and Alabama, for the sake of the material interests of all concerned. He admits, however, that there is little chance of anything of the kind being done, and the plan may probably be taken simply as "suggestive" in character, like that sometimes made of separating the city of New York from the State, to solve the problem of municipal government, or dividing up Utah among the adjoining Territories, to break up polygamy among the Mormons. Mary Etta Smith contributes a story, called "Grant's Luck," which deals with what even the wicked Byron in "Don Juan" admitted to be a dangerous subject. We will do no more to excite the reader's curiosity with regard to the tale, for it is hardly necessary to say to any one who knows the invariably pure character of the short magazine love story that nothing really improper is permitted to soil the pages of *Lippincott*. "Our Monthly Gossip" contains a few brief remarks on "Women as Listeners," signed A. E., in the course of which the writer makes the following observation, the combined truth and sarcasm of which inevitably suggest that A. E. is a woman herself: "Woman is primarily a being who listens. She has in these days lost much of her original teachableness, but she has not yet entirely discarded the appearance of being teachable. In her capacity for hearing without obeying lies her true power." Mr. Felix L. Oswald contributes an article on animals, of more than usual interest and curiosity. There is no fancy in imaginative literature more full of pleasingly mysterious suggestions than that of a secret of animal life possessed by man. Lovers of Hawthorne, who have dreamed over the 'Marble Faun,' with its half implication of an unrevealed tie between human and animal life, may be struck with Mr. Oswald's remarks about the Austrian ratcatcher, who "will lock himself up in a stable and after an hour or so come out with a bag full of mice, live or dead, at the option of his employer." The story of the Pied Piper, the legend of Orpheus, throw a sort of poetic light around such facts as these, which even the acceptance of the law of evolution cannot wholly dim or dissipate.

—There is a marked and interesting difference between the library systems of the cities of Boston and New York, a difference which, if it continues, will be still more interesting to our great-grandchildren. The Boston Public Library, following the old-fashioned advice to kill two birds with one stone, meets—with its upper and its lower hall, its unstinted supply of fiction and its wealth of learned books—the wants of all classes of the community at once. The New York system, on the other hand, represents the modern method of division of labor and adaptation of special means to special ends. Its Free Library, to which we called attention last week, for those who cannot afford to pay anything for their reading; its Mercantile and Apprentices' Libraries for those who can pay, but still want for the most part entertaining literature; its Astor Library, for those who wish to study and do not read for amusement; and its Lenox Library for those who do not care exactly to study, but merely to refer to or look at a book, or whose study can without inconvenience be confined to three days in the week—these differentiations take the place of the one heterogeneous collection of the rival city. Boston is more democratic—every citizen has equal rights; New York is more aristocratic—it has different arrangements for different classes of society. Boston is like the country store, with a little of everything for the whole village; New York like the shops of a city, with their limited objects. The Boston Public Library may in time be obliged, skipping the second stage of evolution, to come to the third discrete synthesis, when it will resemble the great Parisian *Bon Marché* or *Printemps*, where everything is collected under one roof and one head, but more carefully divided into departments, which are none the less separate and independent because the division walls are not visible, and which often are separated by a wall or by a story. If Boston should adopt the Chicago plan for a library building, it would be able to classify both its books and its readers most effectually, and to combine the cheapness and efficiency of one organization with a more exact adaptation of supply to demand. But New York must go on in its own way. A rich family and a rich man have provided for the upper classes, intellectually speaking. The middle classes provide for themselves. The poor have too long remained unthought of.

—The climate and productions of Florida, as the southernmost territory of the United States, will probably long continue to be subjects of interest to the class of tourists who look southward, whether for health or pleasure, with the approach of winter. Mr. George M. Barbour's 'Florida, for Tourists, Invalids, and Settlers' (Appletons), and Mr. Samuel C. Upham's 'Notes from Sunland' (Claxton, Remsen & Co.) give some addition to our knowledge of the country as regards its cultivation and state of settlement, especially in its southern portions, which still remain for most travellers practically an outlying territory. Mr. Barbour makes a useful distinction in speaking of the climate, or climates, of Florida. Its north and south range, from the northern boundary to the southern extremity of the peninsula, is about 415 miles (as against 405 for England, between the Lizard and Berwick-on-Tweed), a range that is wide enough for considerable climatic differences; and it is speaking indiscriminately to call either the climate, productions, or soil of a region so extended in latitude a unit. The mainland of Florida extends from about 25° to 31° north. Within these limits Mr. Barbour distinguishes "three Floridas," a northern, a middle or "semi-tropical" zone, extending from lat. 28° to 30°, and a southern or "tropical" zone, extending beyond the furthest southward limit of frost, which varies considerably with different years, but may be taken at about lat. 28°. The resorts best known to Northerners, St. Augustine and Jacksonville, are in or near the northern zone, where the climate is not unfrequently severe in the winter; and much disappointment has been felt by invalids at finding the ranges of temperature in northern Florida nearly as great as in the Middle States (10° to 104° Fahr. at Pensacola, with monthly variations of 33° to 37° during the winter months). The summer temperatures throughout the State are very trying, and the only advantage in the winter climate north of lat. 28° is that the ranges of temperature are less extreme than in the North. Even in the "middle zone" of Florida there is no sure exemption from killing frosts; no crops are really safe, except such as may be grown to better advantage in a higher latitude. When, however, the settler has crossed the frost line, he finds himself in a region where many of the tropical fruits can be profitably cultivated, in particular the orange. Mr. Upham expresses his conviction that Florida will, within no great number of years, "supply the Mediterranean ports with better oranges than can possibly be raised in that country." But his enthusiasm is clearer than his syntax, being hardly borne out by the facts when he says of the Manatee River region, in lat. 27°–30°, "Our climate is far superior to that of any other part of Florida, and I do not think I hazard much in saying, to that of any other part of the habitable globe." All that can justly be said in praise of the Florida climate is that it is not so cold as that of the North, and that, consequently, there is a more limited range for the racking variations of temperature which occur. But it cannot be too often or distinctly stated that racking variations of temperature are the characteristic feature of the American climate in every part of the United States except upon the Pacific slope, and only upon a narrow belt of that. All other parts of the country, whether North or South, have climates that are highly variable as contrasted with any of the climates of Western Europe or other Gulf-stream (island) climates, or with those of the Pacific islands. The real value of Florida for invalids is not so much in its climate (though one may certainly escape from the cold in its southern regions) as in the fact that it is the only country where an American can escape from extreme cold without expatriating himself.

—The irrigation of large tracts of land in some of the southern counties of California has produced malarial diseases to such an alarming extent as to present a serious problem in connection with the further settlement of that region. Most of the lands in Fresno, Tulare, and Kern counties that have been subjected to irrigation are of the class frequently termed desert lands; without irrigation they are utterly valueless for agricultural operations, but with it their productivity is astonishing. Since the latter fact has been demonstrated there has begun a large immigration into the counties named, and extensive irrigation works have been constructed at heavy expense. The possibility of chills and fever was not thought of in connection with the sandy soil and dry climate of the region until the malarial symptoms made their appearance. The progress of the ague for the last two years has been rapid and general, and, as irrigation has comparatively as yet merely begun, the future is dismal to contemplate. The inhabitants of the Brazos bottom are no worse off than those of the irrigated lands of California are likely to be. There is no exemption from the attacks, it being a notable fact that the Chinese, who are to a considerable extent employed as laborers, do not enjoy the immunity which attaches to the negroes in the swamps of the South. Various suggestions of remedies have been made, one idea being that if a system of thorough drainage should be combined with that for irrigation, it would mitigate the evil. Some benefit seems to be derived from having rooms used as dormitories at a considerable elevation from the ground, and huts raised on long poles have been tried, while one wealthy vine-grower has built a three-story dwelling. Others seek immunity by living in villages at a distance from their farms and the irrigating ditches; and perhaps this practice will become universal. As showing that the question is not a local one, confined to the counties named, it may be mentioned that the same experiment was tried, with similar results, in the county of Yolo, a hundred miles north of San Francisco. A large ditch led the waters of a small stream across a number of farms, and in a few years ague became common, families began moving away, and, as irrigation was not indispensable to cultivation in this instance, the ditch was finally closed.

—The Geographical Society of Bremen have published a circular reasserting their belief in

MALDEN
PUBLIC LIBRARY.

the truth of the claim of one of their members, Capt. Eduard Dallmann, to have been the first to land upon Wrangell Land, and so, in a certain sense, to be its discoverer; and alleging that the late surveys of Lieut. Berry in the U. S. S. *Rodgers* tend to establish the truth of Dallmann's narrative. The latter was the subject of comment in the *Nation* at the time it appeared (see No. 826, p. 304, 1881), and of no little investigation by geographers on the Pacific Coast. The sum of the arguments at present submitted in his favor seems to be that he might have been mistaken in his identification of musk-ox horns reported by him to have been purchased on the Siberian coast; that a bay does exist near the southeast end of Wrangell Island as he asserted; that his instruments might have been bad, and his positions erroneous; that the map illustrating his account was not made by him, and was erroneously constructed; and that his twice seeing Plover Island was no worse a blunder than that of Kellett, who saw it once. On the other hand, it may be recalled that the log of the voyage is not forthcoming; that no report of the landing was made to his owners in Honolulu, nor to any of the numerous whaling masters and traders with whom he was associated at that port; that his officers on a similar voyage in the following year never heard of the alleged landing; that in that year Wrangell Land was seen and reported to the U. S. Hydrographic office by Capt. Long, and was the subject of interested comment by the navigators of the Arctic fleet and the geographical world, the discovery being widely published, and then for the first time definitely placed on the charts; that during all this time, and for twelve years subsequently, no claim was advanced by Dallmann to the discovery; that his account of his voyage shows a complete correspondence with the old and erroneous charts on which a bay was indicated and the land laid down in an erroneous latitude similar to that adopted by Dallmann; that the bearings of Plover Island, and the course alleged to have been sailed, would have taken him over dry land; that Plover Island does not exist as an island, but was sketched from a view over thirty miles of ice by Kellett, and is part of Wrangell Island; that Dallmann pretends to have seen it within a few miles, and in a sea free from ice, and, according to the map, to have made an impossible passage between it and Wrangell Island. When all these facts are taken into consideration, it is clear that the story is not yet cleared from doubt. Dallmann is at present in Siberia, and his return cannot but be awaited with interest both by geographers willing to suspend judgment and the Society which has so generously defended his cause in his absence.

—It is gratifying to compare the condition of the Harvard College Observatory a few years since—in which its activity was so curtailed that it was prepared to do little but slowly accumulate observations, the reduction and publication of which bade fair to block for a long time the efforts of any one who should assume its directorship—with its present flourishing condition, the old observations being nearly all issued, and all the current work so kept in hand that it is ready for publication at the earliest moment. All this has been effected since Prof. Pickering became the director of the establishment, and the Observatory has risen thus rapidly to equality with the first two or three in the country. The Director's Annual Report (laid before the Board of Overseers January 11) shows that three instruments—the great equatorial, the meridian circle, and the meridian photometer—have been kept actively at work during the past year, the latter instrument having already completed the measurement in three nights of the light of all the naked-eye stars visible in latitude forty-two degrees north, and having proved so satisfactory that a large one is being constructed with object-glasses four inches in diameter, to be used in measuring the light of variables and their comparison stars, as also for determining the light of the brighter asteroids. It will be remembered that the particular line of work chosen for the Observatory by its present director was that of astronomical photometry—a subject previously much neglected, and which he has followed up with an enthusiasm to which may be traced the inception of much work in the same direction abroad. One of the most important advances which Prof. Pickering has effected is his method of photometric observation of the eclipses of Jupiter's satellites. More than one hundred and fifty of these eclipses have already been so observed. The search for celestial objects having singular spectra has been kept up, as well as the photometric study of a number of variable stars. In coöperation with the *Science Observer* and Lord Crawford's Observatory at Dun Echt, near Aberdeen, the Harvard College Observatory has taken an important part in the early distribution, in Europe and America, of circulars relating to the comets recently discovered, defraying the cost of telegrams, and furnishing the necessary observations and computations. Observations with the meridian circle have been made on two hundred and fifty days; the time-service is active as heretofore in the distribution of standard time; the thirteenth volume of the 'Annals' is in process of publication, and eleven papers (mostly astronomical) have appeared during the year as communications from officers of the Observatory. The significance of all this work, and the way in which it is done, are not slowly recognized abroad, as evinced by notices and reviews in *Nature*, in *Copernicus*, in the *Observatory*, and in the *Vierteljahrsschrift der Astronomischen Gesellschaft*.

—The subject of suicide is treated at length by Dr. James J. O'Dea in a volume which will form a useful pendant to Prof. Morselli's essay recently noticed in this journal. Its title ('Suicide: Studies on its Philosophy, Causes, and Prevention,' New York: Putnams) indicates the scope of the discussion, which is rather historical and literary than scientific, though Dr. Farr's figures, among others, are cited, and a number of tables and diagrams are given. Dr. O'Dea has preserved some of the last letters of suicides, which are used in a discussion of insanity as related to suicide; and the testimony of Mr. McJeffrey (p. 270) opens up another curious by-way of the subject. It is to the effect that some animals may intentionally take their own lives. "South American sheep," he says, "have a habit of destroying themselves if they are deprived of sufficient food, or are exposed to excessive cold. They start out in immense droves at the top of their speed," and, plunging into deep ravines or rivers, are destroyed. The author adds, but without giving authority, that "suicides of this character occur among horses and dogs also." It must be presumed that the proof-reader was fresh from this passage when he allowed the odd erratum in the index (p. 317): "Cats, suicide of," to stand, instead of "Cato, suicide of." Dr. O'Dea's book, if not an original discussion in the sense that Morselli's is, will yet be found for the most part interesting reading. The chapters on the prevention of suicide are perhaps the least satisfactory, as the rules prescribed are mostly generalities equally applicable to the pursuit of health, long life, or good digestion.

—A neat little volume called 'What Shall we Act? or, A Hundred Plays from which to Choose; with Hints on Scene-Painting, etc.,' has recently been written by (Mr., Mrs., or Miss) M. E. James, and published by G. Bell & Sons, London (New York: Scribner & Welford). No two persons would ever agree on precisely the same hundred plays as the best for amateur acting, but the choice here made is good enough. It does not include either "Box and Cox" or "Trial by Jury," both of which one has fairly a right to expect; and it does include "The Fool's Revenge," the "School for Scandal," and the "Lady of Lyons," plays in which it is simply hopeless for any amateur to be even tolerable. We remark that the best adaptation of Scribe and Legouvé's "Bataille de Dames" is Mr. Charles Reade's "Ladies' Battle," and not that made under the same title by the late T. W. Robertson (p. 60); and the "Babes in the Wood" is by Tom Taylor, not "John Taylor, Esq." (p. 18). The only American play in the whole hundred is "The Coming Woman," as the author chooses to call the amusing satire known to us as "The Spirit of '76." About one-third of the hundred are adaptations from the French, although their origin is rarely recorded. The preliminary Hints to Beginners, and advice as to make-up, are well considered. The notes on scene-painting are of less value; it seems to us that it is best for amateurs not to make any attempt at so difficult an art: any audience will accept the frank use of screens and hangings. The author's method is to give a slight but sufficient analysis of the action of each play, with prefatory notes as to the time and scenery. Thus, the adaptation of Scribe's "Zoé, ou l'amant prêté," is introduced as follows: "'Loan of a Lover,' a Vaudeville in One Act, by J. R. Planché, Esq. Time in representation, one hour and twenty minutes. Period, early part of this century, or the present. Scene, gardens bordering a canal, near Utrecht." Then comes a list of the characters, with notes on the costumes. A similar plan has been adopted by the compiler of the 'Guide to Selecting Plays; or, Manager's Companion, giving a complete description of 1,500 Pieces, arranged according to the requirements of any company' (New York: S. French & Son, 1881), a pamphlet of 78 double-column pages. Here the plays are classified according to the number of characters, beginning with two-part pieces and ascending to dramas and tragedies with thirteen characters and more. Of course the analysis of the plot is far briefer than in 'What Shall we Act?' but it is quite sufficient. The same pamphlet also contains useful lists of plays having a French character, a Scotchman, or an Irishman; of plays suitable for the army and for the navy; of "temperance" plays; of "favorite old comedies"; and of plays in which there are only male characters. The proof-reading is very careless.

—For the English series known as the "Parchment Library," Mr. Andrew Lang has edited 'The Poems of Edgar Allan Poe' (London: Kegan Paul, Trench & Co.; New York: W. J. Widdleton). He has prefixed an essay on Poe's poetry which may be cordially recommended to all who enjoy the charm of beautiful English, or who, liking Poe's "very valueless verses," as Mr. Henry James, jr., once called them, are yet a little at a loss to define the cause or the limits of their liking. Mr. Lang begins by renouncing the consideration of Poe's career as a man, to consider only his work as a poet. He pauses, however, long enough to say that "Poe wanted as a man what his poetry also lacks; he wanted humanity." And again: "Poe's verse is so far from being a criticism of life, that it is often, in literal earnest, a criticism of death." With much insight, Mr. Lang considers Poe's theory

MADDEN
PUBLIC LIBRARY

of poetry, his choice of melancholy, as "the most legitimate of the poetical tones," his ignoring of all conceptions of duty and truth; and he declares that Poe "deliberately discards *sanity*; he deliberately chooses *fantasy* for his portion." However temperately expressed, this criticism is surely destructive enough for the fiercest contemner of Poe; but Mr. Lang proceeds to set forth the solid grounds on which Poe's fame may rest securely. "We shall never appreciate Poe if we keep comparing him to men of stronger and more human natures. We must take him as one of the voices, almost the 'shadow of a voice,' that sound in the temple of song and fill a little hour with music. He is not like Homer, or Scott, or Shakspere, or Molière—a poet that men can live with always by the sea, in the hills, in the market-place. He is the singer of rare hours of languor, when the soul is vacant of the pride of life and inclined to listen, as it were, to the echo of a lyre from behind the hills of death." In short, the charm of Poe's poetry is, in great measure, "the incommunicable and inexpressible charm of melodious words." Moreover, "as his life sank into poverty, bereavement, misfortune, and misery, his verse more and more approached the vagueness of music, appealing often to mere sensation rather than to any emotion which can be stated in words." And further, "we cannot define the nature of the witchery by which the most difficult task of romantic art was achieved. Poe did succeed, as is confessed by the wide acceptance of poems that cannot be defended, if any one chooses to attack them. They teach nothing, they mean little; their melody may be triumphantly explained as the result of a metrical trick. But, 'Ne faict ce tour qui veut.' The trick was one that only Poe could play."

—The third Philharmonic concert in Brooklyn on Saturday night presented a striking contrast to the majority of these entertainments, at which the modern element is usually predominant. The programme contained Haydn's "Surprise" Symphony, Mozart's Concerto in A major (No. 488, Köchel), and Beethoven's Fourth Symphony. Mr. Thomas has no superior in this or any other country as an arranger of programmes, and it is very seldom indeed that any improvement could be suggested in his schemes. But in the present case we humbly submit that one of the elements that should always be taken into consideration was overlooked—the element of variety. The three compositions performed are all characterized by a calm, serene, and dispassionate spirit that tends to become monotonous if sustained for two hours. This defect could have been easily avoided by choosing the third or fifth symphony instead of the quiet and placid fourth. It is not necessary to have turbulent and heaven-storming passion in every composition, but some agitation and excitement are called for at every concert, which otherwise becomes as unsatisfactory as a drama would be without any conflict of motives. The Mozart concerto, moreover, is a decidedly uninteresting composition. The theme of the first movement is fresh and attractive, but all the rest is soporific. Not even Mr. Joseffy's refined phrasing and smooth execution could invest it with any charm; and although the thoroughly modern cadenza of his own which he introduced seemed as much out of place as many of the modern additions to mediæval buildings that are to be seen in Europe, it was yet fully as good as anything in the concerto. We are among the warmest admirers of Mozart's works for the stage; but we insist that his compositions for the pianoforte are thoroughly antiquated and should be allowed to repose in peace. The time was when they were justly considered beautiful, but music (especially pianoforte music) is such a progressive art that this can no longer be said of them. We should prefer to hear Mr. Joseffy in Brahms's new concerto, which has lately been so favorably received in several German cities. It is a well-known fact among musicians that the most delicate and critical form of composition is a string quartet, since the piano does not here lend its aid, like charity, in covering up a multitude of sins. The same is true of orchestral compositions in which the strings are predominant, and the wind instruments with their more powerful waves do not drown such trifling inaccuracies as may occur. In all the works interpreted at this concert the strings did play the leading rôle; and it is high praise to state that Mr. Thomas's orchestra was just as effective here as in its rendering of modern compositions, in which it has no superior. Mr. Joseffy, it should be remarked, was recalled, and played as an encore an arrangement of his own of a Bach prelude, whereas at the public rehearsal on the preceding afternoon he had played some "Songs without Words" by Mendelssohn.

W. R. GREG.

Miscellaneous Essays. By W. R. Greg. London: Trübner & Co. 1882.

Mr. Greg's death leaves a sensible gap in the ranks of English literature, and the publication of his miscellaneous essays gives a fair opportunity for expressing our estimate of a writer who has exerted considerable and deserved influence over English opinion. Mr. Greg's turn of mind led him to oppose many of the prevailing ideals and opinions of his day; and an author who took up the attitude of Cassandra no doubt thought that his forte lay in the originality of his speculations. But this was not so. Mr. Greg's intellect, though acute and vigorous, was preëminently wanting in freshness and versatility. He had not a touch of that talent, traceable in every line of Bagehot, which enables a theorist to put well-worn truths in a new point of view. Hence he displays little skill in the analysis of character. The "Great Twin Brethren" is an elaborate comparison between Louis Napoleon and Mr. Disraeli, written some time before 1870. Every statement which it contains is true, and worth consideration. But the similarities in the career of the two distinguished adventurers on which Mr. Greg dwells are patent, and it is difficult to point out a sentence in which he throws a ray of light on the character of either the French Emperor or the English statesman. It is further apparent that "Cassandra" was in this case no prophet, and failed to perceive the singular incapacity for actual government which ultimately brought Louis Napoleon to the catastrophe of Sedan, and turned Lord Beaconsfield's last ministry into something little better than a splendid failure.

Nor, again, did Mr. Greg possess anything like the extensive knowledge or the capacity for sympathy which gave for a short time such commanding influence to the author of the 'Essay on Liberty.' We are convinced that Mr. Greg's natural powers were in some respects considerably greater than John Mill's; but it is perfectly clear that Mill tried (sometimes not very successfully) to gain a width of view which Mr. Greg neither aimed at nor, we may suppose, wished to obtain. Though, again, no man tried more earnestly to conduct controversy in a fair and candid spirit, Mr. Greg betrayed in all his utterances on political or social subjects an unmistakable bias. He was intentionally a fair advocate, but the spirit of judicial calmness which pervades the writings of such a man as Thirlwall is quite alien to the trenchant, forcible polemics of an author who, not by interest but by force of position and natural bent of mind, was "retained" through life as the representative of capitalists. Whatever the form or the title of Mr. Greg's political writings, he in fact always wrote from the point of view of a manufacturer. It were the grossest injustice to compare Mr. Greg to Gradgrind or Bounderby, but it is not unjust to say that he saw with the utmost clearness just those points in the position and the aspirations of artisans on which men like Gradgrind and Bounderby delighted to dwell. The ignorance, the gullibility, the perversity of workingmen were never really out of his thoughts. All his writings might have been dated from Coketown, and his views (as, for instance, when he identifies the whole body of artisans with the admirers of Dr. Kenealy) were not a little distorted by the smoke of the factory.

But the limitation, and even the distortion, of Mr. Greg's outlook on life were not wholly a loss either to himself or to his readers. He gained as a controversialist by the honest dogmatism which enabled him to put forth without hesitation and with perfect sincerity the strong points of the case which he undertook to argue. Moreover, just because he was not haunted by that desire to sympathize even with opponents which is the disease of many modern thinkers, he was able to see with extraordinary clearness the one side of any question on which his attention was fixed. Any person inclined to make an idol of the intelligent artisan was certain to benefit greatly from a study of Mr. Greg's works. There an enthusiast would learn that English operatives had, to say the least, their fair share of original sin as well as a good number of acquired vices of their own, and that any scheme of policy based on the notion of uneducated Englishmen being by some mysterious law of Providence more virtuous, more wise, and more just than their educated countrymen, rested on delusion, and was, therefore, doomed to failure. This lesson is, one might think, a very simple and obvious one, but it was a lesson which at different periods of Mr. Greg's life, and notably in 1866 and 1867, needed to be forced home on the attention of reformers. If ever there was a man created to impress this lesson upon the apathy and the ignorance of the public, this man was Mr. Greg. He was clearly one of those natures that delight in conflict; he felt it his duty to challenge all the loose thinkers and wordy sentimentalists of the day to combat, and, this duty being to him a pleasure, he performed it with untiring vigor and unceasing zest. To say that he always came off successful in the fray would be a good deal more than is true, but in isolated encounters he constantly had the best of his adversaries; and if he not unfrequently failed of achieving that complete victory which was to be expected from his logical prowess, his failure arose from the provoking fact, which keen and honest logicians find one of the most surprising of phenomena, that lax thinkers and enthusiastic sentimentalists do occasionally, by irregular, and therefore reprehensible, intellectual methods, get hold of truths which have escaped the attention of men of sense. Mr. Greg, unless we are greatly mistaken, throughout the war of Secession held with the South. There is no doubt that he had, like hundreds of other acute and, as far as intention went, fair-minded Englishmen, an ample store of reasons for his belief that Jefferson Davis had made the South into a nation, and into a nation which could not be conquered. General Grant's armies supplied a practical confutation of Mr. Greg's theories, and proved, not exactly by methods of logic, that the sympathies rather than the reasons of English democrats and English artisans had led them nearer to the truth than thoughtful politicians.

This is not the only occasion on which Mr. Greg's political forecasts were not verified by events. To say this is, however, not really to detract greatly from his essential merits. Cassandra, we may be sure, was, in spite of tradition, quite as often wrong in her predictions as right. Tradition, nevertheless, has recorded only her successful prophecies, and tradition has dealt fairly and discreetly in the matter. A teacher is to be remembered not by the errors which he shares with thousands, but by the merits which are his own; and those who, like ourselves, see, as they think, clearly enough the restrictions of Mr. Greg's genius, are the more bound amply to acknowledge his sterling and conspicuous intellectual and, one may say, moral virtues as a controversialist. His strength lay in two characteristics: he never attempted to win his case by any other force than by the strength of his argument. Sarcasm, irony, humorous exaggeration, all the hundred modes of appealing to men's feelings rather than to their understandings, which have been employed profusely by authors as different as Carlyle, Matthew Arnold, and Newman, were utterly foreign to Mr. Greg's manner of dealing with his subject and with his readers. He might be, and in our judgment he was, greatly influenced in forming his opinions by a bias against modes of thought and feeling alien to his own; but he invariably defended his views by means of strict, careful argument. He placed before his readers the precise proposition which he intended to maintain, and then stated as clearly and tersely as he could the grounds on which he held it to be maintainable. This habit of direct, fair discussion had the immense advantage that it always forced even those who were not convinced by Mr. Greg's reasoning to reconsider carefully the grounds of their own dissent from it. He possessed, further, a rare capacity for discriminating between the different degrees in which his arguments carried satisfaction to his own mind. He could distinguish, and make it clear to his readers that he distinguished, between conclusions which he held to be certain, and those inferences which he believed to have in their favor but a slight amount of probability. In all spheres of inquiry the qualities possessed by Mr. Greg are of value, but they are of most value when applied to questions of religion or of theology, for these are the questions to which most men are specially prone to apply lax, incoherent, inconclusive modes of reasoning. Among all the writers who during the last thirty years have taken part in the theological discussions of the day, it would be scarcely possible to point to any single author except Mr. Greg who has not attempted to back up his theological or his anti-theological convictions by an appeal to feeling, to rhetoric, or to passion.

Moreover, by a piece of happy good fortune, Mr. Greg got rid of more than half his natural prejudices when he entered on that very field of inquiry in which ordinary thinkers find themselves most hampered by the distorting influence of a religious or a sceptical bias. The follies of the workingman, the false economy and the practical injustice of trades-unionists, have no connection whatever with speculations as to the immortality of the soul or the truth of the resurrection. Mr. Greg could discuss such topics with perfect calmness because he could, when thus engaged, dismiss from his mind all recollections of strikes and lock-outs. The result is that, though he was obviously deficient in religious or poetical imagination, though he could not pretend to be an accomplished theologian or a well-trained historian, he produced essays on topics of what may be fairly called divinity which every intelligent person can read with interest and profit. Their interest lies in the light which these perfectly calm and very sensible speculations concerning the "Enigmas of Life" throw upon opinions of candid laymen who are not tied down to belief in any special theological dogmas, and yet are not, and do not pretend to be, enthusiastic devotees of any form of agnosticism. One may fairly infer from the tone of Mr. Greg's views that he, and hundreds of English laymen with him, have become profoundly sceptical as to all the supernatural elements of the received creeds, and we may also infer that Mr. Greg (and in this we are well assured he represents an immense number of men who never give printed utterance to their opinions) was not, in the proper sense of the word, a convinced disbeliever in theology. He, clearly enough, did not look with any fervent hope on any of the different forms of positivism and humanitarianism, and felt as keenly as any orthodox apologist the weakness of a host of current sceptical arguments.

The value, as contrasted with the interest, of his theories on matters of religion consists mainly in their impressing on every one who studies his works the absolute necessity of placing clearly before one's mind the exact nature and limits of every problem which one wishes to solve. A student, for example, who reads the article on "The Prophetic Element in the Gospels" will not, in point of information, learn much which is not well known to every educated man. Such a student will not find, in our judgment, any lasting satisfaction in the suggestion thrown out by Mr. Greg as an explanation of the early belief in the fact of Christ's resurrection. But any careful reader will learn from his mode of treating the alleged prophecies of Christ what is the precise point at issue between Mr. Greg and his opponent, Mr. R. H. Hutton. Such a reader will also see what are the admissions which two fair disputants respectively feel themselves called upon to make, and may hence, by a little effort of thought, not only understand the nature and the limits of the matter in controversy, but also form for himself a fair conception of the considerations by reference to which the point in dispute ought to be decided. Mr. Greg has other merits on which, did space allow, we should be glad to dwell; but it is no small tribute that we pay to an habitual controversialist when we assert, as we do with great confidence, that the result of his labors has been to induce thousands of his countrymen to examine the burning questions of religion with the calmness, the fairness, and the good sense which most persons find it far easier to bring to the consideration of political or social problems than to the solution of theological perplexities.

NAPOLEON BONAPARTE.—II.

Memoirs of Count Miot de Melito, 1788–1815. Edited by General Fleischmann. From the French, by Mrs. Cashel Hoey and Mr. John Lillie. 2 vols. London: Sampson Low & Co.; New York: Chas. Scribner's Sons. 1881.

"'WHAT I have accomplished hitherto,' he said to his brothers and to a few general officers with whom he was on familiar terms, 'is nothing. There will be no repose for Europe until she is under one only head—an Emperor whose subalterns should be kings, who should distribute kingdoms among his lieutenants, making of one the King of Italy, giving Bavaria to another, raising a third to be Landamman of Switzerland, and a fourth to be Stadtholder of Holland, while all of them should hold places in the Imperial Household, with titles of Grand Cup-bearer, Grand Butler, Grand Equerry, Grand Huntsman, etc. It may be said that this plan would be an imitation of the empire of Germany, and that the idea is not a new one; but there is nothing absolutely new; political institutions do but revolve in a circle, and it is often necessary to return to what has been done before.'"

But what Napoleon failed to see, until it was too late to recede from his policy, was that the symbols and phrases he was prepared to use might not be adapted to cheat the imaginations of fools all over the world, and that the knaves whom he used as his instruments need not of necessity perceive that their interests were identical with his own. The invasion of Spain revealed that in his scheme of a European empire he had paid no heed to either of these considerations, and the consequence of the omission was his own overthrow.

The better part of Count Miot de Melito's second volume is taken up with a narrative of the events in Spain from the surrender of General Dupont's army at Baylen until the final expulsion of the French. The Count was the intimate friend and adviser of Napoleon's brother Joseph through all those stormy years, and his history shows that the most efficient ally which Wellington and the Spaniards had in effecting the expulsion of the French invaders was the gigantic selfishness of Napoleon himself. He could not endure that his tools should conceit themselves to be aught but the merest tools, and the better to keep them in their places he so broke up and divided the executive power that unity of action became impossible. King Joseph was titular King of Spain, but he had no authority over the troops who were supposed to be upholding his authority. The French marshals corresponded directly with Napoleon—nay, in order still further to guard against the possibility of encroachments on the fulness of his own supremacy, each marshal, with the troops under him, was declared independent of every other, and the range of his military operations limited to a particular province. Thus there was an Army of Portugal, an Army of the South, an Army of Catalonia, which not only did not, but were forbidden by their instructions to act in unison against the common enemy. The position of King Joseph himself was fraught with such unceasing and bitter humiliation that the wonder is that a man should have existed so destitute of dignity and self-respect as to be capable of enduring it. According to Count Miot de Melito, Joseph Bonaparte was a man of mild and amiable disposition, sincerely attached to those principles of equality and political liberty which had been proclaimed at the opening of the French Revolution, and in accepting the Spanish crown it was his desire and intention to establish himself in the hearts of his new subjects, and reign as a constitutional sovereign. Napoleon, of course, had far other ideas. He heaped scorn upon the notion that Joseph, as King of Spain, had any duties or any rights except to obey the orders of the Emperor, and live sumptuously in a palace at Madrid. The Emperor had conferred the right upon the understanding that the corresponding duty should be punctually performed. The following is the Count's picture of the situation of this miserable King, as he followed the march of his imperious brother to Madrid to avenge the defeat and capitulation of Baylen:

"As we approached Burgos, we crossed the field of battle on which the engagement of the 10th had taken place—it was covered with the bodies of the slain. A melancholy spectacle! yet it did not impress me so painfully as the appearance of the town when we entered it. Almost all the houses were deserted and plundered; the furniture was broken up and the fragments lay in the mud; one part of the town on the other side of the Arlanzon was in flames; a brutal soldiery were breaking doors and windows, and smashing everything that came in their way, consuming little and destroying much. The churches were sacked; the streets were choked with the dead and the dying; in fact, we witnessed all the horrors of an assault, although the town had made no defence! . . . We remained a fortnight at Burgos, and during our

stay I had time to become sick of horrors. We may date from this period the manifest moral change which took place in the French army. The resolution of abandoning the villages, and even the towns, to which the inhabitants had come, had resulted in the impossibility of procuring any regular supplies for the army, and the soldiers, thrown upon their own resources for the necessaries of life, were no longer under any restraint. They would no longer do anything but fight and plunder; military discipline vanished, and the Emperor, who witnessed all this disorder, being unable to command the daily distribution of rations, was obliged to tolerate it. I saw a bivouac fire kept up all night under the very windows of the Archbishop's house, where the Emperor was lodging, by burning musical instruments and articles of furniture taken from the houses. King Joseph remonstrated, but his interference was ill received, and the pain with which he witnessed such treatment under his own eyes of one of the most important towns of the kingdom that he was supposed to govern, gravely affected his health. . . . It was evident that he (Napoleon) would leave on the throne only the mere shadow of a King. And in fact, as soon as he had put his foot on Spanish territory, all other authority but his own ceased to exist among the French, and that of the King, feeble enough hitherto, completely disappeared. . . . (Napoleon) dispensed with even the simplest civilities, and neither permitted him to share in the command, nor to partake in the renown of the military achievements. The King was reduced to following in the track of the headquarters. He would have even gone without an escort, if his Guards, the only regiment at his command, had not defended him against the bands that gathered on the rear of the French troops as soon as they passed by."

It was in vain that Count Miot de Melito earnestly and repeatedly entreated his friend and patron to relinquish an illusive title which brought him nothing but insult and humiliation. Even "the semblance of a kingly crown" exercised so powerful a fascination over the mind of Joseph that he tamely endured to be insulted and trampled upon by his brother rather than relinquish it. It was this meanness of disposition in the men who surrounded him which seemed to justify Napoleon's contempt for humanity, while it increased almost to insanity his belief in the power of his own will. At Madrid, probably for the first time in his life, he discovered that there were moral forces in the nature of man which his methods could not reach, and far less subdue.

"None came to meet the French, none sought to propitiate their new masters by attention to the generals and officers. Even curiosity seemed to have lost its power. For several days no women appeared in the streets; none even could be seen at the windows. The theatres were reopened by order of the French Government, but no Spaniards attended the performances. At the houses in which the soldiers were quartered, everything they required was either given them, or they were suffered to take it, but nothing was offered, and the masters of the house avoided as far as possible all contact with their guests. Never did the inflexible Castilian character display more obstinacy, and never was the greatest misfortune that can happen to a capital city, that of falling into the power of the enemy, borne with more of dignity and pride. . . . In vain did the Emperor try to change the public mind by using the means that had succeeded elsewhere. He had flattered himself that his famous name, and the desire to behold so extraordinary a man, would have attracted the populace to him; that the road from Madrid to Chamartin would be thronged with a curious multitude, and that he would be watched and followed. Nothing of the kind occurred. He passed through the town to visit the palace of the Kings of Spain; no one followed or even stayed to look at him on his way. He held a grand review of the army on the plain between Chamartin and Madrid. It had been announced two days beforehand in the hope that some of the inhabitants of the town would be attracted by curiosity, and that he should receive some kind of homage from them. In this also he was disappointed: the review took place, but there was not a single Spaniard present."

But Napoleon dared not withdraw from an untenable position, lest he should weaken in France itself the belief in the felicity of his fortune on which his authority was founded. As little did he care to concede either to his brother Joseph or to any of his marshals such a measure of independent power as was absolutely essential in the circumstances, but which might ultimately have been used against himself. He adopted the middle course of quartering a portion of his vast armies upon the Spanish people, without even making an attempt to govern the country, and thereby kept as it were at fever heat, through the entire area of the peninsula, the national hatred against the French. When the demands of the Russian expedition made it impossible for him to fill up the gaps in his Spanish armies occasioned by their battles with the English, by disease, hardships, and the incessant losses caused by the guerrilla warfare, the beginning of the end was manifestly at hand. When the utter annihilation of the Grand Army during the retreat from Moscow compelled him to withdraw, in large numbers, the best of his soldiers from Spain, the end was no longer doubtful. But it was accelerated by the divided counsels and the quarrels among his generals, which made the headquarters of King Joseph a scene of mere anarchy. Up to the very night before the battle of Vitoria the leaders of the French army were unable to decide whether they would fight or whether they would retire; and in case of an unsuccessful battle, no measures were taken to clear the direct road to France, or to reconnoitre and ascertain the nature of any alternative route. The battle of Vitoria was, in consequence, fought in such a confused and haphazard fashion that 80,000 veteran French soldiers fled in irretrievable confusion before their losses in killed had amounted to 1,000 men. The road behind them being encumbered with heavy artillery, baggage-wagons, and all kinds of *impedimenta*, their artillery, ammunition, baggage, and treasure had all to be abandoned. The victors, so precipitate was the flight of the French army, succeeded in capturing only a very small number of prisoners. The Count, who was present with King Joseph at this the closing incident of the French invasion of Spain, gives a vivid narrative of the retreat from Vitoria:

"The battle was lost. It was then four o'clock in the afternoon. The King and Marshal Jourdan left the battle-field, and, bearing to the right toward Vitoria, without entering the town, reached the high road to France. Both the road and the plain that it crosses to the north of Vitoria were obstructed by the great park of artillery—men were busy spiking the guns—by a train of wagons and treasure-chests, containing several millions in specie, which had been left open for all; by the King's carriages, ready for starting; by those belonging to the generals and heads of the military administration, and by quantities of baggage of all kinds. In the midst of all this we discussed the direction in which we should retreat with our immense convoy. The advance made by the enemy on our right led us to fear that the road to France was already cut off, and we determined to take the road to Salvatierra. But where was it? Which was it? How were we to find it? Nobody among those about the King could point it out. . . . We only knew that Salvatierra was to the east of Vitoria, and no better guide was to be found than an inhabitant of the latter town who had been employed in the King's household, and who offered to conduct us. Just as we were setting out across the fields under his guidance, the enemy appeared on the left of the town, which had been left quite uncovered by the retreat of the Army of the South, and a strong party of hussars charged forward on the plain to the north of Vitoria. This unexpected attack terrified the crowd round the block of carriages, and they fled in all directions, seeking the road to France or that to Salvatierra. In a few moments dreadful confusion prevailed. The artillerymen cut the traces of the gun carriages; part of the troops left the ranks and sought safety in panic-stricken flight; one hundred and fourteen cannons, twenty-seven howitzers and their ammunition wagons, the treasure chest of the army, containing over twenty-five millions, that of the King, the fortunes amassed by generals, officers, and civilians, were all abandoned, and became the prey of the conqueror. I was close to the King, whom I had not left during the whole of that fatal day, when the rout began. He fled, like the rest, and was in danger of being taken by the English hussars. I saw a man struck by a bullet fall at his horse's feet. Fortunately for the King, his regiment of Light Horse Guards . . . now came up. General Jamin, its commander, drew up his men in battle order, charged the hussars, and drove them back. . . . Meanwhile, having taken by haphazard the right road to Salvatierra, we presently found ourselves among impassable marshes and deep ditches, where some persons were lost. . . . We entered the town, where we found a small French garrison, together. I was at supper with the King . . . when Marshal Jourdan arrived. As he came in he said: 'Well, you *would* have a battle, and now it is lost!' Then he sat down to table, shared our meagre repast, and nothing more was said on the subject."

The Count's 'Memoirs' extend to the final overthrow of the Emperor at Waterloo, and should be read by all interested in the occurrences of that stirring period.

FORNANDER'S POLYNESIAN RACE.

An Account of the Polynesian Race, its Origin and Migrations; and the Ancient History of the Hawaiian People to the Times of Kamehameha I. By Abraham Fornander, Circuit Judge of the Island of Maui, H. I. London: Trübner & Co. Vol. i., 1878. Vol. ii., 1880. 2 vols. 8vo. Pp. xvi.-247, vii.-399.

It was only as the extinction of the Polynesian race hastened toward completeness that its origin began to be adequately studied. Wilhelm Von Humboldt was the first to approach the question seriously from the philological point of view (in his 'Über die Kawi Sprache') and Bopp's work on the Malayo-Polynesian languages (1841) directed new attention to the question of origins. Neither of these scholars, however, had before him the linguistic and other data necessary for his researches; these data have been accumulated by more recent students, as Sir George Gray, Mr. Wallace, Taylor, A. H. Keane, Judge Fornander, and Adolf Bastian, whose collection of Polynesian myths has very recently appeared ('Die heilige Sage der Polynesier,' etc., Leipzig, 1881). The consensus of these researches is striking. The Malay theory of Bopp and his followers as regards the origin of the true Polynesian is now regarded as untenable, though it is based upon the common elements in the Malay and the Polynesian languages. Fornander, Bastian, and Keane agree that the large brown Polynesians are of Aryan descent; that, in the words of the latter (*Nature*, Nos. 583–586), they are "Caucasian in all essentials, and without a trace of Mongolian blood." Without committing ourselves to this conclusion, let us look briefly at the grounds upon which it is based.

As found in Judge Fornander's discussion, they may be classified as threefold—the ground of languages, of customs, and of tradition. His argument points to this conclusion, that the Polynesians are a branch put out from Aryan stock in its earlier days, long before the Vedic irruption in India. We should premise that the Polynesians are the inhabitants of the following groups: in the North Pacific, the Hawaiian islands; in the South Pacific, New Zealand, the outlying eastern portion of the Fiji group, the Lagoon or Ellice Islands, the Phœnix, the Tonga or Friendly, the Samoa or Navigators, the Harvey or Cook, the Manihiki, the Paumotu or Tuamotu, the Marquesas, and the Society groups, with some scattering islands, as Uvea, Rotuma, Vate, Nina, and Waihu or Easter Island, remarkable for its hundreds of gigantic stone statues, of unexplained origin. In all these groups and islands one language and race are found. Judge

Fornander seeks to trace the language, and those who speak it, to an Aryan source by the way of the Fiji Islands, and of a previous sojourn in the Indian Archipelago and in India. His argument may be resumed as follows:

1. "Were every other trace of a people's descent obliterated, the identity of the nomenclature of its places of abode with that of some other people would remain an evidence of the former habitats of the absorbed people." Thus the names of headlands, rivers, cities, villages in North and South America would often infallibly indicate the European descent of the people who bestowed them. Hawaii (Hawa-ii, Hawaiki="little Hawa"), takes us to *Jawa*, the second of the Sunda Islands; Oahu, to a tract of country in Borneo named *Ouahou;* Molokai, to *Morotay*, or *Moroty*, one of the Moluccas; Lehua, Lefuka, and Levuka, to *Labouk*, in Borneo; Bora-Bora and Polo-Pola, to *Pulo-Pora*, an island near Sumatra; Namuka, to *Namusa*, in the Moluccas; Puna, to *Puna*, the name of a mountain tribe in Borneo, and to a district and a river in India. Judge Fornander gives a considerable list of these derivations.

2. "Languages in their development pass from the simple to the complex, from monosyllables to polysyllables, from agglutinative to inflectional. Thus considered, the Polynesian language is one of the oldest on the earth. Its identity with the pre-Malay dialects still existing in Malaysia is established; and it is especially the older surviving form of a once common tongue." Whitney says of the Aryan pronominal roots that they were "of the simplest phonetic form; a vowel only, or a consonant with following vowel." That is an accurate definition of the present Polynesian syllabic elements. The vocal elements have a primitive fewness; the Hawaiian language is written with twelve letters, and has probably but about twenty distinct sounds. But most striking of all is the coincidence of Polynesian with Indo-European numerals. The words for one, *ka, ke, ta, te, ha, he*, "refer to a common origin with the Sanskrit *ka* and *sa*, the Greek τo, τη, ὸς, ἡ, the Gothic *tha*, the Latin *hi-c, hæ-c, ho-c.*" For two, the Malayo-Polynesian *lua, rua, dua, duo*, and the Indo-European *dui, due, duo, dau*, are often identical, and never much unlike; for three, the correspondence is not quite so palpable, though the radicals in both groups of languages are essential—the Polynesian *toru, tolu*, and the Indo-European *tri*. The number four corresponds in all the varieties of the two families of languages; the Indo-European *chat, quat, chit, tet, pet*, and *fid* are closely related to the *pat, fat, pa, fa*, and *ha* of the Polynesian and Malayan. Up to the number four the Indo-European and the Polynesian numerals are substantially the same; but now a significant break occurs. The Polynesian word for five is *lima*, and not *peng* or *pente*. *Lima* means also a hand, and it is a purely indigenous Polynesian word, appearing in none of the Indo-European languages. The quaternary system of counting was long retained in the former; it was not adopted in the latter. The conclusion is hard to resist that the Polynesian forefathers parted from the Aryans at a time when they, like the Australian aborigines of the present day, could not count further than four.

3. Traditions and Mythology. The Polynesian traditions are of a former habitat on some very large island or continent to the westward. "The universality of the tradition proves its antiquity. . . . In the Marquesas group, numerous expeditions have from time to time, till quite lately, been started in search of this traditional land of mystery and bliss, and their course was invariably to the westward." Their traditions of the creation and the fall of man, and of the flood, accord closely with those of the Hebrews. "In the Tongas and New Zealand they make reference to the killing of the younger by the older of the sons of the first man. The Hawaiian legend is fuller, and gives a completed genealogy of both the older and younger branches from the first man to the time of the flood. . . . The very names of the hero of the flood and of his wife *Nuu* and *Lili-noe*, point to the Hebrew or Arabic *Nuh* or *Noe*," and possibly, we may add, to the Hebrew Lilith, the name of Adam's first wife. In the legend of the flood there is conformity, even in details, to the Chaldee version of the legend: "such as the truce or respite of seven days before the flood should come; the fastening of the animals in couples, to be stowed away in the ark; the sending forth of the raven, or dark-colored bird at the first (instead of the dove, as in the Chaldee account); sacrifice offered before entering the ark, not referred to in Scripture," etc., etc. (See George Smith's 'Chaldean Account of Genesis,' p. 236.) Judge Fornander adds of the Polynesian legend: "I think it may justly be ranked as another independent version of that great cataclysm which at some remote period spread desolation over the present Mesopotamian basin." Many of these traditions are of great beauty, but we cannot here find room for them. In the Fiji group, "where many shreds of Polynesian folk-lore have been stowed away that have been forgotten elsewhere," there is a legend that "in former ages men built a vast tower, being eager for astronomic information, and especially anxious to decide the difficult question whether the moon was inhabited. To effect their purpose they cast up a high mound, and erected thereon a great building of timber. The tower had already risen far skyward, and the hopes of its builders seemed near fulfilment, when the lower fastenings suddenly broke asunder, and scattered the workmen over every part of Fiji." (Williams's 'Fiji,' p. 199.)

4. Upon the question of the physical resemblances between Polynesians and Caucasians we cannot dwell to advantage, graphic representations being, of course, necessary in evidence; but we may refer especially to the woodcuts reproduced from various sources in Mr. Keane's papers, already mentioned, as being very serviceable toward a conclusion. These illustrations make a sufficiently clear distinction between the three races into which Mr. Keane divides the Pacific Islanders as a whole: the "Caucasian," the Mongolian, and the dark (Negrito, Papuan, Austral). It will not be denied that the former group bears a resemblance to Europeans which cannot be traced in the latter; and this resemblance has a strong corroborative value in the argument, though it could not, in itself, be taken as a proof. Judge Fornander makes little account of the physical likeness, reminding us, indeed, that great dissimilarity of appearance may be found in peoples of known community of race. "What can be more dissimilar in appearance than the light-haired, blue-eyed, high-statured Scandinavian, and the black-haired, dark-eyed, low-statured Bas-Breton? And yet their community of race is now undisputed. Appearance may be the result of physical and local conditions and surroundings operating for ages in a given direction. . . . Something deeper, older, more expressive of the consanguinity of peoples I hold to be language." The argument from likeness, however, has been put in such shape by Mr. Keane as to become interesting. On this point we may refer the reader to the photographic album of the Berlin "Anthropologische Gesellschaft," in which many photographs of Polynesians can be compared with the European types in the same volume.

We have left ourselves little space to speak of the probable lines of migration from the "Aryan plain" to its present habitats of the Polynesian race. The following passages summarize Judge Fornander's views upon the subject:

"I think the facts collected will warrant the conclusion that the various branches of [the Polynesian] family, from New Zealand to the Hawaiian group, and from Easter Island to the outlying eastern portion of the Fiji archipelago, are descended from a people that was agnate to, but far older than, the Vedic family of the Aryan race; that it entered India before these Vedic Aryans; that there it underwent a mixture with the Dravidian race, which, as in the case of the Vedic Aryans themselves, has permanently affected its complexion; that there also, in greater or less degree, it became moulded to the Cushite-Arabian civilization of that time; that, whether driven out of India by force, or voluntarily leaving for colonizing purposes, it established itself in the Indian archipelago at an early period and spread itself from Sumatra to Timor and Luzon; that here the Cushite influence became paramount to such a degree as to completely engraft its own legends, myths, cult, and, partially, institutions, upon the folklore and customs of the Polynesians; that it was followed into this archipelago by Brahminised or Buddhist Aryo-Dravidians from the eastern coasts of Deccan, with a probably strong Burmah-Tibetan admixture, who, in their turn, but after protracted struggles, obtained the ascendancy and drove the Polynesians to the mountain ranges and the interior of the larger islands, or compelled them to leave them altogether; that no particular time can be assigned for leaving the Indian Archipelago and pushing into the Pacific—it may have occurred centuries before the present era, but was certainly not later than about the first century of it; that the diversity of features and complexion in the Polynesian family—the frequently broad forehead, Roman nose, light olive complexion, wavy and sometimes ruddy hair—attest as much its Aryan descent and Cushite connection, as its darker color, its spreading nostrils, and its black eyes attest its mixture with the Dravidian race; and, finally, that if the present Hindoo is a Vedic descendant, the Polynesian is *à fortiori* a Vedic ancestor."

Judge Fornander's second volume is devoted to research into the early history of the Hawaiian Islands, as deducible from tradition and ancient chants (*meles*), gathered in great part by the auth orduring his thirty-four years' residence in the Islands. The closing incident of the Polynesian history proper is that of the visits and of the death of Captain Cook. The account here given of it (pp. 157–200) is by far the best that has yet appeared; and from the fact that Judge Fornander has gathered up much local testimony to supplement that of the printed accounts, we may doubt whether a more complete and judicial history of "the episode of Lono" is likely to be produced. This volume contains many Polynesian chants and traditions, most of them hitherto unpublished, and collected by Judge Fornander himself, who has added extremely careful and faithful translations in every case. The Polynesian proof-reading is remarkably good, better even than the English, though the book was printed ten thousand miles from the author; the only erratum of this sort that we have noticed is in a Fijian name, *Veuua* for *Venua*. A serious, we might say calamitous, fault in this book is one for which, under the circumstances, we must hold the publishers responsible: it is the total absence from it of index, contents, chapters, subject-divisions, or even head-lines. The usefulness of the work is of course materially diminished by this inexcusable remissness. But the abundance, richness, and variety of its contents make it a contribution of the highest value to Polynesian studies; and it is to be hoped that the author will follow it, as he intimates in his second preface, with the comparative glossary of Polynesian and Aryan dialects upon which he is now laboring.

McCLELLAN AND POPE.

The Peninsula. By Alexander S. Webb.

The Army Under Pope. By John C. Ropes. [Campaigns of the Civil War.] New York: Charles Scribner's Sons. 1881.

THE summer of 1862 may well be considered the darkest period of the Rebellion. In the spring the President keenly sympathized with the popular demand for vigorous, energetic movements against the enemy; and his instincts plainly told him that such movements were perfectly feasible, though his distrust of his own opinions about purely military affairs made him hesitate to relieve the man who had created the Army of the Potomac almost from nothing, and who yet seemed so reluctant to bring it into actual use. How intensely Lincoln felt the necessity of active operations is shown by these few words which, from the fulness of his heart, he wrote on the back of one of Halleck's letters from the West: "The within is a copy of a letter just received from General Halleck. It is exceedingly discouraging. As everywhere else, nothing can be done." Finally, however, the Army of the Potomac did get off, the President, on certain conditions, waiving his own judgment, which was against the advisability of the plan selected. Hardly had it started before he had reason to believe that one of the conditions which he considered of vital importance had not been complied with, and he interposed his authority to withdraw enough of McClellan's army to insure compliance. The Peninsular campaign went slowly along, ending in a retreat to the James River, and further calls for reinforcements. The President, meanwhile, had summoned two officers from the West, where more progress had been made, and had given them control in front of Washington in the hope of achieving something positive. But the summer ended with all the Eastern armies defeated and crowded in a confused mass around the fortifications of Washington, and the high officers openly accusing each other of treachery and treason. The history of these events is presented in the third and fourth volumes of the series of "Campaigns of the Civil War," and it is presented in a manner greatly in contrast to nearly all previous discussions of the same subject. With the exception of the papers of the Massachusetts Historical Society (noticed in No. 845 of the *Nation*), we can hardly recall a book about McClellan's or Pope's campaigns which does not bear the strongest evidence of having been written to justify certain prejudices for or against these officers. In the two books now under consideration it is impossible to find a particle of this prejudice in either direction; and if to this we add that they show careful research and thorough knowledge of the facts, combined with intelligent criticism, we do not know that any higher praise can be given.

A very considerable portion of General Webb's book is taken up with discussing the relations between the Administration and McClellan, and, in fact, this was the most important feature of the campaign. For although many bloody battles were fought in it with great gallantry, yet in no one of them does McClellan appear as an important factor; the battles were fought by the corps commanders, most of them on the defensive, and all of them without any definite plan. McClellan's mind was constantly busy with other matters, and the most important among these, as shown by his own despatches, were the relations between himself and the authorities at Washington. These relations were of the most anomalous character. The Administration had lost faith in McClellan, and withheld part of his troops, yet, still hoping that he might accomplish something in the field, it did not relieve him. For this lack of faith McClellan was himself responsible; his "delay was protracted too long, even for a patient people"; "he drew too heavily upon the faith of the public," and he made no effort to put himself in sympathy with the Administration.

The result of the Peninsular campaign was "a lamentable failure—nothing less," and the historian of it must necessarily seek to fix the responsibility of that failure. First of all General Webb finds that Norfolk should have been taken during the winter, and then there would have been no *Merrimac;* next, at Yorktown, there was a complete misunderstanding as to the part to be performed by the Navy, and McClellan "expected more than the Government could promise or the Navy accomplish"; at the same time it was a great mistake of the Administration to retain McDowell's corps; but even with the troops McClellan had, more than three times those of the Rebels, his operations were of the most feeble and impotent character. At Williamsburg was "a battle fought without a plan, with inadequate numbers, and at a serious sacrifice without compensating results." After the battle "the promise of a rapid pursuit failed of being made good." Arrived in front of Richmond, McClellan's "promising advance received an unexpected repulse" at Fair Oaks. For nearly a month afterward he lay idle on both sides of the Chickahominy—his inaction being partly due to bad weather—believing that the enemy had double his own force, though in reality the enemy was inferior to him; when suddenly Lee and Jackson began "executing a scheme which was to put an entirely new face upon the situation." By this scheme the Army of the Potomac was thrown upon the defensive, and although numbering 92,500 against 80,762 of the Rebels, it was forced to defend itself in retreat to the James River; and there the campaign ended.

With the lapse of time, and the disappearance of McClellan as a political element, his status in history is gradually becoming fixed, and this book takes the historical, as distinguished from the partisan, view of his career on the Peninsula. Some portion of the blame of his failure must undoubtedly be laid upon the Administration; the rest of the blame lies with himself, because he did not possess the qualities requisite to "obtain from his army the best service of which it was capable"; because, in short, he was not a great commander.

Mr. Ropes's book is the history of another failure, a failure due not to lack of confidence on the part of the Administration, but to bad generalship in the field, aided by the inefficiency of the commander-in-chief. It opens with an admirable summary of the situation of affairs in July, 1862; reciting the causes on which the Administration founded its distrust of McClellan, and showing how this distrust had resulted in dividing the Eastern army into four portions. When this error became evident, three of these detachments were then united into one army under Pope. As to McClellan, after he had reached the James River, the political situation did not permit his removal, but the breach was too wide for him to be relied on as the chief general. It was therefore thought that his "army might be removed to northern Virginia; portions of it might from time to time be incorporated in the army under General Pope, and if that officer made a successful campaign, the difficulty as to McClellan would settle itself."

This distracted condition of the Union Army gave Lee an opportunity which he was not slow to profit by. The moment Pope began to advance toward Gordonsville, and two weeks before the withdrawal of McClellan's army had been ordered, Lee sent Jackson to defend the railroad at that point; and as soon as McClellan began to withdraw he hastened to join Jackson with all his force in the hope of overwhelming Pope before McClellan's troops could come to his relief. The political necessities of the North had forced it into a thoroughly false military position, and Lee, with true military instinct, grasped the opportunity thus given him. The battle of Cedar Mountain, in the author's opinion, was fought in consequence of a mistake of Banks as to his instructions; there was no necessity for it, and it accomplished nothing. The following movements of Pope on the Rappahannock were judicious. But when Jackson's daring flank march had brought him to the railroad in Pope's rear on the night of August 26, the crisis of the campaign had arrived. At this critical moment and throughout the next four days Pope completely misjudged the movements and intentions of the enemy; his orders were entirely inapplicable to the actual state of affairs, and they resulted in his utter defeat after a series of battles lasting for three days. This is a brief outline of the author's account of this campaign; it seems to us in every way just, and it leaves the question of Porter's action where it properly belongs—*i. e.*, as a matter of secondary importance. The campaign was lost because Porter withdrew McDowell and Sigel from the vicinity of Thoroughfare Gap, and thus made possible the junction of Longstreet and Jackson, instead of holding that point at all hazards and crushing Jackson before the rest of Lee's army could come up.

The action of Fitz-John Porter, though, as we have said, a secondary matter in the sense that the issue of the campaign depended on other causes, was of course a matter of considerable importance, and much space is given up to the discussion of it. His orders were conflicting, vague, and evidently based on a misapprehension of the real condition of affairs. In this trying situation the author concludes that Porter endeavored to do his whole duty—a somewhat different verdict from the dictum of the Schofield Board, that Porter exercised a proper discretion to disobey the orders of his commanding general, and thereby saved the army from complete disaster on the 29th of August. Neither of these is likely to be the last word on Porter's case, though, in the light of facts now known, every one must be convinced that he was guilty of no such shameful charges as those on which he was tried, and that his inaction has brought upon him a wholly excessive punishment.

In reading this book we cannot but congratulate the publishers upon their success in securing Mr. Ropes to write the history of this campaign, and we cannot but hope that Mr. Ropes will write of other campaigns with which his studies have made him familiar. Although he has seen no military service, he has every qualification for a military writer—an admirable military judgment, a clear and attractive style, a good sense of perspective, a thorough knowledge of the facts, and a mind unclouded by any of the prejudices of the war period.

The series, as a whole, judging by the four volumes now published, will unquestionably form a most valuable and trustworthy history of the principal military operations of the war.

Young Folks' History of Russia. By Nathan Haskell Dole, translator and editor of 'Rambaud's Popular History of Russia.' Illustrated by more than one hundred engravings. Boston: Estes & Lauriat. 1881. Small 8vo, pp. 520.

MR. DOLE has an excellent power of telling stories, and has made a history of Russia which is interesting from beginning to end. It is perhaps

no fault of his own that he loses his way in the intricacies of what he calls "Russia of the Princes"—the period between Yaroslav (1054) and the Mongol conquest (1238). We think, however, that his failure in this confused period is mainly due to two faults of his own: he nowhere states clearly what were the rival principalities of the house of Rurik, and he is led by his desire of completeness to crowd his pages with unimportant names and events. He has given two valuable maps, one ethnographical, the other showing the successive acquisitions of territory; but he has strangely enough provided no map to illustrate historical events.

In one feature the book deserves high commendation—the text is almost free from dates, but these are given copiously in the margin, and these marginal notes are not merely a guide to the text, but often contain bits of desirable information additional to that in the text; as (p. 333) where a picture of the great bell "Tsar Kolokol" is accompanied by a statement of its size and weight. We do not think anything is gained by translating the names, and speaking of Yaroslav as "Fiery Fame," and Sviatopolk as "Holy Host"; it gives a sort of grotesque incongruity to have these names side by side with Vladimir, Boris, and Olga. We wish Mr. Dole had been as careful to translate his dimensions. What will it mean to an American boy to read (p. 126) that the Tartars came within one hundred *kilometres* of Novgorod, or (p. 333) that the great bell weighs 130,634 kilos? On page 101 Henry III. should be Henry I.; and on page 128, Silicia should be Silesia. The illustrations are numerous and well engraved; some of them a little far-fetched, but nearly all really illustrative. Mazeppa is of course mentioned in the text, but only his historical career; the young reader therefore—who can hardly be expected to be familiar with Byron's poem—will be astonished to find him represented as fastened naked to the back of a horse, as if this was his usual attitude in leading his troops.

Supplement to the Revised Statutes of the United States, embracing the Statutes, general and permanent in their nature, passed after the Revised Statutes; with references connecting provisions on the same subject, explanatory notes, citations of judicial decisions, and a general index. Volume i. Legislation of 1874–1881, the Forty-third, Forty-fourth, Forty-fifth, and Forty-sixth Congresses. Prepared and edited by William A. Richardson, one of the Judges of the Court of Claims. Washington: Government Printing Office. 1881.

THERE are two editions of the Revised Statutes of the United States, the first printed in 1875, the second in 1878; but the latter does not include the great mass of general laws enacted between the publication of the two; so that the Revised Statutes, without this Supplement, do little more than bring the laws down to December, 1873. The title of the work indicates its contents and, what we have just said, its extreme importance—indeed, its necessity—to lawyers and judges throughout the country. It was prepared and edited by Judge Richardson, under a joint resolution of Congress, and the name of the editor is a guarantee of the painstaking accuracy and faithfulness of the manner in which his work has been done. In its passage through Congress it received the sanction and approval of the Senate Committee on the Revision of the Law, comprising a number of well-known lawyers. This committee reported, with regard to the notes and references, which number several thousand, that they are "the result of annotations made by the editor from time to time during a series of years for his own use, with great care and often with much research, in which he has had the benefit of more than twenty years' experience in such kind of work." It should be added that no attempt has been made by Judge Richardson to improve on the language of the Statutes compiled; the volume is a reproduction of the existing laws in the language of their enactment, and in chronological order.

BOOKS OF THE WEEK.

Alcott, Louisa M. Moods: a Novel. Boston: Roberts Bros. $1 50.
Arsiesis, and Other Poems. New York: G. P. Putnam's Sons. $1 25.
Avery, I. W. History of the State of Georgia, from 1850 to 1881. New York: Brown & Derby. $4 50.

NOTICE.—THE NATIONAL Union Bank of New London, located at New London, in the State of Connecticut, is closing up its affairs. All noteholders and other creditors of said Association are therefore hereby notified to present the notes and other claims against the Association for payment. L. C. LEARNED, Cashier.

Dated January 17, 1882.

No. 20 NASSAU STREET, NEW YORK, Jan. 21, 1882.

THE FIFTH INSTALMENT of Twenty (20) Per Cent. of the second subscription to the Purchasing Syndicate will be due and payable Feb. 1, 1882, at my office. Checks should be to the order of H. Villard, certified, and accompanied by the original receipt.

HENRY VILLARD.

NOTICE.

By a vote of its Shareholders the First National Bank of Lisbon, State of Iowa, taken the first day of November, 1881, has resolved to go into voluntary liquidation. Notice is hereby given the holders of its notes and all other creditors to present the notes and other claims against the said Bank for payment.

Dated November 1, 1881.

By order of the Board of Directors.

HARRISON STUCKSLAGER, President.

THE REPRESENTATIVE

European Art Journals

L'ART.

Revue Hebdomadaire Illustrée. Handsomely printed on heavy toned paper, and illustrated with several hundred engravings on wood from drawings and pictures by celebrated contemporary artists, examples of antique and modern sculpture, objects of Art Industry in all branches, and a series of superbly executed etchings by the best living etchers, executed expressly for this work; being principally from the more noticeable pictures exhibited in the salons of Europe. Published quarterly, in folio volumes. In paper cover, $32 per annum; or in cloth, gilt top, $40. Payable on delivery of each vol.

ÉDITION DE LUXE.

Another Edition, printed throughout on heavy, Holland paper, in the most careful manner. The etchings in two states, Artist proof on Japan paper, and ordinary print on Holland paper. The edition is strictly limited to one hundred copies, numbered. Forming four thick vols., folio. Per annum, price $125.

[From the *Critic.*]

"We are far from holding that *L'Art* is an ideal art-weekly; but at present there is none other so full, so handsome, so discriminate, and so generally fair, to be had. If a better art journal exists, we have yet to know of it."

[From the *Art Amateur.*]

"It comes to hand too late for detailed notice; but we may say that it is not below the high standard of this important publication, which we have more than once expressed the opinion is unequalled in the realm of periodical art-literature. The etchings, as a collection of three months, are of unapproachable excellence; the illustrations in the text—mostly reproductions in fac-simile of the drawings of artists—are often roughly executed, but always with power; and the numerous examples of what is best in old and modern industrial art, makes each volume of great value to the designer and art-worker."

THE PORT...

An Artistic Periodical, edited by Philip G... Hamerton. Now in its twelfth year. Illustrated with etchings, autotypes, woodcuts, fac-similes, engravings, heliogravures, etc. Published monthly. $10 per annum; $7 50 per annum mailed direct from London.

[From the *Nation.*]

"Among a number of worthy artistic journals, the *Portfolio*, edited by Mr. Hamerton, is still the best issued in our language. The editor is the first who has written in English with absolute dispassionateness and competent appreciation when the claims of English and Continental art were to be pitted together; and he has employed etchers without living superiors to furnish the plates which form so exquisite a cabinet in the collected numbers."

THE ETCHER.

A Magazine containing the Original Etched-Work of Artists, accompanied by descriptive letterpress. Published monthly. Imperial 4to, price $12 per annum.

This magazine has been instituted for the purpose of offering to lovers of art an opportunity of indulging in the acquisition of some of the best productions of the etching-needle at a moderate cost, and the works of many well-known etchers have already appeared in this publication, including Robert W. Macbeth, Edwin Edwards, J. P. Heseltine, C. P. Slocombe, R. S. Chattock, Axel Herman Haig, Arthur Evershed, Anna Lea Merritt, E. L. Montefiore, W. H. Urwick, C. J. Watson, C. N. Storm Vans' Gravesande, and many others.

ENGLISH ETCHINGS.

A Monthly Publication of Original Etchings by English Artists. Each number illustrated with four superb examples. $15 per annum.

L'ART DE LA MODE.

Revue Mensuelle de l'Élégance. Handsomely printed on heavy paper, illustrated with a great profusion of woodcuts from special designs, and four full-page plates in colors, exhibiting the costumes of the day, together with the examples of other periods. Text by the best writers of the day. Issued monthly. Subscription, post-paid, per annum, $19. The numbers sent by mail are carefully protected from injury. Specimen numbers sent on receipt of $1 65. The yearly issues form two superb volumes. Royal folio, with titles, false-titles, indexes, etc., and a great number of superb illustrations in black and in colors.

Macmillan & Co.'s

NEW PUBLICATIONS.

John Inglesant:

A Romance. New edition. 2 vols. 12mo, $3 50.

"One of the most remarkable books, not only of the season, but of a good many seasons. It contains a series of most effective historic pictures, shows a wide knowledge and real appreciation of matters of old times which are left out of sight in the bald crudity of standard histories, and finally is composed with a certain grave and beautiful music of style, which in not a few places is on a level with George Sand herself."—*Pall Mall Gazette.*

"'John Inglesant' is probably the best-written novel which has issued from the press for some years."—*London Daily News.*

"I have read his story, which is told in excellent English, with a good deal of interest; and to all who are inclined to look with favor on what is uncommon and odd and personal in literature I can confidently recommend the book."—*Truth.*

The Revelation of the Risen Lord.

By Brooke Foss Westcott, D.D., D.C.L., Regius Professor of Divinity, Cambridge, etc., etc. 12mo, $1 75.

MACMILLAN'S POPULAR NOVELS.

EACH ONE DOLLAR.

Hogan, M.P.

A Novel. By the author of 'The Hon. Miss Ferrard,' etc., etc. 12mo, $1.

"Full of suggestive pictures of Irish society and Irish politics. . . . No other book of the time presents in so vivid and interesting a fashion the curious jealousies, the eccentricities of life and character caused by the mingling in politics and society in Ireland of the Protestant and Roman Catholic elements."—*New York Tribune.*

Hypatia;

Or, New Foes with an Old Face. By Charles Kingsley. 12mo, $1.

The English Citizen.

A Series of Short Books on his Rights and Responsibilities.

NOW READY:

CENTRAL GOVERNMENT. By H. D. Traill, D.C.L., late Fellow of St. John's College, Oxford. 12mo, $1.

"A handbook for the man of affairs who may have occasion to know how Her Majesty's Government is now administered."—*New York Tribune.*

"Perhaps we may best convey what we think of its merits by saying that if a foreigner came to us wishing to inform himself how England is really governed in the nineteenth century, Mr. Traill's book is the first we should put in his hands."—*Pall Mall Gazette.*

The Electorate and the Legislature.

By Spencer Walpole, author of 'The History of England from 1815.' 12mo, $1.

The Poor Law.

By Rev. T. W. Fowle, M.A. 12mo, $1.

MACMILLAN & CO.,
22 Bond Street, New York.

D. Appleton & Co.

Have just published:

I.

The Concepts and Theories of Modern Physics.

By J. B. Stallo. "International Scientific Series." 12mo, cloth, $1 75.

Judge Stallo's work is an inquiry into the validity of those mechanical conceptions of the universe which are now held as fundamental in physical science. He takes up the leading modern doctrines which are based upon this mechanical conception, such as the atomic constitution of matter, the kinetic theory of gases, the conservation of energy, the nebular hypothesis, and other views, to find how much stands upon solid empirical ground, and how much rests upon metaphysical speculation.

"Since the appearance of Dr. Draper's 'Religion and Science,' no book has been published in the country calculated to make so deep an impression on thoughtful and educated readers as this volume. . . . The range and minuteness of the author's learning, the acuteness of his reasoning, and the singular precision and clearness of his style, are qualities which very seldom have been jointly exhibited in a scientific treatise."—*N. Y. Sun.*

II.

The Principles of the Law:

An Examination of the Law of Personal Rights, to Discover the Principles of the Law, as Ascertained from the Practical Rules of the Law, and Harmonized with the Nature of Social Relations. By A. J. Willard. 8vo, cloth, price $2 50.

III.

Studies in the Life of Christ.

By the Rev. A. M. Fairbairn, D.D., Principal of Airedale College, Bradford, and author of 'Studies in the Philosophy of Religion and History.' 12mo, cloth, $1 75.

"These 'Studies in the Life of Christ' are not exhaustive and critical discussions on the Gospel History, but are simply attempts at orientation—at reaching points of view from which the life of Christ may be understood and construed. . . . The author sends the volume forth in the hope that it may help to make the Person it seeks to interpret more real, living, and lovable, to the men of to-day."—*From Preface.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 2, 1882.

The Week.

It has been an important week in the financial markets here and in Europe. The trouble which has been so long threatening in Paris culminated in the suspension, on Monday, of the Union Générale, the bank which was organized a few years ago under Roman Catholic influence, and which had sprung like a mushroom into an apparent prosperity that was wonderful; its capital stock having been twice doubled in three years, and its deposits increased from 30,000,000 to about 140,000,000 francs. It was a highly speculative and venturesome concern, but not more so than many other "institutions" which the speculative craze in France has brought into being. The suspension of the bank was the signal for heavy demands on London for specie; and as these followed a drain caused by the liquidation of speculative accounts which had been going on for some time in Paris, the Bank of England suddenly advanced its discount rate to 6 per cent. from 5 per cent. This reacted on the New York market by advancing the rate of foreign exchange to the point at which gold can be exported at a profit. The prospect of gold exports from here hardened the rate for money loans, and depressed the speculative markets at the Stock Exchange. The latter, however, were well sustained by influential speculators, and on Tuesday, as the situation in the foreign markets was certainly no worse if no better, some improvement resulted.

The crisis in Paris has led to heavy drafts of gold on the Bank of England, and, as a consequence, London has begun to draw upon New York. The process by which this international drain is effected is mainly by the sale of French securities at low rates in England, and of American securities (held by English investors) in New York. There is nothing in such a movement to occasion uneasiness here, since if we buy our own Government and railway bonds or stocks from foreigners we shall buy them at prices which we consider them worth, and shall get full measure for the money we send abroad. Such a crisis could not have happened in Europe at a time when we were better prepared to meet it. Our trade is bottomed upon the largest stock of gold ever accumulated in the country, and undoubtedly the largest held by any country at the present time. Moreover, the prices of our securities—or, at all events, of those held abroad in very considerable amount—were on the "ground floor," or very nearly so, before the French trouble began. At the time when French investors were beginning to go wild over Union Générale and other bubble companies, the assassination of President Garfield and the outbreak of the railroad war put a damper on speculation here from which it has not recovered. There is therefore scarcely any inflation, either in the Stock Exchange or in the general markets, for a crisis to wreak vengeance upon. The grain speculation in Chicago, which had carried prices of wheat above the exporting point, has succumbed in part to the menace of an outflow of gold and a consequent rise in the rate of interest. It is a natural and inevitable result that any staple article of international trade which we hold in excess of our own wants should fall in price at such a time. Speculators may hold on by the teeth for a while, but they must let go sooner or later. It is not worth while to waste breath denouncing the "bulls" in wheat and cotton. The laws of trade will take care of them. If the rate of interest does not rise sufficiently to make them drop their load, that fact will itself be proof that we have an excess of gold which we can spare without inconvenience. If gold is exported, it will be because it is the cheapest commodity we at the moment have to send. If much gold goes, it will lower the rate of money in London and advance it here, and in time the latter will cheapen other commodities, so that they will be exported in place of gold. The stock in the country is greater now than was ever before known—perhaps double that of any former period—and is increasing at the rate of $3,000,000 per month by the yield of our own mines. It is not reasonable to expect that we shall always retain this increment, and it is not desirable that we should retain it after we have accumulated what we need for our circulation.

Guiteau's brother-in-law and attorney, Mr. George Scoville, has issued an address "to the American people" in which he asks for contributions of money to enable him to present the case on appeal to the General Term of the Court, there being "in his opinion ample reasons for a reversal of the judgment." He says that the defence has been made by him for three reasons: first, from loyalty to his wife, Guiteau's sister; second, because he felt the defence "to be just and required by humanity"; and third, "to save the nation the lasting disgrace of hanging an insane man," and at the same time "to place on the records of history, through a judicial proceeding, the solemn judgment that it was impossible for an American citizen of sound mind to murder the President of the United States." Mr. Scoville is poor; his services in the case, instead of bringing him reward, have already been a heavy drain upon his slender resources, and he cannot continue them unless aided by charitable contributions. In his self-sacrificing endeavors to save the life of his brother-in-law, he has had the personal sympathy of many well-disposed people. But he would be wrong in supposing that any of that sympathy is extended to his wretched client. In this last appeal he has been particularly unfortunate in the choice of his arguments. There is no doubt the whole civilized world very generally agrees with the jury in the verdict that Guiteau is rather a villain than a madman, and was in a responsible condition when he murdered President Garfield. It will strike every person of common sense that under such circumstances a declaration of the "solemn judgment of the American people that it was impossible for an American citizen of sound mind to murder the President of the United States" would be a very risky experiment. It would simply advertise the fact that if any rascal takes it into his head to shoot the President, the worst thing that can happen to him is to be sent to a lunatic asylum, but that under no circumstances will he be hung, it being the "solemn judgment" of the American people that any American citizen who assassinates a President cannot possibly be of sound mind. We do not think the American people will subscribe much money for such a purpose.

Mr. Scoville has asked for a new trial in Guiteau's case, mainly on the grounds of want of jurisdiction, newly-discovered evidence, and misbehavior of the jury in reading or hearing read a newspaper calculated to prejudice their minds against the prisoner. This misbehavior of the jury is inferred from the fact that a "guest" of the National Hotel swears that he found in one of the rooms used by the jury a copy of a newspaper containing a report of proceedings in court with editorial comments on the case, and that on the newspaper some of the jury appeared to have written their names or initials. Whether these facts, if true, would raise the presumption that the jury had made themselves acquainted with the contents of the newspaper is a matter chiefly of abstract interest, since, according to concurrent despatches, they say that the whole story is an invention, and that their names have been forged. The newly-discovered evidence merely relates to the prisoner's insane behavior near the time of the assassination, and is very trivial. The question of jurisdiction is the only serious point left in the case, and in all human probability Judge Cox took the views of his brother judges as to this before deciding it.

The public attention during the week has been mainly taken up with Mr. Blaine's diplomatic performances in South America, as revealed by the correspondence presented to Congress. He appears to have directed Mr. Christiancy to recognize Calderon as the Government of Peru, without much regard to the amount of actual power he enjoyed, and apparently without regard to the fact that all the power he had he owed to Chilian forbearance. This recognition Mr. Blaine seems to have considered equivalent to a protectorate by the United States; for, when the Chilians subsequently got tired of Calderon, and arrested him, he treated it as an insult to our Government, and directed Mr. Trescott, who was sent out as a special envoy, to demand an explanation of it, and to break off intercourse with the Chilian Government if the explanation was not satisfactory; and he intimated that the explanation would not be satisfactory unless "accompanied by the restoration or the recognition of the Calderon Government." In fact, he made the

arrest of Calderon a *casus belli*, and if he had stayed in office, would probably have on this point either engaged us in war with Chili, or have overborne her on a pretext to which neither international law nor our own diplomatic traditions give the slightest countenance. He at the same time, too, took occasion to revive the extraordinary doctrine, which, when first propounded by General Hurlbut in his remarkable "memorandum" on Peruvian affairs, he had repudiated, that a victor who seeks indemnity for the cost of a war must always submit the question of the nature and amount of the indemnity to arbitration, and that he is bound not to take land if he can get money. Mr. Frelinghuysen happily got into office in time to prevent this curious folly from bearing fruit. He addressed an inquiry to the Chilian Minister in Washington to know whether any offence was meant by the arrest of Calderon, and having got a prompt and friendly denial, directed Mr. Trescott to make no threatening remonstrance about the matter, and not to go round among the other republics on his way home, as Mr. Blaine had ordered, to prepare for some kind of confederation; and at the same time took occasion to promulgate once more the old and long-established American policy of non-interference with the affairs of foreign states, and to acknowledge in the fullest manner that independence of Peru and Chili which Mr. Blaine seemed to have forgotten.

The President on Friday sent to the Senate a despatch from Mr. Trescott, received very recently, which gives Chili's final terms of peace. Mr. Trescott says that the Chilian Government disclaims all intention of offending the United States in arresting and carrying off Calderon; that Chili will accept the good offices of the United States; that the Chilian authorities will facilitate conferences between our envoy and the Provisional Government of Peru, "with the exception of Señor Calderon." Chili insists on the cession of the Tarapaca district, the payment of an indemnity of $20,000,000 within ten years; Arica to be occupied until the indemnity is paid, or ceded if it cannot be paid; Chili to appropriate besides the guano deposits of the Lobos Islands. In the event of Peru refusing these conditions, Chili would not any longer require the good offices of the United States. The State Department says that the remainder of the despatch is obscure, owing to some difficulty with the cipher, but the above is given as its substance. Had Mr. Blaine's method of treating this South American business been adopted by the present Administration, the question of peace or war with Chili would now be actually upon us.

There is something exceedingly diverting in Mr. Blaine's relations with his envoy, the now renowned General Hurlbut. The correspondence recently published, on which we comment at length elsewhere, contains some rich tid-bits on this subject. Hurlbut was really sent to Peru, as the Minister of the United States, to transact its business; but in Mr. Blaine's correspondence he is treated as if he were a wild young man who had been sent abroad for his health, or to extricate him from an unfortunate amour, and who is getting into fresh scrapes, and spending too much money, and whom his guardian has every now and then to haul over the coals. Hurlbut's follies began, it appears, almost as soon as he reached his post. How soon Mr. Blaine became aware of them we do not know, but he must have known about them as they occurred. His first published despatch, in which he castigates his ward, and says he cannot trust him any longer, objects to nearly everything he did after he went to Peru. It is extremely amusing, therefore, to find that on the 3d of December last he had heard, with "profound astonishment and regret," that Hurlbut had been getting a concession of a railroad and coal mine for an American company from (sham) President Calderon, on account of whose arrest he (Mr. Blaine) was near going to war with the Chilians. Hurlbut wrote home, in the innocence of his heart, saying the "grant was very valuable and the possibilities of the company very large," evidently thinking that a "valuable grant" and a company with "large possibilities" would make Mr. Blaine's mouth water. He must have been amazed when, instead of approval, he received a wigging. The continuance of Hurlbut at his post in spite of his escapades is the most delightful feature in the transaction. It seems as if Mr. Blaine liked the boy so much that his pranks secretly delighted him although he had to rebuke him publicly. We doubt whether Hurlbut knows to this hour why people are abusing him at home, and why Mr. Trescott has gone out to help him. He probably thinks this is simply a new phase of the old joke, and that Mr. Trescott's behavior will cause "astonishment and regret" in Washington also.

Senator Allison, of Iowa, has introduced a bill to provide for the issue, by the Treasury, of gold certificates of denominations not less than $20, to any person depositing an equivalent amount of gold coin in the Treasury, such gold coin to be held exclusively for the payment of the certificates on demand. This plan is identical in principle with the system which regulates the issue department of the Bank of England. The Bank issues a certain fixed amount of notes based upon Government securities, corresponding in principle to our greenback circulation. Beyond this fixed amount it may issue any sum whatever upon the deposit of an equal amount of gold, which shall be kept in the Bank's vaults for the redemption of the notes. These extra notes are merely Government warehouse receipts for gold. There is no reason why our Government should not issue similar warehouse receipts. There would be much convenience in having them, since the cost of transporting coin would be avoided, and the loss resulting from abrasion would be saved. Furthermore, the banks in large cities would be enabled, if they should choose, to dispense with their present machinery for handling Clearing-house balances. The banks of New York, for instance, could place their joint gold reserve, now stored with the Bank of America, in the Sub-Treasury, and enjoy the security which the Government affords without expense. Another advantage would be that persons having gold and requiring paper circulation would no longer be required to accept silver certificates instead of gold certificates. It is a fact not generally known or appreciated that a large part of the outstanding silver certificates have been issued against deposits of gold, the holders of the gold desiring paper money for convenience in use, and not being able to obtain it except in the form of silver certificates—the issue of similar gold certificates having been suspended, in anticipation of specie resumption, in 1878. Senator Allison's provision that three-fourths of the reserve held for the redemption of greenbacks shall be gold and one-fourth silver is open to objection. Although theoretically and legally the Secretary of the Treasury may make the whole reserve fund silver if he chooses, yet practically he makes the whole of it gold by giving the public the option to take what they prefer; and the presumption is that the Department will continue to do so, whoever may be at the head of it, unless some mandatory statute requires him to do otherwise.

The introduction in the Senate of a bill to buy $350,000 worth of land for the extension of the mint in Philadelphia, and the introduction of a bill in the House of Representatives to spend $1,000,000 to build a mint in New York, revive an old and familiar controversy. The argument on one side is that as this is commercially the central city of the Union, toward which all great enterprises tend, the Federal business ought to be concentrated here so far as possible. The argument has been pushed even to the extent of insisting that Washington be abandoned as the seat of the National Government, and New York be made the capital. As to the mint, it is contended that as more of the precious metals come here and are kept here than anywhere else in the country, this city is the most suitable place for carrying on the work of coinage. It is obvious that arguments of this kind would have greater weight if we were now for the first time setting the Federal house in order. Things which have been settled, such as the situation of the mint and the capital, will not be unsettled except upon stronger considerations which might prevail if the question were now an original one. There is another ground, however, upon which Representative Hutchins's New York Mint Bill will be successfully opposed. There is no need for two mints within ninety miles of each other. If we have one here, the one in Philadelphia must be given up. The whole Pennsylvania influence, therefore, will be encountered. But this is not all. Let it be understood that the Government thinks of abandoning Philadelphia, and so many cities will contend for the succession that no one of them is likely to be successful, and Philadelphia will keep the mint after all.

There seems good reason to believe that Congress will pass some bill for the relief of the Supreme Court this winter. The lawyers who support Senator Davis's bill object to the inference drawn from its provisions that its effect will be substantially to abolish the Cir-

cuit duty (the actual trial of cases with a jury) of the Supreme Court judges. The bill provides that the intermediate appellate courts shall be constituted of one Justice of the Supreme Court, three Circuit Judges, and two District Judges—though any three of these are made a quorum. This does not require a Supreme Court Justice to sit in that court, but it contemplates such service by him, and, what is more important, leaves unrepealed the existing law which requires each Supreme Justice to go on Circuit at least once in two years. The main controversy will be as between appellate courts in the Circuits and a new Appellate Court at Washington. All the Supreme Judges are understood to be in favor of Mr. Davis's plan except Mr. Justice Field.

The mail brings from San Francisco a broad and very yellow sheet of seven columns, upon which is printed a remonstrance from "the pro-Chinese minority of California to the American President and Congress" against the passage of certain pending bills. It says that a Congressional investigating committee in 1876 presented "overwhelming testimony" establishing "the vast utility and great necessity of Chinese labor to California." This, however, was before the Morey letter forgery worked a change—as seems to be the case—in the opinion even of the opponents of the anti-Chinese craze. The remonstrance quotes some of this testimony—that of railroad president Crocker, who says that "without Chinese labor we should be thrown back in all the branches of industry"; that of the Rev. Mr. Gibson, who says that "the standard of Chinese morals is higher and better than that of any other heathen nation"; and that of many citizens who bear witness to Mongolian industry, intelligence, honesty, and thrift. The remonstrance further takes the ground that opinion in California has been misrepresented, and is not nearly so unanimously anti-Chinese as is commonly supposed. Unfortunately for the success of this plea for consideration of the rights of the minority, the politicians who represent the State in Congress are on the anti-Chinese side, and the other politicians are guided by them in their votes on the question.

Secretary Kirkwood's proposition to authorize by law the appointment of three Commissioners, who are to visit the different Indian reservations for the purpose of examining their agricultural and grazing capacities, and to report their opinion as to whether such reservations should be reduced in size or not, and to do various things to promote the settlement of the Indians in severalty and their progress in civilized pursuits, is criticised by several newspapers as a mere attempt to create comfortable places for some of his friends. This is doing the Secretary great injustice. There is an abundance of important work for such a commission which the regular force of the Indian service has neither time nor opportunity to attend to. Of course it would be essential to have the Commission composed of men who to a high character unite good business capacity and practical experience in Indian affairs. Possibly men might be found in the present board of Indian Commissioners who possess all these requisites. Another recommendation made, or rather repeated, by Secretary Kirkwood, to increase the salary of the Commissioner of Indian Affairs, and to give him an assistant, deserves favorable consideration. The duties of the Commissioner of Indian Affairs are perhaps more trying and onerous than those of any other officer in the Government. They require not only an honest and clear head, but business ability and experience of a high order, great knowledge of men, untiring watchfulness, and an inexhaustible working capacity. It is an absurd thing that, of all the bureau chiefs, the one who has the largest quantity and the most difficult kind of work on his hands and the greatest responsibility to bear, should have the smallest salary. No wealthy private corporation would hesitate to pay a man in its service such as the Commissioner of Indian Affairs should be, three times as much. And even with such pay this office would still be one of the most undesirable places, considering the fact that, in spite of the most honest endeavor to do right, he is at all times exposed to accidents in the service which the greatest vigilance cannot always prevent, and which may be apt to cast suspicion upon his integrity.

General Curtis, the Special Agent of the Treasury Department, complained of to the Secretary of the Treasury, under the United States statutes, by the Civil-Service Reform Association, for collecting assessments on Government officers, has put in his answer. He denies that he is an "employee," but his letter of appointment shows that he was "employed" by the Government. He also denies that he asked for any assessments, but he confesses that he received them, which is under the statute an offence equally with asking for them, and punishable as such. Judge Folger will doubtless do justice on him in due course. Thurlow Weed has written a very droll letter to the *Tribune*, enclosing one received by him from Naval Officer Burt. He had inquired whether in the Custom-house competitive examinations candidates were admitted "irrespective of party." Mr. Burt answered that certainly they were, thinking, doubtless, that this was a triumphant answer. The aged politician to whom it was addressed, however, received it as a confession of guilt, and writes indignantly to the *Tribune*, pointing out that "the traitor who endeavored to destroy the Government and the Union and answered more idle questions than the patriot who perilled his life in the Union army, carries off the prize." The letter reads like a burlesque, but we believe it to be perfectly serious, and to express the veteran's real view of the situation. He appeals to Chester A. Arthur to put a stop to this infamy.

The death of Dr. Bellows removes one of the most conspicuous figures of New York life during the last thirty years. He was the minister of a very small denomination, but there was no public interest which did not during that period owe something to his untiring activity, his ready sympathy and generosity, and his remarkable powers of statement and persuasion. His sympathy was inexhaustible. No unfortunate cause or man ever failed to receive a patient hearing from him, and as much help as was deserved, or he could give. He first became widely known through his labors as president of the Sanitary Commission during the war, and probably nothing did more than this Commission to make the memories of the war sacred and tender. But the things which made him widely known were but a very small proportion of those which brought him love and honor in private life. He has been happy in having his career close before his natural force had sensibly abated, or he had been compelled to limit the sphere of his usefulness. That he was himself aware, however, that the end was not far off, appeared in some remarks he made at the monthly meeting of the Century Club only a fortnight ago, when, discussing some affairs of the club, of which he was one of the founders in that old New York—now very old and very distant—of forty years ago, he observed, with some pathos, that the future of the club now concerned him but little personally, and that his interest in it was intended for those who were to enjoy it after him.

The loss of the North Riding of Yorkshire is a blow to the English Liberals, rather as showing that they have not gained what some thought they had gained than as showing that they have lost ground they formerly held. Parties are closely divided in the North Riding, with a strong leaning to the Conservatives. At the last two elections it was divided between them, the Liberals having one member of the two. The Conservatives have now succeeded in again filling their own seat by a tolerably large majority for that constituency, defeating Mr. Rowlandson, a tenant-farmer candidate, who ran on the land-reform issue. His failure shows that this part of the Liberal programme has not made much impression on the Yorkshire farmers, or overcome the intense and deeply-rooted prejudice which English county voters have almost always shown in favor of candidates who own broad acres, or are the sons or brothers of men who own them. The Honorable Guy Dawnay, the successful candidate, is an out-and-out Tory, taking the Tory drawing-room view of Mr. Gladstone, that he is the apostle of atheism and communism, and that most of his works furnish "the darkest pages in British history."

The Freycinet Ministry has produced a strictly business programme, because, as the Premier says, "Nations do not live by politics but by business." It drops the revision scheme, which constituted the principal part of the "politics" of the Gambetta Ministry, promises not to buy the railroads, which has under the influence of the late speculative mania been much agitated, and not to refund the five per cent. rentes, in deference to the numerous small holders. Moreover, the negotiations with England for the Treaty of Commerce are to be continued on the footing on which Gambetta has placed them, and the other reforms of the late Ministry are to be carried out in the same spirit. In fact, a more soothing programme there could hardly be.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

MR. PORTER concluded his address to the jury in the Guiteau trial on Wednesday at three o'clock. The jury were then asked whether they would prefer to hear the charge at once or wait until the next day. After consultation they decided to hear it then. Judge Cox's charge bore heavily against the prisoner. In summing up he told the jury that if they found from the "whole evidence that at the time of the commission of the homicide the prisoner was laboring under such a defect of his reason that he was incapable of understanding what he was doing, or of seeing that it was a wrong thing to do," they must acquit him. But if they found "he was under no insane delusion, but had the possession of his faculties, and had power to know that his act was wrong; and if of his own free will he deliberately conceived the idea and executed the homicide, then, whether his motive were personal vindictiveness, political animosity, a desire to avenge supposed political wrongs, or a morbid desire for notoriety—or if you are unable to discover any motive at all—the act is simply murder, and it is your duty to find a verdict of guilty as indicted." On the conclusion of the judge's charge the jury immediately retired. The court then took a recess until half-past 5 o'clock. At the expiration of the recess the jury filed into their seats, after having been out not quite half an hour, and gave a verdict of "Guilty as indicted," which was received with "uproarious applause" by the audience. Guiteau shouted out: "My blood will be upon the heads of that jury—don't you forget it." The jury came to a unanimous decision on the second ballot. The foreman stated, in conversation with a reporter, that there had been little or no doubt in the minds of the jury since Dr. Young, in whose opinion they placed much reliance, gave his testimony. The verdict has been received with approval throughout the country. Guiteau published another "Address to the American People" on Thursday. On Saturday Mr. Scoville filed a motion for a new trial. One of the reasons on which the motion is based, and the only one of importance, is the court's want of jurisdiction. The case will have to be reviewed by the court in banc, but there is no probability of the verdict being set aside.

Friday has been fixed for hearing the arguments on the motion for a new trial in the Guiteau case. Meanwhile Mr. Scoville has issued an "Address to the American People," asking for contributions to enable him to "secure competent counsel."

Mr. Blaine has written to the chairman of the sub-committee "On the Death of President Garfield," to say that he will be prepared to deliver his eulogy of President Garfield, in accordance with the request of the committee, either on February 25th or 27th. The latter date has been chosen.

In answer to the recent resolution of the Senate, on Thursday the President sent to Congress a mass of diplomatic correspondence, including the letters which passed between Lord Granville and Mr. Blaine on the Clayton-Bulwer Treaty, and the correspondence between the State Department at Washington and the representatives of the United States in South America on the Chili-Peru difficulty. In the first-mentioned batch is Lord Granville's reply to Mr. Blaine's letter of June 24. In this reply Lord Granville says that he does not propose to enter into a detailed argument in reply to Mr. Blaine's observations, but calls his attention to the Clayton-Bulwer Treaty, and says that "Her Majesty's Government rely with confidence upon the observance of all the engagements of that treaty." Mr. Blaine's letter in reply to this communication is dated November 29, 1881, and has already been made public. It contains, to use his own words, "a summary of the historical objections to the Clayton-Bulwer Treaty and of the very decided differences of opinion between the two Governments to which its interpretation has given rise," and proposes the modification of the treaty.

The correspondence concerning Chili and Peru covers a period of several years, and is very voluminous. It contains, among other things, Mr. Blaine's and Mr. Frelinghuysen's instructions to Mr. Trescott. Mr. Blaine recounts the various steps which led up to the arrest of President Calderon and the suppression of the provisional government of Peru by the Chilians. He then directs Mr. Trescott to inform the Chilian Government that the President of the United States looked upon the arrest of Calderon as an "unwarrantable offence" and "an act of unfriendly import," which might perhaps require the breaking off of all diplomatic intercourse between the United States and Chili. Mr. Frelinghuysen, however, in his letter of instructions, dated January 9, 1882, promptly revokes Mr. Blaine's instructions, and directs Mr. Trescott to "extend the kindly offices of the United States impartially to both Peru and Chili," and says that the President will himself determine, after report has been made to him, whether the conduct of Chili in deposing Calderon is or is not cause for offence on the part of the United States. Further, Mr. Frelinghuysen tells Mr. Trescott not to come home by Buenos Ayres and Rio Janeiro, with a view to calling a congress of American republics, as directed by Mr. Blaine. All attempts to dictate to Chili that she shall not annex Peruvian territory are also given up. The difference between the careful, moderate, and sensible character of Mr. Frelinghuysen's policy in this South American matter, and the extraordinary course which Mr. Blaine had taken, is very clearly brought out by a comparison of these two letters of instructions to Mr. Trescott.

On Friday Mr. Frelinghuysen submitted to the Senate the substance of a despatch which had been received from Mr. Trescott, special envoy to Peru and Chili. Mr. Trescott says that he has had several confidential conferences with the Chilian Minister of Foreign Affairs, and that the Chilian Government disclaims any intention of offending the Government of the United States in the arrest of President Calderon, and that the good offices of the United States Government will be accepted by Chili, but that the terms of peace presented by Chili embrace the following points: absolute cession of the Tarapaca district, and in addition thereto the payment of an indemnity of $20,000,000, payable in ten years, during all of which time the positive occupation of Arica by Chili is required, and should the indemnity be unpaid, Arica is to be ceded to Chili; and besides this, Chili is to appropriate the guano deposits of the Lobos Islands. But in the event of Peru refusing these conditions, the Chilian Government would decline any further proffer of the friendly interference of the United States.

An interview with Mr. Blaine on the subject of his diplomatic correspondence relating to Chili and Peru was published on Monday. Mr. Blaine denied that his instructions to Mr. Trescott had been drafted and given to him without the knowledge of the President; or that any attempt was made by the United States to push the claims of private citizens against Peru, or that he instructed General Hurlbut to prosecute the Landreau claim. Mr. Blaine further said that his policy was not "a departure from the conservative methods of our country," but on the contrary that it was "directly in the line of our safest precedents laid down by our most distinguished and conservative Secretaries of State." Mr. Blaine, in conclusion, said that he was influenced in taking the course he did by a desire to save Peru from the "heavy hand of England," which she "felt upon her at every turn," and that if Chili is allowed to annex the territory she wishes, the "end will be an absolute domination of English influence in both Peru and Chili."

Leave of absence has been granted by the State Department to General Hurlbut, Minister to Peru, to return to this country.

The Refunding Bill has continued to occupy the attention of the Senate during the week. On Thursday Senator Sherman made a speech defending the bill and attacking the numerous amendments to it which have been offered, and a motion to lay the subject on the table was defeated by a considerable majority. On Friday the Davis amendment, doing away with the five years' time limit, and making the new bonds redeemable as soon as the remaining continued bonds are disposed of, was adopted; but the proposition to make the new bonds irredeemable for three years was lost by a vote of 25 to 36. This was the first direct test of strength between Mr. Sherman and Mr. Windom, the former being of the opinion that a specified time is necessary to give the bonds a market value in comparison with the present outstanding bonds. On Monday the debate was mainly on the Vest amendment, which was made the text for a number of attacks on the national banks. Senator Edmunds asked the Senators who were so hostile to the national banks what they proposed as a substitute. Did they wish the Government to go into the banking business? or should State banks be again set up as a substitute? No satisfactory answers were given to these questions.

In the House no measure of much importance was debated on Thursday or Friday. It is said that private bills have been introduced to such an extent as to interfere seriously with the transaction of public business.

The House Committee on the Census have amended the McCord Apportionment Bill and have reported it to the House. The bill, as amended, gives the House 320 members, the ratio of representation being 154,285.

The House Committee on Territories on Saturday listened to the arguments made before it by a large number of citizens of Dakota for the admission of the southern portion of that Territory as a State.

The sub-committee of the House Committee on Agriculture have reported favorably to the full committee a bill providing for the establishment of a Bureau of Animal Industry, with a view to preventing the exportation of diseased cattle, and the spread of infectious diseases among domestic animals. It imposes a fine on persons or corporations transporting such animals.

The President signed the Census Deficiency Bill on Saturday. He was governed in so doing by the opinion of the Attorney-General.

The bill providing for the retirement of Associate-Justice Hunt, of the Supreme Court, has been signed by the President.

The President has accepted the resignation of Mr. J. Stanley Brown as his private secretary and has appointed Mr. F. J. Phillips to succeed him.

The Secretary of the Treasury has decided that Apollinaris is a natural water, and exempt from import duty.

General N. M. Curtis, a special agent of the Treasury Department employed in the New York Custom-house, has written to the Secretary of the Treasury in reply to the charges filed against him by the Civil-Service Reform Association of New York, charging him with having violated the letter and spirit of the law prohibiting employees of the Government from requesting, receiving, or giving money for political purposes from or to employees of the United States, while acting as Chairman of the Republican State Committee of New York during the late Presidential campaign. General Curtis denies, particularly and specifically, that he violated, or intended to violate or disregard, the letter or spirit of the section referred to, for the reason that he has not been since January 15, 1880, such an employee or

executive officer of the United States as is referred to in the section which he is accused of having violated, nor has he personally levied assessments or requested any persons to make contributions.

It is stated that the Grand Jury at Washington has, for the last ten days, been engaged in making a general investigation of the Star-route cases, in the matter of "straw bonds and expedited routes," but has not yet directed particular inquiry to any special case.

The statement that Special Agent A. M. Gibson, who made a report which was so damaging to the persons implicated in the Star-route frauds, has been discharged from Government employ, is denied by Attorney-General Brewster. The publication of this false report is believed to be part of a plan to misrepresent the Government in all its proceedings in regard to the Star-route cases.

A disastrous fire occurred in New York on Tuesday. A five-story building, formerly occupied by the *World* newspaper, on the corner of Park Row and Beekman Street, was totally destroyed by fire, with the loss of a number of lives. Fourteen persons were reported missing, and eight were injured in escaping. The loss on property is estimated at $600,000.

On Thursday Lieutenant Danenhauer, of the *Jeannette*, telegraphed to the New York *Herald* correspondent in Paris that Lieutenant De Long's party had been traced to a definitive locality on the west bank of the Lena. It seems the *Jeannette* entered the ice near Herald Island on September 6, 1879. Her forefoot had been twisted since the 1st of January. She drifted to the Northwest for twenty-one months, and was finally crushed, and sank on the 12th of June, and Lieutenant Danenhauer and the others made their retreat over the ice to the New Siberia Islands, and thence in boats to the Lena delta.

FOREIGN.

On Thursday the bill for the revision of the Constitution was debated in the French Chamber of Deputies. M. Gambetta made a speech, in which he said that the country desired a limited revision, but was not prepared to expose its present tranquillity to the hazards of an unlimited amendment. He said that *scrutin de liste*, by enlarging the electoral basis, provided the means of rendering personal power impossible. He denied that any idea of dissolving the Chamber was entertained. The Government bill for the revision of the Constitution was then rejected by a vote of 305 to 117, and M. Gambetta handed in the resignations of himself and his colleagues. The Premier's defeat was expected, and does not seem to have produced a very profound impression in France. On Monday the new Cabinet was announced; it is composed as follows:

President of the Council and Minister of Foreign Affairs—M. de Freycinet.
Minister of Public Instruction—M. Jules Ferry.
Minister of the Interior and of Worship—M. Goblet.
Minister of Justice—M. Humbert.
Minister of Finance—M. Léon Say.
Minister of Public Works—M. Varroy.
Minister of War—General Billot.
Minister of Marine—Admiral Jauréguiberry.
Minister of Commerce—M. Tirard.
Minister of Posts and Telegraphs—M. Cochery.

This Ministry is regarded with favor in Paris, and seems likely to receive general approval throughout Europe.

On Monday it was announced that in view of the claims lodged against it, the Union Générale, acting in conformity with legal advice, had decided to suspend payment until the general meeting of its shareholders, which will be held on Friday next. The Union Générale was supported by the entire clergy and the Roman Catholic aristocracy of France, the Comte de Chambord alone being said to hold 5,000,000 francs of its shares. Great efforts were made by the French bankers to avert the threatened panic on the Bourse. M. Bontoux, the manager of the Union Générale, is mainly responsible for the failure. He employed the funds in wildcat speculation.

At a meeting of the directors of the Bank of England on Monday it was decided to raise the Bank rate to seven per cent. without delay, if further withdrawals were threatened.

A despatch from Paris says that Lord Lyons, the British Minister, had an interview on Friday with M. Gambetta, and handed him the reply of England to the concessions made by France in the matter of the Anglo-French commercial treaty. The negotiations are now said to be sufficiently advanced to admit of the hope that there will soon be an exchange of signatures.

The libel case of M. Challemel-Lacour against M. Rochefort, of the *Intransigeant*, is to be tried again, as the Appeals Court has overruled the judgment of the court of the first instance, and ordered a trial on the merits of the case.

The London *Times* has published a letter of Mr. Gladstone in reply to a correspondent who urged the release of the imprisoned "suspects." Mr. Gladstone says: "The first duty of the Government is to law and order. It cannot consistently release these individuals until they have lost their power or have renounced their intention of pursuing a course of disturbance. Neither of these conditions is, so far, apparently fulfilled. The Government thus has no alternative but to persevere with a most painful duty."

At a meeting of Parnellites in London on Monday it was decided to oppose the proposed adoption of the *clôture* at the coming session of Parliament.

It is said that the cause of the military reinforcements and police activity in Ireland at present is the extraordinary number of secret societies in Limerick and Clare. The existence of these societies, however, gives no credibility to the reports which have been circulated concerning a projected uprising, as they are purely agrarian and socialistic associations, supported by Irish-American funds.

The despatches from Dublin on Monday stated that there was a panic on the Dublin Stock Exchange. It is expected that two or three large houses will fail during the present week unless assistance is rendered them. Business is at a very low ebb, and tradesmen are unable to collect debts, as the debtors are mostly landlords.

A very heavy snow storm prevailed on Sunday in Wales, and much snow fell in some parts of England and Scotland. There was a very severe storm in the counties of Dublin, Kildare, and Wicklow, Ireland, causing great damage to property.

In the case of the outlaw leader O'Connell, who appeared as Queen's evidence against his two fellow-prisoners, the Crown has withdrawn all the indictments against him. More troops have been sent to Ireland. The property defence fund now amounts to £17,500, and the fund for ladies in distress to £14,000.

England and France have given reassuring explanations to all the powers in regard to their collective notes to the Khedive of Egypt, and it is believed that the matter will be settled without further diplomatic communications.

A telegram from Cairo says that the deputation of the Notables have arrived at an understanding with the Government concerning most of the new rules of procedure, and have authorized Sherif Pasha, the Premier, to negotiate an arrangement with England and France in regard to the subject.

There has not been much news of importance from Herzegovina during the week. The insurrection is said to extend over a very large district of both Herzegovina and Bosnia. There have been a number of small skirmishes, but the results were unimportant. The Austrian Minister of Foreign Affairs, Count Kálnoky, has introduced a credit of 8,000,000 francs, for the suppression of the insurrection, in the Austrian Parliament.

A Berlin despatch states that the Emperor has specially thanked Prince Bismarck for his defence of the Imperial rescript in the Reichstag on Thursday, the 25th inst.

In the Reichstag on Monday, the Secretary of State announced that the Bundesrath had sanctioned the budget as passed by the Reichstag, and read an Imperial message closing the session.

In the Prussian Landtag the Minister of Finance announced that, in consequence of the modification of the Imperial budget passed by the Reichstag, the contribution of Prussia to the empire will be so far reduced as to render the projected loan of 5,000,000 unnecessary.

The Spanish Cortes will probably meet toward the end of February, when it is expected that some changes will be made in the Cabinet, but a crisis is not expected.

In regard to the proposed Spanish pilgrimage to Italy, the Spanish Government has informed the Italian Government that it will refuse protection to any Spanish pilgrim guilty of participating in a political demonstration in Rome. Much stir is reported to have been caused at Madrid by the publication of a circular letter from the Papal Nuncio to the bishops, recommending that they use their best efforts to promote the pilgrimage to Rome. The Spanish press declare that the pilgrimage would probably prove a Carlist demonstration, and they call on the Government to assume an energetic attitude in the matter.

The census returns show that the population of Rome and its suburbs is 300,292, an increase since 1871 of 55,808.

King George of Greece opened the session of the Chamber of Deputies on Monday. In his speech from the throne he extended a hearty welcome to the representatives from the new provinces.

A despatch from Corfu states that a plot against the life of the King of Greece has been discovered. It was to have been carried out while he was travelling from Athens to the Piræus.

Prince Dolgoruki, the Governor-General of Moscow, is going to take extraordinary measures to secure the safety of the Imperial cortége to Moscow on the occasion of the coronation of the Emperor. He proposes that the Emperor shall go to Moscow by the carriage road instead of by the railroad, and that the crowds in the streets shall be separated from the procession by trenches, barriers, and lines of troops.

The Russian Committee of Pardons has revised the cases of 650 political exiles, liberated 328 of them, and reduced the sentences of the remainder.

The Swiss Council of State has confirmed the decision of the National Council to change the Swiss Consulate at Washington into a legation.

A despatch from Calcutta says that the Amir of Afghanistan is developing a ferocity worthy of his most blood-stained predecessor. A reign of terror prevails at Cabul, 1,100 persons being imprisoned for political offences.

Accounts from Havana report that the continued droughts and the prevalence of worms have so injured the tobacco crop that no change of weather can remedy the damage. The crop will be a small one, and poor in quality.

TUESDAY, January 31, 1882.

ANOTHER CHAPTER OF MR. BLAINE'S DIPLOMACY.

Mr. Blaine was so alarmed last summer by a rumor he had heard that the Government of Colombia was going to ask for a European guarantee of the neutrality of the Isthmus Canal that on the 24th of June he wrote a despatch to Mr. Lowell, which was communicated to Earl Granville, in which he denied absolutely the right of any European government to interfere with or about the Canal or the Isthmus in any manner whatever. He laid it down that any European guarantee of the neutrality of the Canal would be an indication of unfriendliness to the United States, and would be resented as such; that the United States would itself assume the control of the Canal and guarantee its neutrality, and would not permit any other power to share the responsibility. The despatch was very uncourteous and even menacing in tone. It was, as we pointed out at the time, a very extraordinary document, in view of the fact that its object was not to bully Great Britain into an abandonment of all claim of control of the Canal, but to persuade her to do so, and Mr. Blaine meant, he said, to be courteous. But what made it still more extraordinary was the fact that it made no mention whatever of the Clayton-Bulwer Treaty, and indeed ignored its existence. That treaty is, however, still in force, and is part of our "supreme law of the land," and cannot be abrogated by the President at his mere pleasure. When a treaty entered into in time of peace between two equal and friendly powers has become oppressive, inconvenient, or antiquated to either of them, the custom of civilized nations is for the one which objects to it to propose its abrogation to the other, and not to withdraw from it until negotiations for this purpose have failed. This was undoubtedly the course which diplomatic usage as well as the rules of civilized intercourse imposed on Mr. Blaine. He ought to have communicated to Earl Granville the American objections to the treaty, and asked Great Britain to agree to its abrogation. What he actually did was to threaten Great Britain with American hostility in case she should urge certain claims or rights which the treaty has already accorded to her.

Earl Granville took nearly five months to answer, and then said (November 10) rather drily that he considered the Clayton-Bulwer Treaty still in force. But in the meantime (November 19) it appears to have occurred to Mr. Blaine, or to have been brought home to him, that he ought to say something about the Clayton-Bulwer Treaty; so he then sent a proposal to Lord Granville for its abrogation. On getting Lord Granville's answer, he sat down (Nov. 29) and wrote the despatch which he ought to have written at first, giving an historical résumé of the American objections to it, but seems to have been quite unconscious in composing it of the very severe condemnation which, by implication, it passed on his own methods. The American discontent with the Clayton-Bulwer Treaty began within six years after it was signed, and has continued ever since, and caused much discussion during Mr. Buchanan's Administration, though the matter was pushed aside afterward by the war and the troubles growing out of it. Mr. Blaine's historical sketch adds nothing, or very little, to the knowledge already possessed by the public on this point. But it does show that this dissatisfaction was always expressed in very courteous proposals to the British Government for the abrogation of the treaty by—to use Mr. Buchanan's language in his message—"mutual consent," in order to "commence anew." In fact, there is no precedent to be found in the history of our diplomacy for Mr. Blaine's mode either of asserting a claim or beginning a negotiation. His language is only known as the language of a military power to a small state whose coercion has been determined on, or to a state with which everything was in readiness for a bloody war. It is no answer to this criticism to say that his despatches were intended for the domestic stump. We weigh so much in the world now, and our threats and invective have so much significance, that the use of our diplomatic machinery for electioneering purposes is a serious offence against the national peace and dignity.

Mr. Blaine has also supplied the newspapers with an explanation of his diplomacy in South America. Upon the point whether the President saw and approved of his despatches, Mr. Blaine states positively that he did so. The exact nature of the connection of the State Department or of General Hurlbut with the Peruvian Company, the Cochet claim, the Landreau claim, the Crédit Industriel, and Mr. J. R. Shipherd, is hardly yet ready for thorough discussion. We are evidently destined to hear a good deal more on this topic, and we need to know a good deal more in order to talk about it intelligently. But Mr. Blaine's sensitiveness and anxiety about the form in which Chili was to exact her indemnity for the cost of the war, will strike the public as very remarkable. It would appear from his explanation that the main object of his despatch of Mr. Trescott as a mediator to Peru was to get Chili to take a money indemnity instead of annexing territory. The impetuous Hurlbut had settled this question to his own satisfaction, by laying it down as part of the law of nations that a conqueror was bound to take his indemnity in cash if he could get it, and not to take land unless the cash was not forthcoming. Mr. Blaine's instructions to Hurlbut contained no foundation for this startling novelty, for they acknowledged the right of Chili to use her discretion in the matter; and in the subsequent letter of reproof to the same diplomatist, he takes the same ground, although he had already informed General Kilpatrick that the conqueror was not fit to judge whether he should take territory or money—that this ought to be settled by an outside arbitrator. How Mr. Blaine managed to reconcile these two contradictory positions in his own mind we do not pretend to know, and the puzzle is deepened by the fact that in his instructions to Mr. Trescott he again adopted General Hurlbut's law, which he had repudiated, and informed the new envoy that the United States Government "holds that between independent nations hostilities do not from the mere existence of war confer the right of conquest until the failure to furnish the indemnity and guarantee which can be rightly demanded." The best defence that can be offered for this proposition is that it is not quite comprehensible. What Mr. Blaine meant by it was probably that Mr. Trescott was to oppose any cession of Peruvian territory to Chili. Why he should wrap this up in the form of a statement of law it would be hard to say, unless he wished to disguise it. As law it is simply bosh. No rational diplomatist, whether Chilian or other, has ever "held" or contended that the "existence of war" "conferred the right of conquest." Nothing confers the right of conquest but conquest. The Chilians claim the right of conquest solely because they have conquered, and what Mr. Blaine wished Mr. Trescott to do was to oppose the exercise of rights derived from very complete conquest—rights which have never been denied to the conqueror till the appearance of Mr. Blaine on the diplomatic stage, and which the United States has exercised on a large scale in his lifetime.

In the explanation to the reporter, he gives way to his feelings about the things which Chili was going to take, in a style more suitable to a great speculative capitalist than to a prominent publicist and diplomatist. He objects to the territorial indemnity because it is so valuable; he seems to have appraised it all with great nicety. The Lobos Islands, he says, "would sell at auction for twice $40,000." "The province of Tarapaca contains the wonderful beds of nitrate which are capable of producing an enormous revenue. Under judicious management, this province is estimated to be capable of producing from $30,000,000 to $40,000,000 a year." This may be all true, but what has an international lawyer to do with it? It was the business of the Peruvians to count the cost, and consider the value of what they might lose, before they went to war, just as it was the business of the Southerners before they seceded, and of the French before they attacked Germany. It is emphatically not our business to step in to save them from the consequences of their folly or bad luck. Moreover, Mr. Blaine may console himself with the reflection that the Lobos Islands and the province of Tarapaca will be very "judiciously managed" by the Chilians, and will probably contribute more to the world's wealth than if the Peruvians kept them.

Mr. Blaine further explains, however, that he is chagrined at Chili getting all this business, because it will be done with English capital and English ships. But he must not make himself too miserable over this, because, owing to the hostility of himself and his friends to foreign commerce, Peruvian business is already done with English capital and English ships. The Chilian annexation will really make no change in the situation. In 1878, Peru exported $49,475,000, in products. Of this Great Britain took $26,161,525, while the United States took only $1,203,602. Peru owes about $226,340,000, which is nearly all held in Europe. Her exports, too, are now carried almost wholly in English ships. If any one asserts that we can remedy this state of things by meddling in South American politics, he is simply showing his unfitness for the

management of our foreign affairs. It can only be remedied by such a change in our tariff and navigation laws as will enable American products to compete in foreign markets with "the pauper labor," and on the seas with the pauper sailors, of Great Britain.

THE GUITEAU TRIAL.

The trial of Guiteau has been in many ways the severest ordeal to which the feelings of the American people have been exposed since the close of the war. The crime was bad enough and impressive enough to make the public more anxious to have justice done on this murderer than on any murderer who had gone before him. And in addition to this, the remarkable and indeed unprecedented extent to which foreign nations, and particularly the English people, had joined in the American horror and mourning over the assassination, had created an unusually strong desire that the trial should in solemnity and decency, and in the swiftness of its justice, prove in foreign eyes worthy of the occasion which called for it. It is needless now to recall the bitterness of the disappointment which followed the opening of the proceedings. The air of cheap melodrama which the District Attorney thought proper to give it; the theatrical accumulation of evidence to prove facts over which there was not the shadow of a dispute, ending with the revolting and wholly unnecessary production of the dead man's bones, were a great shock to the public, and it was deepened by Judge Cox's decision to allow the prisoner to behave in court in any manner he pleased. The degrading scenes which followed are still fresh in everybody's memory. They furnished unfriendly foreign critics with plenty of material for reflections on the administration of American justice, filled even friendly ones with amazement, and, it is safe to say, made many people here blush who never blushed before.

Of the way in which order was preserved, or rather not preserved, in the court-room, which for a time had all the effect of a deep national disgrace, it may now be said that it was probably an inevitable result of the license which the Court had decided to accord to the prisoner. It is useless to try to impose respectful silence on a dense crowd, in whose presence you permit a lunatic, whether real or pretended, to go through any antics he pleases—as useless, nearly, as if a monkey had been introduced into the court-room and permitted to play tricks on top of a barrel-organ. It is the mood of a crowd which determines its behavior, no matter what the police may threaten, and a decorous mood was impossible in the presence of Guiteau's participation in his own defence.

It must be said, however, that scandalous as the outward results may have been, there was, long before the close of the trial, a very general disposition on the part of the public, both lay and professional, to acquiesce in Judge Cox's view of his duty as regarded the license given to the prisoner. It was undoubtedly a new feature in criminal proceedings; but not a few are now ready to say that its novelty was no fault of the Judge, and that it is truly wonderful, considering how often insanity has been used as a defence in murder trials, that the problem which Judge Cox had to solve for the first time had not frequently arisen before. The problem is, in short, whether, when a prisoner sets up insanity as a defence, it would not be passing on the question of his guilt or innocence to treat him in court as sane and responsible, and insist on his behaving as if his defence were a sham. That no lunatic has hitherto attempted to take as active a part, lunatic fashion, in his own trial as Guiteau has done, and sought to support his plea by actual demonstration before the jury, is in truth somewhat extraordinary. There can hardly be a doubt that, in spite of the failure of the plan in this particular case, it will be tried hereafter, perhaps frequently; and all courts in which the prisoner's innocence before conviction is a legal presumption, or in other words, all Anglo-Saxon courts, will have to make some provision for the preservation of good order when insanity is pleaded, and there is any likelihood that the prisoner means to make a display of his symptoms to the jurors. The simplest remedy in such cases would seem to be a private trial. No country can afford, without bringing serious discredit on the administration of justice, to permit many such exhibitions as occurred daily in the court-room during the Guiteau process.

Judge Cox can, however, now fairly point to the verdict as in part, at least, the result of his experiment. The demonstrations of his insanity given by Guiteau were not successful. There is after all a certain method in madness. Even the crazy are crazy by certain rules, about which long experience has left little doubt, and Guiteau did not observe them. He did not conceal his acuteness or the rapidity and accuracy with which his judgment worked on things which concerned him deeply. The only proofs of insanity he furnished were his violence and indifference to appearances, which are the marks of insanity which it is easiest to simulate—almost as easy, in fact, as to simulate the gait of a drunken man. The play of his mind on the case in no other way indicated marked defectiveness; so that it is probable he himself had the largest and most effective share in his own conviction.

It can hardly be said that the case has made any important contribution to jurisprudence. The charge of Judge Cox on the legal marks of insanity was a model of lucidity and accuracy. He left no haze whatever about the subject, though he acknowledged the insuperable difficulty the courts have had in dealing with it. There was some foolish talk, when the experts were examined, about their having resolved to seize this opportunity to clear up all doubts about the relation between mental unsoundness and moral or legal responsibility, as if it was any part of their business to testify in the interest of public safety, or in any interest but that of simple truth. As a matter of fact, they contributed nothing new to the literature of the subject. What the trial has done is to make plainer than before something that was already well settled, though occasionally obscured by sympathetic juries—viz., that if you are sane enough to live and do business in the world, and be treated in the ordinary relations of life as sane, and you plot or plan a crime beforehand, and in plotting and planning it show that you know and fear its possible consequences, and have taken precautions against them, or made calculations to enable you to escape from them, you will be held responsible for your act and suffer the legal penalty. In other words, to be enabled to commit crime with impunity, it is not enough to be queer or eccentric, or cherish delusions about your own place in the world, or exhibit incapacity for keeping your engagements. Your conduct for a long while before your crime must be such as to show that you were indifferent to the consequences of your acts. In other words, the doctrine of insanity *ad hoc*, as it were, or of sudden temporary insanity, lasting long enough to serve a particular unlawful purpose, has probably received the worst blow ever inflicted on it.

We cannot pass from the subject without expressing deep regret over the character of Judge Porter's closing speech. It is impossible not to hold it responsible for much of the turbulence and indecency of the last day. It consisted largely of a stream of very coarse vituperation directed against the prisoner. A little of this is perhaps tolerable in a criminal trial, but not more than enough to give emphasis and point to the review of the evidence, and touch the moral sympathies of the jury. In favor of steadily blackguarding the prisoner, at point-blank range, no matter how low or degraded he may be, there is not a word to be said. The mere fact that the prisoner cannot answer ought to be enough to make counsel very sparing in the use of this weapon. The prisoner is brought into court, not to be railed at, but to be tried. The immediate effect of Judge Porter's abuse in this case was to take away from Guiteau's retorts and comments much of the air of ruffianism they would otherwise have had. It is not in human nature to expect any man under any circumstances to sit still under such a stream of billingsgate, much less a great scoundrel on trial for his life. Moreover, it was plainly unnecessary. It undoubtedly fell on the ears of the already convinced and very weary jurors.

It now appears that the prisoner will have an appeal to the next General Term of the court, which will not sit till April, and that if the appeal is rejected, he cannot be executed till June, when the court adjourns. Is there any good reason why Congress should not bring this great horror and scandal to a speedier close by passing a short act authorizing the General Term to hear the appeal at once, and permitting judgment to be executed immediately afterward? Otherwise we shall probably have Guiteau playing the lunatic with increasing vigor for the next six months, before a disgusted nation, in the hope of finally cheating the gallows, after all, by a reprieve.

GAMBETTA'S FALL.

The defeat of Gambetta in his contest with the Chamber over the *scrutin de liste* has been more complete than was anticipated, the vote being 305 to 117. The formal issue in the debate was whether the revising powers of the Constitutional Convention should be unlimited, or limited by the instructions of the Chambers, Gambetta contending fiercely for the limitation, under which he meant to estab-

lish the *scrutin de liste* and certain changes in the constitution of the Senate, which we enumerated last week. His devotion to the *scrutin de liste* is not surprising. There is little doubt that the *scrutin d'arrondissement* has done a good deal to weaken the control of the executive over the administrative machine, and to bring about a state of things somewhat similar to that which we see in this country, in which legislators make their support of the Government depend on the extent to which they are gratified in the matter of appointments. The member from a small district has to settle with all the office-seekers and wire-pullers of the district as a condition of his continuance in public life, and he can only satisfy them by wresting patronage from the Ministers. Under this system the French civil-service organization, which was once so remarkable for its discipline and obedience to the executive, has been rapidly falling into disorder, and the time of the Ministers has been taken up, to a degree before unknown in France, with the work of bargaining and adjusting "claims" with Deputies of their own party.

Of course one marked result of this is that absence of interest in real public questions on the part of the legislators with which we are so familiar here. Another—and for the Cabinet perhaps a more important one—is the impossibility of keeping together a compact majority for any great length of time. There are never enough offices "to go round," and for the one member who is satisfied with the "recognition" he gets, ten are annoyed. In fact, French leaders are discovering, what we have so long known, that public patronage is rather a disintegrating than a cohesive force. Besides which the French Deputies are not kept in the traces, even when disgusted, as they are here, by a powerful party organization out of doors, with its settled usages and traditions and its stern and ruthless requirements in the matter of fealty. The consequence is that the ministerial majority has become a rope of sand, by which no Ministry can count on living for more than a week or two.

It is not wonderful that Gambetta should wish to alter this state of things, resume the old governmental control of the civil service, and create a compact majority held together by community of opinion, and put an end to the "group" system. But what is surprising is the want of tact he has displayed in pushing his plan on an evidently hostile majority, in the teeth of the fact, which was made plain enough at the last election, that the country did not share his impatience for a revision. The change he seeks is a kind of change which an English Minister would consider himself fortunate in being able to bring about within ten years. But the defect of the French Constitution which Gambetta's fall most forcibly illustrates is the inability of the Ministry to dissolve the Chamber of Deputies without the consent of the Senate. It is difficult to see how a responsible Ministry without the power of dissolution can ever work successfully. In the first place, the Minister's power of dissolution is most effective in preventing petty revolts in his own party. The rank and file learn to hide their small chagrins when they know that if they indulge them too frequently they may have to run the risk and expense of a general election. And then, when a Minister comes to loggerheads with the Chamber, he ought to have the power of laying the question in dispute before the country at once and getting its decision, and getting with the decision, if favorable, a new majority pledged to support him. No imitation of the English system seems to be workable in which this feature is left out.

The French have now got back to what they call a "business Cabinet," or what we should call a Cabinet without politics. M. de Freycinet, the Premier, is probably the safest man in the Republican party, and although he is by profession an engineer, and has been a railroad manager, he is not beset with the passion for public improvements which was one of the weak points of the Gambetta Cabinet. He has filled several administrative posts with the highest credit, the last subordinate place being that of Minister of Public Works in the Waddington Ministry, which he succeeded as Premier in 1879. He is powerfully supported by Léon Say, who is now the most noted and orthodox political economist in France, and has what greatly strengthens an economist's authority—a large and well-managed fortune of his own. Jules Ferry also reappears on the scene, and so do M. Tirard, M. Cochery, and Admiral Jauréguiberry. In fact, in the matter of talent and prestige, the new Cabinet is almost the exact opposite of Gambetta's. Gambetta surrounded himself by comparatively obscure men, whose chief title to their places seemed to lie in devotion to his fortunes. The most conspicuous, if not the only, exception to this rule was M. Paul Bert, whose appointment to the Ministry of Public Worship had, however, the unfortunate air of being intended as a striking mark of the new Ministry's contempt for worship of every kind, both public and private. The Cabinet as thus constituted, too, recalled somewhat too vividly the great defect of Gambetta's career as Dictator during the war. Even those who most highly appreciated his services in prolonging the French resistance could not deny that he seemed somewhat reluctant to call men of established reputation to his aid, much less to be guided by their advice. But there were not many even of his enemies who expected him to make up his first Ministry on the same principle, and refuse or avoid the coöperation of men of independent views. He did it, however, and it proved from the outset a source of decided weakness, and largely contributed to his downfall. This downfall, taken in connection with the composition of the new Cabinet, must be considered on the whole as a sign of the very healthy condition of French politics. It shows that the country is slowly but surely getting over the need of a "necessary man," which has hitherto been the prominent feature of French political life and has worked the ruin of every régime which has preceded the present republic, and for a while made Gambetta to many people a "shape of dread."

The present financial situation in France is highly favorable to the success of the new Cabinet. Its accession to power finds all that portion of the French public which has anything to lose very sick, sore, and much afraid of and probably hostile to all speculative enterprises, home and foreign, and not the least interested in the revision of the Constitution. No combination that could be made would be much better fitted to satisfy this mood than M. de Freycinet's. France, after ten years of extraordinary prosperity, due in the main to an industry, and above all to a frugality, which no other people in Europe has displayed, has shown at last that she is not free from the weaknesses of her neighbors. Speculation, which under the Empire was mainly confined to the court circle, has taken hold of nearly everybody who had savings, not excepting the peasantry, and France has had her first purely financial panic since the Revolution. This may seem a startling assertion, but it is literally true, for all the other financial crises since 1789 have been brought about by political convulsions. The effect of them on the public mind was therefore invariably to cause a desire for a saviour of society who should bring back business prosperity by the use of the strong hand. In fact, it has until now been almost a settled tradition of French politics that the true remedy for a panic was military or semi-military rule. The experience of a panic, therefore, which has not only occurred in a time of general peace and prosperity, but is plainly due to the sanguine temper produced by peace and prosperity, and which is plainly curable only by sober business government and hard work, is undoubtedly a most valuable one. Every time Frenchmen get over an internal difficulty without the aid of troops they make an immense gain.

The greatest drawback in the new Cabinet from the commercial point of view is to be found in the return of M. Tirard to the Ministry of Commerce. He is a financier of the Boutwell type, having acquired his notions of international trade from the management of a jewelry store, and brought to the late negotiations for the renewal of the treaty of commerce with England a very narrow retail spirit, combined with a curious notion that it was his duty to discourage not only certain of the lines of international exchange, but certain branches of manufacture. It was almost admitted before he went out of office that the conclusion of a treaty through him was impossible. Whether the negotiations have in the meantime gone too far to be upset by his return to office, we do not know. But that hopes of a successful issue are still entertained is shown by the passage of a bill in the Chamber, on the motion of Gambetta's Minister of Commerce, M. Rouvier, providing for a three months' further extension of the existing treaties.

CHARLESTON REVISITED.—I.

JANUARY 23, 1882.

OF things not political, observed while spending the last holidays in Charleston, a few seem worthy of note. There can be no doubt that the general current of feeling, the tone of speech, is one of encouragement. "We have come through the worst," "Things are looking up," "We are more hopeful," "The times are better," are but a few of the common phrases. This, too, it should be remembered, is after a less abundant

cotton crop, and with a smaller rice crop than for many years. On two estates which I knew, not a grain of rice was gathered. Of outward signs of improvement, two or three are very evident. A considerable beginning has been made on the much-needed work of repaving the streets. The railroads have built new and extensive stations for both freight and passengers. A fine avenue has been surveyed along the upper front of the city, and thence up the Cooper River shore. The High School for Boys is in new quarters, in what was once the well-known mansion of Judge King, now remodelled and enlarged. What is still more important, work is to begin at once upon a very large, fine schoolhouse for the lower wards—a part of the town which, in proportion to area, contains the largest number of intelligent and well-to-do families. The East Bay, with the crowded wharves and cotton-presses, and the great cotton-ships in the harbor, looked just as they used to do, but the phosphate-works upon the Neck and along the shores of both rivers are something so novel as to surprise even one who was looking for them. The discovery of the phosphate-beds, and the sudden and extensive development of a new industry in the manufacture of fertilizers from it, are matters of common history now, but the wonder of the long concealment of their value and the opportuneness of the discovery is none the less. Said to me Prof. Holmes, to whose research the result is mainly due: "Almost forty years ago Prof. Agassiz staid six weeks in my house, and we went over and over the phosphate-beds, studying the fossils in them and writing whole books about them, but we never thought of the chemistry of them."

A new experiment is just now undertaken upon the Sea Islands which may have scarcely less important results in the future of the State. It is what has always been considered impossible on any great scale—the cultivation of grass for hay. A native grass has been found apparently answering all the requirements of the case, and the tests of one or two years have been so satisfactory that more than one estate in St. Andrew's parish is now devoted to this crop. To give up plantations once bearing Sea Island cotton to grass seems like the rooting up of the ancient vineyards in the Rheingau a generation ago—enough to make the old masters turn in their graves; but with the conditions of labor and capital now existing, and as they must exist for a long time to come, variety of industry is the true wisdom.

The specific traces of the war are very few. The wide gap still to be discerned through the heart of the city marks the path of the fire of December, 1861. The city endured continuous though inconstant shelling for five hundred days; and for nearly three years the whole lower half of it was tenantless and deserted. It is the effect of that dampness of climate which makes the whole city look so like an old English town, to obliterate very quickly any marks of external repairs. A house untouched for ten years is as gray as if it were a hundred. Yet a closer inspection reveals curious proofs of the desolation of that time. We chanced to be occupants of a very old house, the reputed residence, I believe, of the last Colonial Governor, but at any rate so old as to have nothing distinctively Southern about it—no sign of porch or gallery. It stands square, grim, and severe, with iron railings and lamp-posts in front, the exact London house of the last century. The heavy, hand-made window-sashes were such as used to be sent out from England in that day; but three or four, either upper or lower, had been recently replaced by the slight frames of machine-make. Just below us was the Battery, the small park and promenade at the meeting of the two rivers. There are fine houses on the inner side of it with pleasant gardens. Walking round it on Christmas Eve, in the warm air, sweet with rose and violet, and, beyond, the glitter of a sunlit sea, it was easy to believe in and to share the pride which every true Charlestonian takes in it. I had last seen it, one April afternoon, under a dull, leaden sky. The big rain-drops came in sudden, fitful gusts, but no one heeded them, for out against the misty horizon Fort Moultrie and Fort Sumter were answering each other. The high walk was full of people, yet not a sound was heard except the slow grating of wheels upon the street pavement, and now and then the quick splash of a wave driven over the parapet by the east wind. Women stood with awe-struck faces. I recall one with folded hands and tears on her cheeks. No one then could have supposed that the engagement would be harmless to life; and if there were hearts that trembled for the loyal Anderson, the flower of Charleston was at Fort Moultrie.

We went thither on Christmas Eve. The brick walls are still intact, but within it is only a mouldering heap of sand scarce kept in shape by the straggling wild grass. There is now a large summer village on Sullivan's Island stretching the whole three miles of its length, as odd a mingling of rude cabins and fine houses (according to Southern needs) as can be imagined. At the water's edge at low tide may still be seen the boiler of a stranded blockade-runner, and further out the turret of a monitor is visible. But by way of contrast, on the other side, sheltered in the lee of the island, is going on the peaceful preparation of the brush-work with which to repeat the Mississippi jetties, to deepen the channel over the bar. One man keeps solitary ward at Fort Sumter. For two-thirds of the year no one cares enough about him or his to provide any regular means for getting thither, but in the late winter, when the Northern tourists swarm this way, there are frequent excursions to the fort.

The war is truly very far away from what is now the working world of Charleston. I do not mean to draw too general conclusions from personal experience; but where not one dissenting voice is heard, it is fair to infer unanimity of feeling. One day's stay would prove that the war is neither a forbidden nor a delicate subject. It is simply frankly mentioned as occasion requires. Personal griefs have been softened by time; the past, with its pains and its losses, is absolutely the past, and, because it is never to be renewed again, there is no longer bitterness. The cordial welcome is made only the more kindly if it be to Northerners. Criticism of themselves is outspoken: "We believed what the Charleston *Mercury* told us." Of the burning of the bridge over the Ashley, one said: "We did it ourselves; and it was such a pity." "A great piece of folly," said another. The evidences of the thorough acceptance of the new conditions of life crowd upon any careful observer. "You may go through the land, and you will not find man or woman who would wish the old ways back again." But there is deep regret in the tone in which they speak of the next years after the war. They are "the bad times"; "the troublous times of twelve years ago"; "the hard years when we were so heavily taxed by the Radical Administration of the State." "The dark days" in their speech are not the days of the war, but of that early struggle to renew their homes, to build again the waste places. Hearing this, one understands the thankfulness with which it is said: "We are encouraged; we have now the control of this city and of our State, and of our principal municipalities."

This means most in Charleston itself; for there is there a clinging personal affection and pride for the city unlike anything elsewhere. It has never been a large community, and in no other city has there been so little change in the leading influences for a century. Even the war did not alter it permanently. New men and new fortunes have come in, but the old traditions are held fast with a sense of age and of history which give to the society an individuality and a charm to be found nowhere else in our shifting time, since the Boston of forty years ago disappeared. You find the feeling not only in the fond memories of the aged; the children are born to it. Said an audacious young person from a big city in the West: "I have been out in the *village* this morning." To which her hostess, a loyal little maiden, replied: "Yes, I know it is small, faded, if you like, and old; but it is because it is old that I love it. It might be the great-grandmother of your young, fine Western town." If in their losses and their poverty the world has swept on and left them something behind, seeing the patient endurance, the sweet dignity that accepts the narrowed lot, you feel for once—so much the worse for the world.

Of the great mourning last autumn, the indignation and the sorrow in the South were not exaggerated. More than that, there is a feeling of surprise that any should suppose it could be otherwise. "When the President, the head of the Federal Government, fell by the bullet of an assassin, we rose up with one feeling." At the annual dinner of the New England Society in Charleston on Forefathers' Day, it was not a New-Englander, but the District Attorney, "a South Carolinian, born and reared, a Confederate soldier who has nothing to go back on," who said: "There were no flowers on that bier more fragrant than those sent by the people of South Carolina. . . . The whole State, the whole South, the whole country attended at that funeral." Of President Arthur's first message he said: "The President of the United States says nothing about the Southern section of our country, thank God! and in the eloquence of that silence he speaks golden words, and tells us all that there is nothing that divides us now—that all is covered up in the grave of the lamented Garfield." It happened to us the very next day after the dinner to listen to the Christmas greetings and the New-Year's wishes of a large party of schoolgirls. The scene had all the brightness which youth and hope must always wear, so that there was a strange pathos in the grave shadow that came on even the youngest faces as the chronicle of the old year was read. It was but a girl's voice, yet it was the echo of a nation's lament, and she spoke wiser than she knew: "By that grave, strife and contention have been hushed as never before."

WHAT IS THE STATE OF ENGLISH OPINION ABOUT IRELAND?

London, January 17, 1882.

My main difficulty in answering the question which heads this letter is my doubt as to the truth of the assumption on which the inquiry itself rests. Is there any such thing as a determinate "English opinion" with regard either to Irish affairs or to any other of the chief political problems of the day? There are plausible grounds for asserting that no such definite national opinion in reality exists. Politicians, it is true, of every school, asseverate with confidence that certain dogmas of their own are accepted by all Englishmen, with the exception, indeed, of a few fools or fanatics whose absurdities are not worth taking into account. One orator asserts that the English people are prepared to support the Government through thick and thin. Another speaker is well assured that all men of

sense hold the Ministry in contempt, and are determined that at any price the law shall be maintained in Ireland. Some of my friends are certain that the country will not tolerate coercion; a few hint that the time has come for conceding Home Rule and of trying the experiment of letting Ireland take care of herself. From the honesty and confidence with which equally acute observers pronounce contradictory judgments on the drift of English sentiment, it is impossible not to infer that in fact the nation, or even (what is a somewhat different thing) the electorate, has not in reality come to any definite conclusion whatever as to the proper policy to be adopted in dealing with Irish difficulties.

Nor is the vagueness, the uncertainty, and the fluctuating character of that public opinion which is supposed, rightly or not, to be the ruling power in a free state, a mere transitory accident. Till some crisis arrives the English democracy is likely enough neither to form nor to express a clear, imperative decision on Irish policy. One set of opinions will counterbalance another; the prejudices or principles of strong Tories will be counteracted by the sentiments or convictions of violent Democrats, and the nation will remain content to leave the conduct of affairs to the Ministry in power. Indeed, the most marked feature of modern English politics is the increasing influence of the executive. Any Premier who can retain the trust of the electors is little checked by objections to details of his policy. Mr. Gladstone's popularity (which I do not believe to be as yet seriously diminished among the large constituencies) no doubt gives the Government a freedom of action which would not be possessed by a Cabinet guided by a less popular chief. Still, any one who reflects on the course of events during the last fifteen years will, I think, conclude that the English democracy show a tendency to confer wide discretionary powers upon any statesman whom they recognize as their leader. Lord Beaconsfield might, I conceive, have considerably altered the details of his foreign policy without either increasing or diminishing his influence. If he had occupied Egypt, if he had given genuine support to the claims of Greece, even if he had gone a good deal further than he did in opposing the progress of Russia, he might have done so without losing office an hour sooner than the day on which he was compelled to resign. Mr. Gladstone, again, has had and still has pretty much *carte blanche* as to the minutiæ of his political conduct. The Land Bill was for all intents and purposes what he chose that it should be. He was at perfect liberty to bring in either a much less effective or a much more revolutionary measure. Whatever the bill had been, the electors would, it is probable, have insisted on its being passed.

So it is with regard to coercion. Few are the signs that popular constituencies object to the arrest of Mr. Parnell. Few, again, are the signs that public opinion absolutely demanded his arrest. The most curious feature of the whole crisis through which England and Ireland have been passing since the Ministry came into power, is the calmness of the English people. I do not mention this as wholly to their credit. Indifference to the sufferings of Irish landlords is not a bit more deserving of praise than indifference to the wrongs of Irish peasants. And it is impossible to keep one's mind free from a suspicion that public calmness is to a certain extent another name for perfect indifference. Still, on the whole, my belief is that the absence of passion and violence which has hitherto marked the bearing of Englishmen at a time when there was and is much to excite their justifiable irritation and anger, is due in the main to two permanent causes. Fifty years of really free government have accustomed the people of Great Britain to freedom of discussion, and to that toleration of even unpopular opinions of which freedom of discussion is, or ought to be, the parent. At the same time the vast increase of the electorate has created a disposition to place large if temporary authority in the hands of the Minister of the day, and to hold that all matters of administration (using that term in a very wide sense) must be left in the unfettered control of the man or men who possess the confidence of the country. The approval of the country may, of course, be at any moment withdrawn. The palpable failure of the ministerial policy, any movement in Ireland which required to be put down by measures which shocked the ordinary sense of humanity, any concession to Irish demands which was held by the mass of electors to compromise the dignity or the prosperity of the country, might in a moment drive Mr. Gladstone from power. The Conservative reaction of 1874 ought no more to be forgotten by an impartial observer than the Liberal triumph of 1880. Whenever the next crisis arrives, the voice of the nation will no doubt make itself heard in tones the import of which is unmistakable. Meanwhile, the best course to be taken by any one who wishes to form an estimate of the probable future current of opinion is, to dismiss from his mind the delusion that any one predominant English opinion about Irish affairs does at this moment exist, and to try to trace out the different opinions which, as a matter of fact, appear to exist among different bodies of men.

The definite opinions entertained either by large numbers or by persons of any weight with regard to the "Irish question" (if I may use a convenient piece of political slang) are, as far as my observations go, fourfold:

First, the Government, as represented by Mr. Bright and the vast majority of the Government's supporters, hold that the one essential matter is to ensure the operation of the Land Act. Until that measure of agrarian reform has had time to produce its beneficial effects, society must be kept together by means of what is called coercion, or, in other words, by a system of arbitrary arrest exercised by Ministers who, like Mr. Forster, are assuredly men of humanity, heartily desirous of avoiding acts of oppression, and utterly averse to bloodshed. Many persons who will not agree with Mr. Bright in holding that arbitrary arrest and a suspension of the ordinary course of law are "a resource of civilization," will yet, if they are candid, admit that there is a good deal to be said in favor of the policy advocated by the member for Birmingham, and that at any rate the Government's scheme of ruling Ireland by means of humane despotism intended to give time for the operation of agrarian reform, is sure to commend itself to some of the best feelings of Englishmen. The great merit of Mr. Bright's favorite resource of civilization is that it does not involve those acts of violence which, even when legally justifiable, leave behind them an amount of popular resentment which the lapse of years may not efface. Mr. Bright and Mr. Bright's special followers are exactly the persons to appreciate at the full the tremendous evils of violence and bloodshed. Mr. Bright can probably remember the Peterloo massacre. Whether the conduct of the magistrates and yeomen in 1819 was legal, is still matter in dispute. That the slaughter of unarmed men was not for years forgiven by the artisans of Lancashire, there is no doubt whatever. The policy of coercion may not be a policy of justice; it is assuredly a policy of humanity. The evil of suspending the regular action of law is a great evil, but it is one which does not powerfully strike the popular imagination. Every man who listened to Mr. Bright at Birmingham was able fully to appreciate, and did appreciate, all the evil and cruelty involved in any course of action which necessitates the free use of armed force.

The plain truth is that the sentiment of English electors is, when their passions are not very violently roused, the sentiment of humane men, who detest the shedding of blood. Those who recall the suppression of the Sepoy revolt may doubt the humanity of the English electorate; but it should be remembered that in 1857 the whole civilized world believed the Indian troops to be guilty of atrocities the commission of which has certainly never been proved; that Englishmen, no less than Americans, do in fact think much less of the sufferings of Asiatics than they would of the sufferings of Europeans; that Ireland is not India, and that during the last twenty-five years considerable changes have been wrought in English sentiment. Those who reflect on these matters will come to the conclusion that even Conservatives would, in 1882, not tolerate anything like the horrors of 1798, and that it is natural for English Radicals to look with considerable favor on the policy which, if illogical and arbitrary, is yet not inhumane, and which promises a fair chance of success to the scheme of reform which it is hoped will render the Irish people contented. The fact that Irish landlords suffer hardship or even injustice does not, I am afraid, very vehemently annoy English electors. English squires are not themselves quite so popular with laborers and artisans as squires are apt to suppose, and Radical electors have learnt to think, rightly or wrongly, that Irish landowners have all the faults of English squires, and a good number of their own to boot. If the Land Act palpably fails of its object, or if, after all, the executive are compelled to use measures of repression more violent than arbitrary arrests, the Ministry may lose popular support. Meanwhile, the ministerial view of the situation seems to be, on the whole, the view adopted by the majority of Liberal electors.

Secondly, some writers, of whom Mr. Goldwin Smith is by far the most distinguished, advocate the doctrine that the right mode of dealing with Irish disturbance is rigorously to enforce the law by the strict use of legal means, and that if through the unsuitability of trial by jury to the present condition of Ireland the law cannot be enforced, the part of wisdom is to suspend not the action of the law, but the course of trial by jury. I so decidedly incline to think this view the only sound view that I am not at all likely to do it injustice; but I am convinced that it has little hold, and never will have much hold, upon ordinary public opinion. Conservatives who tremble for the lives and property of Irish landlords cannot be brought to believe that a mere change in legal procedure will be of any considerable effect in checking the tyranny or violence of tenants excited by the cry of "no rent." Radicals, on the other hand, will always think (mistakenly in my opinion) that to abolish trial by jury is a far more serious inroad upon the principles of the Constitution than to pass coercion acts which appear, at least, to be a temporary resource intended to tide over the pressing difficulties of a crisis.

Thirdly, there are undoubtedly to be found persons who believe that the one cure for the political diseases of Ireland is the establishment of martial law throughout that country. It is now nearly a year, if my memory does not deceive me, since the sole organ of militant Toryism, the *St. James's Gazette*, announced that the proclamation of martial law was the one thing needful; and there are probably many persons who hold in a vague way that Ireland can be brought into a condition of order by the free use of cannons and bayonets. Whether this sentiment is or is not widely spread I am not in a

position to assert. Probably there is no one, from the Prime Minister downward, who can form a really trustworthy opinion as to the extent to which the transactions of the last two years have tried the patience of English electors. The man who can believe that "force *is* a remedy" for evils which are the growth of the mistakes, crimes, and calamities of centuries, believes, as it seems to me, in the face of all reason, that a medicine which has failed time after time is a specific. But I do not wish to underrate the possible influence of views which I do not share. The utter failure of the Land Act, or deeds of cruelty which excited the severe and just indignation of the whole of Great Britain, might at any moment carry the people of England and Scotland, so to speak, off their feet. I should, under certain circumstances, witness with much more of grief than of surprise the growth of a general conviction that justice had been tried with Irishmen in vain, and that there was nothing left for England but to show her power. I cannot even mention the possibility of such a turn in popular sentiment without reiterating my firm belief that no change of feeling could be more calamitous to the United Kingdom. I do, however, hold it quite possible that the cry for martial law may gather strength. Meanwhile, the advocates for the use of force belong, to judge from appearances, mainly to the well-to-do classes. No public meeting of a popular character has, as far as I know, been held in support of a policy of what may be termed violent coercion. The Property Defence Association did not, apparently, enlist the sympathy of the mass of the electors. One may doubt whether even wealthy Englishmen feel much inclined to support a proposal for entrusting the duties, responsibilities, and powers of the Government to a society which must of necessity be composed for the most part of violent partisans.

Fourthly, any one who studies the signs of the time will perceive that an idea is gradually gaining ground that the true solution for the Irish question is that England should grant Home Rule to Ireland. The only politician who has avowed this doctrine is Mr. Labouchere. He is not a man whose proposals carry any great weight with the public. This particular suggestion was heard with patience by his constituents, but they gave no sign that it met with their approval, and Mr. Bradlaugh has not, as far as I have observed, endorsed the views of his colleague. But, for all this, it is worth while to pay attention to Mr. Labouchere's utterances. He is a man of ability; he knows the world; he is freed from many conventional trammels; he has good opportunities for seeing which way the wind blows. He is not likely to have made himself gratuitously the advocate of an unpopular view unless he had some reason to suppose that he was putting forward ideas which might, in the not distant future, command a good deal of support. It is fair to conjecture that he believes the time to be drawing near when the English democracy, wearied with attempts to conciliate Ireland, may think that the wisest course is to let Irishmen have their own way. He may not be utterly mistaken. English workingmen are becoming naturally impatient at the amount of time given by the Imperial Parliament to Irish questions. They think, I am told, that we ought now to have an "English session." They are probably—though on this matter no one can speak with certainty—averse to measures of violence. It is, therefore, conceivable that democratic electors might in time come to think that the evils of Home Rule are exaggerated, and that to concede local government to Ireland would at once satisfy Irishmen and save trouble to Englishmen. It is fair to add that I do not myself think this solution of the Irish question either desirable or possible. The inhabitants of Great Britain, are, I believe, firmly determined not to resolve the United Kingdom into a federation; and any party which was believed, rightly or wrongly, to be favorable to the dismemberment of the empire would, I suspect, when a crisis arose, find themselves as weak as did the Northerners who on one ground or another suggested the advisability of letting the South secede in peace. But it is one thing to hold this opinion and another thing to shut my eyes to the fact that views favorable to the concession of some sort of Home Rule are gradually gaining ground, and will sooner or later demand and receive serious discussion.

Amid the chaos of opinions with regard to Ireland, men of sense among all parties are, as it seems to me, beginning to agree in at least one definite conclusion. There is no one certain or immediate panacea for the evils under which Ireland is suffering. The country is passing through a revolutionary period. Whatever may be the outcome of what is going on before our eyes, every one whose thoughts are worth having is convinced that the restoration of social order and general prosperity in Ireland must be a matter of years, and perhaps of many years.

A. V. Dicey.

EGYPTIAN AFFAIRS.

Alexandria, January 10, 1882.

During the last few weeks public attention has been distracted between the claims of the cholera at Mecca, the movements of Arabi Bey, and the press laws. But inasmuch as hardly any trustworthy information comes through the medium of such daily papers as have not yet been suppressed, the information which is to be obtained on all these topics is usually of a desultory and fragmentary kind. It bears upon it much of the impress of gossip in the sense that it oscillates between two opposite extremes of exaggeration, and the real truth only evolves itself after a long and patient examination of every class of witnesses who have anything to say upon the matter. It may be said at the outset, that when one speaks in Alexandria of public attention, it must not be supposed that general news of any kind excites the same sort of interest which it does in a European or American capital. There is, even in the most intelligent circles of society, a certain want of energy and political inquisitiveness which is partly due to climatic influences, and partly to absorption in commercial affairs. The result is that the most amazing alternations of Bedouin massacres, wholesale expulsion of foreigners, and patriotic insurrections are discussed in an easy and courteous way over the dinner-table and in the presence of happy families, with somewhat less zeal or passion than the prospects of the Oxford and Cambridge boat-race are discussed with in England toward the close of Lent. It is, in fact, extraordinary for a traveller who has recently arrived from England to find how the alarming Egyptian news which figures in conspicuous, large-printed telegrams, shrinks into moderate proportions when the real facts are ascertained, and when the reported news, even if true, is laid side by side with a number of small explanatory circumstances which reduce it to insignificance. In a word, it may be laid down generally that the large majority of telegrams despatched from residents here to the European papers are false. They are not usually baseless, but their falsity consists in the impossibility of telling the news in a form which really would be truthful through the condensed medium of the longest of the telegrams which have ever appeared.

With respect to the cholera, there is no doubt that at first great delay and negligence took place in establishing such a quarantine as would prevent the pilgrims returning from Mecca bringing the cholera with them. The memories of one of the last epidemics of cholera in Alexandria, in which residents here will tell you that as many as fifteen hundred persons, Europeans as well as natives, died in a day, have naturally made the public somewhat sensitive on the subject. However, a quarantine was soon established at two points on the homeward route to Egypt, and sanitary authorities were constituted, having large powers to arrest the spread of infection. One difficulty experienced was that of suddenly extemporizing at El-Wisch, one of the resting points adjoining the Red Sea, commissariat arrangements sufficient to provide for incessant caravans of pilgrims arriving from Mecca without provisions for a compulsory stay of weeks duration. It seems, however, that these difficulties have, on the whole, been surmounted, and with the exception of flying rumors that an occasional pilgrim succeeds in breaking the quarantine and swimming across the Suez Canal, the reports are much more favorable. In the meantime, the deaths from cholera at the seats of the disease are largely reduced.

The audacious or eccentric step taken by Colonel Arabi Bey in writing a letter to the English *Times* is felt to be a guarantee for his disposition to substitute appeals to reason in the place of appeals to sedition. The difficulty in according credit to his assertion that the movement he represents is nothing but a genuinely patriotic one, and means neither more nor less than "Egypt for the Egyptians" (and not for highly salaried European officials) is due to the fact that in the case of such an inanimate native population as this, not represented by any public press worthy of the name, it is impossible to distinguish between what is the mind of the people and what is the mind of a few persons who only use "the people" as their stalking-horse. A truly patriotic cry in this country ought to receive sympathy in all constitutionally governed countries. But it would be a misfortune to arrest the real progress of Egypt by breaking up the only conditions under which order and prosperity can be at present secured, even if this be done in the time-honored name of popular rights. Within this country there are at least four distinctly-recognizable political parties, and there are any number of political parties outside the country, including that of Ismaïl, the last Khedive, and the various foreign representatives of the different classes of Egyptian securities. The parties inside the country are that of the Khedive himself, that of Colonel Arabi Bey, that of the Sultan of Turkey, and that of the French and English Control. The party of the Khedive is less distinct than any of the others, owing in some measure to the personal excellences of the Khedive himself. It may still be a matter of doubt whether it was from timidity or from moderation that in last September he abstained from adopting the advice tendered him to have Col. Arabi Bey seized on the spot and tried by court-martial as a rebel. It is certain that the present Khedive is a man of genuine and exceptional piety, though not a fanatic; that he is a friend of education and of social reforms; that he desires to do his work well as a ruler of the country, and that his private life is of rare goodness, even from a Western standpoint. But many of these very qualities would dispose him to sympathize with one or other of the three parties which compete with his own. His religion might lead him to be Pan-Islamic and to favor the aggression of Turkey; his good sense and recent antecedents would lead him to support the European Control; his patriotism must make him not altogether indifferent to the cry of the party which professes to be characteristically patriotic. It is yet uncertain to which party he will finally incline.

The recent engagement of England, on behalf of united England and France, to support him in any emergency, seems to be an indication that he has finally closed with the only party which can effectually carry on the redemption of the country from years of misgovernment, as well as secure his own throne. The Assembly of the Notables, which is just getting to business after receiving and replying to a courteous address from the Khedive, from which little political augury can be extracted, may, perhaps, soon throw a fresh light on the future. A.

Correspondence.

THE POWERS OF A QUORUM.

To the Editor of The Nation:

Sir: An instance occurs to me which may go to confirm to Mr. Whitmore the validity of the Maine Supreme Court's presumption in law that the "other man" was either "thar or tharabouts." In 1787 the majority of the Pennsylvania Assembly, which was Federalist, but not a quorum, wished to pass a bill for holding the convention to consider the new Constitution. The bill allowed only ten days for the election of delegates, in order to cut off the anti-Federalists of western Pennsylvania from getting the intelligence in time to take part. The minority absented themselves, but a mob seized enough of them to make up a quorum, carried them into the House, and held them in their seats while the bill was passed by a majority of the quorum thus obtained. Mr. Whitmore will perhaps perceive from this instance that some of the "fathers of the republic," as well as the Maine Supreme Court, understood that there are quorums and quorums. J.

Norwalk, Conn., Jan. 27, 1882.

To the Editor of The Nation:

Sir: Your Boston correspondent, who inquires concerning the power of the voting majority of a quorum to bind the non-voting but present minority, may get some light from the case of Bank *vs.* Mount Tabor, 52 Vermont, 87.

A quorum is that part of an entire deliberative body—usually, but not always, a majority of the whole—which has power to act for the whole, very much as the officers of a town, or some other like select body of citizens, may act for the whole municipality of which they are but a small part. According to the authorities cited in the case above referred to, if, in public matters, the whole number of such a select body be duly called on to act, and given an opportunity, then the act of the majority is sufficient.

Very respectfully yours, H. A. Harman.

Bennington, Vt., Jan. 27, 1882.

THE RAISED STANDARDS OF OUR COLLEGES.

To the Editor of The Nation:

Sir: In your discussion of the merits of the Harvard plan as compared with the Yale plan of college government—the former being based on the supposed ability of the student to choose his own course of study, and on his willingness to follow it out unconstrained, while the latter treats the college student as a mere schoolboy, to be guided and figuratively birched—you call the former the European, the latter the American idea of the college. But you do not state why most American colleges, especially the smaller ones, have failed to introduce *Lernfreiheit* (freedom of studies), and why this system is of so late growth even at Harvard. Yet the reason is very simple. It is but fifty years since a boy who from his primary school went on through all the institutions of learning that culminated with the college degree of B.A., would, in the absence of either precocious skipping, on the one hand, or of lagging or interruptions, on the other, attain that degree at the age of eighteen or nineteen—that is, at the age at which, at the present day, most freshmen enter upon their course at Harvard, being not much older, indeed, than the freshmen of other high-grade colleges, like Yale, Amherst, or Princeton. The Bachelor's degree of our best American colleges was then no higher than the "certificate of maturity" given to those who finish their studies at a German gymnasium or French lycée, or than a pass from the highest form at Eton or Rugby. It was therefore then quite proper that the same discipline, both in the direction of the choice of studies and in keeping them to their books and out of bad ways, should be applied to the American college students as to the *Primaner* and *Secundaner* of Germany, and to the boys in the four upper forms of the French lycée and of the English "public school." But during the last fifty years the academic department in several of our best colleges has grown upward as much as two, three, or even four years. These colleges, therefore, have to deal with very different material, both in the pupils—formerly boys, now young men—to be taught, and in the subjects to be imparted. While the freshmen, sophomores, juniors, and seniors of Harvard in 1832 corresponded pretty closely to the first and second-year *Secundaner* and the first and second-year *Primaner* of Germany, etc., at present the students of the three upper Harvard classes, at least, must be ranked with the attendants at a philosophical faculty in Germany, Switzerland, Austria, or the Netherlands, or with the hearers at the Sorbonne in Paris.

So much for the *personnel* of those who are to be taught. But as to the things to be taught, there is a vast difference again between those rudimentary branches which make up a good education, and the higher pursuit of the same studies which constitutes learning or scholarship. It may be granted that the amount of Latin, Greek, rhetoric, and mathematics which our boys can learn, and at our high schools do learn, by the time they reach the age of eighteen, is necessary to give them that culture to which they all aspire, and that this modicum of knowledge and practice in these branches must lie at the bottom of all further literary and scientific training. But it by no means follows that when this broad foundation has been laid, it may not then be high time for the student to understand that this life is too short for the acquisition of all art and learning, and that he must now choose one or more specialties in which he may make himself a proficient scholar, whereas he can only become a smatterer if he spreads his efforts over all the fields of human knowledge. Thus the choice of studies as well as the abandonment of discipline is the natural outgrowth of the raised standard of our better colleges, and it should go hand in hand with the upward extension of the college course.

And here I am met with the greatest obstacle to the successful working of American colleges, the great difference in the meaning of the word "college" when applied to the different institutions bearing that name—a difference so great that the Bachelor's degree of one college does not imply as high a proficiency in science or letters as is required for admission to the freshman class of another. As long as this difference is not clearly recognized, both by the governing and teaching bodies, and by the public that patronizes them, no rational treatment of the American college problem can be reached.

Respectfully, L. N. D.

Louisville, Ky., Jan. 22, 1882.

THE NOMINATION OF CANDIDATES.

To the Editor of The Nation:

Sir: Having seen no very satisfactory suggestion of a method of nominating candidates by political parties before elections—not even in the letters appearing in the *Nation*, nor in your comments upon them—I venture to call your attention to the mode now successfully operating in France. No doubt you are familiar with it; so I will simply ask you to discuss it in your own way for the benefit of your readers.

What is known as the "Crawford County System" of nominations has been spoken of by correspondents. The Democratic party in this county (Cumberland) follows that system; but it neither satisfies them nor the Republicans, who are usually in the minority. Were we sure that a Republican could not win, we should often like to join in the preliminary or nominating election, so as to secure the nomination for the best Democrat. It is hard enough for the minority party to be outvoted. It is still worse for them to see the public officers selected by a bare majority of the other party—that is, by about one-fourth of the voters. Then, too, our own candidates are selected by influences over which we have little control.

I have sometimes thought it would be an improvement if candidates of all political creeds were to nominate themselves and be voted on at the election itself, with a provision in the election law that in case of no election the two candidates having the highest number of votes should be voted upon over again. This would involve one, or at most two, elections. As matters now stand there may be three elections, more excitement, more discontent, and more danger of improper practices.

Yours respectfully, A.

Carlisle, Pa., January 30, 1882.

SERVANTS' CLOTHES.

To the Editor of The Nation:

Sir: To my mind the artist you quote in your article of this week on "Men's Clothes" appears to make a grave point when he says that the present style of evening dress tends to make gentlemen of fashion indistinguishable from waiters. This uniformity of black coat and white cravat for both master and menial is certainly open to objection, and often leads to awkward mistakes. Persons from remote and provincial parts of the country, when occasionally introduced into the gilded saloons of metropolitans who have made their "pile," may bow before a servant of courtly presence and bearing, like the late lamented director of ceremonies, lay and clerical, in New York high life, instead of to the less portly and portentous host. In the street the drab suit and folded arms of the Jehu very conveniently distinguish him from the gentleman holding the reins by his side. And if it be consistent with democratic ideas to put a coachman in capes and cockade, what American could object to clothing the evening waiter in some mild and subdued form of regimentals? As you prudently suggest, our busy and money-making citizens can hardly be expected to be so taken captive by the æsthetic lectures and knee-breeches of Mr. Wilde as to be induced to array themselves at evening parties in scarlet waistcoats and rose-colored neckties. But why not try some of these new-fangled clothes on their flunkies?

If even the most cultivated and learned men of

the Old World, if not of the New, manifest an innate longing for stars, ribbons, and epaulets, we certainly should expect to find no difficulty in imposing on our domestics at social entertainments such distinguishing and becoming garments as flame-colored vests or scarlet breeches. Nothing would please Bridget more than to stick a high-colored feather in her cap. The breast of Pompey would be quick to swell beneath the gilded decoration of a chain. There would be, therefore, no great difficulty in harnessing up all our dependents at balls and parties in uniforms more or less pronounced, according to tastes. The waiting-women might be compressed into stomachers, or have their heads powdered. Every little maid might beam with embroidered sunflowers, or glow with painted Jacqueminots, or be made soft with violets in water-color. The butlers and the pages might wear wigs. Perhaps, indeed, only the chosen æsthetes, who have the courage of their convictions, and whose enthusiasm in the cause of clothes reform is only heightened by the railing of the Philistines, would venture on this innovation at the outset. But by the natural process of evolution in fashions, if a beginning were made by simply having the flunky's locks curled by a barber, it might easily follow that whoever was bald should have a towering scratch set on him, and then it would surely be possible that men and women now living might see the night when every serving-man's brows would be arrayed like the head of Louis XIV., and every serving-woman's top-knot be as ceremonious as the periwig of my Lady Pompadour. Let the æsthetic children of light, inspired by the teachings of the gentle Oscar, invent their festal trappings appropriate to the class of domestic servants. Families and clans might run on different colors. Some would naturally be pleased to see their menials clad in a trifle of purple. Others, more modest, might select the drab. There are shades enough from scarlet to sky-blue and pea-green; there is a host of lovely neutral tints, sufficient to accommodate all lovers of the beautiful investments. Go slow at first! And by the time the new gospel of adornment shall be accepted in the circles of our best society, and by the time the independent voters of the nation shall have elected a President for life, it is not absolutely impossible that all good Americans will be prepared, throwing off the bad and uneasy disguise of black dress-coats, to put not only their underlings but themselves into livery.

M.

Great Barrington, Mass., January 28, 1882.

Notes.

The second volume of Mr. James Schouler's valuable 'History of the United States under the Constitution' is in press, and will probably be published in March by W. H. & O. H. Morrison, Washington.——R. Worthington announces for immediate publication 'Familiar Science Studies,' by Richard A. Proctor. Some of the topics are: Notes on Infinity, Science and Religion, The Origin of the Week, The Pyramids of Ghizeh, Sun Spots and Financial Panics, The Fifteen Puzzle, Etna, Our Astronomers Royal, etc., etc.——A. C. Armstrong & Son will shortly issue an American (from the third English) edition of Miss Gordon Cumming's 'At Home in Fiji'; and 'Apologetics,' by the late Dr. Henry B. Smith, being his last course of lectures.——Besides his selection of 'English Essays,' Mr. Austin Dobson is preparing Gay's 'Fables' for the "Parchment Series" of Kegan Paul, Trench & Co., most of the volumes of which, by arrangement, reappear in New York as the "English Classics" of D. Appleton & Co. For the same series, Mr. J. Brander Matthews has undertaken to edit the 'Dramatic Essays' of Charles Lamb, which have hitherto been scattered throughout Lamb's writings; he will prefix a brief essay on Lamb as a dramatist and as a critic of the drama.——We learn from the *Athenæum* that Mr. Justin McCarthy is writing for the Messrs. Longman's series of "Epochs of Modern History" a volume on the 'Epoch of Reform, 1830–1850,' which, if broad enough in its scope, ought to interest us as much as his own countrymen. Also, that Mr. Hall Caine has collected and will publish in the spring a number of the earliest criticisms on Wordsworth, Southey, Coleridge, Byron, Leigh Hunt, Shelley, and Keats, under the title of 'Critical Solecisms.'——Dodd, Mead & Co. have revived a work which, even if it were not minutely truthful, could always be profitably read for its examples of practical philanthropy; we refer to the late Mrs. Child's 'Isaac T. Hopper,' first published in 1852. As a portrait of Father Hopper, the man and the Quaker, and a picture of his times, its value is not likely to decrease with years. We have not been able to discover the added sketch by Mrs. Kirkland alluded to in the present preface; and we could wish something better had been substituted for the odd and antiquated "Particular Index."——Miss Alcott supplies a preface to the new edition of the 'Prayers of Theodore Parker,' just brought out by Roberts Bros. We cannot remember whether the portrait engraved by Schoff accompanied the earlier edition. ——Next to loyalty to the flag itself must be ranked Rear-Admiral Preble's devotion to the 'History of the Flag,' of which a third edition lies before us. The second was reviewed at length in the *Nation* of December 23, 1880 (No. 808), and it is only necessary to say of this revision that "several pages of notes have been added, bringing the matter up to date"; that some typographical and verbal errors have been corrected, and that the handsome and unavoidably costly work is now published by J. R. Osgood & Co.——The English translation of Ebers's 'Egypt' (Cassell & Co.) has now reached part 24, and the end is fairly in sight. In the last four numbers the theme is Upper Egypt—Siut, Abydos, Dendera, Karnak.——As numbers 1521 and 1522 of Philip Reclam's *Universalbibliothek* (Leipzig, 1882) has appeared Mr. H. H. Boyesen's commentary on 'Faust,' included in his 'Goethe and Schiller: Their Lives and Works.' The German translation, which is excellently done, is by Otfrid Mylius (Dr. Otto Müller of Stuttgart). ——The '*Era* Almanac,' the English theatrical year-book, has recently appeared for the fifteenth time, with the usual statistics, obituaries, anecdotes, and miscellaneous articles. The list of new plays produced in London during the past year, when compared with the list of several years ago, shows a great decrease in the number of adaptations from the French and of burlesques, and an increase in the number of comic operas and sensational melodramas.

—We classed, last week, the Apprentices' Library of this city among the ones designed for those who could not pay. We learn that this was not exact. Since 1879 it has been absolutely free to all who are entitled to its privileges. It is only the class that is abundantly able to pay that is excluded. It has never been a pay-library in the proper sense, although before 1879 a nominal fee of $2 was charged to those who, under the most liberal construction, could not come in as free readers. But evidently it was not intended to reach or did not reach the very poor, since the new Free Library has been able in its first year, with a stock of only 5,000 volumes, to reach a circulation of 60,000—a turnover (to use the English term) of twelve, which is greater than we have ever before noted, some of the mammoth libraries, indeed, being satisfied with a turnover of one-third. Truly the nimble penny is better than the slow shilling. Nevertheless, the New York Free Library would no doubt be glad to add some slow shillings to its store, which would not prevent its nimble penny from travelling from house to house as fast as it is doing now.

—One of the sights of the rural districts of Essex County, Mass., is Dummer Academy, in the parish of Byfield. Dummer is a name anciently associated with the adjoining town of Newbury, but the founder of the institution in question was that William Dummer who married in 1714 a daughter of Governor Joseph Dudley, and became himself Lieutenant-Governor, dying in 1761. By his will he devised his entire estate —a farm of 300 acres—for the endowment of a free grammar-school and the erection of a school-house thereon, and the opening of the Academy in 1763 placed it chronologically at the head of all similar foundations, in Massachusetts at least. The time was opportune, for the graduates were prepared for the impending struggle with the mother country, as well as for the conduct of the State and nation when once independence was achieved. Master Samuel Moody, a famous teacher, gave the Academy a great reputation at the start, and maintained it till 1790. Among his pupils were future cabinet officers, congressmen, governors, and judges—Nathaniel Gorham, president of the Continental Congress; Rufus King; Samuel Osgood, first Postmaster-General under Washington; Theophilus Parsons and Samuel Sewall, both Chief Justices of the Massachusetts Supreme Court; Samuel Webber, President of Harvard College; and Samuel Phillips, sometime one of the judges of the Court of Common Pleas, always prominent in State affairs, and ending Lieutenant-Governor of Massachusetts. Judge Phillips was instrumental in founding the two academies which bear the name of his illustrious family at Andover, Mass., and Exeter, N. H., and of which Dummer Academy might therefore justly regard itself as the parent—one act of public spirit begetting another. The late George B. Emerson, whose services to education were also conspicuous, was among the graduates, not a few, who did honor to their training under Master Moody's successors. In 1840 the list of alumni numbered more than 1,100, and in 1822 the "Sons of Dummer" associated themselves to accumulate a fund, among other objects, for establishing prize scholarships. In 1854 they still maintained their organization. Of recent years, however, the Academy has been overshadowed, while still retaining its fund and its large farm. Some of the alumni have undertaken to recover for it its pristine repute, and have been fortunate in engaging as head master Mr. John W. Perkins, for many years principal of the Salem High School. They have also sought to guarantee the running expenses, and it is greatly to be hoped that their efforts will be successful. Dummer Academy is beautifully situated, within easy reach of Salem and Newburyport, and there being nothing more venerable than an institution of learning reaching far into the past, it is a pious work to rehabilitate it for a second century of shining usefulness.

—More than a dozen years ago we called the attention of our readers to a very remarkable auctioneer's catalogue, in which we had found not merely many works of well-known authors with which they had never been credited by the most searching and comprehensive bibliographers, but a number of positively new authors previously unknown to Fame and, indeed, we ven-

ture to say, to Obscurity. Since that day we have been anxiously, but in vain, looking for another catalogue capable of throwing such a new light upon English, French, and German literary history. Occasionally our hopes have been raised for a moment by a strikingly novel title or name, but only to be disappointed. At last a worthy successor has appeared. At present we have but a specimen of his powers, some two dozen titles, but it is an exceedingly promising specimen, and we have the liveliest expectation of his future work. Of the new authors discovered (the word is more appropriate here than when Messrs. Lippincott say they "discovered Ouida") we may mention "M. De"; "L'Abbe Roche Tiltrue"; another Abbe, "M. L. Abbi de Balleegurall" (his ancestors must surely have come from Ireland with the foighting Onety-oneth); the Fathers of the Church, "Juton Martyn, Turtullum, and others"; "M. Thomasi" (who writes on 'Les Mœurs et les Esprit de Fanues'); De la Brugers, whose 'Maxims et Reflexion Mosules' treat of a subject not touched upon, so far as we know, by any other writer; an author whose name positively would make the hearer's mouth water, "San le Compte de Morangues," and another almost as appetizing, "Eugene Labunne"; and finally "Tiryante Tasso," who, the auctioneers obligingly remark, writes "in Italian" (one would not have thought it from the title, 'La Gerusalemine Liberatu,' though, to be sure, it may be in some dialect that has escaped the researches of philologists). In what language, by the way, can 'L'ami des Infants' be written, "par M. Berguin," who is also credited with 'L'ami de l'Adolenences'? Perhaps in the same as the 'Monusserit Venu de St. Helene,' or the 'Fragmenti San l'Inde,' or the 'Elat des Cours de l'Europe,' or the 'Manuscrit de mil Herit cent Tuntorze. Contenant l'Histoire des Six Demiers mois dn Regne de Napoleon pet le Brown Fain.' We shall look forward with great interest to the future issues of this firm, which are "calculated," as a prospectus might say, "to render a true service to the cause of literary science, and to push the knowledge of books far beyond the limits hitherto observed by the plodding cataloguer, into the realms of the Unexpected and the Inexplicable."

—The fourth of M. Renan's peculiarly interesting "Recollections of Childhood and Early Manhood" in the *Revue des Deux Mondes* (Dec. 15) relates his experience at the Seminary of Saint-Sulpice, beginning with the two years' course in philosophy at the branch establishment at Issy. Here his sceptical disposition revealed itself to his instructors, one of whom, a M. Gottofrey, flatly accused him of being no Christian, and thus nearly diverted him from his purpose to make himself a theologian. Had he been turned aside, he would have passionately devoted himself to the pursuit of science. The following passage is worth quoting for the sake of those who have followed, on one side or the other, the discussion in our columns as to classical and non-classical education:

"It was, then, decided that after my two years in philosophy I should enter the Seminary of Saint-Sulpice for my theology. The transitory illumination of M. Gottofrey's mind produced no result, but, now that thirty-eight years have elapsed, I recognize the depth of his penetration. . . . Assuredly I regret now that I did not follow his direction. I should have quitted the Seminary innocent of Hebrew or of theology. Physiology and the natural sciences would have absorbed me; and I will add that the extreme ardor which they excited in me makes me confident that, if I had pursued them continuously, I should have arrived at several of Darwin's conclusions, of which I had a half-perception. I went to Saint-Sulpice, I learned German and Hebrew; the revolution was complete. I was drawn towards the historic sciences—petty conjectural sciences, incessantly unmade and remade, and which, a hundred years hence, will be neglected. We are witnessing, in fact, the dawn of an era in which man will no longer attach much interest to his past. . . . It is by chemistry on the one hand, by astronomy on the other, and above all, by general physiology, that we truly grasp the secret of existence, of the universe, of God however named. It is the regret of my life that I selected for my studies a line of researches which will never become authoritative (*qui ne s'imposera jamais*), but will always remain merely interesting reflections on a reality that has disappeared for ever. Still, for intellectual exercise and pleasure, I certainly chose the better part."

—The necessity for a new and satisfactory grouping of the States and Territories, for statistical and other purposes, has long been felt. The old classification into New England, Middle, Southern, and Western States—never a satisfactory or characteristic method of grouping—was outgrown several decades ago, and to-day it is manifestly absurd to speak of New York and New Jersey as "Middle States," or of Ohio, Indiana, and Illinois as parts of the "West." Mr. Henry Gannett, the Geographer of the Tenth Census, has proposed a plan of grouping which is being adopted by the Census Bureau, and will probably come into general use, as it appears to be natural, characteristic, and well-balanced. The scheme divides the country, first, into its three great geographical divisions—the Atlantic, the Great Valley, and the Cordilleran regions. The first of these Mr. Gannett names the Atlantic section, the second the Central, and the third the Western section. The Atlantic and the Central sections are subdivided—the former on Mason and Dixon's line, the latter on the Ohio River and the southern boundary of Missouri and Kansas. The following, then, are the States making up the five divisions severally:

North Atlantic States: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania—Total, 9.

South Atlantic States: Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida—Total, 9.

Northern Central States: Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Dakota, Nebraska, Kansas—Total, 11.

Southern Central States: Alabama, Mississippi, Louisiana, Texas, Indian Territory, Arkansas, Tennessee, Kentucky—Total, 8.

Western States: Montana, Idaho, Washington, Oregon, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, California—Total, 11.

The areas and populations of these groups, with the exception of the last, are not very dissimilar, one from another.

—The propriety of this grouping, from a purely geographical point of view, is too apparent to need argument. As was stated above, the three primary groups correspond with the three great topographical features of the country. In respect of temperature and rainfall, the North Atlantic and Northern Central States differ characteristically from the South Atlantic and the Southern Central States, while the West possesses an arid climate, a light rainfall, with the accompanying great extremes of temperature. These divisions have a meaning, too, from an historical point of view. The Atlantic States, with but one exception, that of Florida, consist of the original thirteen and those formed from them—viz., Maine, Vermont, and West Virginia. They may fairly be said to represent the first or colonial stage of our history. The central section, which has developed during our progress as an independent nation, may be said to represent the second stage, extending to the present time, while the great undeveloped territory of the West represents the development of the future. In the forms of local government, the first and third of the above divisions differ radically from the second and fourth—*i. e.*, the North from the South. In the former, with the exception of Nebraska, Dakota, and a few counties in southern Illinois, the township or town form of government is universal, while south of the line separating these divisions the county form of government prevails exclusively—the so-called "townships" of Arkansas and the Carolinas bearing no resemblance whatever to those of the North. There is also a vital point of difference between these sections in the elements of the population, the two northern sections containing not less than eighty-six per cent. of the foreign element of the country, while in respect to the colored element the reverse is the case, the two southern sections containing more than 90 per cent. of the total. In respect of industries, the North Atlantic section is the region of manufactures, containing not less than 63 4-10 per cent. of the total of the United States. The Northern Central is distinguished as the region of cereals, raising in 1879 71 per cent. of the whole cereal crop of the country. The two southern sections raise very nearly the whole cotton crop and all the sugar cane and rice. In the West the characteristic and leading industry is the mining of the precious metals. This discussion might be continued almost indefinitely and result in pointing out new features characteristic of the different sections, but enough has been suggested, it is hoped, to show the propriety and fitness of the scheme, of which, by the way, our school-atlas makers have particularly felt the need.

—"The Colonel," now running at the Park, is described in the bills, in somewhat questionable English, as being a "satirical comedy on the æsthetic craze." The play is merely a new adaptation of the "Serious Family," which was taken from Bayard and De Vailly's "Le Mari à la campagne, ou le Tartuffe moderne." This is a comedy which has great advantages for the purposes of the English adapter. It is perfectly moral, and, with very slight changes, can be altered so as to be a satire on any fashionable pretence. "The Colonel" so closely resembles the original French play that if the plot had not become common property, the performances at the Park would probably be brought to a speedy close by injunction. As a satire upon the æsthetes, it suffers from the fact that æstheticism is, in this country at least, hardly a serious enough matter to lend itself very effectively to such a use. There is a certain grotesque silliness, if not about the situation put before us in "The Colonel"—that of a family whose domestic happiness is undermined by the wiles of an æsthetic "impostor"—at any rate about the manner in which it is developed, that is rather palling. The *Punch* dialect, the stained-glass attitudes, the affectation of mediævalism which furnish "The Colonel" with its æsthetic basis, have taken so little real root on this side of the Atlantic that it is chiefly through literary channels and the lecture-tour of Mr. Wilde that we know what it all means; and it is hard to conceive the imposture ever taking rank with the religious humbug which the "Serious Family" and the "Mari à la campagne" ridiculed. "The Colonel," besides this, requires for success two things, neither of which it gets at the Park—first, thoroughly good and delicate acting; and second, an actor for the *Colonel's* part who is American *au bout des ongles*. Mr. Wallack has in his time played many parts, but his successes have all been scored in English characters. He has little variety, and it was hardly to be expected that his *Colonel Woodd* would have a marked flavor of the soil. There being nothing in the part itself essentially American, the actor who plays it must make it American by his acting; and this, we believe, Mr. Charles Coghlan succeeded

in doing in London. To most of the audience it is probably a surprise to learn that "Why, certainly" is a cis-Atlantic form of assent or affirmation; and it is a striking illustration at once of Mr. Burnand's poverty of invention, and of his reliance on purely verbal effects, that he should have resorted to such a trifle as this to mark the nationality of the latest representative of *César Poligny*. To tell the truth, *Colonel Woottweell W. Woodd*, as represented by Mr. Wallack, might almost as well be an Australian as an American. The parts of the mother-in-law and the impostor (taken respectively by Miss Maria Davis and Mr. C. P. Flockton) are badly exaggerated, and recall their farcical prototypes in the "Serious Family." The day of English farce is admitted to be over; but its traditions are still preserved for us, and afford interesting illustrations of the great law of survival, in the exaggerated acting of many a leading comedian. The performance of Miss Waldon, as *Nellie*, is the best thing in the play, and would be good anywhere.

—Mr. Gilbert's "Pygmalion and Galatea" is considered by some critics to be Miss Mary Anderson's best play. To our minds she plays all parts equally well; but the reason why she appears to better advantage in *Galatea* than in other rôles is, that during a considerable portion of her time on the stage she appears as a statue, and as a statue she is without a rival. Her great beauty of face and figure, which do not in themselves constitute theatrical talent, though they form such an important part of most successful actresses' theatrical capital, and her statuesque, dignified grace of attitude and movement, can be studied to the best advantage in *Galatea*. Her voice also is rich and, in its natural quality, expressive; but we prefer her, just where *Pygmalion* in the end prefers her, on the pedestal where she made her first appearance. As a statue she is charming; and as her new life comes to her, the change from marble to flesh and blood is something quite wonderful to behold. The illusion is in fact complete. You seem to see the metamorphosis going on under your very eyes. Color appears gradually to tinge the cheeks of the statue as it tinges the cold, gray sky at dawn; and blood to begin to flow in the numb veins, and the statue to wake to life under our very eyes. These effects are apparently produced by electric light. This first change is very much better managed than the change back to marble at the last. None but a great actress, however, could petrify herself for love thoroughly well. When the final moment comes, Miss Anderson mounts the pedestal with dignity and self-possession, much as she might if she were going to have a photograph taken, but without any expression of that warm yet unavailing regret over her ebbing vitality and vanishing love which the situation suggests.

—The part of *Galatea* on the English stage is so modern that it can hardly be said to have any traditions. Miss Katherine Rogers used to act it, and, if we remember right, there were certain differences between the statuesque part of the rôle as conceived by the two actresses which were rather in Miss Rogers's favor. We cannot recollect that the latter ever thought it necessary to powder her hair to make it resemble marble. Miss Anderson, at any rate, does this—and why? Evidently it is supposed to be one of those little tributes to realism which show the rapid advances continually made by our remarkable stage. But as a realistic effect, the difficulty is that *Galatea* is a statue for half an hour and a woman during all the rest of the play; and, while marble hair is for a statue a precious beauty, and a true delight to the earnest lover of the real in art, in a woman it simply looks like a mass of capillary matter covered with flour. As realism has got to be sacrificed at some point, would it not be better to have the statue a little less and the woman a little more real? This of course is a minor matter to any one who regards the acting as the main point in a play; but for a public which has made of Miss Anderson a leading actress, acting must count for comparatively little, and as much attention as possible should be devoted to the make-up and business. Miss Anderson has not yet given evidence of any dramatic talent properly so called. Acting consists mainly in the expression of thoughts and sentiments by means of the voice, in articulate words. Miss Anderson's articulation is good, but she seems devoid of all idea of expression. It is certain, at least, that she expresses totally different feelings in precisely the same tone, without variety of accent or inflection. It is a curious fact, too, that, possessing as she does a remarkably beautiful voice, she should, for the expression of certain emotions—it is impossible to say exactly what emotions they are—deem it advisable to adopt the familiar false and hollow method of vocalization employed by the *Ghost* in "Hamlet." She resorts to this in all the dramatic crises of the play, and the effect is more mysterious than pleasing. If this is done on a new theory of the relation between language and the voice, and the ideas and sentiments which they express, it should be explained by the management, and a key to the system given with the bills. This would prevent a great deal of uncertainty and confusion. It is hardly necessary to say that Miss Anderson draws good houses in *Galatea*. The play, to any audience which sees it for the first time—and the New York audience, since the identity of its membership changes from night to night, probably always remains substantially a first audience—is very amusing. The humor is perhaps a little simple, and the contrast between the classical tradition of the subject and the familiarity, not to say occasional vulgarity, of the treatment, a little painful. But the whole play is really little more than a humorist's practical joke. The idea of the comical effect produced by the introduction of a statue into real life seems to have been with Mr. Gilbert the chief motive for writing it. A large part of one entire act is taken up with an absurd scene based upon the difficulty of making *Galatea* understand the difference between shooting wild animals and murder in the first degree. Her difficulty in comprehending the nature of the marital relation and the obligations it imposes is more natural and better managed; but the spectator's intelligence resents the suggestion that even a new-born statue would regard with the same feeling the killing of a man in cold blood and the shooting of a doe.

—Mr. Theodore Thomas has never given a more striking proof of his extraordinary organizing and disciplinary powers than by the manner in which the New York Chorus Society, which is to be the "nucleus" of the May Festival chorus, sang at its first concert on Saturday night After a few months of practice this chorus has already developed a well-rounded body of sound, a precision of attack, and a regard for dynamic shading which come to most choruses only after years of study. It would be too much to say that the work done by the chorus was perfect in all respects. There was noticeable an occasional want of purity in tone and pitch and of rhythmic shading, especially at the public rehearsal on Friday afternoon, where even the Philharmonic orchestra was strangely erratic; but at the concert itself all minor deficiencies were lost sight of in the excellence of the general effect. The programme was remarkable for the variety, weight, and interest of the selections. First on the list came one of the best specimens of Handel's choral writing, the "Utrecht Jubilate." The solo parts of this work are decidedly stale and uninteresting, but the choruses are superb, the first in particular being characterized by that sustained surging movement of sound which makes Handel's best choral works so suggestive of the billows of a moderately excited ocean surface. The "Jubilate" will be sung again at the May Festival. A strong contrast to this composition was afforded by the clean-cut, plastic rhythms, the modern harmonies and instrumentation, and the overwhelming grandeur of the chorus "Wake, wake, the dawning day is near," from the third act of Wagner's "Meistersinger," which in the opera is sung by the assembled populace of Nürnberg in salutation of Hans Sachs. On the stage the chorus is usually of about the same size as the orchestra, whereas on this occasion it outnumbered the instrumentalists about six to one. But the total impression was not so much altered by this arrangement as one would suppose, chiefly on account of the acoustically more advantageous position of the orchestra on the concert stage. Beethoven's Choral Fantasia in C minor, opus 80, for piano, chorus, and orchestra, is not often heard in concert halls. It is curiously suggestive of the Ninth Symphony, not only in its general cast, but in the melodic structure and vocal treatment of the last part. In spite of the festive and joyous character of the words of the chorus, there is yet noticeable an undercurrent of sadness so peculiar to Beethoven, and so universally characteristic of the highest genius. The piano seems out of place in such a work, as Beethoven himself must have felt, since the part he assigned to it is quite trivial. Mr. Joseffy, who sat at the piano, also contributed an original composition, a Scherzo Fantastique for piano and orchestra, which is a curious embodiment of his style of playing—light, airy, and graceful, but lacking force and eloquence. The melodic and harmonic ideas of this scherzo are inferior in interest to the instrumentation, in which Mr. Joseffy has shown himself a clever disciple of Berlioz. After the scherzo Miss Schell and Miss Winant sang the duo from Berlioz's "Beatrice and Benedick," which has been repeatedly heard of late in this city and Brooklyn.

—The one remaining piece on the programme was that which had perhaps aroused the greatest curiosity on the part of the audience—the second and fifth of Professor Paine's "Œdipus" choruses. Professor Paine has written a considerable number of works for the concert stage, among them an oratorio, a mass, two symphonies, and a concert overture; but none of these, in our opinion, equals in originality of conception and scholarly treatment his music to Sophocles's tragedy, which to our taste is the most finished specimen of musical workmanship produced in this country. Professor Paine's devotion to Bach and Beethoven is well known, and the legitimate influence of these masters is revealed in most of his works, especially in its polyphonic structure and clearness of form. But in these choruses he also unconsciously reveals his admiration for a composer whose theories he condemns. The vigorous and melodious treatment of the bass in the "Œdipus" music, the chromatic progressions and modulations, the avoidance of stale cadences, the use of the brass in moments of passion, and the brilliant, full, and rich instrumentation in general, as well as the earnest endeavor to reproduce musically the emotional contents of the language, are all so many tributes to the genius of Wagner, from whose influence no modern composer has yet succeeded in emancipating

himself. By this we do not intend to imply any plagiarism, but merely to mark the author's place in the musical world. Professor Paine's music is his own. It has individuality of style, and his themes impress themselves on the memory at once, and gain in beauty by repeated hearing. The "Œdipus" music was given in its entirety at Booth's Theatre on Monday evening.

—In the *Nation*, Nos. 809 and 818, we published some then recent facts concerning the Brahmo Somaj, the theistic church of India, which placed Mr. Sen, for a long time a leader in that church, in an unfavorable light, and which seemed even to bring him under suspicion of favoring idolatrous rites. The *Contemporary* for October has an article by William Knighton on the same subject, in which some apology or explanation of those proceedings is attempted by some of Mr. Sen's friends. In the same article, and in the November number, which has another paper on the subject by Miss Sophia Dobson Collet, the reader will find the history of the Brahmo movement brought down to August of last year, with numerous highly instructive quotations from Mr. Sen's discourses. These show him to be, though a very able and eloquent man, yet too eccentric to continue to be the leader of the theistic movement in India; and it is understood that his authority as such, except with his own congregation, is very nearly gone. The Sadharan Somaj, or Universal Church, with 140 congregations all over India, is the true theistic church of India, from whose principles Mr. Sen has turned away, while he in turn has been forsaken by the great majority of its members.

—A year or two ago Fr. Winkel Horn published in Leipzig an exhaustive work, written by himself, in German, on the literature of Iceland, Denmark, Norway, Sweden, and Finland, from the most ancient to the present time. He has now laid students of literature under obligation to him for two large octavo volumes in which he sketches the literature of Denmark alone, from its beginning down to the year 1880 ('Den danske Literaturs Historie'; Copenhagen). The work is written in the spirit of Taine's 'English Literature,' but is much fuller in details. Indeed, Horn takes up in chronological order every author worthy of mention, and has, nevertheless, avoided the fault which we pointed out in his German work, and on account of which we complained that his book would be found "tedious reading" (*Nation*, Jan. 13, 1881), by introducing more biographical matter and by giving specimens from the authors whose works are discussed. Horn divides Danish literature into the following six epochs: 1. The Middle Ages; 2. The Epoch of the Reformation; 3. The Epoch of Learning; 4. Holberg and his contemporaries; 5. The Epoch of Enlightenment; 6. The Nineteenth Century. The book must be called a timely one, since N. M. Petersen's great pioneer work in this field, in six large volumes, is, on the one hand, too expensive for most students, and, on the other hand, closes with the beginning of the nineteenth century. Whatever may be said of the propriety of including the names of living authors and of passing judgment on that of which the future can alone be the competent judge, we are certain that a large number, particularly of Horn's readers in foreign countries, will be grateful to him for the *facts* given in the last one hundred pages of his work, and will not think it strange that he did not confine himself to these, but tried to present a general estimate of the literary value of the products even of the last ten years. In our opinion, he has succeeded in setting forth the merits and faults of his contemporaries in an unbiased and impartial manner. The reader gets a tolerably definite idea of the foreign streams of culture which from time to time have given direction and color to Danish literature, and learns that Denmark forms a part of the wide field of European thought, of which the whole expanse is benefited whenever a refreshing rain descends in any locality. The debt of Holberg and Danish literature to Molière may be referred to as a striking illustration of this.

JAMES'S PORTRAIT OF A LADY.

The Portrait of a Lady. By Henry James, jr. Boston: Houghton, Mifflin & Co. 1881.

Mr. James's novel, which caused each number of the *Atlantic Monthly* to be awaited with impatience last year, gains in its complete presentation, and, like most novels of any pretensions, is most readable when read consecutively. Unlike most novels, however, whose fate (and the fortune of whose authors) it is to appear serially, the reason for this does not consist in the condensation which the reader is thus enabled to make in spite of the author, but in the fact that it is a work of art of which the whole is equal to no fewer than all of its parts, and of which there is a certain "tendency," to lose which is to miss one of the main features of the book. In other words, 'The Portrait of a Lady' is an important work, the most important Mr. James has thus far written, and worthy of far more than mere perusal—worthy of study, one is inclined to say. It is in fact a little too important—to express by a paradox the chief criticism to be made upon it—or, at all events, the only impression left by it which is not altogether agreeable. For the first two or three hundred pages one is beguiled by a kind of entertainment always of a high order—the dissection of an interesting character by a clever and scrupulous demonstrator. After that, though it would be misleading to say that the interest flags—the interest being throughout the book remarkable for its evenness—the feeling supervenes that to be still entertained argues a happy aptitude for most serious and "intellectual" delectation. Most persons will recall some experience of the same sensation in first becoming acquainted with undisguisedly philosophical writings—such as the writings of Emerson or Burke. To others it may be indicated by saying that it is just the sensation Carlyle missed in finding the works of George Eliot "dool—just dool." In America, it is well known, we do not find George Eliot dull, and it is upon our appetite for this sort of provender that Mr. James doubtless relies, and undoubtedly does well to rely. Nevertheless, it is possible to feel what Carlyle meant without agreeing with it; and though maintaining firmly the absorbing interest of 'The Portrait of a Lady,' we are ready to admit that once or twice we have laid aside the book for a season, with the exhilaration which Mr. Howells has somewhere observed to be coincident with giving up a difficult task. One of the happiest of the many happy remarks made in 'The Portrait of a Lady' is in Miss Stackpole's characterization of her *fiancé*: "He's as clear as glass; there's no mystery about him. He is not intellectual, but he appreciates intellect. On the other hand, he doesn't exaggerate its claims. *I sometimes think we do in the United States.*" The person of whom this is said naturally cuts a smaller figure in the novel than the more complex organizations, in dealing with which Mr. James is most at home; and it is the inference from this circumstance that we have in mind. For not only are the simpler though perennial elements of human nature in general eschewed by Mr. James, but his true distinction—that is to say, his strength and weakness also—consists in his attempt to dispense with all the ordinary machinery of the novelist except the study of subtle shades of character. In other words, his masterpiece, as 'The Portrait of a Lady' must be called, is not only outside of the category of the old romance of which 'Tom Jones,' for example, may stand as the type, but also dispenses with the dramatic movement and passionate interest upon which the later novelists, from Thackeray to Thomas Hardy, have relied. In a sense, and to a certain extent, Turgeneff may be said to be Mr. James's master, but even a sketch or a study by Turgeneff is turbulence itself beside the elaborate placidity of these 519 pages. This involves the necessity of the utmost care in presenting the material, and accordingly we have that squaring of the elbows and minute painstaking which not only result inevitably in occasional lumbering movement, but which lend the work an air of seeming more important than any book whatever could possibly be; so that it is perhaps fortunate for its popularity (which, by the way, we believe is extraordinary) that we exaggerate the claims of intellect occasionally in the United States.

Even this measure of fault-finding, however, seems a little ungracious, not to say hypercritical, in view of the distinguished success of Mr. James's experiment in applying the development theory to novel-writing, so to speak. We have ourselves followed the succession of his stories since 'Roderick Hudson' appeared with mingled interest and regret, because he has seemed to be getting further and further away from very safe ground, where he was very strong, and into the uncertainties of an unfamiliar region of which it was impossible to tell whether its novelty or its real merit gave it its interest. The elemental characters and dramatic situations of the novel just mentioned were strongly handled, and the work being, comparatively speaking, a youthful one, its promise seemed even greater than its actual qualities. But, almost as if he had been an amateur dipping into another branch of effort after having demonstrated his ability in one, Mr. James immediately abandoned the field of imaginative romance as it is generally understood. He at once made clear his faculty for his new choice, and the field he entered on with 'The American,' and continued with the shorter stories illustrative of American types, became immediately popular. 'Daisy Miller' may almost be said to mark an era in the mental progress of many persons who exaggerate the claims of intellect occasionally; it is wearisome to recall the "discussions" it occasioned in drawing-rooms and in print. There was, to be sure, a Chauvinist view, so to speak, taken of this and its associated sketches, by persons who omitted to perceive that Mr. James had not only made the current mechanical speculations about "the coming American novel" an anachronism, but had also displayed his patriotism and the national genius by inventing a new variety of literature. But naturally Mr. James might be expected to heed rather those of his readers who appreciated and enjoyed his motives and rejoiced in his discovery of romantic sociology. And this seemed his real danger; for though to these readers this reading conveyed a peculiarly refined pleasure, on account both of its novelty and the cleverness of its execution, there was no certainty that this pleasure was not a rather temporary mood, and likely to pass away after the novelty had worn off. Instead, however, of avoiding this danger by a return to the perennially interesting material with which he first dealt, Mr. James has conquered it, *vi et armis*, by a persistence that at one time seemed a little wilful. No one can now pretend, whatever his own literary likes

and dislikes may be, that romantic sociology, exploited as Mr. James has shown it capable of being, is not a thoroughly serious field of literature, whose interest is permanent and dignified.

'The Portrait of a Lady' is a modest title, though an apt one. The portrait of the lady in question is indeed the theme of the book, and it is elaborated with a minuteness so great that when finally one begins to find it confusing it becomes evident that the ordinary point of view must be changed, and the last detail awaited—as in a professedly scientific work—before the whole can appear. Miss Isabel Archer is an orphan to whom her aunt gives an opportunity of seeing the world, and to whom her aunt's husband leaves a large fortune, at the instance of his son, who is unselfishly and romantically interested to see what his cousin will make of her life when nothing prevents her from doing as she wishes. The reader at once assumes the position of this young man, and with more or less (less in our own case, we confess) sympathy, watches the progress of the drama which he has set going. At the climax the heroine discovers that she has wrecked her life most miserably. The spiritual transition from the Isabel Archer of Albany to the Mrs. Osmond of Rome is of course accomplished in part by natural disposition and in part by the influence of the numerous characters which surround her. The way in which this influence is exhibited is a marked feature of the book. If George Eliot was the first to make of this important moral phenomenon a distinct study, Mr. James has here, in our opinion, quite surpassed her. Any one can judge by comparing the reciprocal effect upon the development of each other's characters of the Lydgates in 'Middlemarch' with that of the Osmonds here. The other characters are treated with a microscopy hardly inferior. Osmond himself is one of the most palpable of those figures in fiction which are to be called subtle. Madame Merle, his former mistress, mother of his child, who makes the marriage between him and his poverty and Isabel and her wealth, and who, up to the climax of the book, is Isabel's ideal, is, if anything, even better done. There is something almost uncanny in the perfection with which these secretive natures are turned inside out for the reader's inspection. As for the heroine, the American girl *par excellence*, it seems as if, scientifically speaking, Mr. James had said the last word on this subject; at any rate till the model herself is still further developed. For example (p. 344): "She never looked so charming as when, in the genial heat of discussion, she received a crushing blow full in the face and brushed it away as a feather." There are pages as good.

It has long been evident that Mr. James's powers of observation are not only remarkably keen, but sleepless as well. But 'The Portrait of a Lady' would not be what it is if it did not possess a *fonds* of moral seriousness, in addition to and underlying its extraordinary interest of purely intellectual curiosity. There is a specific lesson for the American girl in the first place; there are others, more general, which accompany every imaginative work of large importance. That these are nowhere distinctly stated is now nothing new in fiction even of a distinctly moral purpose. But Mr. James has carried suggestiveness in this regard further than any rival novelist, and though, unless one has ears to hear, it is entirely possible to miss the undertone of his book, to an appreciative sense there is something exquisite in the refinement with which it is conveyed. Refinement in this respect cannot be carried too far. In strictly literary matters Mr. James's fastidiousness may be objected to, perhaps, if one chooses; he has carried the method of the essayist into the domain of romance: its light touch, its reliance on suggestiveness, its weakness for indirect statement, its flattering presupposition of the reader's perceptiveness, its low tones, its polish. Upon occasion, where the circumstances really seem to warrant a little fervor, you only get from the author of 'The Portrait of a Lady' irreproachability. Objection to this may easily be carried too far, however; and those who do thus carry it too far, and argue that no people ever spoke and acted with the elegance and precision of the personages here portrayed, must of necessity pay the penalty of ultra-literalness and miss the secret of Mr. James's success. To characterize this secret with adequate fulness would require far more than the space at our disposal; but it may be sufficiently indicated by calling it the imaginative treatment of reality. In this unquestionably lies Mr. James's truly original excellence. 'The Portrait of a Lady' is the most eminent example we have thus far had of realistic art in fiction *à outrance*, because its substance is thoroughly, and at times profoundly, real, and at the same time its presentation is imaginative. On the one hand, wilfulness and fantasticality are avoided, and on the other, prose and flatness. One may even go further, and say that the book succeeds in the difficult problem of combining a scientific value with romantic interest and artistic merit.

COBDEN.—I.

The Life of Richard Cobden. By John Morley. London: Chapman & Hall; Boston: Roberts Bros.

COBDEN was the apostle of a social creed. His strength and his weakness, his success and his failure, are best understood if he be regarded as the preacher of principles which to him had the character of a religion. This was in substance his own view of his position. He explains, quite after the manner of a religious leader, how he and his friends had originally engaged in the work of free trade without at all fully entering into the vastness of the cause which they had in hand: "I am afraid that most of us entered upon this struggle with the belief that we had some distinct class interest in the question, and that we should carry it by a manifestation of our will in this district, against the will and consent of other portions of the community." It is, however, abundantly clear that with Cobden at least the "class interest," to use Mr. Morley's language, "widened into the consciousness of a commanding national interest. In raising the question of the bread-tax and its pestilent effects on their own trade and on the homes of their workmen, the Lancashire men were involuntarily opening the whole question of the condition of England." And whatever might be the case of Cobden's companions or followers, he came soon to perceive the wide bearings of the contest in which he was engaged. Hence his deepening tone of fervor or conviction; hence, too, that "call" of John Bright by his friend and teacher which has, as narrated by the great orator, something that irresistibly reminds the reader of the appeals by which reformers of all ages have summoned chosen disciples to their side:

"I was in the depths of grief, I might almost say of despair; for the light and sunshine of my house had been extinguished. All that was left on earth of my young wife . . . was lying still and cold in the chamber above us. Mr. Cobden called upon me as his friend, and addressed me . . . with words of condolence. After a time he looked up and said: 'There are thousands of houses in England at this moment where wives, mothers, and children are dying of hunger. Now,' he said, 'when the first paroxysm of your grief is past, I would advise you to come with me, and we will never rest till the corn-law is repealed.'"

To many readers Cobden's words will seem to end with a kind of bathos: the repeal of an objectionable tax is not, they think, a cause such as the abolition of slavery or the independence of Italy, for the sake of which a man might live and die. The point to note is, that to Cobden's mind and to the feelings of the sufferer who heard him it seemed far otherwise. "I knew that the description," says Bright, "he had given of the homes of thousands was not an exaggerated description; I felt in my conscience that there was a work which somebody must do, and therefore I accepted his invitation; and from that time forth we never ceased to labor hard on behalf of the resolution which we had made." At least as early, therefore, as 1841 the contest for free trade, and for all that free trade to his mind meant, had become to Cobden a sacred duty. He was already the preacher of a faith. Hence arose his fervid denunciation of those who did not take part in the conflict of right against wrong.

"It is in vain," he writes to a clergyman, "to try and elevate the religious character of a people whose physical condition is degraded by the privation of the first necessaries of life; and hence we are taught to pray for our daily bread before spiritual graces. There is a legislative enactment which prevents the poor of this town from obtaining a sufficiency of wholesome food, and I am sure the law only requires to be understood by our clergy to receive their whole unanimous condemnation. Surely a law of this kind, opposed alike to the laws of nature, the obvious dispensations of Divine Providence, and the revealed Word of God, must be denounced by the ministers of the Gospel."

It is easy for opponents to imagine that language of this kind is mere rhetorical exaggeration, meant to excite or stimulate supporters. It is far wiser and fairer to assume that such words express the simple, unaffected convictions of the speaker, and show that his cause is in his eyes invested with the sacredness of religion. Nor does Cobden ever deviate for long from this point of view. Like other leaders of men, he may have deceived himself in supposing that he had little pleasure in public life, but he assuredly looked upon himself (and no doubt with substantial truth) as one called upon and compelled by Providence to perform a particular work. "It has always," he writes to a friend, "been to me a spectacle worthy of reproach to see a man sacrificing the welfare of his own domestic circle to the cravings of a morbid desire for public notoriety; and God, who knows our hearts, will free me from any such unworthy motives. I was driven along a groove by accident too fast and too far to retreat with honor, or without some risk of loss to the country; but the happiest day of my life will be that which releases me from the conflicting sense of rival duties by restoring me again to private life." Grant, however, that Cobden was the apostle of a social and political creed, and two questions at once present themselves for candid consideration: What were the essential features of Cobden's creed? What were his own characteristics as the exponent of it?

Cobden's fundamental dogma, the real basis of all his political actions, was the principle that the whole policy of modern states, and notably of England, ought to conform to and be ruled by the laws of political economy. Any arrangement which hampered the trade, or was not conducive to the material prosperity, of the nation was, to his mind, an arrangement at variance with the nature of things, and doomed, like every other scheme conflicting with the laws of the universe, to failure and ruin. This dogma, which, looked at from one side, appears to be merely the doctrine that the great end of social life is the promotion of material prosperity, acquired under his treatment grandeur and im-

pressiveness from the force of two considerations which he seized with prophetic insight, and pressed upon his age with prophetic fervor. Material prosperity, in the first place, is the essential condition for the physical, the moral, the religious development of that vast majority of every civilized community who, under the name of the poor, the laboring classes, or the artisans, have, both from their numbers and their wretchedness, a just claim that the promotion of their true interests should be the main aim of social organization. The economic interests, in the second place, of one country are, when rightly understood, the true interest of the whole world. Hence to the freetrader of 1841 the contest for free trade was a struggle on behalf of the welfare of the masses, and also a struggle against that national blindness and selfishness which has prevented all mankind from sharing with equal freedom in the natural blessings which the Creator has distributed throughout all the world for the benefit of all his children. Whoever considers that the close connection in Cobden's mind between free trade, popular progress, and general philanthropy was simply the result of a merchant's passion for commerce, would do well to reflect that the most melancholy and the least worldly of religious poets had before Cobden's birth anticipated that view of the moral significance of trade which lent to economic theories a moral and religious sanction:

> "Again—the band of commerce was design'd
> To associate all the branches of mankind;
> And if a boundless plenty be the robe,
> Trade is the golden girdle of the globe.
> Wise to promote whatever end he means,
> God opens fruitful Nature's various scenes.
> Each climate needs what other climes produce,
> And offers something to the general use;
> No land but listens to the common call,
> And in return receives supply from all.
> This genial intercourse and mutual aid
> Cheers what were else an universal shade,
> Calls Nature from her ivy-mantled den,
> And softens human rock-work into men."

What Mr. Morley terms the "high economic doctrine"—or, in other words, the principle that all national policy ought to be tested by its bearing on trade—destroyed the corn-laws, but it was a dogma which, when once received as an article of faith, was fatal to many other things besides the vicious legislation which raised the price of bread. Long before the Anti-Corn-Law League was organized, Cobden had perceived that if statesmanship was to be looked upon as a branch of economics, the whole foreign policy of England, not to say of the civilized world, must be remodelled. The "balance of power," the "independence of the Turkish Empire," the "necessity of checking the growth of Russia," the "extension or maintenance of the Indian or Colonial Empire of England," seemed, when tested by their reference to trade, little better than empty phrases. The one essential condition for commerce is freedom of exchange and the existence of peace. Hence the practical outcome of Cobden's economic doctrine was the absolute necessity of freeing commerce from all unnecessary burdens; of keeping down standing armies; and of maintaining peace at any price short of concessions fatal to the material prosperity—or, in other words, the trade—of the nation. That the views of Cobden and his associates are open to very considerable criticism we have no doubt whatever; but it is of great importance, even for the sake of fair criticism, to realize what these views were, and how great was the element of truth which they contained. It is the more essential to examine the matter with some care, because the true character of Cobden's economical doctrines has been a good deal masked by their accidental connection with revolutionary or republican opinions. The plain truth is, that though Cobden was throughout life engaged in a conflict with the English aristocracy, his fundamental convictions consisted of economic beliefs which had no necessary connection with democratic, or even with political, principles. A benevolent and enlightened despotism, or even a very enlightened aristocratic government, might have pursued a policy of free trade and peace which would have commended itself to Mr. Cobden. There is, indeed, little doubt that, had he lived in the eighteenth century, he would have looked, as did Turgot, and for that matter as did Voltaire, on an enlightened despotism as the form of government most likely to promote the progress of the world. From accident of position, and from the force of circumstances, Cobden was a democratic leader; but his doctrines are, when dispassionately examined, the doctrines of an economist, not of a democrat.

If Cobden's creed be looked at in its true light, as that of an economist penetrated by the conviction that the government of the state exists for the benefit of the mass of the people, and that states and nations themselves are bodies which exist, or ought to exist, for the benefit of mankind, it will be seen that his teaching contained truths of great value which, in Cobden's time, required to be forced on the attention of the world. It was, for example, undoubtedly true between 1830 and 1848 that the pressing problem of the day was how to ameliorate the condition of the people. Reform bills, splendid foreign policy, the maintenance of national prestige, the dignity of the empire, were all good things in their way, but the one immediate, pressing question was the "condition of England." It was also true, as Cobden constantly insisted, that neglect and contempt of economic laws were bringing the country to ruin, and that nothing but strict public economy and complete freedom of trade could restore the nation to prosperity. It was further true that low taxation was inconsistent with the keeping up of large armaments, and that free trade itself made any system of active intervention in the affairs of foreign countries difficult and impolitic. In England the doctrines of free trade have been justified by their fruits. The country has enjoyed for more than a generation a period of unexampled prosperity, and freedom from physical suffering has reconciled the working-classes of England to the constitution under which they live. The present period of depression has proved to demonstration that in Great Britain (we say nothing of Ireland) there is no large discontented class. If any one will read any description of England between 1830 and 1845 and compare it with her present state, he will realize how great have been the political benefits conferred on Englishmen by free trade. Nor ought the course of events abroad during the last twenty-five years to conceal from candid observers the fact that nations or statesmen who, rightly or not, have rejected the free-trade creed, have done so at an immense cost. Great things have been accomplished in Italy, in Germany, and, in a different way, in France. Meanwhile, Continental Europe has been turned into a vast camp. This is a terrible set-off against the benefits conferred on the world by the ideas and the statesmanship which, often in neglect of economic considerations, have created Italy and have reunited Germany.

"You must live before you can live well." This homely adage contains and, if properly understood, defines the essential and important truth contained in the "high economic doctrine." Freedom of exchange and all that it implies enable the mass of the world "to live"; but no merely economic doctrine, however wide the extension given to it, ensures that men shall "live well." That men "do not live by bread alone" is as true in the sphere of politics as in the sphere of religion; and the defect of the free-trade creed is, not that it is false, but that, looked upon as containing the principles of statesmanship, it is inadequate or incomplete. The teaching of the Manchester school did not in any way meet two ideas which have influenced more strongly than any other conceptions the whole course of modern European history. Freedom of exchange, closely connected as it was with the wider dogma of which it is merely a part—summed up in the phrase *laissez-faire*—in no way met those notions which, summed up under the vague term of Socialism, fascinated men as different as Maurice and Louis Blanc, and which, whether sound or not, have, as Mr. Morley points out, in fact exercised an immense, though unrecognized, influence over the whole current of English legislation, as well as over the arrangements of English trade. The creed, again, preached at the Free-Trade Hall was utterly foreign to the enthusiasm for the rights of nationalities which, within the last thirty years, has remoulded the map of Europe. Cobden's faith was, oddly enough, a little out of date. A curious combination of circumstances made it possible for him and his associates to give practical effect to their speculative views, but the doctrine which he taught was not in reality in accordance with the prevailing sentiment of his time. He pressed the truths discovered by Adam Smith and by Bentham upon a generation who half believed in Fourier or in Louis Blanc, and whose imaginations were captivated by the teaching of Mazzini and by the achievements of Garibaldi. To say that the free-trade doctrine of 1840 was not in harmony with the ideals of the men who witnessed and shared the revolutionary movements of 1848, is assuredly not the same thing as asserting either that the policy of the economists is mistaken or that the ideas of Socialists or Nationalists are sound. What is certain is that no mere economic reform will of itself remove all the evils of society. If the United States should now, as every rational man must hope that they will at some future day, adopt the policy of unrestricted free trade, the Union would form a state governed by all the principles contained in Cobden's creed. Does any one suppose that the Union would then constitute an earthly paradise? Assuredly, a man of Cobden's genius would soon find that even in a society unburdened by feudal ideas and freed from the curse of protection there was still room for the labors of a reformer.

JOHNSTON'S CECIL COUNTY.

History of Cecil County, Maryland. By George Johnston. Elkton. 1881.

In a country like ours, whose oldest history is but of yesterday, and where local ties are comparatively weak, there is a special reason why everything that can give that history fulness and color, and link the present more firmly to the past, should be carefully preserved. From this point of view, we are pleased to notice the growing tendency to produce local histories like this before us; and we should be glad if, in the older States at least, each city, each county, each village and township had its local historian or annalist. While, of course, the petty provincialism

> "That thinks the rustic cackle of its bourg
> The murmur of the world,"

is not to be approved, we must remember that the patriotism that owns no narrower sphere than "the boundless continent" is apt to be attenuated in proportion to its expansion; and, after all, the local affections are the rootlets which nourish the love of country and fasten it in the heart. To our mind, no movement has

arisen in France for nearly a century so promising as the late Provençal revival, which, though assuming a somewhat fantastic form, is yet full of fresh and vigorous life. But it is a far cry from the Garonne to the Elk, and we must come back to Mr. Johnston's book.

After the inevitable first chapter on Captain Smith and his voyage up the Chesapeake, we are at once brought face to face with the equally inevitable Clayborne, who was "dispossessed," Mr. Johnston thinks, of Kent Island. Now, of all the colonial history of Maryland, this business of Clayborne's seems to be the solitary incident that possesses at the present day a living interest other than historical and antiquarian. And the reason of this is an odd one. While the people of all the other older States take pride in their founders, and that man would be anathema who in Pennsylvania, Rhode Island, or Massachusetts, should be so hardy as to blaspheme Penn, Roger Williams, or the Pilgrims, in Maryland, on the contrary, we find a number of worthy and intelligent persons who seem to have a personal grudge against Cæcilius Calvert, and listen with pleasure to anything that tends to place him in an unfavorable light. As this case of Clayborne's is the only one that will serve the purpose, they are never weary of citing it as an act of high-handed oppression on the part of the Proprietary; and yet the real grievance of Clayborne, when examined, turns out to be one of the smallest. Here are the facts: Clayborne, Secretary of State for Virginia, had been granted a license to trade with the Dutch and others, and under this license had established a trading-post on Kent Island, and another near the mouth of the Susquehanna. When the province of Maryland was granted to Calvert, the latter notified Clayborne that these posts were within his dominion, and that the dwellers therein must consider themselves under his government. Clayborne resisted and defied him, and appealed to Virginia for help. Baltimore, who was most desirous of enlisting able and energetic men among his colonists, would gladly have had his support; and, we cannot doubt, would not merely have granted Clayborne all the land he wanted, but would have advanced him to as high a position under the Maryland government as he enjoyed in Virginia, had he been willing; but he refused, and even armed a vessel and made war on the government at St. Mary's. We may imagine an analogous case if, at the cession of the District of Columbia to the United States, an enthusiastic Marylander had refused to acknowledge the new jurisdiction, and, fortifying his house, had bid defiance to the Federal authority. Of course the Proprietary had but the one alternative: to enforce his authority or to throw up his charter. He enforced his authority, and Clayborne fled. We can sympathize with Clayborne's natural attachment to Virginia; but it is plain that his grievance was purely sentimental, and if he was dispossessed of his trading-posts, he had only himself to blame.

There is fine material for the novelist or dramatist in the romantic story of George Talbot, the eponymous hero of Talbot County—satrap, homicide, outlaw, and hermit. It is an interesting proof of the fact that the early portion of any people's history tends to take a legendary form, no matter in what epoch of the *Weltgeschichte* it may fall, to find that legend has crystallized about this redoubtable Talbot as about any Dorus or Ion. He was a kinsman of the Proprietary, who established him in the northeastern parts of his dominion, with the titles of "deputy-governor and surveyor-general," with territories not very exactly limited, and with powers not very clearly defined. These vaguenesses Talbot interpreted in his own manner; defining the former as "all you can get," and the latter as "whatever you please." Far away from the authorities at St. Mary's, in the primeval wilderness, he proceeded to constitute himself monarch of very much more than all he surveyed, in either the technical or the poetic sense of the word. Like some Warden of the Marches in feudal times, he built himself a fortress, garrisoned it with a band of daring and devoted retainers, and harried the country round at his will and pleasure, but without bloodshed for a time, so far as we can learn.

It is, however, a fact well known to students of human nature that in the power of arousing the old Adam in the unregenerate soul nothing has ever existed or been discovered comparable to a collector of customs or excise; and one Rousby, a customs officer of the King, in a luckless hour for him, came into contact with Talbot, who incontinently abolished him. It was at one of the times when Virginia, being in favor at court, was bullying Maryland; and, against all law and justice, Talbot was carried off to Virginia for trial, which meant death. The courage and address, however, of his devoted wife and two faithful followers delivered him from prison; but the pursuit was so energetic that he had to take refuge in a cave near where Port Deposit now stands, where he long remained in hiding, fed, the legend says, by hawks which he trained to fish for him in the river. Again he fell into the hands of the Virginians, but the prompt action of his friends in England procured his pardon before the close of the trial. He returned to the mother country, fought on the Jacobite side, then entered the French King's Irish Brigade, and ended his adventurous career in battle.

An example of the tendency of myth and legend to form around any unusual natural phenomenon is the following: Near Elk Neck Ferry there grows an ancient holly-bush, whose leaves, for some unexplained botanical reason, are flecked with spots and splashes of crimson. The story goes that one Hans Rudolph, who in early times was the owner of the ferry, set out one morning in pursuit of a runaway slave. The negro, who had armed himself with a gun, was crouching in ambush behind a log at the roadside, and when his master drew near fired, his victim's blood bespattering the leaves of the bush, which have ever since retained the crimson stains.

It was long the custom for persons who wished to emigrate to America, and had not the means of paying their passage, to enter into indentures to serve for a given time—usually three years—after their arrival. The services of these "redemptioners," as they were called, were sold to the highest bidder on the arrival of the ship. Speculators sometimes bought up a whole gang, and marched them through the country, selling here one and there another, as they could find purchasers; from which practice they were nicknamed "soul-drivers." It happened one day that a "soul-driver" who had sold off all his gang but a single Irishman, stopped very late at a country tavern. Early in the morning the Irishman got up, put on his master's clothes, found the host, and actually sold the "soul-driver" to him for a good price, representing him as an exceedingly good servant, whose only fault was that of being a most outrageous and impudent liar, who might even go to the extent of representing himself as the master, if he thought the landlord gullible enough to believe him. Having given this caution, he pocketed his own price and went on his way rejoicing, leaving the "soul-driver" and landlord to settle the matter between them. One cannot help trusting that they were a long time settling it, and that before it was settled the adroit Paddy was far beyond pursuit.

Readers on both sides of the Atlantic will learn with interest that descendants of the family of Daniel Defoe are still living near Nottingham, Md. Elizabeth, Daniel's niece, having quarrelled with her family for interfering with her marriage, left her home and embarked for America. She had no means to pay her passage, and came as a "redemptioner." On her arrival at Philadelphia, she was offered for sale, and bought by Andrew Job, a resident of Nottingham, who took her to his home. Thomas, the son of Andrew, looked with an eye of favor on the forlorn girl of nineteen, and proffered honorable matrimony. His suit prospered, and in 1725 they were married. Elizabeth now wrote home for the first time since her flight, and in the course of time received a letter from her uncle Daniel saying that her mother was dead, and had left her considerable property. He sent over her mother's furniture, of which an inventory is given in his letter, recommending to her particular care various articles which he had used in his private study, "as they have descended," he wrote, "to the family from our Flemish ancestors, who sought refuge under the banner of Queen Elizabeth from the tyranny of Philippe," and apologizing for the condition of two chairs, the wicker seats of which he had worn out and replaced by wooden ones. We are glad to learn that these chairs are still preserved, one in the possession of her descendant James Trimble, and the other in that of the Delaware Historical Society. From this time Elizabeth corresponded with her uncle, whose letters she carefully preserved, and they are now probably in the keeping of some of her descendants.

This history is not only agreeably written, full of interesting particulars of early Maryland history, and illustrated by a good map, but in typography and general finish is a creditable specimen of Elkton workmanship. We are not disposed to carp at little blemishes here and there; though it certainly has an odd effect to find the third Lord Baltimore, "Absolute Lord and Proprietary," as his style ran, persistently alluded to as "Charles Absolute," as if he were a progenitor of Sir Anthony.

ROSCHER'S NATIONAL ECONOMY.

Nationalökonomik des Handels- und Gewerbfleisses. Ein Hand- und Lesebuch für Geschäftsmänner und Studierende. Von Wilhelm Roscher. Stuttgart. 1881.

It is with no ordinary interest that the student of political economy cuts the leaves of this book. Not only is its author more widely known than any other writer upon kindred subjects now living, but he is known to be a man of high scholarly attainments, whose accuracy in the statement of facts pertaining to industrial subjects is unequalled. This book, moreover, is the third volume in a systematic treatise, the first edition of the first volume of which appeared in 1854. The labor of its author, during the twenty-seven years which have intervened, has been almost entirely in the field of political economy, and one is thus assured that what he now writes will not prove to be undigested matter, or to be based upon hastily gathered data. The expectation thus excited is heightened by learning of the success of all of Professor Roscher's previous works, especially the first and second volumes of the system of which this book forms a part. The first volume, 'Grundlagen der Nationalökonomie,' had, in 1877, passed through twelve German editions. The second volume, 'Nationalökonomik des Ackerbaues und der verwandten Urproductionen,' which appeared first in 1859, had, in

1875, reached the eighth edition. It is this book which Professor Adolf Wagner, of the University of Berlin, pronounces the most important single contribution which has for many years been made to the study of which it forms a part. It was the original design of the author to complete his system in four volumes, and, what is especially worthy of mention, since the author is a German, the subsequent study of many years has not induced him to extend the first plan. He promises that the fourth and last volume, which will be entitled 'Lehre vom Staats- und Gemeindehaushalt,' shall be put in press without delay, "wenn Gott Leben und Kraft erhält."

To one who is acquainted with the growth of economic literature since the middle of the last century, this purpose on the part of Professor Roscher to complete a system begun while yet he was a young man, suggests the query as to the permanent place in the structure of economic thought which will be eventually assigned to the historical method of study in industrial subjects. This method was originally regarded as a radically new departure, as beginning a new era in the development of political economy. It is evident that our author considers it to be the correct method, and trusts that it will prove to be the permanent one; otherwise he would not have devoted the closing years of a life of hard work to such a laborious arrangement of citations and references as the present volume indicates—a labor in which but little enthusiasm can be aroused, and which must repress every play of the imagination by which many are led to undertake severe toil.

It is not, however, so evident that the younger economists are equally deferential to this method of study; for, if we look closely into the literature of the last ten years, we shall be forced to recognize the mistake of regarding the historical school as representing the latest phase of development in German economic thought. No one will for a moment deny that a strong presentation of the claims of this school, by men who believed it to be the final word upon method, was necessary to correct the errors of English forms of study, but, that correction having been effected, this school is amply rewarded for the service rendered by the assignment to it of a chapter in the history of the growth of political economy, while the younger men turn their attention to other and more important questions. Were it not for the wealth of material which is peculiar to all that Professor Roscher writes, one could not regard with entire satisfaction the devotion of his splendid abilities for wielding facts to what may perhaps be termed an anachronism. The continued advocacy of this method of study as though it were aggressive is considered an anachronism in Germany, and universities and colleges in this country which devote a large share of the time allotted to economic subjects to a presentation of this method, are but wearing the old clothes that the younger German professors have cast aside.

The honor which historical economists have earned for themselves is of being the recognized organizers of the successful revolt against the extreme "scientific method" of English writers. Ricardo, Senior, and Mill had tempered the maxims of Adam Smith into unyielding propositions of scientific pretensions. This precluded all discussion except in a single direction, and led to some conclusions out of harmony with observed facts. Knies, Roscher and others, very properly pointed out that the better way would be to inquire first after realities, rather than to proceed from assumed and unproved premises, and that this could be most satisfactorily accomplished by observing the development of industrial life in its history. Their only error was in overestimating the significance of their claim, and in exalting it to the importance of a separate and exclusive method. The true purpose of a study of political economy is to procure a rational and scientific basis for the formation and government of an industrial society. A prerequisite to the performance of this task is to understand all the forces and factors to be controlled. The service of the historical school consists in having furnished an additional method of becoming master of these facts, but beyond this it does not extend. Of itself it is totally inadequate to the solution of a single economic problem. The employment of good logic and *à priori* reasoning is as necessary now as it has ever been. The true method of economic investigation is that which combines the habits of the English economists with those of German historical writers. That this combination has been effected as a result of the efforts of Professor Roscher and his friends, all are happy to admit; and this, it is believed, is the position which the future historian of economic literature will award their work.

When we turn from a consideration of this question to the contents of the book which forms the subject of this review, too high praise can hardly be awarded its author. It is devoted to a study of two subjects: commerce and manufactures. It is encyclopædic in its character, and would serve as a guide to extended study upon even minor questions properly included in its purpose. The book embraces 823 pages, consisting of text and notes, in coarse and fine print respectively. The proportion of the former to the latter is about one to three and one-half. These notes are made up, for the most part, of references to works ranging over the entire field of literature, and contain terse suggestions as to what may be expected under them. As an illustration, which is by no means exceptional, attention may be drawn to the support given the simple statement, that by no other means can the superiority of modern culture be brought out in such bold relief as by a consideration of modern methods of transportation. This is substantiated by twenty-one specific references, embracing works of history, travel, romance, poetry, periodical literature, and scientific treatises. Not only is the reader introduced by such references as these to an extended bibliography, but he feels their moral effect in the study of the text. In them he has a guarantee against partially considered data or hastily drawn conclusions. In what bold contrast with this, both as regards form and effect, stands such a book, for example, as 'Progress and Poverty,' by Mr. Henry George; a book that indulges in the widest generalizations, but at the same time displays provincialism as regards its premises, and narrowness of research.

But it is not alone because of its encyclopædic character that this book by Professor Roscher will find a place in the library of all students of industrial subjects. It contains many important generalizations which cast much light upon vexed questions, and is not wanting in those concise statements of facts or tendencies so universally selected for purposes of quotation. For example, speaking of the influence of commerce upon the life and character of peoples, he says: "Commerce everywhere tends as strongly to cosmopolitanism as agriculture and the handicrafts do to communalism and provincialism, or manufactures to nationalism." Again, the sentence which characterizes the mercantile system cannot easily be surpassed for accuracy and comprehensiveness: "The chief peculiarities of the so-called mercantile system rest upon an overestimation of five specific points: density of population, amount of money, foreign commerce, factory industries, and the guardianship of the state over private enterprises." By far the most important problem touched upon in this book is that of the new elements introduced into nineteenth-century life by the changed modes of applying labor to material. The transformation of hand labor into machine labor, the disappearance of small independent concerns and the establishment of large manufactories, the concentration of power and of wealth which the introduction of machinery has rendered possible—these and kindred questions connected with the development of industries are here treated as constituting a problem in history. From the standpoint of the production of wealth, modern methods are worthy only of praise. "The significant difference between hand-work industries and factory industries lies in the division of products considered from the social standpoint." This modern method of industry is observed to render workmen careless, and, in consequence, introduces the "danger of a proletarian increase of population"; it increases the dependence of the laborer upon the master, and thus tends to repress his individuality, a tendency that strikes at the successful continuance of democracy itself. Speaking of the introduction of machinery and the consequent employment of women and children, the author remarks: "The most mischievous side of all this may be discerned in the destruction of family life. When the man ceases to be the provider for his family, the most natural and unquestionable ground of his paternal and matrimonial authority is assailed. Here are those sickly dreams of the emancipation of woman already in a measure fulfilled; the woman is admitted to the same occupation as the man, independent as he; but what a fearful number of marriages ensue worthy only of savages."

It was Burke who pointed out the difficulty of understanding the forces of one's own times. The past is given to us by historians, but the present is beyond the comprehension of the great majority of those who form a part of it. It is studies such as these of Professor Roscher that assist one to read his own times as though he had but an objective interest in them, and to be as sure of his judgment, and perhaps equally severe, as the historians of the next century will be. In this lies his great service. The first volume of his system, the one translated into English, does not add a great deal to economic literature; nor can one hope much from the fourth, so perfectly has that field of study already been presented; but the second, upon agriculture, and especially this third volume, devoted to commerce and manufactures, will long remain among the most fruitful books which economists can study. Upon these two books must Professor Roscher rest his hopes of enduring reputation as an economist.

President Garfield and Education. Hiram College Memorial. By B. A. Hinsdale, A.M., President of Hiram College. Boston: James R. Osgood & Co. 1882. 8vo, pp. 433.

We feel safe in assuming that but for our late President's death few of our readers would ever have heard of Hiram College, or of the intelligent little settlement which gathered round that school and church in the Western Reserve of northern Ohio. But it is easy to see that Garfield's character was a good deal shaped by his life there. It was not an idle one. Teaching school, and studying law, and busying himself with politics were not enough, without preaching on Sunday, to satisfy the demands of his vigorous physique and active brain. The habit of public speaking and of preparing himself carefully for it seems to have been in great part acquired there. Before that, however, he had had some experience in Solon, Zanesville, and Warrensville. His own account of his first experi-

ment in Solon we may quote. He had been looking about for a school to teach without at all satisfying himself, when, he says,

"a man from an adjoining neighborhood called at my mother's house, and said he 'was huntin' widow Gaffield's Jimmie.' He wanted a teacher for his district, and he ''lowed that Jimmie would do.' I was called in, and a bargain was soon concluded. The coming of this man confirmed me in the opinion that place-seeking was not in my line; and I have never asked anybody for a place from that day to this."

The time has not come for a dispassionate review of the life of our murdered President. The sadness and suffering of his painful death have drawn a veil of tender sympathy over the weaker parts of his career. We may well notice, however, this kindly picture of his Hiram life; and the extracts from his addresses on educational topics which are appended to the volume seem to deserve comment, from the light that they throw on his character and way of looking at things. He showed in them all his shrewd, clear common-sense. His sentences are short and direct. He used few figures, and those of a homely, familiar kind. He was intensely practical. He pointed out the folly of spending large sums on the brick and mortar outside of schools while the brains were poorly furnished within. He dwelt on the wrongfulness of multiplying early studies at the expense of a thorough knowledge of the essential elements. He wanted the United States to spur on the backward part of the community for its own protection, through the influence of the Bureau of Education; and he urged the importance of universal education. But the kind of education that he always had in view was the preparation for practical life. Study purely for the sake of culture he scarcely comprehended. He thought a college course very deficient which should leave a student ignorant how to harness a horse or draw a bill of sale. The kinds of knowledge to be sought in a liberal curriculum he specifies clearly as—

"(1) That knowledge which is necessary for the full development of our bodies and the preservation of our health; (2) the knowledge of those principles by which the useful arts and industries are carried on and improved; (3) that knowledge which is necessary to a full comprehension of our rights and duties as citizens; (4) a knowledge of the intellectual, moral, religious, and æsthetic nature of man, and his relations to nature and civilization; (5) that special and thorough knowledge which is requisite for the particular profession or pursuit which a man may choose as his life-work after he has completed his college studies. In brief, the student should study himself, his relations to society, to nature, and to art; and above all, in all, and through all these, he should study the relations of himself, society, nature, and art to God, the author of them all."

In short, the things that a college student should study are those which will teach him to take care of his health, to succeed in business, and perform his political duties; keeping religion especially in view. It is unnecessary to point out how far this is from the purpose of a liberal education as understood by more cultured communities. The two schemes are quite irreconcilable. The one aims at general culture and mental development, and arranges the course of study to reach that end. The other seeks to teach the facts which will be required for use in after life, and makes its prime object those things which the great universities relegate to the professional schools. The difference is not accidental, it goes to the root of the matter. The two views belong to different phases of culture. Mr. Garfield held to his belief consistently. It ran through his character, and throws much light upon his other views. He applied the same process of reasoning, for example, to the Government survey of the Western territory, which he was inclined to confine to practical preparation for the sale of the lands. He was, in short, thoroughly practical in everything. His chosen examples of success were the Maydole hammer, the Spencerian penmanship, and the Ryder photography, and it is not difficult to trace the influence of his ideals upon his public career.

On the Indian Hills; or, Coffee-Planting in Southern India. By Edwin Lester Arnold. In two volumes. London: Sampson Low & Co. 1881. 8vo.

Mr. Arnold went to India, in the fall of 1877, to take a position as assistant superintendent of a coffee-estate in the little native dependency of Cochin. It is only in the second volume, however, that we actually arrive at the scene of his labors on the hills just west of Madusa. The first is occupied with a very readable description of the voyage out, in which the little incidents which vary the monotony of life on ship-board are narrated in such a sprightly manner that one forgets how old the story is. He landed at Colombo, the first inhabitants to greet him being innumerable crows, of whose familiarity he gives many amusing particulars. After a short run to Kandy, he proceeded by steamer up the coast to Calicut, and thence by rail, bandy, and munchiel, or swing-cot, into the interior. The estate to which he was sent was a new one, so that we have a very clear account of the various processes by which the well-nigh impenetrable jungle is converted into a coffee-plantation. The reclaiming the jungle is of course done in much the same manner in which our forests are cleared, but the labor is tenfold as great, since the Indian planter must depend upon coolie labor, which at the best is poor, but in famine times is sadly inefficient. Mr. Arnold came when the distress was at its height, and the two or three hundred laborers on his estate were mostly "famine" coolies—that is, men, women, and children who had been driven from their homes on the plains to escape starvation, in many cases only to meet a quicker death in the cold and fever-laden mists of the hills. Mr. Arnold has much of the literary ability of his father, the author of the 'Light of Asia,' and his account of these poor creatures and their sufferings is painfully graphic. We do not remember anything which brings up so vividly the horrors of those days as some of the incidents which he gives. Here is one of the least distressing: "After lunch I was strolling about the platform, when a poor old decrepit coolie woman appeared on the line, and came timidly forward with her eyes bent on the ground, every now and then stooping to pick up something, which she greedily ate. Wondering what this could be, I waited until she was close by, and then again saw her bend down, rub her fingers along the rails, and suck them. She was positively eating the train-oil which had fallen from the axles of the carriages!" One of the hardest of his every-day tasks was to doctor his people, who died, sometimes at the rate of fourteen a week, from famine, diarrhœa, cholera, and smallpox.

The life of the planter on a new estate is a very hard one. His home is a flimsy hut, with a roof of grass and walls of a single thickness of matting, through which both wind and rain have free access. He must toil from early morning till night in the broiling sun, the terrible rain, and the yet more frightful mist which lurks in the valleys. "Once, while crossing the jungle, I came to the steep banks of a reedy nullah, and descended to wade across; but no sooner was I down into the fog than my head swam, my breathing grew painful, and my throat rough and dry, so that I was glad to scramble back before my senses left me, as they were rapidly doing." Add to all this his solitude, the wretched food which he is often compelled to cook for himself, and the inevitable fever, and it will be seen that the planter's lot is exceptionally trying. His amusements are few, consisting mainly of occasional Sunday visits to a neighboring planter, and a holiday excursion now and then to the plains. Hunting is almost out of the question from want of time, though elephants, tigers, and bisons, to say nothing of smaller game, abound in the forests about him. After a year principally spent in cutting roads, felling and burning trees, and making holes for the coffee-bushes, Mr. Arnold was utterly vanquished by the fever, and compelled to return to England to recruit. His short experience, therefore, prevents us from learning from him, as we would gladly have done, more about the cultivation of coffee than the mere preparation of the soil—for it takes at least three years to bring an estate into a bearing condition.

Notwithstanding the wretched surroundings of Mr. Arnold's life in the jungle, the worst of which we have only hinted at, there is a cheeriness about him when writing of them which extorts our admiration, and is another proof of the indomitableness of Anglo-Saxon pluck. It should be said, however, that he is evidently sustained, even under the most adverse circumstances, by a little of the enthusiasm of the naturalist. For instance, we find him solacing himself for a miserable night in which he was drowned out of his bed, by the fact that he was able on this account to add to his collection "all sorts of strange creatures in the insect way, besides bats, snakes, rats, lizards, and so on," which shared the meagre shelter of his roof with him. He is a keen and interested observer of all animal and vegetable life, and with one more quotation we will close our notice of his entertaining work:

"On one occasion, in the hot weather, when the streams were at their smallest and everything lay dry and hot under the fierce sun, while all the trees and plants sagged down their leaves for want of moisture, I came upon a quiet nullah meandering through the jungle. The bed, by chance, just there was broad and sandy, and the stream a single thread that seemed every moment in danger of vanishing. But to my astonished eyes the whole place appeared a garden of flowers of a thousand colors, and crowded so close by the water that the sand could scarcely be seen. I looked and looked again, and then stepped down to observe the parterre closer; but as I did so these animated blossoms sprang into the air in a huge cloud, and the truth was plain that they were a countless host of thirsty butterflies, collected from the forest all round to drink at this thread of liquid. The sight was wonderful as they wheeled round and round amongst the hanging creepers, and enough, in itself, to delight any naturalist—hundreds of varieties and tens of thousands of specimens, all intertwining in mazy gambols. Every size and shape and color was there, and as they flew backwards and forwards in the sunlight, with their wings shining and flashing, it was like a shower of jewels."

Analytical and Topical Index to the Reports of the Chief of Engineers and the Officers of the Corps of Engineers, United States Army, upon Works and Surveys for River and Harbor Improvement, 1866–1879. Compiled under the direction of Major Henry M. Robert, Corps of Engineers, by L. Y. Schermerhorn, C.E., Samuel O. L. Potter, A.M., and others. Washington: Government Printing Office. 1881. 8vo, pp. vii.–624. (Stereotyped.)

This work, of which 1,000 copies were printed by the War Department, is one which ought to have been done years ago, and which should be gratefully welcomed when it does come, in spite of some imperfections. Any one who has had

to consult Government reports of any kind knows in what an inextricable confusion they are left. Take the Reports of the Secretary of War, for example: there is his personal report and the special reports of all his heads of departments—as, the Chief of Engineers, of Ordnance, etc., etc. Each chief of department has scores of valuable reports on special subjects, by persons specially qualified, which are tacked on as Appendix A, Appendix MM, or Appendix ZZZ, to the report of the immediate chief. Add to this that the average specialist in engineering or ordnance is as innocent as a babe of what ought to be done to make his work available to a busy man in another department, and you have the data of the problem. The solution of it usually comes in the shape of an index (Heaven save the mark!), which is hastily compiled by a subordinate in the central Washington office.

This work of Major Robert is an attempt at a more rational solution, and it is a praiseworthy and very valuable attempt. It has undoubted defects, most of which could have been avoided by a reference to Publications, No. 1, of the Index Society of London, or to any of the best catalogues of public libraries in the United States, or to 'Poole's Index,' or, indeed, to any one of a hundred standard publications. For example, under *Cross-Section*, *Discharge*, and *Velocity*, we find the references to cross-section of *rivers*, discharge of *rivers*, velocity of *rivers;* when the references should of course be to Rivers: their cross-sections, their velocities, etc. And so in other cases, which are violations of rules that have been proved by many trials to have been founded in sound reason.

These criticisms refer chiefly to a very small part of the work; the main portion is contained between pages 43 and 603, and is an Index to Works and Surveys for Improvement of Rivers and Harbors. The entries are alphabetical by the names of special "improvements"; as, "Accotink Creek, Virginia" (why not in order of States, and alphabetically by improvements under each State?). Under each "improvement" the references are given to the reports of the Chief of Engineers, under the following headings: *Appropriations*—including all made by Congress from 1790 to 1879, which thus shows the total sums appropriated; *Commerce*—giving commercial statistics; *Contracts*—naming the various contractors, and the prices paid in some cases; *Documents; Engineers*—references to reports of the Engineer Department, to the action of engineer boards, and to engineers in charge; *Estimates; Expenditures; Financial Statements; Legislation*—by States or towns; *Operations*—brief history of the work, with references; *Physical Characteristics*—giving a reference to information on this question; *Plans*—proposed for the improvement, and not adopted; *Private and Corporate Work*—done by individuals, towns, and States; *Projects*—adopted plans; *Secretary of War*—with reference to his action, if any; *Surveys*—including references to maps published or mentioned in the reports.

Thus the whole history of a work is exhibited to the eye at a glance, and all published details concerning it can be had by referring to the original reports. This is, professionally, of the highest importance, as it at once makes available a great amount of information concerning the enormous quantity of useful work done by engineer officers on public improvements. It will have a political value also, for the "claims" of any river or harbor can be at once investigated. The great question, "How much has Ohio got?" can be answered from the condensed table of appropriations for rivers and harbors arranged by States, on pages 30-37. Pages 603-624 contain the personal index to the names of all civil employees, contractors, and failing bidders, with references to the main index for details.

As is evident, the work will be of great value not only to officers of the Engineer Corps, but to civil engineers engaged in similar work. The arrangement is probably as good as any that could be adopted (if we except, perhaps, what seems to be the error of indexing alphabetically by improvements and not by States and improvements under the States), and, at any rate, the compilers have made their system homogeneous, and therefore intelligible and eminently practical. It is greatly to be regretted that Major Robert did not extend his original plan so as to include a *complete* index to all the work done under the Engineer Department during the years 1866-1879. He has gone over the necessary ground in preparing the partial Index, and a very little extra labor would have made the Index exhaustive. For example, a large number of geographical positions have been determined by officers of engineers during this period. These should all be made available. As it is, although the Topical Index of Engineering and Physical Data (pages 1-30) professes to give the work of the Lake Survey, we find only general references, and no results quoted.

These are undoubtedly gaps which must be filled at some future time. They do not affect the usefulness of the Index as it stands, nor diminish the credit for the conception and execution of it. Finally, we may note it as a little remarkable that the value of special bibliographies should have manifested itself just where it has, and congratulate the engineers, civil and military, who can use this work and who do not have to make it for themselves.

NEW YORK, THURSDAY, FEBRUARY 9, 1882.

The Week.

THE financial situation was one of anxiety and apprehension until Saturday, which was the critical day for the settlements at the Paris Bourse. Up to that time gold continued to flow from London to Paris and from New York to London, although the total specie shipments from here amounted to only $3,750,840. It is true that the Bank of England made no further advance in its discount rate, but the actual discount rate was before Saturday above 6 per cent., and as high as 7 per cent. was then paid for money on the best securities which could be offered in London as collateral for call loans On Saturday, as soon as it was known that the Paris settlement had been made satisfactory, the agony ended. Hopefulness took the place of fear; exchange on London at Paris began to advance, the prices of securities in London began to rise, and the tendency in all directions has since been toward improvement. This was shown here by a decline in the rates for bills on London and Paris to figures which do not warrant gold exports; and the week under review closes with the prospect that no more gold will be exported at present. The speculation at the Stock Exchange here varied in tone with the changes in the foreign-exchange markets, which in turn were influenced by the foreign advices. The New York banks last week lost heavily in reserve, but, after the losses were made good, their condition was somewhat stronger than a year ago. The legitimate business of the country shows every sign of soundness and prosperity. The surplus revenues of the Government continue to accumulate so that the Secretary of the Treasury has been forced to call in for redemption another $20,000,000 of 3½ per cent. bonds. The public debt was reduced during January $12,978,836, making the total reduction for the first seven months of the fiscal year $88,085,931.

Tuesday's *Tribune* brought us another explanation from Mr. Blaine of the manner in which he acquainted the President with the instructions to Mr. Trescott. According to this statement the mission of Mr. Trescott to South America was resolved upon between the President and Mr. Blaine; the President then had a long conversation with Mr. Trescott in Mr. Blaine's absence; Mr. Blaine then made a rough draft of instructions for Mr. Trescott, which he "handed to Mr. Trescott for such suggestions and additions as he might deem desirable for authority in the mission upon which he was to enter"; Mr. Trescott returned the paper with his suggestions and additions, and Mr. Blaine then completed the draft, which he submitted to the President, "reading it carefully to him for correction." The President "listened with close attention," and "suggested four corrections, which were accordingly made." Mr. Blaine then "stated to the President that it might be well to add a paragraph to exclude the idea of any special desire on the part of the United States Government to consider itself an umpire in the Chili-Peru controversy." This paragraph being added to the instructions, Mr. Blaine "again read it carefully to the President," and "the copy for Mr. Trescott was then made." It is further given out that the paragraph concerning the breaking off of diplomatic relations with Chili, which was subsequently taken special exception to and countermanded by Mr. Frelinghuysen, was in fact first written out by Mr. Trescott. This is the latest statement of Mr. Blaine, and we have seen nothing specifically impugning its correctness as far as it goes. It is a usual thing for a minister of foreign affairs to permit an envoy sent out on an important mission, to write out his own instructions after the objects of the mission have been explained to him, so that it may appear whether those objects have been clearly understood and appreciated by him, and also to give him an opportunity to formulate such suggestions as he may wish to make to his chief, who after all has to bear the responsibility for the instructions. This was done in Mr. Trescott's case. Judging from the context of the *Tribune* despatch, Mr. Blaine does not mean to shift any part of his responsibility upon Mr. Trescott, but rather to defend the instructions as they stand. Statements apparently "inspired" by the White House have not denied that President Arthur saw the instructions and authorized them to be issued. But they create a doubt as to whether Mr. Blaine gave the President sufficiently explicit and clear information on the general condition of South American affairs to enable him to decide intelligently. This doubt is not removed by Mr. Blaine's latest explanation, and it is difficult to see how it could be.

The arrest of the manager of the Union Générale for fraud is probably a very unexpected termination to a religious bank, or at least a bank supported mainly by persons acting under a religious impulse. It was essentially a Catholic and Legitimist bank, and was intended to give conservative religious people a fair share in the fruits of the prevailing material prosperity. The Pope is said to have put money into it. The Count de Chambord put money into it, and the Catholic nobility of France and Belgium put money into it. Under this stimulation the shares rose rapidly and greatly, and it went into all sorts of enterprises with its spare cash. It built railroads, and started gas works, even undertook to float a "Compagnie des Forces Électriques," which was to have a capital of $15,000,000. The manager reported great profits, and the stockholders believed him and so did the outside public, until the inevitable hour came when the insiders wished to "unload." This hour comes in all speculative enterprises sooner or later, and if it happens to be the same hour at which insiders in other speculative enterprises wish to unload also, there is a panic such as Paris is now passing through. It was at first supposed that the Union Générale must be proof even against a panic, and that, the first flurry over, it would go on again. But investigation revealed the fact that its management had been fraudulent all along, and its managers are now in jail, and the scandal is great, and the best circles of Continental society are sadly out of pocket.

The moral of the affair is a very old one, and yet every time it is reproduced it has the charm of novelty. It is that business cannot be successfully conducted under any guarantees of soundness and safety except business ones. Innumerable attempts have been made to put commercial enterprises of various sorts —newspapers among the number—on a religious or quasi-religious basis, and always with the same result. If the scheme does not fail outright, it does not succeed. The reason is that people never rely equally on two guarantees of a wholly different order. If a president or cashier is mainly trusted because he is a religious man, the ordinary business precautions against his malfeasance are sure to be neglected, and thus new temptations to fraud actually created. Besides which, nobody knows how religious a man is except himself, and if his word is taken as sufficient on this point, it is sure to be taken in other matters where it ought not to be taken at all. The probabilities are that M. Bontoux and his fellow-managers of the Union Générale were largely trusted because they were so good Catholics, and so right-thinking in the eyes of the depositors on a variety of subjects, social, political, and religious. The probabilities are, too, that M. Bontoux himself at last got to believe that a man who was sound on all these subjects might fairly treat himself to a larger liberty in the use of the bank capital than a man less orthodox; and then, when things began to go wrong, he probably worked himself into the belief, also, that it was better to cook the accounts than permit the enormous scandal which would be caused by the failure of an institution blessed with such support. The fact is, however, that "business is business," and nothing else. The time for religious and philanthropic and political considerations to begin to operate in financial undertakings is after the accounts have been examined and honest dividends have been declared, and not sooner.

Mr. John Roach has made a very singular confession to a reporter of the *Tribune*. He declares he is going over to France to establish a ship-building yard and build ships, in order to take advantage of the French bounty, which would amount to $34,215 on the building of a 3,000-ton ship, and $54,000 the first year and $52,000 the second year for running her. The law providing this bounty was passed two years ago, and seems, Mr. Roach says, "an expensive one, yet it furnishes France with a cheap navy, and the best she has ever had"—alluding, we suppose, to the provision which compels the owners to sell

to the Government on demand in time of war. We need hardly say that, according to Mr. Roach, "England has tried in every way to have the law annulled, but finding herself defeated, her capitalists are going over to France to build ships there." Of course they are. It is just like them to do so. English capitalists go wherever they can make money, and especially to places where they get bonuses for carrying on their own business. They are a cold, heartless, greedy class, who, when you talk to them of carrying on business from patriotic motives, laugh in a peculiarly provoking British way. But we had little idea that a really patriotic American shipbuilder like Mr. Roach would follow their very repulsive example. He is now going to devote himself to the task of increasing that disparity between the number of steamships afloat under foreign flags and that of steamships afloat under the American flag which already constitutes such a scandal and disgrace. Nor is this all. He is going to help to increase the competition in the foreign carrying trade, and thus lower freights and diminish the price at which foreign goods can be sold at a profit in our market. What do they say to this in Philadelphia? One thing, however, Mr. Roach seems to have forgotten, and that is, that the British are not at all likely to be content with trying to "annul the French law," or with starting shipyards on French soil. They will circumvent him in some other way.

The Rev. Dr. John Hall, who has personally investigated the condition of the Mormons, has given an opinion on the polygamy problem to a reporter of the *Herald*, and we are glad to see, considering the kind of talk the question has called forth, that he proposes to deal with it rationally and humanely. He points out that if we interfere violently with marriages already contracted, we must make some provision for the cast-out wives and their children, a consideration which those who have hitherto declaimed on this subject seem to have overlooked. In fact, he is opposed to all restrospective legislation of a punitive character. He calls attention, too, to the fact that the polygamic women—a few thousands all told—"are of the lowest—the dregs of certain sections of European society, mean, ignorant, wretched-looking creatures." This fact alone gives a very ludicrous air to the boastings we have lately heard of the power of 50,000,000 of people to put these creatures down, and to the plan of despatching armies against them led by great captains. It would be about as sensible to despatch an army against the sinners of Greene Street and Water Street. What is needed is well-considered legislation capable of execution and firmly executed, backed up by missionaries and philanthropists. Sexual morality cannot be, and never has been, enforced or maintained by artillery and cavalry, and the ministers who discourse on this subject know it well. They know that it was not by hanging and hunting down that Christianity purified the relations of the sexes in the ancient world.

The Canadian publishers are raising a loud complaint with regard to the operation of the present Anglo-Canadian copyright system in their case. They say that when worked as it now is, in combination with our own cheap-reprint system, it puts the trade in Canada at a great disadvantage. A book copyrighted in England can be first reprinted (pirated) in the United States, where it is sold for twenty or thirty cents, and then imported into Canada, and, after paying a royalty of twelve and one-half per cent., and a duty of fifteen per cent., can still be sold there at a price that "defies competition" so far as legitimate trade is concerned. But then who was it that insisted on the right to import American reprints? Why, the Canadians themselves, because of their longing for "cheap books," that same ardent thirst for knowledge which used always to be advanced by the supporters of international piracy here as the true ground on which to rest the system. The fact is that the laws on the subject of copyright, framed at various times for different and often conflicting purposes, by England, Canada, and the United States, have together produced a practical working system which, if applied to any but literary property, would cause widespread distress and even ruin. A recent writer of authority on the subject has described the system as being a mixture of "meaningless, inconsistent, and inadequate statutory provisions," with "ambiguous, erroneous, and conflicting decisions" of the courts. Canada will evidently have to be taken into the account in the pending negotiations for a treaty.

The annual attempt of the Columbia College Law School graduating class to get its members admitted to the bar, without going through the period of apprenticeship prescribed by the Court rules, has attracted a good deal of notice. It was in great measure to abolish the right to admission through the mere possession of a law-school diploma that the new rules were passed. This right gave the law schools which possessed it a direct pecuniary interest in making as large a number of lawyers every year as possible, so that these institutions had a constant temptation to lower instead of elevating the professional standard. When the new rules, requiring a three years' period of preparation for attorneys and five years for counsellors, were adopted, Professor Dwight took the ground that as to students who had entered his school under the old system, the rule would have a retroactive effect and that such students ought still to be admitted on diploma. There are no longer any such students, the graduating class of this year having entered since the rules were adopted. This class recently appointed a committee to consider the question, and the committee has divided, some of the members strongly insisting that to apply to the Legislature for a special act to get themselves admitted would be an unwarrantable step, while others are in favor of keeping up the old system notwithstanding that the reason for it is gone. The judges and the bar will, we presume, look after these young men, and let the Legislature know what they think of the matter.

The appearance of sixty Harvard students at Mr. Oscar Wilde's lecture in Boston, in the peculiar costume in which he has exhibited himself on various occasions, helped to turn the lecture into something very like a farce, and cause it to be received with more laughter than applause. The performance of the students has been criticised on the score of good manners, but we suspect Mr. Wilde was prepared for it, and did not object to it. It is, indeed, hard to see why he should. He has himself given an air of the ridiculous to everything he says and does, by putting himself for commercial purposes into the hands of the same manager who "runs" the plays in which Mr. Wilde and his teachings are ridiculed for purposes of amusement. After this almost anything which draws becomes legitimate. Since Mr. Wilde accepted *Bunthorne* as an ally in procuring himself an audience, anything which brings people to his lectures must be welcome. Neither he nor any other man can go about the country as a prophet in the hands of a showman. The essential condition of successful prophecy is that the prophet should take himself seriously. If he is once detected laughing over his own gospel, or allows it to be supposed that he thinks his robes funny, it is all over with him

---

The *Tribune* makes the very pertinent suggestion that the names which were left in blank in the Peruvian correspondence, particularly the Shipherd part of it, should be supplied. The public ought to know who they are who have been mixed up in this business, whether innocently or discreditably, and we do not see that the Administration is under any obligation to conceal them. If the transaction was harmless, no injury can be done by telling who the actors in it were. If it was mischievous, justice requires that they should be produced. At the same time there ought to come from some quarter an answer to the question whether anything was done in consequence of the following curious piece of information contained in a letter from M. Suarez, the agent of the Crédit Industriel in Washington, to the president of the company in Paris:

> "I must apprise you that in order to render the grounds for American intervention more evident, and fully to justify the dominant attitude of the United States in the Pacific question, I have thought it right and proper verbally to promise Mr. Evarts that the agency for guano and nitrate in the United States should be placed under the patronage of a first-class American house."

The letter is dated February 18, 1881. M. Suarez had been long but vainly teasing the Government to interfere between Chili and Peru so as to prevent Chili from taking the nitrate and guano deposits, which the French company proposed to work itself. It would be interesting now to know whether this "promise" to give the agency of the concern to a "first-class American house" was ever carried out. Of course Mr. Evarts had nothing to do with it.

It is questionable whether a bill which a committee of the House of Representatives is said to favor ought to be called a measure to settle disputes concerning the election of President, or one to promote litigation in rela-

tion thereto. It provides for the reference of controversies about the choice of electors in any State to a tribunal in that State—a proceeding which has been generally approved on the ground that it leaves the appointment of electors where the Constitution puts it, in the hands of the several States. The bill goes on to provide that if, within ten days after the declaration of the result of the election by the President of the Senate, under the direction of the two Houses of Congress, either House shall express dissatisfaction therewith, the question of title to the office of President shall be tried by proceedings in the nature of *quo warranto*, to be begun in a Circuit Court from which an appeal may be taken to the Supreme Court of the United States. The suit may be brought by "any claimant" against the person officially declared to be elected. The objections which will be made to the bill are obvious. One is the same which was urged at the time of the passage of the Electoral Commission law—that it is inexpedient to involve the Supreme Court in political disputes. Another is that the bill takes the final decision out of the hands of Congress, where it is agreed that the Constitution seems to leave it, whatever difference there may be as to methods. A third objection is that, as the title to the office may turn on the vote of a single State, the Supreme Court may overrule the decision of the State tribunal on the question, and so the State may be in effect deprived of its right to choose electors. The bill reported to the Senate from the Committee on Privileges and Elections avoids these objections by limiting litigation to getting the judgment of the State Court on a question arising in the State.

The Senate Judiciary Committee has made a report upon the questions relating to extradition procedure raised by the Esposito case. It finds that complaints exist that the Commissioners in extradition cases receive payment from agents of foreign Governments. This, we presume, refers to fees; but, as we pointed out at the time, it gives the Commissioner a direct interest against the prisoner in the decision of every case. As a consequence of this it is said that Commissioners are usually disposed to expedite extradition proceedings, and for this purpose to hold court on board ship—the ship afterward being used to transport the fugitive from justice to the country which "wants" him. The Committee think that this practice is bad, and that United States Commissioners ought always to sit and hold court on land: they have really no maritime or admiralty jurisdiction. The Committee report a bill to prevent abuses, which is good as far as it goes, but they wind up with a handsome eulogy of the extradition practice as it now is, which recalls a little Blackstone's praise of the common law as it existed in his time. In this city, where most extradition cases arise, improvements are still believed to be possible.

Senator Bayard having come to the rescue of sound principles of finance, as he usually does, in opposition to the majority of his own party, the Plumb amendment to the Funding Bill was finally rejected by the narrow vote of twenty-seven to twenty-five. Senator Sherman thereupon announced that the Finance Committee would shortly report a bill to establish by law a greenback-redemption fund. Senator Allison has already introduced such a bill, which fixes the amount at $120,000,000, and provides that three-fourths shall be gold coin and one-fourth standard silver dollars. This bill is objectionable only in the proviso regarding silver. One hundred and twenty millions of coin is sufficient, according to all experience, to protect three hundred and fifty millions of paper, enjoying the confidence of the public in a high degree. If the greenbacks are to remain as a constituent part of the circulation, some definite provision of means for their redemption should be made which no Secretary of the Treasury can depart from. Perhaps Mr. Allison's bill is the best that the politicians in Congress will give us. But the votes taken on the Plumb amendment show that it is not altogether certain that so large a sum as $120,000,000 will be set apart for this purpose. Differences of opinion will arise also as to the kind of coin, gold or silver, which the redemption fund shall be composed of. The silver advocates believe, or affect to believe, that the adjourned international monetary conference which is to assemble in Paris in April next will really do something to "rehabilitate" silver. It is certain that foreign governments will do the very least which their own necessities will permit. Prudence would dictate our doing nothing in the interval which would indicate a purpose on our part to sustain silver single-handed and alone. Therefore it would seem to be unwise, from the standpoint of a silver advocate at this time, to make one-fourth of the greenback-redemption fund silver, unless in the permissive way in which the Bank of England is authorized, but not required, to keep one-fourth of its resources in silver.

A change has occurred in the ownership of the Washington *Republican*, and it is said that the paper under the new management is to become the organ of the Administration. Such a relation between a journal and a Government will, in a country like this, inevitably be embarrassing and hurtful to both sides unless the journal confines itself strictly to the publication of official matter, and thus ceases to be a newspaper in the ordinary sense. It is the business of a journal to speak out on everything that is of prominent public interest. It is the business of those in power to keep silence on a great many things about which a journal ought to speak. If a journal does its duty in discussing public interests and men, it will embarrass those in power who are held responsible for its utterances. If the restraints which the members of an administration have to impose upon themselves are also imposed upon a journal representing them, the latter will become dull and uninteresting. A recognized organ in the press will always be rather a trouble than an aid to an administration. Moreover, the latter does not need any organ. Whenever the President or the Secretaries have anything to say to the public they will find plenty of newspapers willing and even eager to print it.

The complete and now officially announced failure of the Rugby Colony in Tennessee adds one more to the list of miscarriages of co-operative schemes intended to make money and create "good society" by the same machinery. The result is not unattainable, but it requires more sagacity and forethought than such enterprises usually have at command. In the present case everything, or nearly everything, seems to have been wrongly done. The land was badly chosen, and the colony badly managed and composed of unsuitable materials. It has ruined the projector, Mr. Thomas Hughes, who is likely to be compelled to take refuge in his declining years in a London police magistrateship. The Will Wimbles, whom he expected to turn into industrious and useful cultivators of the soil, apparently do not do well when there are too many of them together. They need to be diffused thinly among people who have been brought up with different standards and ideals. There was, in fact, at the founding of the colony too much talk, and apparently too much thought about lawn-tennis and five o'clock tea.

The doings of the Egyptian Chamber of Notables confirm the general anticipation as to the result of its deliberations. It was bullied by Arabi Bey into the formation of a new Ministry for the Khedive's acceptance under Mahmoudi Bey. The Chamber is composed of the leading men of the various districts from which they come, elected by a sort of rough-and-ready process somewhat like that of the English election in the olden time, by a show of hands in front of the hustings. But there is no real popular participation in it. The Notables themselves decide who of their number shall go to the Chamber, and everybody else declares that it is good and God is great. But the Chamber is probably as nearly an expression of popular opinion as could be, considering how little popular opinion there is in Egypt to express. The Fellaheen's politics thus far have a very restricted range. They desire to be taxed as little as possible and bastinadoed but rarely. The Notables, or great landowners, high army officers, learned Mussulman doctors of divinity, and leading Government officials, are the only persons who have "views" on the condition of the country. The notion that a change in the Government can make any difference to themselves has not yet reached the masses. The Notables are hostile to the European—*i. e.*, Anglo-French—Control, and to the Khedive as the instrument of that Control, and are said to exhibit some signs of genuine national feeling. They talk of Egypt for the Egyptians, while yielding to no one in their desire for reform. But, then, their aspirations and deliberations are of very little practical importance, because there is no likelihood that France and England will be influenced by them. In fact, it is all but certain that if the Notables should seek to embody their conclusions in any sort of action, or if there were any signs of their affecting the people or the army, joint intervention would promptly follow. This has been already announced, indeed, by the two powers, as a certain consequence of any serious attempt to disturb the existing régime, or interfere with the European Control.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

On Thursday Mr. Blaine published, through the Associated Press, a copy of his despatch inviting a conference of North and South American republics to meet in Washington. In a statement accompanying the despatch Mr. Blaine said that he wished to correct the misrepresentations which had been made in regard to his invitation to a "peace congress" at Washington. The despatch as published contains nothing that necessitates any material change in the statements which have been published in regard to it. On Friday Mr. Blaine sent a letter to President Arthur in which he impliedly accuses him of having pursued a vacillating course in regard to the peace congress. He says the President gave the "most appreciative consideration" to the draft of the invitation to the congress, and directed that it should be sent, and that he, Mr. Blaine, was greatly surprised at finding in the communication afterward addressed by Mr. Frelinghuysen to Mr. Trescott "a proposition looking to the annulment of these invitations" to the peace congress. Mr. Blaine goes on to say that he "cannot conceive how the United States could be placed in a less enviable position than would be secured by sending in November a cordial invitation to all the American governments to meet in Washington for the sole purpose of concerting measures of peace, and in January recalling the invitation for fear that it might create 'jealousy and ill-will' on the part of monarchical governments in Europe." This matter has excited much interest in Washington, and it is understood that a resolution will shortly be introduced in Congress calling for an explanation from the President.

Mr. Sherman's Refunding Bill passed the Senate on Friday by a vote of 38 to 18. Mr. Sherman is said to have expressed satisfaction with the shape in which the bill was finally passed, and to have said that the amendments which it bears do not materially harm it. It has been referred to the Ways and Means Committee in the House, where it is expected that it will meet with much opposition and many amendments. As sent down by the Senate, it retains the provisions of the Davis amendment making the bonds redeemable at any time, at the option of the Government, after all bonds bearing a higher rate of interest have been called in. It provides for the issue of three per cent. bonds to the amount of $200,000,000, the proceeds of the sale of which are to be devoted to paying off the fives and sixes now bearing three and a half per cent. interest.

Beyond the passage of the Refunding Bill, little business of importance has been transacted by the Senate during the week.

A bill was reported from the Senate Committee on Pensions on Friday granting to Mrs. Garfield, Mrs. Polk, and Mrs. Tyler, widows of ex Presidents, life pensions of $5,000 per year from September 19, 1881, that of Mrs. Tyler to be in lieu of the pension heretofore granted her.

The joint resolution granting the franking privilege to Senators and Representatives has been reported adversely by the Senate Committee on Post-offices, and indefinitely postponed.

The Senate Committee on Civil Service and Retrenchment heard testimony and arguments on Saturday from Mr. Dorman B. Eaton and Postmaster Pearson of New York. The hearings of the committee are secret.

On Wednesday the House took up the Post-office Appropriations Bill, but no action was taken on any of the amendments offered. The amount appropriated by the bill is $43,529,300, or $132,500 less than the estimates made by the Department.

On Monday a bill introduced by Mr. Burrows, of Michigan, providing that no person guilty of bigamy or polygamy shall be eligible to the office of Delegate in the House of Representatives from a Territory, was passed under a suspension of the rules.

On Tuesday the House began the consideration of the bill for a reapportionment of representation under the Tenth Census. The bill as reported by the Census Committee met with much opposition, mainly on the ground that it "robs the weak States for the benefit of the strong." One of the grounds on which the increased number of Representatives which it proposes was defended, was that unless private legislation in the House should be forbidden by a Constitutional amendment the only safety of the Treasury would be in a larger House.

The House has passed a bill for the payment of $7,500 to the Society of the Army of the Cumberland, for the erection of a statue of President Garfield in Washington. The money is to be appropriated from the proceeds of the sale of condemned ordnance.

On Monday a resolution was adopted by the House calling upon the President to furnish a transcript of the letters of Jacob R. Shipherd, of New York, and the replies thereto, now on the files of the State Department, and also copies of any other letters already communicated, from which the names of persons and firms have been omitted. It is expected that this resolution will bring out more interesting facts in connection with the Peruvian claims and Mr. Blaine's diplomacy.

The sub-committee of the House Committee on Territories has decided to report to the full committee in favor of admitting Washington Territory into the Union as a State.

The charters of nearly 400 national banks will expire within a year, and the Committee on Banking and Currency has reported a bill to provide for their extension.

Both houses of Congress have agreed to set apart Monday, February 27, for the ceremonies in memory of the late President Garfield.

The President has approved the bill granting an additional pension to Mrs. Lincoln.

It is reported that the Washington *Republican* newspaper, of which Mr. Gorham is editor-in-chief, has been sold to friends of President Arthur, and that it will hereafter be the "organ" of the Administration.

The Secretary of the Navy has issued a general order to the effect that the frequency with which punishment by solitary confinement on bread and water, or diminished rations, is imposed by the sentences of summary court-martials, meets with the disapprobation of the Department.

The Secretary of the Treasury has issued the one hundred and eighth call for the redemption of continued five per cent. bonds to an amount not to exceed $20,000,000, the principal and accrued interest on which will be made payable about the 1st of April.

It is reported that as a result of the secret investigation concerning the expenditures of the Treasury Department Contingent Fund, four Treasury employees have been dismissed.

Mr. Spofford, Librarian of Congress, has submitted his annual report on the progress of the Congressional Library. The entire library now numbers 420,092 volumes, as against 396,788 volumes one year ago. The books acquired by purchase numbered 7,429, and by copyright deposits, 11,372.

On Saturday Judge Cox rendered his decision on the motion for a new trial in the Guiteau case. He overruled all the points made by the defence and denied the motion. After certain formal motions had been made Judge Cox sentenced the prisoner to be hanged on the 30th of June. When asked if he had anything to say why sentence should not be passed on him, Guiteau made a short speech, in which he said he was not guilty, and denounced every one, from the President down, who had anything to do with his death. In conclusion he said he would have a "flight to glory," and that the "American nation will roll in blood if my body goes into the ground, and I am hanged." He abused Mr. Scoville, whose "jackass theories and consummate nonsense" had convicted him. Mr. Scoville now has till the 1st of March to file his bill of exceptions, after which the case will be reviewed by the court sitting in banc, before which, among other points, the question of jurisdiction will be argued.

On Monday the Grand Jury at Washington began instituting inquiries into the straw-bond cases in the Post-office Department, which have been occupying the attention of the Police Court for the past three weeks. A number of witnesses were examined.

The State Department has received a despatch from Mr. James Gordon Bennett advising that Lieutenant Danenhower be not allowed to go back and continue his search for the missing members of the *Jeannette's* crew, for the reason that if he returned to the north there would be a strong probability of his losing his eyesight entirely, partial blindness having befallen him already. Mr. Bennett also says that he considers it unnecessary to send line officers from America to assist in the search, as it would only put the Government to unnecessary expense, and he has himself taken all the necessary steps to ensure a thorough and efficient search for the lost members of the crew. The Secretary of the Navy has complied with the humane suggestion in regard to Lieutenant Danenhower, but has cabled Mr. Bennett that he considers it his duty to send officers to Europe to take part in the search. Nearly 100 navy officers have applied to be permitted to go.

Justice Hunt has sent his resignation to the President.

The deadlock in the New York Legislature was ended on Thursday by the election of Mr. Charles E. Patterson, the Democratic caucus nominee, as Speaker of the Assembly. This result was brought about by the Tammany members finally consenting to vote for Mr. Patterson, on condition that another caucus should be held to make nominations for Clerk and other officers of the Assembly.

The Grand Jury on the recent disaster on the New York Central Railroad has indicted the conductor and brakeman of the wrecked train as the persons most to blame, and has censured the management of the road for not sufficiently guarding the cut in which the accident occurred.

Mayor Grace, of New York, has received a letter from Colonel von Steuben thanking the city of New York for the "kind and hospitable reception tendered to the members of the Von Steuben family during their stay in America."

Sir Henry Parker, Premier and Colonial Secretary of New South Wales, has come to this country to endeavor to induce the United States to contribute a subsidy to the Sydney and San Francisco Company, to reduce the duty on wool, and to admit Australian products free of duty.

On Monday the Catholic Bishop of the Diocese of Cleveland delivered a public lecture on the Irish Land League doctrines, which was called forth by a controversy with the local Land League as to how far the League doctrines should be taught within his jurisdiction. The lecture was an able denunciation of the "no-rent" doctrine, which the lecturer declared was "clear, unqualified theft." The lecture was very unpalatable to a large portion of the audience, and it is stated that had the speaker been a layman he would have been "vehemently hissed and rebuked" by the audience.

The Vincennes University of Indiana has started a lottery, of the profits of which the University is to receive $20,000. The scheme is said to be in the hands of "old lottery men from Louisville," and is a disgrace to the State and to the University. The charter permitting the University to establish a lottery was granted before the adoption of the present State

Constitution, and the Supreme Court has decided that the right could not be taken away by subsequent legislation.

There was a disgraceful scene in the South Carolina Legislature on Friday. Lieutenant-Governor Kennedy and State Senator Fisher engaged in a hand-to-hand fight in the Senate Chamber, which was continued in the street. Both parties, of course, belong to the "oldest and most respected families in the State."

A prize fight, which has excited considerable interest, took place at Mississippi City, near New Orleans, on Tuesday, notwithstanding the fact that the Governor had issued a proclamation forbidding the fight. The contest was between John L. Sullivan, of Boston, and Patrick Ryan, of Troy. Sullivan won in nine rounds.

The recent floods on the Cumberland and Tennessee Rivers, attended as they were with great loss of property, are reported to have seriously affected certain branches of business in Cincinnati and the Southwest.

FOREIGN.

Parliament assembled on Tuesday. The opening of the House of Commons was well attended, but there was a sparse attendance in the House of Lords. The Queen's speech reviewed Great Britain's foreign relations very briefly and declared them satisfactory. The programme of legislation outlined in the speech is elaborate. A Country Government Bill and the extension of municipal government to the metropolitan parishes of London are proposed; measures for the repression of corrupt practices at elections and the subject of a bankruptcy bill are revived; educational reforms in Scotland and Wales are also mentioned. The subject of the proposed change in Parliamentary procedure in the House of Commons is not mentioned. In the debate on the address in reply to the Queen's speech in the House of Lords, the Marquis of Salisbury made a violent attack on the Government. He said that the conduct of the Government in regard to Turkish affairs tended to separate England from Germany. In regard to Ireland, he declared that the state of affairs there would not have been allowed to exist six months in France or America. He looked upon the Government's course on the Irish question as "offering a sop to those we hope to conciliate because we are unable to conquer them." In conclusion he said that the country expected the Government to meet the calamity of which the doctrines they have preached have been the cause. Earl Granville replied to the Marquis, and in the course of his reply said that the present condition of Ireland compared favorably with that of last year. After Lord Granville's speech the address was agreed to.

When the House of Commons met, Mr. Bradlaugh attempted to take the oath. Sir Stafford Northcote moved that he be not allowed to swear. Sir William Harcourt moved that he be permitted to affirm, and after some debate, in the course of which Mr. Gladstone maintained that the House could only see that the formalities of administering the oath were observed, and could not inquire into Mr. Bradlaugh's opinions, Sir Stafford Northcote's motion was adopted by a vote of 286 to 227, the majority including the Home Rulers.

At a meeting of the Irish Parliamentary party on Monday, Mr. Parnell was reëlected chairman, and a resolution was adopted that the entire question of administration in Ireland, particularly the suppression of tenants' organizations, should be raised in the debate on the address in reply to the speech from the throne.

Great uneasiness is felt in Limerick, Ireland, owing to the ill-feeling which exists between certain classes of citizens and the military. The officer in command of the troops has addressed a communication to the magistrates, pointing out that the soldiers are unable to walk on the streets at night without being stoned, and giving warning that the military will be compelled to fire on the people in self-defence if this condition of things continues. The magistrates have resolved to take extraordinary precautions to preserve the peace.

The Right Hon. Henry Brand, Speaker of the House of Commons, addressing his constituents near Cambridge, recently, distinctly expressed himself in favor of the *clôture*.

A despatch from London on Tuesday announced the death of Major Sir William Palliser, C.B. He is well known as the inventor of the projectiles and guns which bear his name.

An influential meeting was held in London on Thursday to consider the feasibility of establishing a general hospital ambulance service in London similar to that existing in New York. The Duke of Cambridge presided, and resolutions in favor of the New York system were passed.

The meeting called by the Lord Mayor of London, at the instance of distinguished citizens, to protest against the outrages committed on the Jews in Russia, was held on Wednesday, the 1st, at the Mansion House. Speeches were made by a number of very eminent persons, and resolutions were adopted declaring that "the laws of Russia concerning the Jews tend to degrade her in the eyes of Christians." A relief fund was opened, and subscriptions received from many of those present. The Rothschilds, of London and Paris, contributed £5,000 each, Samuel Montagu, Louis Cohen, and the Seligmans, £1,000 each, and the Corporation of London, £300.

The Russian Government is about to publish a statement in regard to foreign agitation regarding the Jews, in which it says that it has not heretofore deemed it worth while to take any notice of the rumor that England was about to take a course so much at variance with existing good relations as to intercede on an internal question, which every government regulates in accordance with its own views. The Government goes on to show that hundreds of persons implicated in the Jewish riots have been tried and otherwise dealt with by the authorities of the various towns. In Warsaw alone 2,302 persons have been committed for trial.

General Ignatieff, Russian Minister of the Interior, in receiving a Jewish delegate recently, said he hoped that, before many months were over, the western frontier would be open to the Jews.

A despatch from Warsaw says that the authorities are apprehensive of a renewal of the outrages against the Jews. A thorough patrol of Cossacks has been ordered.

The Russian Minister of Finance has been authorized to issue Treasury bonds whenever necessary, without obtaining special sanction on each occasion, but the total amount in circulation must never exceed 50,000,000 roubles.

The defalcation recently discovered in the Taganrog Custom-house in Russia amounts to 70,000,000 roubles.

The nomination of M. Katkoff, editor of the Moscow *Gazette*, as Privy Councillor, is gazetted in St. Petersburg. M. Katkoff is reported to be an "Anglophobist, a strong protectionist, and an advocate of inflation of the currency."

There has been a Cabinet crisis in Egypt. On Thursday a deputation of Notables waited upon Sherif Pasha, President of the Council, and requested him to sign their draft of an organic law. Sherif Pasha referred them to the Khedive, who summoned the English and French Consuls to a consultation, in the course of which Sherif Pasha arrived and tendered his resignation. The military party then demanded the appointment of Mahmoud Baroudi as Prime Minister, and finally forced the Chamber of Notables by threats of violence to agree. Mahmoud Baroudi was accepted by the Khedive, and proceeded to form his Ministry. The new Premier has informed Mr. Malet, the British Consul-General, that the new Government will respect all international obligations. The programme of the Government has been published. It declares that an organic law scrupulously respecting rights of a private or international character, and engagements of the public debt, will be the first act of the new Ministry, and that the law will also determine the limits of Ministerial responsibility to the Chamber. The Khedive has accepted the programme. The military party are greatly elated at their success.

The Khedive approved the organic law proposed by the new Ministry, and the long-mooted question of the right of the Notables to vote on the budget has been settled by a declaration drawn up by the Ministry, affirming that this right had been delegated by the Khedive to the Notables by virtue of the power conferred on the Khedive by the Sultan, and that the granting of such right is not contrary to international obligation.

In the French Chamber of Deputies on Monday a Republican member interpellated the Government in regard to the revision of the Constitution, and urged the Ministry to undertake the matter. M. de Freycinet replied that the revision bill was the work of the House, and therefore it was not for the Government to present it. He said insuperable obstacles stood in the way of immediate revision, but the Government would act when the proper time arrived. A resolution confiding in the declaration of the Cabinet, and in their firm resolve to realize the reform demanded, was adopted by a vote of 287 to 66.

A declaration prolonging the existing Anglo-French commercial treaty has been signed by Lord Lyons and M. de Freycinet.

The French Senate has elected M. Royer, formerly Minister of Justice, President of the Senate, to succeed M. Léon Say, the actual Minister of Finance.

M. Bontoux and M. Feder, President and Manager respectively of the Union Générale, were arrested on Wednesday evening, at a meeting of the Board of Directors, and it is stated that legal proceedings are to be instituted against several of the directors. The Tribunal of Commerce has formally declared the failure of the Union Générale. The warrant for the arrest of MM. Bontoux and Feder charges them with abuse of trust by speculating with customers' funds.

Slosson, the American player, won the international billiard match in Paris on Friday night, defeating Vignaux by a score of 3,000 to 2,553.

The Italian Chamber of Deputies has adopted the measure for the introduction of the system of *scrutin de liste* in the Italian elections. Premier Depretis made the adoption of the bill a Cabinet question, and obtained it by a vote of 285 to 125.

A despatch from Madrid states that an interview recently took place between the Minister of Foreign Affairs and the Papal Nuncio. The former expressed the great dissatisfaction of the Government at the behavior of several archbishops and bishops, who, he said, openly encouraged a Carlist pilgrimage to Rome. The Government has received a despatch from the Spanish Ambassador at the Vatican, reiterating the statement that the Pope disapproves of a political character being given to the proposed pilgrimage to Rome, and insists that it be carried out under the direction of the clergy.

Both the Austrian and the Hungarian delegations have approved the grant for the suppression of the Herzegovinian insurrection. The insurgents have burned Konyitza, an important strategic point between Serayevo and Mostar. There are said to be many desertions from the Austrian ranks.

In the Prussian Landtag recently one of the new Schleswig members refused to take the oath, and accordingly forfeited his seat—proof of the unpopularity of the Prussian régime in Schleswig and the tenacity with which the inhabitants defend their Danish nationality.

TUESDAY, February 7, 1882.

MR. BLAINE'S MANIFESTO.

THE first question suggested by the letter on the American Peace Congress, addressed by Mr. Blaine to President Arthur, is what Mr. Blaine's object may have been in writing and publishing it. If he merely wanted to induce the Administration to take a more favorable view of the matter than it had the appearance of doing, then a private communication, conveying strong arguments and friendly advice, would obviously have been the way to attain the end. If, on the other hand, he wanted to make a political point against the Administration, at the risk of rendering it difficult if not impossible for the latter to accept his advice, then the publication of a letter couched in rather caustic terms was the thing. He has, evidently with deliberation, chosen the latter course, and we may therefore look upon his published letter not as an effort to bring about the American Peace Congress, but as a political manifesto, if not a declaration of war against the Administration. It is not improbable that Mr. Blaine wants to have it so understood.

He makes two points which at first sight seem to be somewhat effective. He charges that his invitation to the Peace Congress addressed to the different American governments was President Arthur's own act, resolved upon after mature consideration of the subject. According to the theory of the Constitution, this is unquestionably true. Every diplomatic document goes out in the name of the President, and, of course, with his implied approval. Mr. Blaine says that President Arthur in this case "received the suggestion with the most appreciative consideration, and, after carefully examining the form of the invitation, directed that it be sent." To this, it would seem, the President might have one of two answers: either that when he directed the invitations to be sent he was misinformed upon the subject and therefore did not understand it, or that he subsequently changed his mind. There is a despatch in Saturday's *Herald*, which has the appearance of being "inspired," and which intimates that Mr. Blaine did not inform the President about the condition of American international politics as he ought to have done, and that the President gave his assent to this and that without a full understanding of existing circumstances. President Arthur is not supposed to have devoted much attention to foreign affairs during his political career, a point in which he does not differ from a majority of our public men. He is therefore likely to depend in a great measure upon the advice of the Secretary of State, who must be assumed to be conversant with the details of affairs, and who under such circumstances should feel a peculiar responsibility in giving the President a clear, true, and comprehensive view of the facts and circumstances to be dealt with. We do not mean to impute to Mr. Blaine any wilful neglect in this regard, but the singular fact that the invitation to the American Peace Congress was not mentioned at all in the President's message, which was otherwise so elaborate, seems to indicate that President Arthur did not then consider it one of the subjects entitled to special consideration. There will perhaps be further light on this phase of the controversy.

The other point urged by Mr. Blaine is, that the reason avowed by Mr. Frelinghuysen for doubting the expediency of the Peace Congress—namely, that if we "entered into negotiations and consultation for the promotion of peace with selected friendly nationalities without extending a like confidence to other peoples with whom the United States are on equally friendly terms," it might create "jealousy and ill-will" among the latter—is "a voluntary humiliation of this Government" before European powers. While we do not think the apprehension of jealousy and ill-will on the part of nations with whom we are now on friendly terms is the strongest objection to the holding of the American Peace Congress, we do think that Mr. Blaine's flourish about the "voluntary and complete humiliation of the American Government" is far-fetched, and rather a scream of the eagle than a serious argument. One of those powers has very extensive possessions on this continent, with a population larger than any American state excepting the United States, Mexico, and Brazil, that population being in point of intelligence, civilization, thrift, and general character superior to any of them, except the United States. To consider that power in calling a general American Peace Congress would, we think, not be a voluntary humiliation of our Government. It would rather be an evidence of that courtesy and wisdom which are far more effective in carrying important points in international transactions than sensational brilliancy.

It is scarcely possible to treat seriously that portion of Mr. Blaine's letter which relates to our commercial relations with the South American states. He says that the "balance" against us in South American trade last year was $120,000,000; that this was paid in "foreign exchange, made by shipments of cotton, breadstuffs, etc., to Europe, and chiefly to England, and that if anything should happen to check our exports to Europe, our commercial exchanges with Spanish America would drain us of our reserve of gold coin at a rate of $100,000,000 per annum, and would probably precipitate a suspension of specie payment in this country." Mr. Blaine notices the fact that we make large purchases from foreign countries at a time when we are making large sales. But if for any reason our sales should fall off, he thinks that our purchases would go on as before, and that we should send all our gold away to pay for them. Political economy tells a different story. It says that buying and selling go *pari passu* and on the same scale, and that when the one falls off the other falls off, and usually in the same ratio. Mr. Blaine seems to think that we are so much fonder of South American products than of our own gold that we are in danger of squandering our whole stock of the latter commodity in one year unless we have a Peace Conference. Only the profoundest ignorance of economic principles or the most daring assurance would talk of regulating commercial affairs by a congress of South American patriots.

It is very much to be regretted that the questions of foreign policy recently brought to the foreground by Mr. Blaine's diplomatic ventures should at once have become subjects of personal controversy, connected with the "opening of the next Presidential campaign," instead of being considered upon their merits. They must be discussed with impartiality as to persons, if that discussion is to be useful in the way of forming correct opinions. Mr. Blaine has, during his brief administration of the State Department, advanced two ideas touching our relations with the other American republics: one, that the United States, being by far the strongest and also the most just and disinterested member of the sisterhood, should interfere in the difficulty between Chili and Peru, with urgent advice or threats, and the execution of those threats in case of non-compliance, to save Peru from dismemberment and to weaken and gradually exclude European influence in politics and commerce from those republics; and the other, that a congress of special commissioners from all the American republics should be held, in which the United States are to appear, not as the great arbiter or protector, but as an humble unit, on an equal footing as to representation with the rest, for the purpose of agreeing upon some method of settling disputes among them without resort to war. It will be seen at once that these two ideas stand in somewhat glaring contrast to one another, the first representing practice and the second theory; and this contrast is characteristic of the whole scheme.

A great confederation of all the American republics, a grand Amphictyonic council, may at first sight captivate the imagination, but the question is whether, if attempted, its usefulness—in fact, its whole existence—would not be merely imaginary too. Confederations of this kind, if they are to last, must be held together, not by fine theoretical conceptions, but by a distinctly felt and well understood community of interests. Such a common interest would be the necessity of combined efforts in defence against foreign aggression. It was this necessity which at times held the republics of Greece together when the Persian empire threatened their independence. But whatever danger of this kind may have hung over the American republics in times gone by, that danger is long past, and not in the least likely to return. There is no European power now that is in the least tempted to take any risk in an effort to establish anything like foreign dominion, where it does not already exist, in this hemisphere. The latest experiences of Spain in San Domingo, and of France in Mexico, have been so disastrous that no European government will again undertake so hopeless a venture. The European press may now and then speak slightingly of the Monroe Doctrine, but every sensible statesman in Europe has long accepted it at heart, for he knows that there are forces on the American continent which on that ground no foreign power is able to cope with. All that foreign governments now want is to have their sensibilities spared while yielding old pretensions to a force of circumstances which they know cannot be resisted. We have, for instance, no doubt that, keeping this in view, American diplomacy can by considerate and clever management easily overcome the difficulties which now

seem to surround the control of the inter-oceanic canal. There is, therefore, absolutely no necessity of providing, by a confederation, for the common defence of American republics against foreign aggression, and thus disappears the strongest element of cohesion.

Next, as to the prevention of wars between these republics, the question is whether, such as they are, any international arrangement would be effective. We should, in this case, not have to do with governments ruled by the same principles of conduct upon which, with other civilized nations, we count as a matter of course. Mr. Christiancy, in the confidential letter addressed to Mr. Blaine which we summarized last week, gave a graphic picture of the condition of things in Peru, which applies to nearly all of those republics. Their population consists in great part of a debased and ignorant mongrel race, easily led by political chieftains, a great many of whom are mere adventurers trying to exercise power for their own advantage. If such states and governments are to be kept in order, it must be done by something stronger than the mere moral force of agreements, and in order that the Amphictyonic council should be in any way effective, the United States would soon have to take a position very different from that of a mere "co-equal member," having no more voice and influence than any other. This republic would have to become practically the arbiter and protector of the whole sisterhood, enforcing its decisions with a strong hand. And then we would see a fine selection of adventurers from the little republics hanging around our State Department and the lobbies of Congress, trying to involve our Government in their intrigues and our public men in their schemes. There would be a fine crop of jobs and plundering contrivances, and our attempt to keep peace among our interesting sister republics would soon result in powerfully stimulating the elements of demoralization in our own.

Finally, it is intimated that by the influence which such relations would give us, we could extend our commerce and regain fields of enterprise which we have lost. It is a remarkable circumstance that a certain class of politicians want to extend our commerce by all sorts of antiquated contrivances, such as bounties, or diplomatic tricks, or even war—by all means, in fact, except those which are natural and rational—namely, the removal of those economic restrictions which now prevent us from entering into commercial competition with other nations. On the whole, therefore, the great American confederation appears to us to be a chimerical conception, and the President has done well in declaring, through Mr. Frelinghuysen, that, as to this project, he "prefers time for deliberation." Deliberation will probably be the end of it

THE OBJECT OF BANKRUPTCY LAWS.

Mr. Robbins's report to the Chamber of Commerce on the Bankruptcy Bill now before Congress brings out some facts with regard to the proposed legislation not hitherto generally recognized. A remonstrance against the passage of any law has, it seems, been extensively signed in this and other large cities, and this brings into view a radical difference of opinion as to the proper object of bankruptcy legislation, which seriously threatens any measures that may be introduced. The "main question," says Mr. Robbins, is whether the administration of the law is to be "official" or non-official—that is to say, whether the liquidation of the bankrupt's estate, and the granting of his discharge, are to be left to the courts or the creditors. The two methods represent really exactly opposite theories of the whole subject of insolvency. Bankrupt laws were, as Mr. Robbins says, originally passed, not for the collection of debts, but "to try the insolvent merchant upon his career as a trader, and to relieve the deserving from imprisonment." The main object of insolvent laws, such as we have in all our States, is to provide means by which the trader may compromise with his creditors, get rid of his obligations, and start afresh. In other words, the old idea of bankruptcy was that it resulted from wrong-doing, from something very like fraud; while the general modern commercial notion of insolvency is that of mere bad luck. In England and the United States the prevailing feeling about failures in business is that they do not carry with them the idea of moral obliquity, and this must inevitably be so in countries where every one is trading more or less on borrowed capital and taking large speculative risks, and that are exposed periodically to commercial crises and panics, involving individuals in disaster which can neither be foreseen nor guarded against. In France the old feeling about insolvency has hitherto survived, and the disgrace attaching to it is still great; but in this respect, as in so many others, French ideas are not altogether modern.

Mr. Robbins and his committee, however, declare substantially that the value of the pending bankrupt law will depend altogether upon its disciplinary character. "Any law," he says, "will prove a disappointment" that does not recognize the fact that the original object of bankrupt laws was the trial of the merchant, "because the discouragement of insolvency is much more important than any economical or speedy settlement of insolvent obligations." All experience shows that creditors as a body care little or nothing about the causes which have led to the insolvent's failure, but are satisfied if they can only have the debtor's estate wound up and distributed as quickly and economically as possible. Creditors, therefore, cannot be entrusted with the discipline of the bankrupt nor with the protection of their own interests. Courts of justice are the only tribunals fit to be clothed with such powers, and the committee "regard any law that will allow composition settlements without court supervision unjust, and that such a law, if enacted, will prove to be as unwise in practice as a permission to compound felony in the interest of owners of stolen property."

The history of bankruptcy legislation in this country makes it more than doubtful whether an act which has for its main purpose the discipline of the debtor will ever get through Congress. Three bankrupt laws have been passed by Congress—one at the beginning of the century, one after the panic of 1837, and the third at the close of the war. Each one of these was passed after the trade of the country had gone through a period of serious depression, which had produced widespread disaster. Each one was passed at the instance of debtors who wished to clear off their debts and start anew. The reason why Congressional legislation was asked was in order to get the benefit of a uniform law, so that the discharge should be applicable to the whole country. As soon as these laws had answered their purpose they were in each case repealed, and the country fell back upon the local insolvency statutes. The present movement for a bankruptcy law has the great advantage of coming up at a time of general prosperity, when there is no weight of debt in any quarter, and no necessity for a class pressure from either debtors or creditors. It is an excellent opportunity for considering all the general questions involved upon their merits; and Mr. Robbins's committee seems to be inclined to go as much too far in one way as Congress has on previous occasions been ready to go in another. There is not any likelihood that public opinion will ever be more strongly in favor of disciplining debtors through Congressional than through State legislation. Why should it be? The States have, locally, in the absence of Congressional legislation, all the power possessed by Congress, but the insolvent laws throughout the country show no trace of any public opinion in favor of a trial of the trader's business career. What they do show is that public opinion is in favor of treating a failure in business as an accident, which entitles the debtor to sympathy and assistance rather than to punishment. Calling him a bankrupt and legislating with regard to him at Washington instead of at the various State capitals will make no difference in this feeling.

The value of a national bankruptcy act lies in its uniformity—in its covering the whole country; and the aim of Congress should be to pass a law securing as far as possible justice between debtor and creditor—that is to say, the surrender of all the assets, and their equitable distribution in as speedy and economical a manner as possible. In other words, equitable distribution of the assets, and the discharge of the debtor honestly surrendering these, and not the punishment of the bankrupt, should be steadily held in view as the object of the law, for we may rely upon it that there is no public opinion in the country to maintain disciplinary bankruptcy legislation long on the statute book, if it can be placed there at all.

ENGLISH POLITICS.

The meeting of the English Parliament this week opens what promises to be an even more exciting session than the last. When the last opened, Mr. Gladstone was fresh from one of the greatest victories ever won at the polls, and his antagonists were cowed and even dazed by his success. They have now somewhat recovered their senses, and even flatter themselves that a Conservative reaction has set in which would make it safe for them, if the chance offered itself, to appeal to the country once more. On the various questions of foreign policy which the Beaconsfield Cabinet left unsettled when they went out of

office, the Tories almost acknowledge themselves irretrievably beaten. They will not appeal to the constituencies about Afghanistan, or Russia, or even the Boers. They occasionally still affect to suffer from burning shame over Sir George Colley's unrevenged defeat at Majuba Hill. Their anti-Russian craze has almost subsided, and, curiously enough, they show little disposition to take part in the protests now made in philanthropic circles in England against the connivance of the Russian Government at the maltreatment of the Jews. The Jews are not favorites in Conservative circles, and good Tories are not easily moved by "outrages" even when chargeable to Russians.

In fact, most of their weapons of war against Mr. Gladstone are now drawn from the Irish land question, which has entered on a new stage since the Sub-Commissioners began to render their decisions. The reductions they have made in rents have been very serious, inasmuch as most estates are mortgaged on the old rental, and on the new basis are worth very little over the encumbrances. Some of the decisions, too, cut deep into the very vitals of landed property—particularly the recent one on the "Healy Clause" of the Act, which lays it down that no length of occupation under a lease exhausts a tenant's interest in improvements made by him and makes them a proper ground for increase of rent, unless he has received formal compensation for them from the landlord. This has been confirmed on appeal by the Commission itself, and will probably be also confirmed in the Law Court, to which another appeal still lies.

In consequence of all this, the Irish landlords have raised the cry both of confiscation and of breach of faith, and it has been eagerly taken up in England. They say that the understanding in Parliament when the Land Act was passed was, that it was intended mainly to give security of tenure, and would not diminish the value of property, whereas it has really diminished it from one-quarter to one-third, and they therefore demand compensation out of the Treasury. Of their getting compensation there is no chance whatever. In fact, the claim was demolished almost as soon as it was made, by Lord Derby, in one of his neatest and most remorseless bits of dialectics. The Conservatives have probably just as little intention as the Liberals to favor any such compensation, but they are none the less ready to treat the decisions of the Commission as acts of spoliation, and the Irish landlords as the victims of Gladstone's demagogy. They say very little for the Irish landlords as objects of compassion, because they well know that they are a class for whom it is difficult to excite sympathy in England. But any stick is good enough to beat a dog with, and the "plundered" Irish proprietor, if he is good for nothing else, is an excellent illustration of the working of Gladstone's wickedness and perfidy. In fact, the depravity of Gladstone's nature may be said, without exaggeration, to furnish at present the leading topic of Tory speeches; and the attacks on him, savage as they used to be when Beaconsfield was in power, were never as savage as they are now. In those days Tory criticism of him was softened by contempt for him as a hair-brained rhetorician, who would never again fill any place of responsibility. These criticisms are now, however, sharpened by the consciousness that he is the most powerful man in England, the man hardest to shake in his seat since the younger Pitt. He is denounced by some as the enemy of property; by others as the enemy of religion, his own piety being a mere cloak for inbred sympathy with all assaults both on the throne and the altar. His Irish legislation shows that he is really a Communist; his willingness to let Bradlaugh into the House shows that he is really an atheist, with a sneaking partiality for indecency.

These ravings, which for the last two or three months have been reported nearly every week from the Conservative stump, would have little importance except as illustrations of the fanatical violence of the upper classes when threatened in their pockets or their privileges, if it were not for the indications they give of the position the Tories are likely to take on the question of parliamentary procedure. This question is undoubtedly the most important of all those which are to arise in the coming session, and it will be the first to arise. It must, as Mr. Gladstone and Lord Hartington have both repeatedly said, precede all others. The omission of all mention of it in the Queen's speech has no significance, because no suggestion is ever made from the throne on a matter of this sort, and if made would be considered a breach of privilege. The Conservative temper is now so exacerbated that there is little doubt that any weapons against Gladstone will be considered lawful. It is very much like the temper of the "chevau-légers" of the French Chamber, in the days before "the 16th of May," when the Opposition were treated in debate as malefactors, whose proper place was the jail. The Ministry will be opposed and impeded by every means which the rules of the House permit. The policy of obstruction will be taken up where the Irish left it, and tried unflinchingly to make legislation difficult or impossible. In fact, the Ministry must meet it at once, before attempting anything else, unless they are prepared to pass the present session, as they passed the last, in the discussion of a single bill. They must get for the majority the right of cutting off debate. This would, no doubt, be a serious step. It would be a complete departure from one of the dearest traditions of the House of Commons—namely, that it is a club of gentlemen, who do not need many rules, who are governed in the main by good feeling and mutual consideration, and who recognize easily, by common consent, when a measure has been sufficiently debated and a division should be taken. It would, in short, to use Mr. Bagehot's phrase, be the substitution in England of "government by public meeting" for "government by club," and would involve the introduction of those summary rules and processes for the preservation of order which public meetings find necessary. It will therefore be fiercely resisted, and the resistance will probably not be confined to the more rancorous Tories.

It is still uncertain to what extent Mr. Gladstone's following will stand by him in subjecting the House of Commons to the "clôture." There are many good Liberals who shrink from robbing it of the distinction which it has so long held of being the only legislative assembly in the world which was managed mainly by comity. It will, moreover, be difficult to satisfy even those who favor the clôture about the guarantees against its abuse. So that the strength of the Ministry on this crucial question is still not easy to ascertain, and, before a combination of the Conservatives, the Irish, and Whig deserters, may prove unequal to the task. In that case, it is difficult to see how Mr. Gladstone could, after the declarations which both he and his lieutenants have made as to the absolute necessity of the change, avoid appealing to the country by a dissolution. The Tories have begun to say lately that they would like nothing better, and the Liberals would not be so sure of the result as they were a year ago. But that the Ministry would come back with sufficient, even if diminished, strength, there is little doubt, though it would be greatly to be regretted if Mr. Gladstone's stock of vitality had to be again drawn on by the heat and fury of a general election.

LIBRARIES IN BALTIMORE.

THE gift of over a million dollars to the city of Baltimore for the establishment of a free circulating library upon municipal foundations suggests a review of Baltimore libraries in general. Before the announcement of Mr. Pratt's gift, free lending libraries on a small scale and of a secular character were already in existence. Three years ago, in a night-school for boys which was started at a mission-station of Grace Church, a circulating library began to develop, as it were, by spontaneous generation. In the first place, a lad asked the Superintendent if he might take a certain book home. This was irregular, but a patron of the school ventured to assume the responsibility. The demand for books naturally increased, and at first the gentleman endeavored to meet it by allowing boys to take books from his private library. These naturally went the rounds, and fresh contributions were obtained from friends of the school. A library was organized with a nucleus of fifteen books. The first year it increased to 250 volumes, the second year to 1,000, when the collection was legally incorporated as "The Baltimore Free Circulating Library." During the year it grew to 1,400 volumes, which are now distributed at library stations in four quarters of the city.

Books are sent out from the original centre in small lots of 200 or more, and when they have been read at one place they are removed to another and a fresh supply is substituted. Thus the whole library circulates. During the past year this collection of 1,400 books, administered at the incredibly small expense of $135, has been drawn upon 4,506 times. Considering that the station-libraries are open only once or twice a week, and in no case for more than seven months in the year (in one case for only two), this is very remarkable. But more extraordinary is the fact that the loss of books has been less than one per cent. At the station in East Baltimore not a book has been lost. In this quarter boys have clubbed together under the authority of a librarian, one of their number, who rules his tribe with almost absolute power. The boys pay taxes of two or three cents a week for the purchase of fuel, so as to keep open their reading-room every

evening from seven until ten o'clock. This room was rented on the ground floor of a private house, and is a cheery place, with its good fire and tables spread with illustrated newspapers, magazines, and checker-boards. Anybody can have free access to the conveniences of this "Club," provided his moral character is endorsed by a member, or a policeman, or any person of established reputation. Another interesting branch of the Baltimore Free Circulating Library has been instituted in the new mission-house of the Society of Friends, in the vicinity of Federal Hill, which was the site of Butler's battery commanding Baltimore in war-time, but which is now in process of transformation from an unsightly clay-bank into a sightly terrace, affording a fine view of the city and harbor.

Still another free library, although quite independent of the above group, has been in successful operation for the past two or three years at Canton, among the rolling-mills and oil works. This library is open not only week days but also on Sundays, and that, too, by the special request of the clergymen of the neighborhood. The reading-room is well supplied with magazines and newspapers. The whole enterprise is in connection with the Workingmen's Institute of Canton, which comprises lectures by instructors from the Johns Hopkins University, public readings, concerts, and the like. The employees of the Baltimore and Ohio Railroad have also their free lending library and a course of free lectures by teachers of biology from the University. At the first lecture, which was upon the suggestive topic "How Skulls and Backbones are Made," President Garrett reminded the audience that Johns Hopkins left all that portion of his estate which was invested in the stock of the Baltimore and Ohio Railroad to the University that bears his name, and that the earnings from that stock were, therefore, its chief support. He said it had occurred to the president of the road that its employees and their families might secure some of the benefits to be derived from that University, and he had accordingly spoken to some of the professors, who had consented to give a few instructive lectures. Thus the workingmen of the laboratory and machine-shop are brought together. It is wonderful to observe the interest of manufacturing districts in libraries and reading-rooms. Woodbury has just organized such an associate institution, in which all classes and sects, Protestants and Catholics, are happily united. Catonsville, a place of less than 2,000 inhabitants, has maintained for several years a similar association, encouraging not only reading, but also music, the drama, and the playing of billiards in a reputable place. It is noteworthy that the establishment of the Catonsville Library as "a general meeting-place for citizens" has lately resulted in a memorial to the Legislature for the incorporation of this village into a town by itself. The importance of schools and library associations as germs of corporate life, and as points of cohesion for church sects, is gradually becoming apparent.

On the first of January, 1882, the Mercantile Library Association, which was first started in 1839 by a few clerks and business men, opened its doors to the public in a new building, erected as headquarters for the trustees of the Wilson Sanitarium (another monument of Baltimore private philanthropy—for securing, in summer, country and sea air for sick people too poor to leave the city). The Wilson building, the upper part of which is devoted to offices, is situated upon a convenient corner, and fronts fashionable Charles Street. Baltimoreans passing this fine new building on New Year's Day could look in from the sidewalk upon a most inviting scene. Naturally everybody entered to attend the reception given by the president and librarian of an old Baltimore association, now rescued from its basement quarters and side-hill tendencies, and firmly established in a convenient, well-lighted, highly attractive place. The spacious rooms, their comfortable and even elegant appearance, the evidently increased supply of new books, papers, and magazines, the perfect ease and freedom of access to the shelves —these things, combined with the well-known fact that the president of the Association had made the transfer at his own expense, and had guaranteed the rental of the building for five years, revolutionized the Mercantile Library in a day. The membership began to increase, old members returned, everybody determined to pay his subscription, and it is now confidently believed that the Mercantile will once more become self-supporting, notwithstanding the immediate prospect of a Free Circulating Library for all Baltimore. A certain class of people will prefer, on some accounts, a library which is not so free and not so public; and the Charles Street corner has many attractions.

Three weeks after the New Year's opening of the Mercantile came the letter of Enoch Pratt to the Mayor and City Council of Baltimore announcing his proposition to erect upon his Mulberry Street lot (valued at $30,000) a fire-proof library building, capable of holding 200,000 volumes, and costing, "when ready for occupancy," in the summer of 1883, about $225,000. This entire property, embracing grounds and building, Mr. Pratt proposed to deed to the city, and then to pay over the sum of $833,333 33, making a total gift equivalent to $1,088,333 33. The only condition which Mr. Pratt attached to this magnificent donation was that the city should make the Library a municipal institution, by creating an annuity of $50,000 forever, payable quarterly to a close corporation of trustees, for the future maintenance of the Library in its various branches. The point of the whole matter is not generally understood. The Library, according to Mr. Pratt's idea, is to be, not privately endowed, but a public institution, supported by public moneys. He gives outright to the city of Baltimore the sum of $833,333 33, and suggests that it be added to the sinking fund for the gradual payment of the city debt. Of course, if applied to library purposes, the income of the money donation, at the rate of six per cent., would yield the precise amount of the required annuity, although at present rates there would probably be a deficiency which the city would have to make up by self-taxation. But that is not the point. The city of Baltimore can apply the interest or principal of this donation to any public purpose whatever, and it may even lose the whole amount by bad investments, but will remain bound forever to pay an annuity of $50,000 to support its Free Public Library, for, by an act of the City Council, on the 31st of January, signed by the Mayor February 3, the terms of Mr. Pratt's generous and far-sighted offer were formally accepted. In token of public appreciation of private munificence, the municipal government recommends that the trustees, whom Mr. Pratt is to appoint, organize under the name of "The Enoch Pratt Free Library of Baltimore City."

Workmen are now preparing the ground for the new building, the details of which were planned by an architect under the personal direction of the Provost of the Peabody Institute, who has been Mr. Pratt's chief adviser in this regard. The Provost, in an article explaining to the Baltimore public the plans of the new library—an article published at the same time as Mr. Pratt's letter—says:

"Baltimore has long needed a popular library to supplement her noble scholars' library in the Peabody Institute. That collection of books will supply students with all they require in their difficult and recondite pursuits, but in no sense can it supply the want of the great mass of the people. The great want of books at home, which the Peabody Library, as a reference library, cannot possibly meet, will now be supplied by the munificent endowment of Mr. Pratt. These two libraries will form a complete library system, each supplementing the other; each supplying a want that the other does not reach. And there will be no rivalry between them, unless it be a generous rivalry for excellence, each in its own sphere of usefulness. One is intended for scholars, the other for the people. One is designed to promote the highest culture of the learned few, the other to increase the knowledge and intelligence of the busy many."

No individual benefaction is altogether independent of public or private influences and of historical environment. Broad schemes of philanthropy like that of John McDonogh, who left $1,400,000 to the cities of Baltimore and New Orleans for the education of poor boys; that of George Peabody, who left $1,250,000 for the founding of the Peabody Institute in Baltimore; that of Johns Hopkins, who left $7,000,000, one half for a hospital, the other half for a university —such philanthropy is the product not alone of broad minds, but of broad experience in the world and of wise association with suggestive men; of a careful study of existing institutions, and of a keen discernment of the spirit of the times. It would be interesting if Mr. Pratt should ever describe the formative process of his own great plan, which originated ten years ago, but which has grown by conference with friends and by observation of existing libraries, even of the Mercantile Association, and of those small branches of the first "Baltimore Free Circulating Library." Mr. Pratt has been one of the trustees of the Peabody Institute from its very foundation. His legal adviser, who drew the will in which Mr. Pratt's idea was first outlined, was a member of the same board. No one realized more fully than did these men that the Peabody plan did not embrace the idea of a popular lending library. In a letter to the original board of Peabody trustees, the founder of the Institute provided for "an extensive library, to be well furnished in every department of knowledge—to be maintained for the free use of all persons who may desire to consult it—to satisfy the researches of students who may be engaged in the pursuit of knowledge not ordinarily attainable in the private libraries of the country." He distinctly recommended "that it shall not be constructed upon the plan of a circulating library; and that the books shall not be allowed to be taken out of the building, except in very special cases, and in accordance with rules adapted to them as exceptional privileges." Evidently Mr. Peabody's idea was to establish a library for scholarly research, something like the British Museum. Other provisions for his Institute show that he was aiming to engraft upon Baltimore the offshoots of the highest culture attainable in the great capitals of Europe. He instituted "lectures by the most capable and accomplished scholars and men of science." He planned for a Conservatory of Music, a Gallery of Art, and an annual exhibition of paintings. He established a system of prizes, not for common schools, but for high schools. He aimed at the higher education, and meant to elevate the masses, not by descending to their standards, but by raising theirs to his. And the far-sighted wisdom of the Peabody foundation is now evident in many ways, in a growing interest in libraries and good books, in the development of the "high school" idea into a university, in a wonderful popular interest in scientific lectures, in classical music, and art in general. Nothing proves so well the power of high ideas as their influence in creating a demand for higher

things. The Peabody Institute and the Johns Hopkins University make their influence felt in the mechanic's workshop as well as in schools and libraries.

It is impossible in a few words to give any adequate conception of the present resources and growing wealth of the Peabody Library. That collection for scholarly research was begun in 1861, and now embraces 73,000 volumes of a strictly scientific character. Popular works, ephemeral literature, and "the latest novel" have been rigorously excluded. The trustees of the Peabody Institute, who are among the most respected, influential, and cultivated men in Baltimore, have held firmly to the Peabody idea of securing the highest and the best. "Quietly, without pause, without parade, amid much ignorant cavilling and vituperation, they have pursued their work of collecting a library which should furnish to the student the best books in all languages, and in all departments of human knowledge." The collection was begun through the aid of specialists in various parts of the country, who recommended books, many of which were purchased by European agents. Professors at Harvard, Yale, Brown, Virginia, and Michigan Universities, lecturers at the Peabody Institute, scientific men in Washington, specialists and gentlemen of culture in Baltimore, have all coöperated with the Provost of the Peabody Institute in his laborious and responsible work of choosing a library for scholars. At first there was naturally little demand for the original sources of knowledge, works of science in foreign languages, the collections of learned societies, and the proceedings of the great academies of Europe. "We cannot create scholars or readers to use our library," said the Provost in an address to the public in 1871, "but we can make a collection of books which all scholars will appreciate, when they shall appear among us, as they surely will some day." That day has come. Already in 1871, the idea of founding a great university was in the mind of Johns Hopkins, and already he had chosen upon his board of trustees several of the managers of the Peabody trust. The two institutions now supplement one another. A learned foundation is slowly building, with a library of research for its corner-stone.

The Johns Hopkins University does not attempt to duplicate collections already existing in Baltimore unless there is some special demand. The institution enjoys the incalculable advantage of free access to the Peabody Library. One or two University classes meet in a small lecture-room of the Institute for the sake of using its valuable resources. The same privileges are accorded by the Maryland Historical Society, where also University classes have met, and where there is an excellent collection of Americana—manuscripts, pamphlets, and files of old newspapers, some of which latter have been utilized by Von Holst in his studies for the 'Constitutional History of the United States.' By the courtesy of members of the Baltimore bar, the Law Library is also made easy of access to advanced students of history and political science. The Maryland Episcopal Library, the legacy of the late Right Rev. W. R. Whittingham to his diocese—a unique collection of ecclesiastical literature (Catholic and Protestant), comprising ancient folios and rare editions of the classics, church fathers, and schoolmen—this modern cloister is open to advanced students of church history and institutions. The library of the Johns Hopkins has a character quite its own. In point of size this collection, now numbering about 11,700 bound volumes, is inferior to five other libraries in Baltimore, that of the Peabody Institute (73,000), Mercantile (37,000), Maryland Institute (19,000), Odd Fellows' (20,500), Maryland Historical Society (17,000). But it would be unjust to measure the efficiency of the University library by any material scale. At the outset, the trustees of the Johns Hopkins seem to have conceived the idea that a library should form an organic part of University work. The newly-appointed professors, associates, and fellows were consulted as to what books they needed for the immediate prosecution of their researches, and those books were first ordered. From the very foundation, the library has grown in the direction of special working-collections, rather than of a library-museum. Small department-libraries have been formed in separate rooms, with facilities for quiet research. The systematic policy of the University has been toward colonizing special libraries in the very class-rooms and work-shops. The chemists have long had their own reference-library in the laboratory-building, so that students, without personal inconvenience or neglect of work in hand, can look up special points in any of the complete sets of mechanical journals, Liebig's *Annalen*, and the like. The Professor of Greek has his seminary-library, and other departments are working in the same direction.

In addition to these special libraries, there is a University reading-room, which is the favorite resort of students and instructors, and is, on the whole, a unique place. Large, comfortable, attractively furnished, well-lighted and cheery, it may be termed a University parlor, or the Johns Hopkins family library, where all departments are entirely at home, and where every member of the University household can help himself to books or periodicals. There is no obstructive policy on the part of librarians. The books are upon open shelves, and within easy reach from the floor. The collection contains chiefly works for general reference, not merely encyclopædias, dictionaries of various languages, maps, hand-books of biography, art, and science, but also works of classic, Germanic, French, and English literature, history, philosophy, and science—standard books which not merely persons of liberal culture, but even so-called "narrow specialists" have frequent occasion to consult. Men take the volumes they want, sit down at one of the long tables, and work quietly, without asking questions, for everybody seems to know where everything is to be found. When they have finished, they return the books to their places, as though they belonged to a private library. If a book is to be taken away, of course it must be charged by the library attendant, who employs a card-system of receipts and keeps an alphabetical account of all absent volumes, which may be recalled if demand arises, but which otherwise may be renewed from time to time. In the reading-room may also be found, arranged by departments upon long tables, a remarkable collection of periodicals, published in various countries—England, Scotland, France, Germany, Austria, Holland, Belgium, Italy, Greece, India, and the United States. Some of these foreign periodicals are the proceedings of royal academies and learned societies, notably of London, Edinburgh, Dublin, Paris, Berlin, Vienna, St. Petersburg, Copenhagen, Rome, Venice, and Calcutta; and some of them are received in exchange for the mathematical, philological, and other scientific publications of the University.

One of the most interesting features, perhaps, of the library management is the so-called "new-book department," for the exhibition, in a special case, or occasionally upon long tables in the reading-room, of new French, German, and English books which may be of special value to University men. Copies of these books may be recommended for the library by instructors, and permanently retained, or may be disposed of to individuals. Nothing is ordered for the mere sake of possession. Value in use and the law of demand and supply control the choice of books. The main idea is to keep pace with the progress of science and with the advancing needs of specialists. Instead, therefore, of becoming simply an interesting cabinet of literary curiosities, the University library has always been a busy laboratory of science, where new truth is discovered by a study of its living forms.

CHARLESTON REVISITED.—II.

JANUARY 23, 1882.

IT is gratifying to see that the effect of the new prosperity begins to show itself in the schools. There are, again, private schools of high character for girls. If there is not very much talk of "higher education," etc., there is the serious steadiness, the appreciation of the value of genuine study, which comes from the long want of opportunities for it. The public schools, having to carry the dead weight of the negro population, cannot do all they once did; but it is only justice to say that, in proportion to means, more is done than in very many Northern cities. There is a charge of $40 per year at the High School for Boys, which is really a high school. The girls' school, formerly of the same grade, is now a grammar school, teaching only English, with a class for normal training. It is in spacious quarters, and the pupils are from all classes in society, as in any Northern city not overwhelmed by a foreign population. The condition of the boys and girls in the country, which is so sparsely settled that no possible effort can maintain common schools within their reach, is a matter of painful interest. Nothing can make up what has been lost to this generation in that regard during the last twenty years. In the darkest times in Charleston two schools were started which have done untold good. In the "Church of the Holy Communion Institute," which now occupies the old United States Arsenal, 2,100 boys have been pupils since 1867—a large proportion staying until fitted for college or business. Not half of them have paid full tuition—a great many nothing at all. Walking through the grounds with the devoted head of the school, the Rev. Mr. Porter, and listening to his earnest gratitude for the help received from the North, it was incredible that in the mid-winter of '61 I had myself seen the Stars and Stripes drawn down from that staff, and the blue palmetto flag run up in their place. Not less important is the school for girls connected with the Home for Widows. It was started by a few ladies of the old Huguenot Church, but it has the support of all denominations, and receives girls without any distinction as to religious faith. They come mainly from the country, and are well-born, but too poor to pay for the education they ought to have. The course of study includes (beyond thorough English) Latin, French, and music, thus fitting them to be school teachers or governesses, or, better still, to return home, as they often do, to teach younger brothers and sisters. The self-denial which the beginning of this work must have cost in such a time of extreme poverty would shrink from public praise, but it has its place of honor in the unwritten annals of South Carolina.

A torn and battered straw hat is a curious travesty of the cap of liberty, was the repeated reflection of the first half-hour on the morning drive from the railway-station, watching the black women and girls on their way home from market. In the old time they had the broad-brimmed hat in the fields, but in the cities, while the old "Maumers" were gay in the turbans of Madras handkerchiefs, the younger women and girls walked bare-headed on working-days.

Now there is none so poor as not to wear a hat. Shape, material, or age seems of no consequence, so it be a hat. At church, a woman of fifty, comfortably dressed, wore over a dull gray headkerchief a man's coarse straw hat. In the street, a tall girl, unable to lift her feet lest her slatternly boots should fall off, had both ribbon and feather on her hat. Of minor judgments about the negro none used to be more frequent than that upon the fondness for bright colors. More than one gallery in church was like nothing so much as a parterre of tulips; but, left to themselves, the scarlet and orange have disappeared. The women at the African Methodist Church were neatly dressed, but in sombre or dingy color; and the market, even on Christmas Eve, had not one bright bit in it except the fruit and the red bows fastened on the stiff white sunbonnets of two tiny negro babies. Generally in dress the women look much like white people, so that dress is more varied, but it does not seem so substantial and hardly so comfortable as formerly.

There is less outward manifestation of gayety, less singing and laughter. The mirth of Christmas week had a subdued tone, but the faces are contented—too contented, it is often said, for they do not care about making for themselves tidy and thrifty homes. In this respect a marked distinction is asserted between the country and the city negro. The former "have comfortable little farms, cows, and a horse and buggy to drive to church." Upon the emancipation, the negroes of the Sea Islands near Charleston, except the few faithful household servants, flocked *en masse* to the city. They have only the wants of a simple people, and these are so easily supplied in a mild climate that they have as yet learned almost nothing of economy—that is, the best use of the means they have. Some are extremely poor. One scarcely knows how they live; yet there is absolutely no begging in the streets, and a negro beggar at the door is a thing as unheard of as it was in the old time. All testimony agrees upon two points: "They are improvident. The man who earns three dollars a week will spend three; he who earns five will spend five; but they are *learning* to save." "They are thriftless in their daily living, but they are eager to get hold of the land."

This winter, wages for men are so high that there are complaints about house-servants. Many women who are glad to work in hard times will do nothing now. Outside the families who have retained their old servants or their children, the question of domestic service is to the full as difficult as it ever was at the North. Even the quite young women insist upon going home at night, often very long distances. "We do not sleep upon the premises," said the very deliberate housemaid. They spend the night harmlessly enough, but their late hours keep them tired and dull. A servant of the old type will work double tides rather than put up with one "who has growed up since de war." "Uncle Remus's" disdain of young Africa is repeated every day all over the South. The women are worse off than the men. It is one of the most serious evils of this transition-time that there is no upper rank of trained servants of their own class for the girls to look up to. They used to be sent to dressmakers, hair-dressers, pastry-cooks, etc., to be taught; now a few do exceedingly good work of their own free will, but there is no sort of industrial training. The public schools are so crowded, so heavily burdened, that to teach sewing even is impossible.

The distrust excited by the failure of the Freedmen's Bank is not yet allayed, so that only a small part of the negro's savings is invested in that way; but sums (really large in the aggregate) are contributed to the various friendly societies—the burial clubs, and the like. A grand funeral is a negro's pride, and the more intelligent who manage these societies have very wisely availed themselves of this feeling, and have united the provision for the funeral with that for the care of the sick. There is actually a carriage society, which sends so many carriages (pro rata) to a funeral, and the members attend in white jackets and black bands. A woman who died this autumn had received through a long illness seven dollars a week as the return from her contributions to one of these societies.

On a lonely road, a dozen miles from the city, we met a rude cart and a mule driven by a negro man. Two young boys were with him, and in the cart was a coffin. They were on their way to one of the old plantations to bury their dead in the place of their fathers. It has been a touching proof of the fidelity of old attachments, and of the still surviving power of the old personal ties, that this privilege of burial at their former home has become a much-coveted and often-sought boon. It is the more remarkable inasmuch as the country within reach of the city has been so completely deserted. In that great Saint Andrew's parish only two houses were left standing, and scarcely a family has returned to its former home. Yet the black people have constantly found out their former masters, and asked leave to carry home the dead. It has been a melancholy mode of measuring the swift disappearance of the former slaves. "Scarcely one is left now." "Not the old only are gone, but the middle-aged and the strong young women." Every one who lived on the Sea Islands says the same thing. In the city old people are rarely seen. The solemn white-headed men that looked so dignified at church are all gone, but the streets swarming with young men and boys and little children leave no doubt of the actual increase in numbers. In the city the black people are but very little less than one-half the population, while on the Islands in some parishes they are even six and eight to one white man. In a single school in Charleston there are 1,400 negro children.

The teachers are all white—the principal is a man; all the other teachers are women, many of them ladies of great refinement, themselves once mistresses of slaves, whom necessity has compelled to seek employment. They are working in good faith, and with an infinite patience, and they undoubtedly make the best teachers for the blacks. From their intimate knowledge of them, they know when it is wise to insist and when to yield. Numbers vary. One primary teacher has had one hundred and eighty pupils under her charge at once. The first class in the intermediate grade averages fifty. In this class they are of every size and age, from boys of eleven to women of twenty-two and twenty-three. In this class they learn long division. Arithmetic is the thing they care most for. The boys are brighter and quicker than the girls, but the girls are more docile and more attentive, which makes good the difference. The girls can be managed without corporal punishment; the boys not, for a rattaning is a small matter to them, since many of their fathers are likely to use either a rope or a club upon them. So few have books that the classes must be taught as if they had none. Of school-work as such you hear only praise. It is frequently said by white parents of even such studies as algebra: "It would be a good thing if our children of the same age could do as well as those darkies do." The doubt, either logically or practically, comes in the step beyond. It cannot be denied that so far, for almost all, even those who go through the whole school course, progress ceases at fourteen and fifteen. More than half who can write and spell creditably on leaving school cannot do it in two years' time. The reasons are obvious. Although it is universal that the parents care to have the children go to school, and make willing sacrifices to keep them decently clothed, almost all must go to work, and that mainly in employments which offer very little stimulus to the brain. There are no home associations whatever to keep up the school influence. Not only are there no books, but very, very few have good lights in their houses at night. There are evening schools, but that at best means only a small fraction.

Nevertheless, there is no word of discouragement. "They do more than I ever would have believed possible when I knew them as slaves." "They will surely make an intelligent laboring class." The tone of speech about them is more than kindly; it is respectful. And here might be noted a change that has its significance. In the old time the word "slave" was never heard; now it simply has its own meaning, as stating a fact of the past, and is used as needs be, with not the slightest special thought or emphasis. Remarks like these are made every day: "We ourselves have beheld with astonishment the good behavior of our own people—those who were slaves before the war. We have been ourselves amazed at their good conduct under the influences to which they were subjected directly after the war." To an inquiry about the character of a colored man, the reply was: "R——? Oh! everybody trusts him. He had a hard time of it from the negroes in the dark days, because he stood by the white people; but now they see he was right." "H—— has always voted with the Republicans, but he is held in much esteem here, because more than once in times of excitement and danger in the country he stood between the blacks and the whites." For him, upon his own single bond, $2,500 had just been secured from strangers to him (distinctly not Republicans), to save his farm. If it is said, "There are still negroes who think that everything a Southerner tells them is a lie," on the other hand you will hear words like these, spoken from the experience of a long and honored lifetime: "No one has thought more highly of those who have really succeeded than their own old masters. They have come back to us. Those who have done best were the first to do so. In five years' time now, they will all have come back to us."

It was to be expected the negroes would prefer to have their own churches separate, but it cannot on the whole have been other than a loss. There are but few men yet, of their own color, who are fitted by education, or the traditions of education, to be the teachers they need. Nor in saying this do I forget the admirable preacher to whom we listened in the African Methodist Church—a man of bearing in every way so suitable and becoming that comment on it seems almost impertinent. This, however, was a city church, poor enough, but still the best able to keep the better men. The one service showed what occasion the minister may have for the simplest elementary instruction to his people. Five babies were presented for christening. Two of the mothers were accompanied by their husbands; the other three were alone. "Where is the father?" asked the minister of one of them. She nodded, and he said, "Let all the fathers come forward." Three men at once came from the rear. All the parents were very young. The minister prompted them for all the answers to his questions. The church was new and fresh. To the question how old it was, a woman replied: "It was made up since the Union." Opposite it stands a vast old church, once famous throughout the South as almost the

only church composed wholly of negroes. Its great congregation, often fully three thousand, was gathered by the care and zeal of the late Dr. Girardeau. So long as he lived the church maintained itself, spite of the changes around it; but after his death the preference for colored preachers led to a break-up, though some two or three hundred remained faithful to his successor. Though the old place of worship is deserted, these have kept together under his charge, and form a strong working church.

It is an inference in which one would be glad to be mistaken, but the blacks seem to care less for churchgoing than formerly, and the difference is greater than the general change in feeling on the subject will account for. It is, alas! one instrumentality the less for their education and elevation. No thoughtful man can study the present situation without perceiving at once its hopefulness and its hopelessness—hopeful because of so much of beginning; hopeless, because the end is so far off. Never had people a heavier burden, never a harder duty, than the white people of the South to-day. Not to have abandoned it in despair is the surest proof that they will at last succeed. No one who realizes what the work is can withhold his admiration at the patience, the faith, the devotion with which, in the midst of their own poverty, they have set themselves to do it.

THE DECLINE OF GAMBETTA'S ADMINISTRATION.

PARIS, January 19, 1882.

THE honeymoon of Gambetta's Ministry has been of the shortest. He was lifted to power by an almost irresistible force. After the general elections everybody felt that he must become the Premier, just as Mr. Gladstone became the Premier in England after the defeat of the Conservatives. Would he keep M. Ferry, who almost asked for the honor of serving under him? Would he admit M. de Freycinet and M. Léon Say? These were subordinate questions. He could do as he liked; bring fresh men—*his* men—with him, or take a few old stagers. The fact remained clear, he was to be the leader; he was to be the Cabinet; there was no dissentient voice—whoever his colleagues might be, his *ministère* was named beforehand the *grand ministère*.

How rapidly these first impressions vanished! How fickle is public opinion! First, there was a little disappointment caused by the choice of some of the Ministers. The Conservatives, who secretly are ready to consider Gambetta as their last protector, were much annoyed at the nomination of M. Paul Bert, who represents irreligious intolerance. They could not regret M. Ferry and M. Constans, who broke the doors of the convents, but what could they expect from M. Bert, who cannot speak patiently, not only of the Jesuits, but of any priest?

The second blow came with the Roustan trial. Though Gambetta was not the author of the Tunisian expedition, he was known not to have disapproved of it; he was known also as having chosen for Minister of War General Farre, who has become the most unpopular man in France. He had to accept the legacy of the last Administration, and in this legacy he found the Roustan trial. Rochefort, who is now the arch-enemy of Gambetta, had not much difficulty in discovering all the impurities of the Tunisian affair, and he threw them in the face of the Government. Public opinion in such matters is always sensational; it likes to feed on scandals. There are scandals enough in every Eastern court, and I may say in many European courts. If we saw behind the scenes at Constantinople, at Cairo, at many other places, what should we not see? The English generally wash this dirty consular and diplomatic linen *en famille*—to use Napoleon's expression; the Tunisian linen was washed publicly, before a jury, under the eyes of an excitable population. The acquittal of M. Rochefort was considered a condemnation of the Tunisian expedition. This Tunisian business has been on the minds of all the Governors of Algeria for thirty years. It has always seemed to them that it was easier to defend Algeria with than without Tunis, which afforded a good frontier on the east, while the actual frontier was a long line which nothing could defend. Tunis has a good port, Biserta, and Algeria is lacking in good ports. All this was forgotten; everybody came to the conclusion that the expedition had been undertaken merely to satisfy the greed and the caprice of a few adventurers and their mistresses.

Gambetta's strong card, in arriving at power, was an active understanding with England, or at least the possibility of such an understanding; but if France pronounced herself against distant expeditions, what could he offer England? If France showed so much ill-will simply toward a short, bloodless expedition in Tunis, how could he hope to drag her, with England, further East, perhaps to the Valley of the Nile? England knew that she had a sympathetic friend in Gambetta, but began to doubt whether this sympathy would ever or could ever take a practical shape. The decision of the jury in the Roustan trial seemed to be an intimation in favor of non-intervention, of peace at any price. England had disapproved the Tunisian expedition—the letters of the *Times* correspondent in Tunis are full of spite against the French. Here was the result. The Tunis affair gave a cry to the enemies of the Government, at home as well as abroad. The active policy which was attributed to Gambetta became, almost at once, impaired. Still, he was in the *engrenage*—the Egyptian question had to be settled, and settled with England.

It has recently taken an acute form, since the military *pronunciamiento* of Arabi Bey. France and England have established in Egypt a sort of *condominium*, which has been successful in a financial way, but which seems to become politically a source of embarrassment. The former Khedive, who was hostile to all financial reform, was dismissed, but unfortunately the present Khedive has no prestige, no energy, and is looked upon as a mere tool of the Anglo-French Control. A brother of the late Khedive lives in Constantinople, and is perpetually intriguing against his nephew. He has found an ally in the Sultan, who has become the most active sovereign in Europe, and who puts his finger everywhere. The "National party" of Egypt is in reality the instrument of the combined passions of the Sultan and of Hamid Pasha; it has found a devoted instrument in Arabi Bey, a clever, pious, brave officer. The National party wishes to place the liberties of Egypt under the protection of the army, first, and of a Chamber of Notables, which is composed of the most incongruous elements. The increase of the army indicates in what direction things are going in Egypt: a movement against the Europeans, and especially against the English and French functionaries, may be expected at any moment; and the two Governments have come to a sort of agreement about a common action in Egypt in case a state of anarchy should arise there. The difficulties of this common action would be, however, manifest; it may be said, in one word, that France does not completely trust England, and that England does not completely trust France. The English feel, that with the actual form of government in France, and in the present temper of the French people, it would be exceedingly difficult for Gambetta to enter into a systematic intervention in Egypt, to make long plans, and to guarantee their execution. The Tunisian affair is like a dead weight which embarrasses his movements. Even the creditors of Egypt are afraid; for Tunis, which had paid its debt in full for the past few years, has only paid it partly since France has taken it under her protection.

On the other hand, the French see very well that if we embark with the English for Egypt, we run the chance of being left there alone, as we once were in Mexico. If public opinion changes in England, a single vote can upset the administration, and there is an end to all active undertakings in the East. It would certainly be advantageous to France and to the French republic to have the alliance for any number of years of a power which has as much moral prestige as England; but since the war of 1871 the French nation has become very suspicious, and there is a general notion abroad that England always wishes to use the French, and will never do anything for them in the end. Without going so far as repeating the old phrases about "perfide Albion," people cannot help seeing that England has many difficulties; that she may find it necessary to withdraw for a while from active politics; that she can always retire into her unassailable island. France, once engaged in the confusion of European affairs, has no retreat; she has neighbors, and powerful neighbors. She must be more guarded than ever.

Gambetta is too shrewd to lead his country with a "light heart" into inextricable difficulties; at the same time, he has given not only to France, but to the whole world, the impression that he will not be a passive politician; and this sentiment, which first contributed to his success, is beginning to turn a little against him. If you had heard the conversations which took place a few days ago, when he presented to the Chambers his plan of constitutional revision, you would have thought he was lost. This plan was looked upon as a means of escaping from office; it was a sort of provocation to the new Chamber, or, at any rate, was regarded as such. It seemed as if Gambetta, feeling the approach of some great danger, were trying to get out of office, and, as one paper said, to return to Saint Sebastian (where he remained during the Commune). This feeling, which is probably founded on an error, helped nevertheless to agitate the public mind; and finally, to the vague sentiment of insecurity which it created, were added the sensations caused by a financial crisis.

The financial world has for years been optimistic, and the possible excesses of speculation seemed to have no end. Stocks rose to unknown heights without any reference to dividends; a bank sprang up in every street, and these banks did nothing but sell new stocks. Now the end has come: the tide, after having reached its maximum, is turning back. The fever of speculation had seized all society, and all society will have its victims. The higher classes of France, turned out of active politics, consoled themselves with gambling; and many will remain on the battle-field, having lost more than their hazardous gains, their paternal fields and their ancestral manors. It is a sad experience, but it was not difficult for the wise and the prudent to see whither we were drifting. Such accidents are hardly worth mentioning, they are so common in all countries. I merely allude to the financial crisis as one of the elements of the present state of opinion. The horizon is dark on all sides; still, I hope that we shall weather the storm.

THE ROYAL RESCRIPT.

BERLIN, January 14.

"YOU will and you shall have a conflict with the Government." Such, during the last few

months, has been the standing menace of our officious and official papers, addressed to the Reichstag and every independent voter in the country; and now, as a New Year's gift, the old King surprises Germany and the world at large with a step toward naked absolutism. By this time the telegraph will have acquainted you with the contents of King William's decree of January 4, so that I need not dwell on the particulars. I will therefore confine myself to a few general remarks, instead of discussing each single controvertible sentence.

"The right of the King," says the decree, "to conduct the government and policy of Prussia according to his own discretion is limited by the Constitution, but not abolished. It is therefore inadmissible, and leads to the obscuration of the constitutional rights of the King, when their exercise is referred to as if they emanated from the Ministry, for the time being responsible for them, and not from the King himself. The Constitution of Prussia is the expression of the monarchical tradition of this country, whose development is based on the living and actual relations of its King to the people. It is the duty of the Ministry of the King to support his constitutional rights by protecting them against obscurity and doubts. These royal prerogatives must be considered as an essential part of the Constitution, and not only be conceded to the present King, but also to his successors. All civil officers (*Beamte*), whatever their private convictions may be, are bound to support, or at least refrain from actively opposing, the Government at election times."

The decree has, of course, created universal sensation, the more so as it was published at the head of the official paper, the *Reichs- und Staats-Anzeiger*—in other words, in a place which is usually reserved for personal manifestations of the royal pleasure. Such acts as a rule are not subject to public criticism, but the document alluded to bears the countersign of Bismarck, and has, therefore, the character of a constitutional act, which allows it to be criticised like any other official paper. It is addressed to the Prussian Cabinet, and owes its origin to the Chancellor, on whom a double responsibility thus falls. The first half of the ideas expressed in the decree have lately been developed by him, while the second half repeat the theories of Herr von Puttkamer, the Minister of the Interior, who on December 15th last tried to defend them in the Reichstag, and who, of course, merely expressed the views of his chief, without whose condescending permission none of his subordinates, including the Ministers of State, dare to utter a word.

In the opinion of the most impartial observers, there was no need to throw this bombshell into the midst of the general tranquillity and peace. Everybody, of whatever party, respects old William, and nobody would ever think of attacking any of his prerogatives. On the whole, there is no more loyal and monarchical people than the Prussians, and it is but a frivolous act to poison the King's mind by inventing dangers which do not exist. It served Bismarck's ends, however, to identify his policy and that of his satellites with the interests of the crown; to represent all his opponents as enemies of the royal government, and, for the future better control of the elections, to make all royal civil officers obedient tools of the ruling Minister, who devolves the responsibility of his acts on the crown, while on the contrary he alone should be responsible for them and shield the authority of the King. From the newspapers you cannot realize the sad and exasperated impression which this new manifestation of Bismarck's passionate resentment has produced on the overwhelming majority of the people. The editors publish very calm but at the same time resolute articles, public opinion everywhere condemns the wanton measure, and the several Liberal parties of the Reichstag are still considering the best means to defeat the Chancellor's plans. An answer he will get very soon, and that a very plain and determined one. It would therefore be preposterous to judge from these scanty public manifestations that the Prussian people will quietly submit to this new outrage. They will take up the gauntlet and fight out the conflict. However cloudy and stormy our political horizon may become, I am sure it will not be Bismarck who will triumph in the end.

While last fall he and his supporters went into the election, pleading for the insurance of workingmen against accidents and old age by the state alone, now he has suddenly changed his views on that subject. The other day, in answering a Clerical interpellation about social reform, he freely confessed that such insurance, in order to be safe and salutary, must be effected by private corporations, and that a state monopoly in this respect would do more harm than good. His speech on that occasion might just as well have been made by a Manchester man. In his own interest, as well as in that of the country at large, it is to be hoped that the Chancellor will gradually return to his old economical creed. It almost seems as if his firm belief in the expediency and efficiency of his pet measures had been shaken. At all events, he cannot conceal from himself the fact that the blessings of the new protective tariff are far from being realized. He has implicated himself too far to be able graciously to withdraw from the whole line, but so much is certain, that none of his so-called grand measures will be submitted to the Reichstag at its present session.

A benevolent German organization, the Society for the Rescue of Shipwrecked Persons, has lately, for the purpose of raising some extraordinary means, published an album of autographs and drawings, called 'Aus Sturm und Noth,' to which some of our most prominent characters—poets, artists, scholars, and actors—have contributed a sentence, a sketch, or a poem. Almost all Germany is represented there, beginning with the old Emperor, a host of princes, Moltke, and other distinguished men, down to singers and actors. Bismarck at first refused to give his autograph, but toward the end of last year he quite unexpectedly sent a short Latin sentence, "Patriæ inserviendo consumor"—*i. e.*, "Serving my country I consume myself." This motto is tinged with a somewhat mournful shade, and thoroughly characterizes the Chancellor's present position. If he had confined himself to his legitimate field as a diplomatist, and refrained from meddling with our domestic policy, and from making forced constitutional interpretations, he would have no reason to complain of the futility of his endeavors, for his greatness would gladly be acknowledged by the whole nation, and he would be more at peace with himself.

After a two days' excited debate, the motion of Herr Windthorst, the leader of the Ultramontane party, to repeal the law of May 4, 1874, was carried by 233 against 116 votes. This law prohibits clergymen who, for the infringement of state laws, have been removed by the Government, from exercising religious functions, and punishes their disobedience even with banishment. For the last seven years it has been a dead letter, and was thus of no practical value. The present large majority against it is due to its character as an exceptional enactment, and to the wavering attitude which the Government occupies in its conduct of ecclesiastical affairs. Members of all, and even of the most radical, parties voted for Herr Windthorst's motion, and for this reason its passage can, in my opinion, not be considered as a victory of the Centre. Nevertheless, the people at large look at it as a great Catholic triumph. Encouraged by this success, the Ultramontane party in the Prussian Landtag will very soon fall on the Falk laws and try to repeal them all. The moment is very propitious for carrying out their scheme.

The Prussian Landtag was opened to-day, and will sit for about a week simultaneously with the Reichstag. Its present session will be full of general interest, as the Government must develop its policy toward the Church, and especially its negotiations with the Papal See. In his address from the throne the King to-day informed the House that he had succeeded in reëstablishing the ordinary administration of several bishoprics, and that a bill for the reënforcement of the law of July 17, 1880, as far as it had become obsolete by its own limitation, would be submitted to the House. This law conferred discretionary powers on the Government for its negotiations with Rome and the bishops. "The friendly relations with the present chief of the Roman Church," the King concludes this passage, "enable us to satisfy our business wants by re-establishing our diplomatic intercourse with Rome. The means for doing so will be asked from you in the budget."

Besides the Roman question, the Landtag will have to decide upon the purchase of the rest of the private Prussian railroads by the Government. The experiment has thus far proved a very profitable one for the public exchequer, as it has yielded a net revenue of twenty-nine millions of marks. I believe that the measure will be carried through, but that some better guarantees than those given last year will be insisted upon for the legitimate appropriation of the railroad proceeds. †††

THE ANGLO-FRENCH NOTE TO THE KHEDIVE.

ALEXANDRIA, January 17.

THE policy of the English and French in Egypt is gradually discovering itself, or, rather, is gradually being crystallized out of the state of solution in which vague diplomatic utterances have recently contained it. The note presented by the French and English Consuls-General on the 7th to the Khedive lays down certain lines of policy which comprise a distinct augury of future events. The interest attaching to this important document is not so much in the actual words used as in the revelation it includes of much which does not meet the eye. On its first reaching this city by telegram from Cairo it took everybody by surprise, and the immediate question asked was, not what it meant, but what new thing the Khedive and his advisers had been doing to call for such a decisive act of diplomatic intervention from without. The note of the Governments specifically says that the meeting of the Chamber of Notables has afforded a fresh occasion for the English and French Governments to exchange their views once more as to the policy to be pursued. It further says in so many words that the two Governments considered the maintenance of the Khedive on the throne as an indispensable guarantee for order and prosperity, in which France and England are equally interested. Lastly, it is announced in the note that the two Governments are closely united in the determination to use such efforts as may be required to obviate the causes which might menace the existing régime in Egypt either from within or from without. Since the presentation and publication of this note, it is reported that some personal explanations have been offered to the Khedive which might reduce its apparent significance, and the Khedive is also believed, in his reply, to have professed his satisfaction with the prospects of stability for the existing order of the country, especially in view of his constitutional relations with the new rep-

resentative Assembly. Nevertheless, the better opinion here is that there was a real occasion for the note of the two Governments, which has gone so far beyond Lord Granville's celebrated despatch, in which he hardly adverted to the coöperation of France, and contemplated the intervention of either England or France as only a remote possibility in the case of an extreme emergency amounting to anarchy. This occasion is believed, in some well-informed quarters, to have been the disclosure of a long-rooted dissatisfaction on the part of the Khedive with the feeble support he was receiving from the Western powers. The result of this dissatisfaction was leading him to alternate between a reliance on Turkey and coquetting with what is called the National party. The Western Consuls-General here saw, that in the case of any further military pressure, which is every day on the cards, and of which symptoms are almost incessantly coming to the surface, the Khedive would be reduced to a position of formidable weakness. It seems likely enough that a communication to this effect was made simultaneously both to London and Paris, and the result has been that the two Governments have at last made resolute efforts to compose any existing differences, and to agree upon a united and energetic policy. This policy is expressed in the new note.

In some portions of Continental society here the new departure taken by France and England is looked upon with jealousy and suspicion. It is said that while the two Governments may have a claim to exercise control over the finances of Egypt in order to secure payment of their own bondholders, they have no different claim to intervene in the general government of the country from those which other European states have, such as, preëminently, Germany, Austria, and Italy. It is said further that, even though the newly-emphasized alliance should succeed in securing for Egypt all the political advantages which are supposed to be bound up with the continuance of Tewfik's rule, yet this is but a slender support on which to rest such weighty interests. England and France are agreed to-day, but they may differ to-morrow, or, what is still worse, one of them might, for sufficient consideration, surrender all its rights to the other, and Egypt might pass into the hands of some single European power before any coalition of other powers could be formed to vindicate the general interests.

For my own part, after reading carefully all the organs of public opinion which, in the depressed state of the press, afford still any clew to the mind of foreigners resident here, and after conversation with the best-informed persons, I think it probable that the account given above of the origin of the new note and of the altered and more decisive policy of France and England is the true one. On the other hand, I incline to believe that the criticism of this policy on the ground of its exclusiveness is both unreal and unreasonable. The commercial and political interests of England and France in Egypt, both as respects the Suez Canal and the relation of Egypt to other North African provinces, are tenfold those of all the other states of Europe put together. Nor is it fair to say that England and France have hitherto mainly, or even primarily, interfered in the government of Egypt for the sake of their own subjects who happen to be bondholders, and that their present action is of a new and extraordinarily aggressive kind. From the time which just preceded the deposition of Ismaïl, the English and French Governments have throughout acted as the agents and delegates of Europe. It was Germany which, by insisting that the judgments of the International Tribunals should be enforced by Ismaïl, induced France and England to give the needful intimation to Turkey that Ismaïl must be deposed with as much saving of the prestige and prerogatives of the Sublime Porte as might be. The Control established by France and England was not primarily due to the claims of bondholders, but to the necessity of maintaining the stability of the new Khedive's throne. Ismaïl had fallen through his indebtedness and impecuniosity. The only chance of firmly establishing the rule of his successor was to provide for the liberation of the country from its pecuniary obligations, and to prevent all lavish and irresponsible extravagance in the future. Thus, the meaning of the Control is not that the bondholders should be paid, but that Egypt should be free. The object is the establishment of good order, regular and moderate taxation, security to property, and an economic employment of the public revenue in permanent works in this country, and not the satisfaction of exacting money-lenders elsewhere. So far as the debts were concerned, the main machinery introduced was not that of the Control, but of the European Commissioners appointed to manage the public estates mortgaged for the debts. Thus, in intervening in a special manner at the present crisis, England and France would be doing nothing more than what is perfectly consistent with the position they have always occupied, and been encouraged to occupy by other European states, from the beginning of the present Khedive's reign.

The French paper which succeeded to *L'Égypte*, being worked by the same company, and called the *Gazette des Tribunaux*, has just received two warnings, and is in imminent danger of being suppressed like its predecessor. The first sin was that of publishing from a French paper some news about the doings of Arabi Bey, which it is imputed the editor ought to have known was not true. The second sin was that of not printing the warning which rebuked the first sin in the right place in the paper, and for general hostility of tone to the Government. Many, if not all, of the European journals (though not the English journal, the *Egyptian Gazette*) receive large gratuities from Government, and it fares badly with those who are neither in the Government pay nor conform to Government doctrine. Nothing but the weakness of wine-and-water, with the wine chemically extracted, will save them.

The last news is that a whole caravan-full of pilgrims escaped from their quarantine and reached the banks of the Suez Canal. A fight occurred with the Egyptian soldiers, who seem to be serviceable for fighting pilgrims, and they were compelled to retrace their steps. A.

Correspondence.

THE POWERS OF A QUORUM.

To the Editor of The Nation:

Sir: The question submitted by Mr. W. H. Whitmore in No. 865 of the *Nation* does not admit of the same solution in every State of the Union; for the proper solution thereof, in any particular State, depends upon the requirements of the Constitution of that State in relation to the passage of laws.

It is safe to say that it is settled that the general rule is, that a simple majority, but not a less number, of a quorum of a legislative body can legally pass a law, except where a different rule is prescribed by the Constitution of the State; and that where there is a constitutional requirement of a two-thirds or a three-fourths vote in the affirmative in order to pass a law, said requirement is satisfied when it appears that two-thirds or three-fourths of a quorum have voted in its favor, unless the language of the Constitution plainly shows that such a proportion of all the members elected is intended. (As authorities upon the above, see 2 Mich. Rep., p. 287; 4 Mo. Rep., p. 303; and Cooley's 'Constitutional Limitations,' p. 171.)

Now, when we examine the fundamental laws of the several States, we find that in *most* of them, in order to adopt legally either all laws or all laws upon some specified subjects, it is necessary that said laws shall be affirmatively voted for by a majority or some other prescribed greater proportion of all the members elected or of the entire representation; in which cases all members of the Legislature, whether present or not, must be taken into account in determining whether or not a bill has received a constitutional majority. (See 22 Cal. Rep., p. 314.)

As throwing an additional ray of light upon the subject, I quote one of the provisions of the Constitution of this State in relation to the passage of laws, being section 13 of article 2, and which reads as follows: "*A majority* of all the members *elected* to each house voting in the affirmative, shall be necessary to pass any bill or joint resolution." Again, in this State, under the requirements of three general acts in relation to cities of the three general classes, "No ordinance" of any city "shall be valid unless a majority of all the members elect of the Council vote in favor thereof."

Respectfully, Thos. W. Heatley.
Troy, Kansas, January 30, 1882.

DANIEL DEFOE AND THE "REDEMPTIONERS" IN MARYLAND.

To the Editor of The Nation:

Sir: The notice of Johnston's 'History of Cecil County,' in the last issue of the *Nation*, in which it is stated that descendants of Daniel Defoe's niece, who came into Maryland as a "redemptioner," are still living near Nottingham, Md., calls to mind the description of Maryland life contained in 'The Life of Colonel Jack,' one of Defoe's less known works.

'Colonel Jack' was published in 1722. In Johnston's 'History' it is said that Elizabeth, daughter of Defoe's sister, Elizabeth Maxwell, was brought into Maryland in 1718, and married to her owner's son in 1725, and that she did not communicate with her friends in England until after her marriage. The graphic description of Colonel Jack's life as a "redemptioner" in Maryland, however, suggests the idea that Defoe's niece may have been in correspondence with her uncle before the date of her marriage, and that he may have derived from her the information which he uses in his story. Be that as it may, Defoe seems to have been well informed in regard to "redemptioners" and their treatment in Maryland, and his account of their position and prospects may be accepted as largely founded upon fact.

Colonel Jack, with several companions, having deserted from a Scottish regiment, seeks passage from Newcastle to London on a collier. They get drunk on liquor supplied them by a kidnapper, whom they suppose to be the captain of the vessel which is to take them to London, and on becoming sober find themselves at sea, bound for America, whither they are carried notwithstanding their remonstrances, and delivered to planters in Maryland to serve a term of years. Jack's faithfulness causes him, after a time, to be made overseer on one of his master's farms. He so pleases his master, who is represented as a very humane man, by his success in managing the negro slaves without the constant use of the lash, that he obtains his liberty and "the coun-

try bounty—that is to say, a quantity of land to begin and plant for himself." He ultimately becomes a rich planter, owning several plantations and many slaves of his own.

This fiction is made the vehicle for very minute descriptions of the "redemptioners" and slaves in Maryland and their condition, which are no doubt in many respects true to nature. Defoe's conclusions are especially interesting when we learn that his own niece's experience was an example of their truth:

"The meanest and most despicable creature, after his time of servitude is expired, if he will but apply himself with diligence and industry to the business of the country, is sure (life and health supposed) both of living well and growing rich. As this is a foundation which the most unfortunate wretch alive is entitled to, a transported felon is, in my opinion, a much happier man than the most prosperous untaken thief in the nation. Nor are those poor young people so much in the wrong as some imagine them to be, that go voluntarily over to those countries, and, in order to get themselves carried over and placed there, freely bind themselves there, especially if the persons into whose hands they fall do anything honestly by them."

B. Sollers.

Baltimore, Md.

Notes.

The 'Q. P. Index Annual for 1881,' just issued at Bangor, Maine, is a guide to the contents of the *Living Age, Eclectic, International Review, Popular Science Monthly, Century, Harper's, Lippincott's, Atlantic,* and *Nation.* The simple device by which all these periodicals are distinguished from each other is prefixing the volume to the page referred to, since, as it happens, the volume numbers in no case coincide. The key to them is repeated at the foot of each page, but why was not the more intricate symbolism of * † ‡, etc., likewise explained continuously, in the blank space between the columns? It is needless to point out what a boon this work is to the frequenter of any library, as well as to the possessors of the above magazines and journal. ——The Messrs. Harper, by the way, announce that after July next they mean to destroy the plates of their *Magazine, Weekly,* and *Bazar,* prior to 1878, so that orders for back numbers and volumes must be sent in before June 30. Among new works in press they enumerate the 'Law of Stock Brokers and Stock Exchanges,' by John R. Dos Passos; 'Old Greek Education,' by J. P. Mahaffy; and 'Atlantis, the Antediluvian World,' by Ignatius Donnelly.——The 'Life of James Mill' and the 'Life of John Stuart Mill,' both by Professor Alexander Bain, are to be published in this country by Henry Holt & Co., under an arrangement with the author.——J. B. Lippincott & Co. have become the sole publishers of Bouvier's 'Law Dictionary' and 'Institutes.'—— The MS. of 'A Tour in Ireland in 1849,' by Thomas Carlyle, has just turned up and will be issued serially in the *Century Magazine.* —— Fords, Howard & Hulbert have in press 'John Eax,' by Judge Tourgee. —— 'Dorothy,' an English story in elegiac verse; and 'School Sermons,' by Dr. William Everett, of the Adams Academy, at Quincy, Mass., will be published immediately by Roberts Bros.——Lee & Shepard have brought out in good style an English version of Alphonse Daudet's 'Numa Roumestan,' with the original illustrations. The translator is Miss Virginia Champlin, whose success is noticeable in spite of a few inaccuracies, attributable either to haste or to the freedom which great familiarity with the French—not to say a proper theory of translation—has made warrantable. ——'Ecclesia Anglicana, a History of the Church of Christ in England from the Earliest to the Present Times,' by Arthur Charles Jennings, M. A.; 'Modern Heroes of the Mission Field'; and 'Questions that Trouble Beginners,' by the Rev. George W. Shinn, are to be shortly issued by T. Whittaker.——In the *American Architect* for January 21 will be found Mr. John H. B. Latrobe's interesting address on the building of the Capitol at Washington (in which the writer's father played so important a part), delivered last November before the American Institute of Architects. This journal, by the way, shows marks of permanent prosperity by the great increase in its minor illustrations, particularly initial letters embodying architectural motives.——Bulletin No. 2 for 1881 of the American Geographical Society contains Commander Gorringe's unpretentious account of his suggestive cruise in the *Gettysburg* while sounding the northern coast of Africa, and a paper, which Mr. Blaine might read with profit, on "Chili—its Geography, People, and Institutions," by James Douglass, jr.——In the *Publishers' Weekly* a review of the books of 1881 states that the number composed by American writers is greatly in excess of all previous years.——We learn from the London *Bookseller* that Mr. D. C. Thompson, of the staff of the London *Art Journal,* will issue by subscription a quarto illustrated volume on 'The Life and Works of Thomas Bewick, Wood Engraver,' of which the edition will be limited to 250 small-paper and seventy-five large-paper copies, at one and two guineas respectively. It will contain "a complete critical estimate of his engravings, both on copper and on wood."——"The *Library Journal* is at last self-supporting," is the publisher's pleasing announcement in the December number. He does not deny, however, that it is not yet highly profitable.——*Monthly Notes* (Trübner) for January 16 has an important paper by Mr. John Ballinger, of the Borough Free Library, Doncaster, who tells how, by means of a circular, he greatly enlarged the patronage of the institution, which had been working far below its capacity.——Strong petitions for the erection by the State of a special building for the Historical Society are now before the Legislature of Wisconsin.——The literary activity which characterizes the officers of some of the Government observatories of Europe is worthy of note. The recent report of Director Struve, of the Russian observatory at Pulkova (*Jahresbericht am 20 May,* 1881, *dem Comité der Nicolai-Hauptsternwarte*), gives by title fourteen papers published during the year by eight of the attachés of the observatory. These papers, only two of which are written in the Russian language, are published partly through the Kaiserliche Akademie der Wissenschaften, the observatory itself, the Russian Geographical Society, and the Astronomische Gesellschaft, of Leipzig. ——In *Polybiblion* for January, M. Henri Cordier announces that he has in press a bibliography of Beaumarchais.——One of the latest issues of the excellent *Universal-Bibliothek* of Philip Reclam, Leipzig, is Kant's little esssay 'Zum ewigen Frieden.' The editor is Karl Kehrbach, who some time ago carefully edited for the same cheap series the three *Kritiks* of Kant. The price is 30 pfennigs.

—By an unlucky and regrettable error, in our recent review of Ropes's 'Army under Pope' (page 84, column 3), the statement occurred that "The campaign was lost because *Porter* withdrew McDowell and Sigel from the vicinity of Thoroughfare Gap." Of course *Pope* should have been read.

—Peter Cunningham's octavo edition of Goldsmith (4 vols., 1854), recently reprinted in attractive form by the Harpers, will have especial value for some of its readers in the textual corrections which have accrued from the collation of earlier editions. Not the least of the pleasure to be had from a good writer is the study of the sources, whether in his temperament or in his art, from which he derives his effects. The temperament, of course, appears in any text, but the literary art is best shown by *variorum* readings such as those given in the present edition. As in the case of other classic authors whose *labor limæ* is recorded, it clearly appears that laborious writing must go to make good reading. Even in musical composition, which one might suppose to be the most spontaneous form of art-expression, the same law holds good. The score of a Beethoven symphony preserved in the Berlin Museum (the Seventh, if we remember correctly) is a mass of the most intricate and painstaking corrections. Byron corrected laboriously, and ought to have corrected more than he did. But aside from any question of form, it would not perhaps be easy to name an English author of the eighteenth century whose writings retain a more certain charm than Goldsmith's. They will long attract us by their urbanity and intellectual hospitality —traits that were none too frequent among the contemporaries of Goldsmith, nor, for that matter, even among the contemporaries of Carlyle, Freeman, and Ruskin; and the present reprint is the most accessible as well as the best edition.

—Food and clothing can be supplied without difficulty to a city of a million inhabitants. How to remove the refuse of a village of a thousand is not so well understood. Each successive publication on sanitary matters shows that there is little uniformity in practice, even in the different towns of the same country, upon the question of the scavenger's duties. Mr. Percy Boulnois, the city surveyor of Exeter, finds that in ninety English towns from which he received information the average annual cost of removing house refuse and of street cleaning is about tenpence per head; but the figure varies with different places from one halfpenny to three shillings and sixpence. A shilling per head per annum is sufficient, according to Mr. Boulnois's estimates, to pay for the proper cleansing of cities and towns. How this should be done he points out in his little book on the subject ('Dirty Dustbins,' etc. London and New York: Spon. 1881). The collection and disposal of house refuse form his chief subject, the methods practised in the city of Manchester being especially effective. The Health Committee of that city deals weekly with about 3,000 tons of refuse material, of which something over nine-tenths are ashes and cinders. The rest is classified as follows: Paper, 1 ton; dead animals, 2 tons; rags, 3 tons; stable-manure, 17 tons; tin cans, old tin, and iron, 33 tons; refuse from slaughter-houses and fish-shops, 60 tons; broken pots, bottles, and glasses, 80 tons; vegetable refuse, door-mats, floor-cloths, and old straw mattresses, 100 tons. The rubbish is sifted by steam-power; the dry, combustible refuse is burned, and the mineral refuse is fused, and its residue converted into good mortar. A third process utilizes a considerable portion of the offal as a fertilizer. In our climate the treatment of the snowfall is one of the most serious questions of town-cleansing. Mr. Boulnois finds the most perfect organization for the removal of snow not in the north, nor even in Paris, but in the city of Milan. For this purpose the city is divided into 112 districts, each one let out by annual contract; but the same contractors generally apply year after year. They belong to trades that are interrupted by the winter, as masons and quarrymen. Four engineers supervise the work, each in his appointed quarter of the city. The amount of each snowfall is

promptly ascertained, and is made the basis of the pay. It is measured by means of stone posts, capped with level slabs of stone, and placed in suitable open spaces. "As soon as it stops snowing, or two or three times during a storm of several hours, the depth of snow caught on the slabs is measured by the engineer, in the presence of two of the contractors in his section." The city finds the implements used; they are worth about $8,000. The number of men engaged after a snowfall is from 2,000 to 3,000. The expense varies with the severity of the season. During the winter of 1874-75 the snowfall was 40¾ inches, cleared away at a cost of $42,000; in 1877-78 it was only 5¼ inches, cleared for $5,200. In 1879-80 the cost averaged $1,000 per inch of snowfall within the walls, and $310 per inch without, equivalent to only about two cents per cubic yard. "Payment," adds Mr. Boulnois, "is made only for work effectually done" —a feature of city government which is, we dare say, more distinctively Italian than American.

—The fire in Park Row suggests anew the standing danger of an extended conflagration in the business portion of the city. Our easy system of fire insurance encourages fires by taking away the motive to build solidly. Why should the proprietor go to the expense of iron floor-beams and rafters when a company stands ready to pay his losses in case of a conflagration—when, as in the case of the old *World* building, even if the insurance falls short, the destruction is a pecuniary gain to an owner anxious to enlarge or rebuild? As a matter of fact the greater part of our fine buildings are full of wooden floor-beams and rafters which prove to be mere kindling-wood, as in Chicago and Boston, under the heat of an intense conflagration. They are fire-proof only until the breaking out of the fire. It may be pointed out that in our highly inflammable cities the construction of a really fire-proof building is quite another and a considerably more difficult thing than it is in cities in which wood scarcely enters into the structure of the house. In the Chicago and Boston fires even marble and granite walls crumbled under the fierce heat; brick was the only material that withstood it. In what city of southern Europe could a fire have raged so fiercely as to destroy marble and granite walls? It is only in cities where wood enters largely into the construction that non-inflammable materials are melted or crumbled by the heat. A building law that should forbid the use of wood for floor-beams and rafters would render lower rates of fire insurance possible by greatly reducing the number of fires, and it would also make the construction of a really fire-proof building easier and cheaper than it now is in inflammable cities. Even a poor building-stone does not crumble except under excessive heat; and the iron work which gives way in a great fire even more rapidly than a wooden beam is consumed would thus be rehabilitated as a fire-proof material. French fire-insurance companies, or some of them, provide that, while they make good other losses by fire, they shall pay no insurance upon the houses in which the fire originates. It will be seen that this provision gives the proprietor the liveliest interest in the care of his own building. Were a similar contract possible here, it would materially reduce the great destruction of property by conflagrations—a loss which is computed at about $800,000 per day for the United States, exclusive of the great cost of fire insurance and of fire companies. It would seem as if "practical reform" in the directions we have just indicated was quite as desirable as in many others about which more talk is made.

—Census Bulletin No. 273, by Prof. R. Pumpelly, gives a summary of the production of bituminous coal in the United States during the census year. Bituminous coal, in which term is included all the softer varieties, such as cannel coal, lignite, etc., is produced in twenty-four of the States and Territories. Out of a possible output of 76,155,970 tons, the mines produced during the year 42,417,764 tons. That is, the production was about fifty-six per cent. of what could have been taken out, with the same degree of development, if the state of the market had warranted it. The value of the product of the year at the mines was $53,006,073, or $1 25 per ton. The total capital invested is reported at $101,996,937, and the number of employees at 99,916. The area of coal land attached or belonging to the collieries is given as 443,643 acres, besides 56,101 acres, which are reported as "worked out." It should be observed that the latter item does not include the lands partially worked, or even those from which the seams of workable thickness have been taken, in case there are other seams which it is not at present profitable to work. Of the States producing bituminous coal, Pennsylvania of course takes the lead, its yield being more than forty-two per cent. of the whole product. The next are Illinois and Ohio, with fourteen and four-tenths and fourteen per cent. respectively. Following these, in the order named, are Maryland, West Virginia, Indiana, Iowa, Kentucky, and so forth, the States above named producing nearly nine-tenths of the entire product of the country.

—It is several years since we had the pleasure of praising M. Ernest Legouvé's admirable little essay on the art of reading. In this time 'L'Art de la Lecture' has reached its twenty-ninth edition in France, and it has been twice translated into English in America. Now M. Legouvé has written a sort of sequel to it, 'La Lecture en Action,' which is inferior in interest and instructiveness only to its predecessor. It appears from the first chapter that M. Hetzel, his publisher and the publisher also of the excellent *Magasin d'Éducation et de Récréation*, of which —under the assumed name of P. J. Stahl—he is one of the editors, asked M. Legouvé if he could not supplement and support the theory of his 'Art de la Lecture' by a series of practical examples, showing just how a good selection of pieces ought to be read, and also why they ought to be read in that way. This is exactly what M. Legouvé has done. He begins by showing that the style of reading should differ with the style of the writing read, and should be appropriate to it. Taking the fable of the Cat and the Rats, as told by Æsop, Phædrus, and Lafontaine, he explains that the first is to be read clearly, correctly, and with precision; the second with *finesse* and relief; and the third with color and sentiment. Thus we have a literary criticism preceding a lesson in reading and serving as its basis. This, of course, is the only proper plan; and we wish there were in English a Reader in which it was as skilfully carried out as here, and with as much variety. In the course of his 362 pages M. Legouvé brings forward the rules of reading, one by one, and illustrates their application by choice selections from the chief poets and prose-writers of France—Molière, Racine, Béranger, Théophile Gautier, Victor Hugo, in verse; and Fénelon, Voltaire, La Bruyère, Pascal, and Bossuet in prose. He gives us not only a course of reading, but, in miniature, a course of French literature, which has much of the lightness and ease of a comedy. Moreover, from his experience as a writer for the stage and from his association with actors, M. Legouvé has gained a store of anecdote, from which he draws freely to point a moral. His work is, indeed, what an American book once declared itself to be: "Reading without Tears." It can be recommended most cordially.

—In the *Revue des Deux Mondes* for January 15th, M. Maxime du Camp prints a chapter of literary reminiscences dating more than thirty years back, and containing interesting notices of Théophile Gautier and Gustave Flaubert. In conjunction with the former and with Arsène Houssaye, M. du Camp revived in October, 1851, the defunct monthly *Revue de Paris*, and continued its publication till January, 1858. He sums up its career by saying that financially it was something of a load; as literature, if not of great importance, it had some utility; and if it had served no other purpose than to introduce Baudelaire, Flaubert, and Eugène Fromentin to the public it was worthy of the sacrifices which it demanded. Flaubert was very undecided about publishing anything, and after much urging on the part of his friends, concluded to take the advice of Théophile Gautier, who was thirteen or fourteen years the senior of the others. Gautier listened with a smile while Flaubert developed his theories of art and the duty of the artist, and replied:

"I know all about that. Everybody goes through that phase, just as children have the measles. When I used to live with Arsène Houssaye, Camille Rogier, and Gérard de Nerval we had just such ideas. I know what it is to write *chefs d'œuvre;* I wrote 'La Comédie de la Mort'; I gave away two volumes of prose in order to have my verses published, of which seventy-five copies were sold. Everybody can write *chefs d'œuvre* if he will only believe in them. In this matter, as in everything else, it is only by faith that one is saved. You believe in the mission of the writer, in the priesthood of the poet, in the divinity of art. Oh! Flaubert, you are an innocent. The writer sells copy just as the draper sells kerchiefs; the only trouble is that calico brings more than manuscript. All the sculpture of Greece is contained in the Venus of Milo; just so all French prose and poetry can be reduced to a single volume; if that volume is saved, the literary art of France is saved. Can you add a line to that volume? I don't know, you don't know, nobody knows; perhaps in two hundred years somebody will know. To keep back manuscripts is folly; after finishing a book the next thing is to sell it as well as you can and publish it. That's all."

Flaubert disregarded this advice. He locked up his 'Temptation of St. Anthony,' which he had just written, and began 'Madame Bovary,' which was published in the *Revue de Paris* in 1857, and was prosecuted as an offence against the public morals.

—M. du Camp warns his readers not to take Gautier more seriously than Flaubert took him. Gautier had as elevated views of art as any one could, and if at times he indulged in cynical utterances, it was when he had one of his periods of discouragement. Harassed by creditors, and persecuted by his family, he led the traditional Grub Street existence. The task of furnishing the weekly dramatic review of the *Presse* became unbearably irksome to him, but as he derived his chief revenue from it he could not afford to get rid of it. He found a substitute, however, in Louis de Cormenin, who for three years wrote Gautier's *feuilletons* without anybody's suspecting it. The respite which he gained by this arrangement enabled Gautier to write his 'Italia,' which was composed in the printing-office without a single book of reference or document of any kind. His memory was wonderful; he could rely on it with a confidence which was never betrayed. He never corrected or revised a phrase; as soon as he had written ten lines they were set up in type, and so on to the end of the chapter or article. When the proofs were brought to Gautier he marked the errors by a scratch of his nail. He once said: "Schiller, in order to set his fancy working, inhaled the odor of rotten apples; I believe I could not write without smelling the stench of printers' ink."

One morning Gautier came rushing into the apartments of Du Camp, and informed him that he had narrowly escaped arrest for refusing to perform his duties as a member of the National Guard. His reason for refusing would find a ready echo in the bosom of Oscar Wilde. "I have no right," he said, "to disguise the beauty of my figure by clothing it in a ridiculous uniform. In 1832 I was about to become a St. Simonian, but when I learned that I should have to wear white trousers, a red waistcoat, and a blue coat, I recoiled with horror, and spontaneously renounced the new worship. I would rather perish in a dungeon than prove recreant to my principles." Having had a first taste of the "dungeon," however, he was tempted to yield to necessity, and repaired to the meeting of his company in the following costume of his own devising: Gray trousers, a yellow vest adorned with blue flowers, and a green swallow-tailed coat with gilt buttons. It is easy to imagine the indignation of the captain and the amusement of the company.

—In speaking of the days immediately preceding the *Coup d'État* of December 2, M. du Camp says that it was a sort of steeple-chase between the President and the Assembly which of the two rival powers should get ahead and rid itself of the other by committing some illegal and violent act. Nobody knew when the blow would fall, or by which side it would be dealt, but everybody confidently expected it. In one and the same day M. du Camp was accosted by one person, who said: "Have you heard? Tomorrow is the day; the President is going to sleep at Vincennes; everything is in readiness; the army is with the representatives; it is time to finish the traitor"; and an hour later by another, who said: "Have you heard? Tomorrow is the day; the Assembly will be dispersed by force; everything is in readiness; the army is with the Prince; it is time to finish the babblers."

—J. Mayer & Co., of Munich, have secured a royal patent on an invention which promises greatly to improve our pianofortes. A series of tuning forks are freely suspended over the three highest octaves of the piano, each fork having the exact pitch of the string over which it is suspended. The vibrations of the string are communicated to the fork, which in turn reacts on the string, whereby a full and sustained tone is secured, in strong contrast to the short and dry tones of the present pianos. The improved quality of the higher notes also improves the volume of the lower ones, since several of these high notes are always heard as overtones whenever one of the lower notes is struck. In this manner the difficult problem of equalizing the strength and fulness of the different octaves will probably be solved at last.

—At the fourth concert of the New York Symphony Society on Saturday evening three compositions only were played, each of which is eminently characteristic of its author—Mozart's G minor Symphony, Spohr's Concerto in A for violin and orchestra (*in Form einer Gesangsscene*), and Rubinstein's popular "Ocean" Symphony. The G minor Symphony is one of the three or four of Mozart's forty-one works of that class which still boast of a large number of admirers; but it cannot be denied that its colors, too, are rapidly fading away. To realize what immense progress music has made since the day when it was written, one need but compare it with the "Ocean" Symphony. In the older work the ideas are few and superficial, the forms narrow and artificial, and the spirit too naïvely happy to suit this pessimistic age. In the "Ocean" Symphony the themes and harmonies are of stirring originality and depth, the form broad and unconstrained, and the development of the musical plot, so to say, not so transparent and self-evident as to neutralize all emotion in the listener's breast. From a relative point of view it would be rash to claim such a complete superiority of Rubinstein's over Mozart's symphony. To the generation for which the latter was written its form and contents may have seemed as novel and interesting as the form and contents of Rubinstein's work seem to us; but music as a mode of amusement must not be judged from a relative, but from an absolute point of view. For many of the features which make Rubinstein's symphony the greater work its author is not personally responsible. They are the product and invention of many minds and only assimilated by him. But the features are there, nevertheless, and that is the point to be considered. Mr. Damrosch's orchestra played both these compositions equally well. The free and spontaneous performance of the "Ocean" Symphony—or the five movements of it which were played—clearly revealed the fact that the majority of the musicians have played it under Rubinstein's own inspiring direction. In the Spohr concerto the violin part was played by Master Michael Banner, a pupil of the Cincinnati College of Music, only thirteen years of age. For various reasons we are opposed to the parading in the concert hall of the powers of such youthful prodigies. Appeal is thereby made to emotions and interests not purely musical on the part of the audience, and the boy himself suffers almost invariably from this hothouse method of forcing his talents. The pleasure given by Mr. Banner's playing, however, was so genuine that these objections, for once, were quite driven to the background. His full tone and skilful bowing reflect as much credit on his teachers as the purity of his intonation and intelligence of conception do on his inborn talent. While the manly force and breadth of execution which can only come with age were of course absent in the concerto, there was evident everywhere a maturity of feeling which fully justified the applause bestowed on him. The manner, however, in which this applause was bestowed showed a strange want of intelligence on the part of a certain proportion of the audience. Surely it ought not to be necessary to remind a Steinway Hall audience that a concerto is not an Italian opera, or, in other words, that the orchestral part in a concerto is just as important as the solo part, and should not be spoiled by applause. An English critic congratulated London musicians the other day on the fact that an end was put some time ago to the bad habit of applauding every solo in a concerto and drowning the *tutti* in noise. New York should not be behind London in matters musical.

COBDEN.—II.

The Life of Richard Cobden. By John Morley. London: Chapman & Hall; Boston: Roberts Bros.

COBDEN possessed the rare virtues and shared the special defects which have at all times been found in religious reformers. Of his single-minded zeal for his cause it is hardly necessary to say much, for it is apparent in every word that he spoke and in every act which he did. He was a man of loving and lovable nature; he was tenderly attached to friends and family. But from the moment that he engaged in public affairs, his whole soul was given up to the service of the nation. He pushed aside the claims of business; he neglected (perhaps unduly neglected) his private interests for the public concern. When distracted with the fear of ruin, he bore up with a brave heart for the sake of "the cause." There are few things more touching in biography than the account given, with admirable tact and all due reticence, by Mr. Morley of Cobden's mercantile distress at the very crisis of his political triumph. One thing, and one thing only, in the free-trader's life touches even a deeper chord of human sympathy. Of the death of his son, and all that it meant and involved, one hardly likes even now to speak in what must necessarily be the cold language of writings intended for the public eye. Poignant sorrows, even when necessarily disclosed to the world, have still a character of privacy. Those who wish to understand a side of Cobden's character without which our idea would be most incomplete, should turn to the chapter on the "Death of his Son," in which Mr. Morley displays all the best talents of a biographer in revealing, and still more in not revealing, the tragic aspect of his hero's life; for a career crowned with ample success was, like other lives dedicated to public service, not a career of anything like unalloyed happiness.

"In the last year of Cobden's life, as he and Mrs. Cobden were coming up to London from their home in the country, Mrs. Cobden said to him: 'I sometimes think that, after all the good work that you have done, and in spite of fame and great position, it would have been better for us both if, after you and I married, we had gone to settle in the backwoods of Canada.' And Cobden could only say, after looking for a moment or two with a gaze of mournful preoccupation through the window of the carriage, that he was not sure that what she said was not too true."

Just after the repeal of the corn-laws, Cobden thus writes to a friend:

"I am going into the wilderness to pray for a return of the taste I once possessed for nature and simple, quiet life. Here I am, in one day from Manchester, to the loveliest valley out of paradise. Ten years ago, before I was an agitator, I spent a day or two in this house. Comparing my sensations now with those I then experienced, I feel how much I have lost in winning public fame. The rough tempest has spoilt me for the quiet haven; I fear I shall never be able to cast anchor again. It seems as if some mesmeric hand were on my brain, or I was possessed by an unquiet fiend urging me forward in spite of myself."

These passages tell their own tale. Cobden was assuredly not that "happy man" for whom sages have been searching in vain since the days of Solon and Crœsus. But it were a mistake to fancy that he was a person whom any one could call unhappy. He enjoyed in the fullest measure that buoyancy of spirit, that determined and excessive hopefulness, which was never wanting in any successful reformer. Both from theory and from disposition he was an optimist. The doctrines of free trade rest on the assumption that when men are left free to act in accordance with their obvious interests and their natural dispositions, their conduct will tend to the benefit of the whole of mankind; and Cobden adopted this axiom of his school as the guide not only of his public life but of his private feelings. His creed was himself. It is hardly possible to say whether he adopted his social and economical views because he was by nature an optimist, or whether his optimism, manifest no less in his absurd over-estimate of so-called "moral force" than in his unsatisfactory pecuniary investments, was the result of a philosophy of life based on the teaching of George Combe and confirmed by acquaintance with the phenomena of trade. Temperament was the source of opinion, and the acquired set of opinion confirmed the bias of temperament. In any case, sanguine buoyancy of nature was one of Cobden's special endowments. To hope all things goes a great way toward obtaining all things.

In addition to singleness of purpose and hopefulness of purpose, the preacher of free trade

displayed in all his public action singular capacity for the management of business. This, it will be thought, is a secular virtue, foreign altogether to the qualities to be found among successful religious teachers. But those who think thus take a mistaken view of the qualities generally to be found in men who have organized moral movements. Reformers such as Luther, Calvin, Knox, Wesley, and a score more whose names would occur to any one well versed in ecclesiastical history, were assuredly enthusiasts; but any one who studies their lives will soon perceive that they were persons of great capacity in the management of affairs. Nor is there anything in this to excite surprise. Genius is not a special talent. It is a power which may be turned in any direction. The innovator of genius can bring the force of his nature to bear on all which interests him. He may not feel much interest in the matters which occupy the attention of common men, but in so far as these matters affect his cause they have for him an intense interest. It is little likely that a reformer will make his own fortune, but it is likely that he will bring to the promotion of his reforms the powers and even the talents by which he might have made himself the richest of the servants of Mammon. That Cobden enriched the country by millions at the moment when he was likely to become bankrupt for want of thousands, is one of those idle paradoxes which attract popular imagination and mislead popular judgment. The paradox, such as it is, scarcely deserves the explanation, ingenious and true though it be, provided by Mr. Morley. Cobden gave the keenest attention to the conduct of the Anti-Corn-Law League. He could not at the same time pay any careful attention to the business of his own firm. The League grew and prospered; the firm became all but insolvent. The only point which concerns critics is to avoid the mistake of fancying that the man who managed with success the complicated affairs of the League had not the gifts of a first-rate man of business.

Another quality which in the case of Cobden, as of many other reformers, specially fitted the man for his work was the audacity of ignorance. Nature had given Cobden an active and inquiring intellect. His own energy had procured for him an education which was, like most things that a person procures for himself, of far more value than the training to be purchased at schools and universities. But it is no discredit to Cobden to say plainly that, if he knew many things of practical importance which were not understood by Palmerston or Russell, he lacked the width of knowledge which can only be acquired by complete training. Nor is there any absurdity in maintaining that the defects of Cobden's education contributed greatly to the success of Cobden's political career. He never tasted the most dangerous knowledge of all kinds of knowledge—the knowledge of his own ignorance. On the other hand, the truths which he did know, being acquired by his own efforts, had a force, a reality, a vividness, a meaning to him which no facts ever have to a student who has learned them at second hand from the mouth of others. Of the absolute truth of the principles which he had worked out more or less for himself, Cobden never doubted. Every additional fact which told in their favor was, as the saying goes, "grist to his mill"; and every fact or supposed fact which he picked up he at once adduced in support of foregone conclusions. Cobden, said a friend, always spoke "at the top of his knowledge." The expression which Mr. Morley interprets as the language of simple eulogy may strike others as a happy specimen of the sarcasms proper to candid friendship. If Cobden had not spoken "at the top of his knowledge"—or, in other words, talked with authority of matters which he did not understand—he would never have afforded sport to the Philistines by his reference to the "historical books of Thucydides." But had elaborate intellectual cultivation made it impossible for a man so honest to speak with assurance on the basis of inadequate knowledge, he might, it is likely enough, have never spoken at all truths which required to be driven home to the understandings of the English people. Honest audacity, even if aided by ignorance, is audacity still, and has all the influence which rightly falls to every kind of bravery. It were pedantry to regret that Cobden spoke "at the top of his knowledge" and sometimes a little beyond it. One may easily pardon defects in a sermon if the preacher vividly enforces the neglected truths of a good text.

No reformer can, from the nature of things, be a fair critic of the "world" which it is his mission to convert, and Cobden suffered from the moral disabilities inherent in his position. He was by nature fair and candid. When brought face to face, for example, with education at Oxford, he could recognize the fact that to do well in the University examinations required a greater effort than he and his friends (who no doubt conceived all the inhabitants of the colleges to be soaked in "port wine and prejudice") had believed. He was one also who, on grounds both of principle and of expediency, tried to use moderate language. But, for all this, he was in his whole attitude toward such a man as Palmerston constantly unjust. Palmerston was, both in his vices and in his virtues, the very incarnation of the man of the world; and Cobden, if he did not hate Palmerston himself, assuredly did detest the whole spirit of which Palmerston was the embodiment. For Lord Russell he could feel a cold respect. For Peel he entertained, even in the midst of conflict, that kind of antipathy which may very easily be turned to admiration. With Gladstone he probably felt a good deal of sympathy. For Palmerston, and all that pertained to Palmerston, he never had a good word, and, with creditable sagacity and firmness, declined to make part, under any circumstances whatever, of a Palmerstonian Cabinet. To settle the rights of the long controversy between him and the representative of a spirited foreign policy is not the purpose of this article. Mr. Morley is, unconsciously no doubt, unfair in his strictures on Palmerston. Even were every censure which he passes on a very remarkable and patriotic statesman sound, we should still complain that Mr. Morley omits to lay any emphasis whatever on the points of Palmerston's policy in which he was as much in the right as the Manchester school were in the wrong. All that need here be noted is, that Cobden's quarrel with Palmerston was in its essentials the old and never-ending feud between the reformer and the man of the world, between the innovator who tries to change the principles of society, and the man who takes life as it is. The controversy is one which, in one form or another, will endure for ever. Each party seems to himself and his followers to be exclusively in the right. A final judgment on the real issues between them can be pronounced by history alone; and even this judgment will not be really conclusive, since the point in dispute is the worth of different views of life—one might almost say of different virtues—and on this matter the verdict of one individual and of one generation will differ from that of another as long as the world endures.

"A character like that of Cobden," writes Mr. Morley, "calls for no elaborate attempt at analysis. In motive and purpose he was the most candid and direct of mankind." This statement, if properly understood, is strictly true. It is further as clear as day that when Cobden chose to speak out he did not fear the face of man. But we find it impossible to study the facts put before the world by Mr. Morley without seeing that Cobden, like other innovators, was endowed with a kind of practical wisdom which was hardly akin to directness and simplicity of action. Like all propagators of a faith, he was eager to gain disciples and to spread his creed. He practised occasionally the possibly legitimate arts by which preachers have in all ages tried to aid the cause of truth. Can any one, for example, think that Cobden's position in relation to Kossuth was a perfectly natural or clear position? The Hungarian came to England filled with indignation at the wrong done to his country, and burning with hatred of Russia. It cannot at this time of day be doubted that Kossuth would, if he had been able, have induced England and other free countries to intervene on behalf of Hungary. There are those who still believe (we incline to think mistakenly) that English opinion would have supported armed intervention on behalf of the Hungarians. However this may have been, one of the inherent difficulties in the way of any such policy was the fanatical adherence of the Manchester school to the principle of non-intervention. We find it a little difficult to see how Cobden could, under these circumstances, take Kossuth in any sense by the hand. Yet somehow or other he did to a certain extent keep up a friendly relation with the Hungarian patriot. They both were, it is true, displeased with the conduct of Palmerston; but the man who detested the English Foreign Secretary because he occasionally and fitfully intervened in the affairs of the Continent, was hardly the natural ally of the exile whose essential quarrel with Palmerston was that he did not at once use the sword of England on behalf of Hungarian freedom. Cobden's attitude is partly explained by the extraordinary delusion—it can be called by no other name—that if England acted on the principle of non-intervention, and got America to adopt the same course, "the word 'stop' addressed to Russia would have the force of a thousand cannons." Still, we confess to wishing that the apostle of free trade had left Kossuth and the question of Hungary entirely alone.

Cobden was probably at this, as certainly as other crises of his career, hampered by the falseness of his own position. He was the recognized head of the English democracy. He was termed by opponents a democrat, a leveller, a communist; the *Times* accused him of advocating an agrarian law. In matter of fact he was not a democrat, for he attached very little importance to popular government except as a means of checking the errors of an aristocracy; he was not even a Liberal, if by that name be meant a man to whom the maintenance of liberty was of itself, as to Mill, the main end of government. He might, indeed, be called a Radical, as from one point of view his economical reforms went to the root, in his opinion at any rate, of the evils with which English society was cursed. But he was, before everything else, an economist. Forms of government, national independence, political liberty, were in his view important mainly because of the security which they provided, or might provide, for good government—that is, government in conformity with the laws of political economy. "I very much suspect," he writes, "that at present for the great mass of the people Prussia possesses the best government in Europe. I would gladly give up my taste for talking politics to secure such a state of things in England." He is convinced that the English constitution is a "great juggle." It is "a thing of monopolies and churchcraft and sinecures,

armorial hocus-pocus, primogeniture and pageantry. The government of Prussia is the mildest phase in which absolutism ever presented itself." This was written in 1838. There is no reason to think that Cobden's opinion ever substantially changed. With perfect consistency he showed little enthusiasm for the plans of political reform which occupied the mind of John Bright. He distrusted rightly enough the bad political economy of the workingman. He does not show any sign of sympathizing with movements in favor of national independence. In all this there is, we frankly admit, something to admire even by those who do not agree with the dogmas of the peace party. It is impossible not to acknowledge that Cobden had intellectually a firmer grasp of the doctrines in which he believed than have most men whose life is spent in political agitation. But it is also impossible not to perceive that his position was to a certain extent false. He did not share the principles or the prejudices of ordinary democrats. At the time of the Crimean War the fact became apparent that Palmerston, aristocrat as he was, more nearly represented the English democracy than did the champion of free trade. A false position may lead even the most candid of men, not into dishonesty, of which Cobden was utterly incapable, but into calculated reticence, or at least into the awkward keeping back of points which might excite division between himself and his followers.

Cobden's enthusiasm for his cause, and his leniency toward the faults of beneficent absolutism, are closely connected with the most dubious moral feature of his policy. He exhibits a certain moral indifference in the choice of means for promoting economic reforms. His negotiations with Louis Napoleon were in themselves inconsistent with zeal for liberty. But it is difficult to believe that any man who had shared the burning indignation of Liberals in every country at the *Coup d'état*, and the despotism which it founded, could have voluntarily undertaken the task of opening the eyes of Louis Napoleon to economic truth. To Cobden the French Emperor was an interesting convert, who was able beyond any man living to promote the progress of the good cause. Cobden may have been right in holding that the service to mankind of promoting free trade and good will between France and England was sufficient to justify his friendly relations with the French despot. Still, there will always be found persons to regret that the high principle of Mr. Cobden and the worldly sagacity of Lord Palmerston should, curiously enough, have led two statesmen who agreed in nothing else, to agree in looking with toleration on the blood-stained author of the crime of the 2d of December.

HOWORTH'S HISTORY OF THE MONGOLS.

History of the Mongols, from the Ninth to the Nineteenth Century. By Henry H. Howorth, F.S.A. London: Longmans, Green & Co. 3 vols. 8vo.

It has often been remarked that the age of nautical discovery has passed; that in the state of modern geography the career of a Columbus or a Drake is no longer possible, and the only outlet for adventurous spirits is in the dangers and hardships of polar voyages. But the passion and the field for intellectual exploration are apparently illimitable, and each new achievement only furnishes a fresh stimulus to ambition. The most obvious illustrations of this are in the domain of physical science; but it is also true of a branch of knowledge which is nearly akin to geographical discovery—the history of races and languages. It is said that fifty years ago there was hardly a scholar in Europe who could read the Sanskrit books of the early Aryans; now many of them have been translated and published in English, and the study has had very notable philological results. A monument of industry and patience which might excite the envy even of German students is furnished in the work before us. Three large volumes, handsomely printed (though in small type), and with wide margins, comprising in all some 1,800 pages, are devoted to a history, mainly genealogical, of the tribes of central Asia, wrought out with a zeal and minuteness almost equal to that of a member of a New England antiquarian society, tracing up an ancestry whose whole title to interest lies in the fact of their existence.

The first half of the first volume comprises the erection of the Mongol Empire under Genghis (or, as we are now told to call him, Jingis) Khan in the twelfth century. Our author tries hard to endow his hero with some romantic personal qualities, but his narration of facts bars any other conclusion than that, apart from intellectual qualities, this hero was an unmitigated savage. Great qualities of some kind he must have had, since, as Mr. Howorth says, "he may fairly claim to have conquered the greatest area of the world's surface that was ever subdued by one hand"; while it is no less a testimony to his power of administrative organization that we find one of his successors, a hundred years after, ruling over "the largest empire that was ever controlled by one man." The origin of this great structure was in an obscure tribe living between the sources of the rivers Amoor and Yenisei, in about fifty degrees of north latitude. They were pure nomads, living by hunting and cattle-breeding, without any fixed pastures, and wandering every year in search of water and grass. Their food consisted of flesh and sour milk. Here, about the year 1160, was born Temudjin, (signifying "iron" or "steel," his sobriquet of Jingis, or the "Mighty" Khan being assumed only after he was forty years old), of a royal stock, which Mr. Howorth discusses with elaborate detail. His early career was that of thousands of adventurers in Asia—the assertion of his rights by the strong hand; and having subdued the neighboring tribes, he expanded his operations, till during the last twenty-five years of his life, covering the first quarter of the thirteenth century, his armies had overrun China as far as the Yellow River; had reduced the peninsula of Corea to at least tributary subjection; had subdued all central and southern Asia as far as the Indus and the Persian Gulf, and had swept over northern Asia and Europe as far as the river Dnieper in Russia.

These armies were composed of soldiers who could live anywhere where their horses and cattle could find pasture. On distant expeditions they took no gear except two leathern bottles for milk, a little earthen pot to cook their meat in, and a little tent to shelter them from the rain; and, in cases of great urgency, they would ride ten days on end without lighting a fire or taking a meal. "On such occasions," according to Marco Polo, confirmed by the Persian historians, "they would sustain themselves on the blood of their horses, opening a vein and letting the blood jet into their mouths, drinking till they had enough, and then stanching it." With these hardy habits, and controlled by the severe discipline of Jingis, these hordes were irresistible. Their conquering march through the rich countries of southern Asia must have been as romantic as those of the Crusaders from Europe, and of the Spaniards in Mexico. But it was more destructive than either. "The creed of Jingis was to sweep away all cities as the haunts of slaves and luxury, that his herds might freely feed upon grass whose green was free from dusty feet." It is frightful to read that from 1211 to 1223 18,470,000 human beings perished in China and Tangut alone at the hands of this man and his followers. Mr. Howorth philosophizes that the great scourges of God—Sesostris, Sennacherib, Darius, Alexander, Cæsar, Attila, Timur, Bonaparte—recur at intervals to purge the world of the diseased and the decaying, the weak and the false, the fool and the knave. But if Divine Providence undertook to renovate the world, it seems, in this case at least, to have made but a very poor job of it. The countries thus ravaged were rich and prosperous. Balkh, Samarcand, Khiva, and Bokhara were great cities, with large wealth, extensive commerce, and beautiful gardens. What the Mongols did for these their successors the Turks did for such cities as Bagdad, Aleppo, and Damascus. And what has come out of it? If the state of things destroyed was worse than what exists in these countries in the nineteenth century, it must have been very bad indeed.

After the death of Jingis in August, 1227, the work was continued by his numerous sons and relatives. His nephew, Batu, carried his arms over nearly all Russia, all of Hungary as far as Pesth and south to the Adriatic, very much on the same principles which had been so effective in Asia. Fortunately for mankind, the Mongols made no permanent settlement in Europe, but as internal quarrels broke out in the empire they retired again into Asia. The conquest of China was also completed about the same time. The empire of Kubhilai Khan, who died in 1297, included, under more or less direct rule, China, Corea, Tibet, Tung-King, Cochin-China, a great portion of India beyond the Ganges, the Turkish and Siberian realms from the Eastern Sea to the Dnieper, while the Ilkhans of Persia (whose empire bordered on the Mediterranean and the Greek empire) were his feudatories. After this time the Mongol rule began to decline. Luxury and effeminacy did their work as usual, and by the end of the fourteenth century the invaders had been driven out of China by the founders of the Ming dynasty, while their other dominions in Asia had been divided among various claimants.

The last half of the first volume is devoted to an analysis of the numerous tribes which made up the Mongol empire—a mass of intricate detail which we imagine few readers will have the patience to master. That Mr. Howorth has had the patience to write it shows how absorbing becomes the pursuit of such special investigations, and the terms of warm friendship and admiration in which he speaks of his colaborers in the same field show also what a close bond unites those who give themselves up to studies so far from the general line of inquiry.

The second and third volumes are devoted to the rulers and tribes in the countries surrounding the Caspian and those northward to the borders of Russia and the Arctic Ocean. It is curious to note how the traditions of government are modified by circumstances. In Mohammedan, and indeed in most Asiatic countries, the succession to a crown does not fall to the oldest son, but to the oldest male member of the family—brother or uncle as it may be. The political reason seems to be that a long minority with a regency is almost impracticable in the midst of lawlessness and turbulence: it is necessary that a grown and strong man should take the reins at once. But then, where difference of age (it may be slight) is the only determining element, there is a constant tendency to secure or establish a claim by the murder of all other possible competitors. The obvious inconveniences of this course lead, with the progress of civilization, to the establishment in European countries of a definite law of succession in favor of the

eldest son or child, and the rest of the family uphold this as the means of securing the best which they can obtain by peaceful methods.

The most interesting feature of these last volumes is the gradual development of the relations of the Asiatic tribes to Russia. It has been remarked that after the death of Jingis, his nephew Batu, in the middle of the thirteenth century, overran most of Russia, and penetrated to the Danube. We may be pardoned for the repetition, as Mr. Howorth, with each tribe, goes back for centuries and makes repeated reference to events already narrated, in a way which is sadly detrimental to the clearness of the story. The Mongol success was owing in a great measure to the principle which is so much in vogue in modern Europe, universal service. Every man was a horseman, and therefore a soldier, and all were subjected to an iron discipline. In Russia, on the other hand, the priests and merchants and slaves had so multiplied that the military class were in a small minority. The feeble militia which was assembled could not stand before the Tartar cavalry. Mr. Howorth observes again, after a description of the Tartar weapons, that they were far superior to anything then known in Europe. The history of warfare is full of examples of a transfer of dominion effected almost entirely by new inventions and improvements of the appliances of war, so that modern Europe, with its spirit of subjective analysis, spends its years of peace in scientific research applied to the implements of attack and defence. The forests and morasses of central Russia had no attractions for pastoral nomads, and so, after devastating the country in a frightful manner, the Mongols retired to the regions to the south and east. They left behind them, however, commissaries and tax-gatherers, who drained the vitals of the land. Two centuries of misery and degradation reduced the country to the lowest ebb, and then a revival began to take place, under the Czars Ivan III. and IV., the latter surnamed the Terrible. It is a striking fact of history that nearly at the same time all over Europe a remedy for the anarchy and chaos of feudalism was sought for in a centralized despotism. Henry VII. and VIII. of England, Richelieu in France, Ferdinand and Isabella in Spain, the Ivans in Russia, were all comprised in a period of little more than a century. It was the want of a corresponding power which has kept Germany and Italy in a state of disintegration down to our time; and the former may be said, *mutatis mutandis*, to be going through what other parts of Europe experienced three centuries ago. The work which the two Ivans, in the depressed state of the nation, did among the boyars of Russia had much more fatal effects upon municipal and social freedom than corresponding events elsewhere. To quote Mr. Howorth: "Serfdom was introduced, the peasant was tied down to the land, and the whole nation, by an ingenious hierarchy of officials, was made a mere machine, of which the key was in the hands of one irresponsible person, and during one long reign in the hands of a madman and a monster." None the less, the concentration of national strength worked out results here as elsewhere, and as the Tartar powers fell to decay the Western giant was growing in strength, till in the nineteenth century we find the situation completely reversed, and Russia invading the Tartars, as in the thirteenth they invaded her, but with a comparative mildness and beneficence which marks the change that has come over the world.

The third volume has a very interesting account of the first expedition which led to the conquest of Siberia. It was organized in 1579, by the Stroganoffs, a family of nobles on the frontier, and led by Yermak Timoveef, hetman of a body of Don Cossacks who had fled from Russian punishment of their robberies. Five years of the severest hardships ended in defeat, but paved the way for future enterprises. We have an account also of the modern city of Bokhara, associated for Anglo-Indian readers with the names of Stoddart, Conolly, and Wolff; and also of Khiva, captured by the Russian General Kaufmann in 1870, when General Skobeleff, since so famous, first came into notice.

It is hardly to be expected that a writer absorbed in Asiatic genealogies should be very sensitive to purity of English style, and Mr. Howorth's shows traces of the fatigue which the greatest enthusiast must experience in such a labyrinth. To a reader struggling in a sea of barbarous nomenclature it is an additional burden to find himself engaged in constant chase of an antecedent for the pronoun "he." Mr. Howorth modestly disclaims a position among the brilliant writers who have made history so fascinating to the general reader, being content with that of a collector of materials; but, granting that a recasting of these materials in a more narrative form might make them easier reading, he is certainly entitled to the credit of what principally gives history any real value, indefatigable research.

MARTIN'S 'HOW TO DISSECT A CHELONIAN.'

Handbook of Vertebrate Dissection. Part 1. How to Dissect a Chelonian. By H. Newell Martin and W. A. Moale. New York: Macmillan & Co. 12mo, pp. 94, 1 plate. 1881.

Dr. Martin was already known to American naturalists as the collaborator of Prof. Huxley in the preparation of the 'Elementary Biology,' which, although slightly antedated by Morrell and Rolleston, may justly be regarded as the real prototype of what we hope may become a long series of practical dissections of representative and peculiar organic forms. Theoretically, neither the frog, which is treated in the 'Biology,' nor the turtle, which is the subject of the present volume, is best suited for the exemplification of the vertebrate structure in general, or of the amphibian or reptilian modifications. Chelonians are a very peculiar and aberrant group, while frogs and toads are in some respects as decided morphological monstrosities as are the tailless apes and man himself. Practically, however, there is much to be said in favor of the generally distributed and easily obtained, preserved and dissected frog as an introduction to vertebrate anatomy, and our author explains the publication of the 'Chelonian Dissection' prior to those of the lizard, bony and cartilaginous fishes, tailed amphibian, rat, and pigeon, which he intends to prepare, upon the ground that the difficulties presented by the turtle led him first to put the directions into shape for his students. In passing, let us express the hope that the series may be made to embrace the amphioxus and lamprey eel, and that Dr. Martin may be led to substitute for the pigeon and the rat the more readily obtainable common fowl, and the rabbit or the cat. An additional reason for the early publication of the present part is the fact that "the great persistence of vitality in its various organs after general death of the animal makes it extremely promising for physiological experiment." So true is this observation that, although the volume professes to deal with merely structural considerations, we wish that, in addition to noting the action of the heart, which often beats long after death, the student were advised to pinch the muscles and nerves, or stimulate them with electricity, so as to obtain an elementary yet very distinct conception of some of the fundamental properties of those tissues. The action of the cilia also might be observed if some method of killing the turtle other than by chloroform were recommended.

The foregoing reference to the manner of killing the animal suggests the first criticism upon the practical portion of the work. On page 6 the student is told to "insert a tenaculum into the soft parts beneath the head, and draw out the latter; force open the mouth and direct a pipette, containing about a teaspoonful of chloroform, into the opening of the glottis, which will be found in an elevation at the base of the tongue; then blow the chloroform in to the lungs." This may be appropriate to the small and pacific "Red-bellied Slider Terrapin," but would our authors advise the same liberties to be taken (or rather undertaken) with a "Snapper," with the soft-shelled turtle which is so common at the West, or with the giant "Loggerhead" or "Gallapagos"?

Upon the following point criticism applies with equal force to nearly all published directions for anatomical manipulation: there is no list of the various instruments and materials required. Indeed, excepting the guarded bristle and the sharp knife for dividing the brain, the *armamentarium anatomicum* is assumed to be complete and appropriate; yet it is notorious that the average dissecting-case of the medical schools affords an altogether inadequate outfit for the nicer kinds of zoötomical work. Coming to details, nothing is said of injecting the vessels, which is certainly desirable upon at least one of the several specimens which each student should examine; there is no hint as to ligating the intestines before dividing them; "strong" and "dilute" alcohol are mentioned without definite intimation as to the per cent.; and *macerate* is employed in at least an ambiguous sense. The volume is advertised as "with illustrations," which consist, however, of four scarcely large enough figures of as many aspects of the skull. Since our authors determined to depart from the much to be regretted and wholly unaccounted-for plan of the 'Elementary Biology,' and the 'Practical Physiology' of Foster and Langley, most users of the present work will certainly wish that the illustrations had been multiplied; that the figures of the skull had been collocated with the description thereof, instead of forming a very unattractive frontispiece; that the numbers designating the bones had been replaced by the names themselves, or by intelligible abbreviations; and that references to the figures had been given in the text.

Most of the more important organs are mentioned, and our authors were probably wise in not describing or even enumerating each individual muscle, vessel, and nerve. Yet (especially in view of the detailed and apparently accurate account of the caudal portion of the sympathetic system) one is surprised at the absence of allusion to the interesting pair of lymphatic hearts at the root of the tail. The brain is allowed a fair share of space, but how can a student gain any clear or accurate conception of its general plan of arrangement without an intimation of the existence of a *lamina terminalis*? Since merely an acquaintance with human osteology is assumed as a prerequisite to such work as is here described, it might be expected either that each of the softer parts would be designated by a single name in all places, or that the synonymy would be indicated, at least in the Index. Yet *glottis* (p. 6) is not included in the Index, and in other parts of the work it is replaced by the ponderous and unfamiliar term *aditus laryngis*, with no intimation that the two refer to the same thing. In a greater or less degree, the same remark applies to the words *gullet* and *œsophagus*, *trachea* and *wind-pipe*,

chiasma and *optic commissure*, *thalami* and *thalamencephalon*, *optic lobes*, *midbrain*, and *mesencephalon*, *cardia* and *cardiac end of the stomach*. The Index, in fact, is simply verbal, and one must know all the names by which an organ might be called in order to ascertain where it is treated.

It is gratifying to observe the general, though not uniform, use of such exact toponomical terms as *dorsal* and *ventral* in place of the utterly vague *upper* and *lower*, *front* and *back*. Our authors, however, still employ the almost equally objectionable words *anterior* and *posterior* rather than the explicit *cephalic* and *caudal*, which have been suggested in the last edition of Quain's 'Anatomy,' and adopted by some writers. Notwithstanding an evident intention of accuracy, there are some pretty vague descriptions, as, *e. g.*, 206 *f*, and the statement in 209 that the "lateral ventricles" are "under their respective prosencephalic lobes." As in the other practical works which have been mentioned, excepting that of Rolleston, no references are given to compendiums of Comparative Anatomy, or to the papers of original observers of chelonian structure. It may be a fair question as to the desirability of very copious references; yet we think it only just both to the investigators and to the students that the latter should be informed by whom knowledge has been advanced in any particular direction. In the present case it would certainly not have taken much space to name the works and papers of the elder Agassiz, Bojanus, Brücke, Parker, and H. S. Williams. Despite the deficiencies which have been pointed out, the present volume will prove very helpful and satisfactory to any who will employ it (as it is intended to be used) specimen and scalpel in hand.

FREEMAN'S SUBJECT AND NEIGHBOR LANDS OF VENICE.

Sketches from the Subject and Neighbour Lands of Venice. By Edward A. Freeman, D.C.L., LL.D., Honorary Fellow of Trinity College, Oxford. With illustrations. London and New York: Macmillan & Co. 1881. Small 8vo, pp. 395.

UNDER the above title Mr. Freeman has arranged a series of short historical papers, some of which are entirely new, and many of which have been recast from articles which appeared five or six years ago in the *Pall Mall Gazette* and the *Saturday Review*. The present collection is a volume similar in form, content, and illustration to the 'Historical and Architectural Studies,' published in 1876. Mr. Freeman regards the above 'Sketches' as a companion and sequel to the 'Studies.' The latter related chiefly to Italian cities; the former relate more especially to the cities on the northern and eastern shores of the Adriatic. With Venice as a kind of polar star, Mr. Freeman has voyaged up and down the Dalmatian coast and along the western shores of Greece, visiting many points of historic interest; and his present work is a kind of historical Odyssey, in twenty-six books, the personal observations of an old historian of many devices, who, returning homeward by devious ways from historical warfare with the Turks, has lately found a modern Ithaca and a new England in the westward-drifting island of Atlantis.

The chief interest of Mr. Freeman's book attaches itself to the historic continuity of ancient municipal life in those lands which fringe the eastern shores of the Adriatic. Cities, like nations, possess a kind of organic life, and reproduce their kind. They even renew their strength, and sometimes, apparently, their youth. As Greek and Roman nationalities have endured to this day, reinvigorated with infusions of Slavic and Teutonic blood, so many Greek and Roman cities, grafted with fresh institutions, have preserved their old municipal stock; their historic soil and environment; their monuments and traditions; and, in some cases, their very names. Through all the storms of barbaric invasion, and amid the very wrecks of Roman, Gothic, Byzantine, Norman, Venetian, and Turkish dominion, certain of these ancient municipalities, like Zara and Durazzo, have stood forth like historical lighthouses, illuminating to some extent the darkness which settled down upon the borders of southeastern Europe. Some ancient cities, like Aquileia and Salona, have handed on their light to other cities standing by, like Venice and Spalato, as did runners in the old Grecian torch-race, or as Grecian colonies used to bear with them fire taken from the altar of their native city to kindle municipal life upon distant shores. Many ancient municipal beacons have gone out entirely, but some are now shining on with renewed brightness—for example, the haven of Pola, which shelters to-day the growing navy of Austria as it once sheltered the ships of Old and New Rome.

Among the most interesting of Mr. Freeman's municipal sketches are those of Ragusa and Spalato. Ragusa, "the city of argosies," is the daughter of Epidauros, a Grecian colony originally planted upon a peninsula hill, with a double harbor, like Epidamnos (the Roman Dyrrhachium, modern Durazzo), which was the daughter of the elder Korkyra, and the granddaughter of Corinth. The site of the ancient Epidauros is marked by a village known as Ragusa Vecchia, the old municipal home having curiously appropriated the name and fame of the city which went forth from out of it. It is as though England should one day assume the name of Old America. Old Ragusa, like Salona, mother-city of Spalato, fell a prey to Slavonic invaders, and its inhabitants founded a city of refuge upon "a peninsula of hills and rocks and inlets, offering a bold front to the full force of the open sea." There seems to be a principle of heredity in the very choice men make of ground whereon to build a city. The Greeks planted their first towns upon hills remote from the sea. Gradually these "hill-forts" crept out upon promontories, and their long walls reached down to harbors on either hand. The choice of a peninsula hill, or of land with easy access to the sea, finally became as much an instinct with Greek colonists as the building of nests upon rocky cliffs is with certain sea-birds. But the original idea of an acropolis was rarely, if ever, abandoned. Ragusa itself was simply a hill-fort brought down to the seaside. Mr. Freeman's description of this transplanted Greek colony, now Slavic in speech and culture, but still Hellenic in its traditions of local freedom, is one of the most felicitous of all his sketches:

"Ragusa lies at the foot of the mountains, and the crest of the mountains was her boundary. She has always sat on a little ledge of Christendom, with a measureless background of barbarism behind her. Those hills, the slopes of which begin in the streets of the city, once fenced in a ledge of Hellenic land from the native barbarians of Illyricum; then they fenced in a ledge of Roman land from the Slavonic invader; lastly, when we first looked on them, when we first crossed them, they still fenced in a ledge of Christian land from the dominion of the Infidel."

And herein lies the chief glory of Ragusa as contrasted with other important cities on the Dalmatian coast.

"We draw near to Zara, and say, 'There is the city that was stormed by the Crusaders.' We draw near to Spalato; we see the palace and the campanile, and round the palace and campanile everything gathers. We draw near to Ragusa; the eye is struck by no such prominent object, the memory seizes on no such prominent fact. But there is Ragusa; there is the one spot along that whole coast from the Croatian border to Cape Tainaros itself which never came under the dominion of the Venetian or of the Turk."

If Ragusa is interesting as an historical survival of the old Greek municipal spirit, though downtrodden by Napoleon and the "emperors" of Austria, Spalato is still more interesting as a survival of municipal Rome, which, from a hill-fort on the Palatine, went forth with widening power until it became the *civitas mundi*, *urbs et orbis*. Spalato, like Rome, a city of refuge, likewise developed from the abode of its founder, although the palace of Diocletian, the first building at Spalato, was a developed type of the abode of the Cæsars, then crowning the Palatine hill and representing Rome as did the hill-fort of its early kings. Diocletian was the first of Roman emperors to establish a new capital. He was the archetype of Constantine, who built a New Rome upon the Bosphorus. He was the forerunner of Theodosius, who finally divided the Empire into its eastern and western branches; for Diocletian gave the world the idea of two Augusti and two Cæsares, ruling in eastern and western capitals, at Nikomedeia, Milan, Trier, and York. All three rulers sprang from the region of Illyria, and to this region Diocletian, the ruling spirit, finally returned, and built himself a stately palace near Salona and his old home, where, having retired from imperial office, he showed the world that a Roman emperor could conquer himself, as he had conquered the old imperial city, by asserting the principle, *ubi Cæsar, ibi Roma*.

Mr. Freeman regards Spalato as the most marked and memorable spot in the whole course of his Dalmatian journeyings. He says it is a place thoroughly unhackneyed and as yet uninvaded by British tourists. He first visited Spalato in 1875, and his first impressions were those of unbounded enthusiasm. The visit was "the accomplishment of a thirty years' yearning after the architectural wonders of Spalato." It was chiefly this monumental city, described many years ago for art-history (see Kugler, 'Kunstgeschichte,' i., 226) by an Englishman named Adam, in an illustrated work on the 'Ruins of the Palace of the Emperor Diocletian,' that first attracted Mr. Freeman to the Dalmatian coast—that old border-land of rival empires and rival churches. And to this city of Spalato Mr. Freeman has returned again and again. In a sketch entitled "Spalato Revisited" he tempers somewhat his first enthusiasm about "the house which became a city," admitting that the name Spalato is not derived from the Latin *Palatium;* but he holds firmly to his main position that Diocletian's palace represents the greatest advance ever made in the art of building, for it was "the beginning of all consistent arched architecture—Romanesque, Gothic, or any other." This wonderful advance consisted in the simple expedient of rearing the Roman round arch directly from the capital of the Grecian column, without the employment of entablature, which had long prevented the perfect organic unity of two classic and representative types. Until the erection of the Baths of Diocletian at Rome, and of his palace at Spalato, Grecian columns had served no real purpose in Roman architecture except that of mural ornamentation. They had been beautiful masks for ugly walls. Now, however, we find them restored to actual use in upholding the mural superstructure. And thus began that wonderful development-process of modern architecture—Basilican churches like St. John Lateran and St. Paul's without the walls; Romanesque ca-

thedrals like that at Pisa and those along the Rhine; so-called Gothic architecture, which is but the pointed Saracenic arch made to spring directly from the head of the column, as does the Roman arch in Diocletian's palace. "All Romanesque and Gothic architecture was, like another Athene, in embryo in the brain of Jovius or his architect," says Freeman in an earlier paper on "Diocletian's Place in Architectural History" ('Historical Essays,' Third Series), which should be reread in connection with these new sketches of "Spalato" and "Spalato Revisited."

One of the most striking characteristics of Mr. Freeman's method of treating historical subjects is the habit of suggesting comparisons. He is ever on the alert to note points of resemblance and points of difference. The palace of Diocletian, "the main object and centre of all historical and architectural inquiries on the Dalmatian coast," suggests to his mind a Roman military camp, a *chester*, because of the vast original circuit of the palace and its outlying quarters for soldiery, its four gates and four streets. The great inner court of the palace, with its arcades yet standing, appears to him the *piazza* or public square of Spalato. The Venetian *loggia* of this town, the lower story of the Ducal Palace of Venice, and the pillared space below the civic palace of Udine, all remind him of English town-halls and market-houses, which are often built upon open arcades, beneath which is a sheltered place for traffic, while town affairs and local courts are carried on in the rooms above. "Enlarge and enrich a building of t[illegible] and we come by easy steps to the pala[illegible] and to the palace of Venice." At Ragusa Freeman discovers a town-hall which is a fair counterpart to that at Venice, although he regards the Ragusan arcade as much finer than the Venetian. An ancient knocker upon a side-door of the court of the cathedral at Ragusa is "a worthy fellow of the great one at Durham." At Treviso, which was the first acquisition of Venice upon the mainland of Italy, the numerous streams, canals, and bridges call up the memory of its mistress. Everywhere in his travels he is quick to observe traces of Venetian likeness or of Venetian influence. Curzola, "true child of Venice, knows neither horse nor carriage." Cattaro attracts him by its graceful little scraps of Venetian architecture. In fact, all Venetian towns beyond the Adriatic seem to him in some sort to reproduce their mistress.

Very early in this volume Mr. Freeman calls attention to the fact that the Lombards had their *Eastrice*, corresponding to the Austrasia of the Frankish kingdom and to the *Ostmark* (afterward *Oesterreich*) of the Frankish empire. But throughout the whole book extends the implied parallel between the East and the West, between Austria and Turkey, between the powers of Europe and of Asia. In reading the story of those little municipalities which dot the borderland between the old Eastern and Western empires, we are continually reminded of the survival of historic relations and of the existence of an unsolved problem—the "Eastern Question"—which is truly "eternal." Mr. Freeman's suggestive words as to a possible revival of the Eastern Question at no distant day assume a fresh interest in the light of the recent rebellion in the Balkan peninsula against the attempt of Austria to introduce her militia system in the provinces of Bosnia and Herzegovina, which, by the Berlin treaty, she was authorized only to "administer." These provinces and the border districts of Dalmatia are now in revolt. Mr. Freeman has been among the mountaineers of the latter region, and has learned something of the Swiss spirit of independence which reigns among the men of the Bocche di Cattaro. In 1869 Austria endeavored to crush this determined people and their ancient rights, as she once tried to crush the Swiss Confederates at Morgarten and Sempach, and with much the same results. An army of Austrian troops was hurled back from the Bocchese Highlands. In village-inns [illegible] region Mr. Freeman saw rude pictures [illegible] the triumph. He says: "People still [illegible] about the mythical exploits of Tell, but hardly any one has heard of this little piece of successful resistance to oppression done only twelve years back." It remains to be seen what success will attend Austria's present invasion of mountain fastnesses. Mr. Arthur Evans, the son-in-law of Mr. Freeman, visited the Bocchese insurgents a few weeks ago when the rebellion was brewing, and in a letter to the *Manchester Guardian*, December 4, prophesied a general uprising of the mountaineers in the Bosnian and Herzegovinian Alps, and a desperate resistance to service in the Austrian *Landwehr*.

C F Bickford 280 27 82

Christopher Columbus (1440–1506). The first American citizen (by adoption). [Lives of American Worthies.] By W. L. Alden. New York: Henry Holt & Co. 1881. Pp. 287.

If it is worth while to write a comic biography of Columbus, Mr. Alden's is certainly very well done. It is sprightly and entertaining, and affords agreeable amusement for an odd five minutes. Moreover, it must be confessed that there are incidents in the life of Columbus which diminish the regret that one feels at seeing a man of the really highest type made the butt of ridicule. Nothing can justify, for example, giving over the character and career of Washington to be made sport of by the author of 'Helen's Babies.' We are told in the announcement of the series that "the truth of history is adhered to with most uncompromising rigidity." Precisely what this means we do not know. Of course the main facts in the life of Columbus are faithfully stated; on the other hand, there are numerous incidents which are fictitious upon the face of them, being introduced merely in order to give a touch of the ludicrous to the narrative; and there is certainly no absolute dividing line between these to distinguish the truthful from the comical. The following passage about Prester John (p. 31) will give a good notion of Mr. Alden's best style:

"The wonderful credulity of the age is shown by his belief in a Presbyterian King whom no European had ever seen, and in a kingdom of which no man knew the situation. It ought to have occurred to the Portuguese King that, even if he could find this mythical monarch, he would not take any real pleasure in his society, unless it were to burn him. King John II. was a pious Roman Catholic, and, next to a Methodist, a Presbyterian King would have been about the most uncongenial acquaintance he could have made."

Much of the fun is genuine and good, a part is rather forced; but on the whole we prefer biography and drollery separate.

BOOKS OF THE WEEK.

Acland and Ransome. Handbook of the Political History of England. London: Rivingtons; New York News Co.

Acton, R. England's Colonial Empire. London and New York: Cassell, Petter, Galpin & Co.

PUBLISH

CHAMPLIN'S

Young Folks' History of the War for the Union.

By John D. Champlin, Jr. Large 12mo, illustrated (uniform with the 'Young Folks' Cyclopædias'), $2 75.

The *Nation* says of it:

"A book that can be heartily recommended, as designed to meet a real want, and meeting it well. Indeed, the book gives a good deal more than it promises, for it is equally well adapted to general readers who are not 'young folks.' It is, in short, a well-written and entertaining history of the War of the Rebellion, very fair and impartial in tone, and aiming rather at incident and graphic narrative than at political and strategic analysis, although these are not neglected; affording, therefore, probably as good an account of these events as most will desire. It is copiously illustrated, as well with maps and plans as with portraits, views, and pictures of special objects of interest (as the Armstrong gun and the barrel torpedo). Few or none of the illustrations are 'made-up' pictures. There is an index."

FOR SALE AT A REDUCTION.

BACK NUMBERS OF

The Nation.

After April 1, 1882, back numbers of the *Nation* more than a year old will not be kept in stock. A quantity now on hand, of dates from January 1, 1877, to January 1, 1881, will be sold immediately at 5 cents each. All unsold on April 1 will be destroyed. Persons wishing to complete their files should take this opportunity.

Address the Publisher, 210 Broadway, New York.

*** Price of copies of later date than January 1, 1881, 10 cents each. We have none on hand of earlier date than January 1, 1877.

HELIOTYPE.

PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.

THE HELIOTYPE PRINTING COMPANY

Are producers of illustrations by the most approved Photo-Mechanical, Photo-Lithographic, and Photo Engraving Processes. Employed by the United States Government in illustrating Scientific and Medical reports; by Scientific, Historical, and other learned Societies; by the leading Publishers, and for illustrating Town and Family Histories, Trade Catalogues, Show-Cards, etc. Fac-similes of Medals and Coins, Ancient Manuscripts, Paintings, Drawings, Sketches, and Autograph Circulars, Views and Portraits from Nature, Medical and Scientific Objects, Antiquities, etc.

Estimates and specimens furnished on application.

NEW YORK, THURSDAY, FEBRUARY 16, 1882.

The Week.

THE week has witnessed a further liquidation of speculation in France, where several credit concerns not of the first importance have collapsed, and it has witnessed in this country a beginning of the liquidation of the "bull speculation" in Cotton and Produce Exchange commodities. There was at no time during the week anything like a panic in the foreign markets for securities, and at the close some improvement was apparent. Nevertheless, there was sufficient uneasiness early in the week to advance again the rates here for foreign exchange to the gold-exporting point; and the result was an outflow of specie of nearly $2,500,000. The Bank of England steadily gained specie during the week, but not in sufficient amounts to warrant a reduction in the discount rate, which is still 6 per cent. The decline in the domestic markets in the prices of cotton, breadstuffs, and provisions was large, but as yet it has not been sufficient to quicken or enlarge the export movement, although of course the tendency is in that direction. As soon as merchandise exports become active, a stoppage of gold exports will be in order. The New York money market was easy at 4@6 per cent., although the banks lost $2,330,000 of their surplus reserve, which was reduced to $4,050,000, against $6,380,000 a year ago. At the Stock Exchange the tendency of prices, as a rule, was to lower figures. The Advisory Commission, consisting of Messrs. A. G. Thurman, of Ohio, E. B. Washburne, of Illinois, and T. M. Cooley, of Michigan, which is to consider the question of differential rates referred to it by the trunk-line railroads, met early in the week to prepare for regular sessions in March. There was a break of 15@25½ points in Tennessee State bonds, on account of a decision of the Supreme Court of that State that the Funding Act is unconstitutional. The most scandalous part of the business was that most of this decline occurred before the decision was rendered, showing that the decision was known in Wall Street before it was announced in court. There was also a heavy decline in the inferior class of railroad bonds, such as are speculated in like shares. Outside of speculation, the general trade of the country continues very large in volume and satisfactory as to profits. The price of silver bullion in London advanced to 52⅛d. per ounce; and the bullion value of the 412½-grain silver dollar advanced to $0.8855.

Lord Granville's elaborate despatch about the Isthmus Canal would be very curious reading if we had not already had Mr. Blaine's. Any one would suppose, on seeing them, if he knew nothing of the history of the matter, that there was a contention going on for the possession of a canal across the Isthmus between Great Britain and the United States. There is not. There is no such canal in existence. None is likely to be in existence either in Mr. Blaine's or Lord Granville's lifetime. The money for such a canal has not been subscribed. It is much less likely to be subscribed now than it was six months ago, and it grows more and more unlikely to be subscribed with every despatch about the control of it. No prudent man cares to put money into an enterprise over which two first-class powers seem likely to quarrel. Earl Granville denies that the greatness of the Pacific coast was not foreseen when the Clayton-Bulwer Treaty was made, and alleges that the causes of dissatisfaction with its working which subsequently arose have since been removed, by the voluntary action of the British Government. This may be all true, but does not make up for the absence of a canal. This is all that is needed to make the Clayton-Bulwer Treaty really worth discussion. The treaty is about a canal; but until there is a canal, or a near prospect of one, it is simply an expression of opinion now thirty years old. Quarrelling over its provisions is very like litigation over a bequest of a testator who has left no assets. It was worth Mr. Blaine's while to write about it, because he needed the despatch for home use, but nobody else can get any good out of the question.

Mr. Blaine's despatch, offering the mediation of the United States for the settlement of a boundary dispute between Mexico and Guatemala, is another instance of the troublesome vivacity which has played such curious freaks in his management of our foreign affairs. There is really no reason why the United States should not act as mediator between Mexico and Guatemala in such a case, if the two countries desire it. On the contrary, it would be a very proper and, perhaps, a very useful thing to all parties concerned. But the first requisite is that both parties to the contest should want such a mediation. Mr. Blaine, after having been requested by Guatemala to interpose his good offices, was also justified in trying to ascertain whether Mexico would be willing to accept such an offer on our part. But when, in doing so, he rushed in with historical statements which were not only open to question, but also betrayed a bias of his mind in favor of the Guatemala side of the case, and when, besides, his despatch contained some expressions which could be construed as unfavorably reflecting upon the conduct of Mexico, it was very natural that his professions of disinterested friendship and of "lofty" purposes should have found scanty appreciation, and that the only honors borne away by our Government from the correspondence should have consisted in some corrections as to historical facts rather pointedly administered by the Mexican Minister of Foreign Affairs to the American Secretary of State.

Ex-President Prado, of Peru, publishes an open letter to Mr. Christiancy in reply to his confidential despatch on the ways and manners of the Peruvians. It consists chiefly of a flat denial of all Mr. Christiancy's charges of degradation and corruption. He suggests incidentally a curious explanation of Mr. Christiancy's statement that the Chinese are generally treated in Peru with the same severity as the slaves were in our Southern States. "You must have felt very bilious when you wrote that letter," he says, "or you would have spared your own country." He ridicules the idea that a man of standing would "lose caste" in Lima if he were to carry a parcel through the streets, and declares that the whole thing depends entirely on the size of the parcel. "Large-sized parcels," he admits, "are carried by servants or sent home by the sellers." But, he continues, "after all, what has public opinion to do with what a person carries or does not carry in his hand?" To a philosopher, of course, nothing whatever, but to the jaundiced eye of Caste it may have a great deal. Even in London, where Caste has lost its hold upon politics to so great an extent, it still draws the line at parcels "tied with a string," and in Lima this delicate distinction is probably unknown.

It is reported that Senator Ingalls's resolution against the repeal of the Pension Arrears Act will pass the Senate almost without a dissenting voice, since the Southern Senators who were on the Confederate side during the war seek to demonstrate their loyalty by favoring any amount of pensions for Union soldiers. But the worst of it is that they will also push the passage of a bill to pension all the survivors of the Mexican war whether disabled or not, and the widows of those of them that have died. It is suggested that this measure is particularly favored by Southerners for the reason that the South furnished a large number of soldiers at that time. Of course, estimates are made to show that only an inconsiderable sum will be needed for that purpose, as the number of surviving Mexican war veterans cannot be very large. But the crop of such veterans and of Mexican war widows that will show themselves immediately after the passage of a bill to pension them all, will be marvellous to behold. Pensioning men disabled in the service is one thing; but pensioning those who have come out of a war without having suffered any injury at all, and a great many of whom have been the whole time in depots and other comfortable places, scarcely away from home, is a thing which a nation cannot afford, unless it absolutely does not know what to do with its money We are not precisely in that condition. The Pension Arrears Act has already imposed burdens upon the people which, in the course of time, they will become more sensible of than they seem to be now. But the kind of demagogy which passed that act seems determined to stop at nothing unless public opinion interposes a veto which politicians will not dare to disregard.

The decision of the Tennessee Supreme Court that the 100-3 Funding Act of that State is unconstitutional, is based on the clause making the coupons receivable for taxes for a long period of time. The Court says that the

Legislature has no power to make a contract of this character, apparently on the ground that the legislative authority to raise money by taxation is limited to periods of two years. No clause of the Tennessee Constitution has been mentioned which warrants such a construction; and if the meaning of the Court is that because each Legislature lasts for two years only, therefore coupons cannot be made receivable for taxes beyond that period, the decision will long be remembered as a remarkable feat in legal interpretation. The Court seems to think that the Legislature might bind the people of Tennessee for two years, but we doubt it. The people of Tennessee are as hard a people for a Legislature to bind as any in the world. The bondholders complain of the decision of the Court, and insist that they are being swindled. This, however, was to have been expected, for bondholders, when payment is stopped, always become querulous and dissatisfied. Nothing short of complete confiscation will silence a noisy creditor of this class. The Georgians adopted this plan several years ago. They did not divide into any parties on the debt question, but simply appointed a committee, told it to go over the debt, and settle what should be paid and what should not. The committee repudiated all that they thought had better be repudiated, and there was no further trouble. The bondholders at first wrote letters about it to the newspapers; but even this they have now given up, and Georgia is prosperous and happy, and its credit as high as that of any state in the world.

There is a law forbidding officers and employees of the Government, who are not of the class appointed by the President with the consent of the Senate, to demand or receive from any other officer or employee any money or other property for political purposes. The penalty is removal from office and a fine not exceeding $500. For several years General N. M. Curtis was employed by the Government as a special agent of the Treasury Department. Last autumn he was also made treasurer of the Republican Central Committee of this State. As such he received contributions of money for political purposes from Government clerks and other employees in the Custom-house and Post-office. The Civil-Service Reform Association of this city brought the matter to the notice of General Curtis's chief, Secretary Folger, for such action as the law contemplated. General Curtis contended that he was not a Government officer or employee within the meaning of the law. We learn now that the Secretary of the Treasury has decided to dispense with General Curtis's services at the end of this month and to send all the papers in the case to the District Attorney of the United States in this city, to prosecute General Curtis if in his, the District Attorney's, opinion there has been any violation of the law. Secretary Folger, in explanation of his action, is reported to have said to a correspondent of the *Tribune* that when he came in as Secretary it was understood that General Curtis should "close up" the special business for which he was employed as soon as possible, and "when these charges were made it was agreed in consultation between us [the Secretary and General Curtis] that he should retire by the end of this month."

If this report of the conversation with Secretary Folger is correct, it would seem as if the Secretary had avoided deciding the case upon its merits, and preferred to have it appear that the discontinuance of General Curtis's services had nothing to do with the violation of the statute concerning the levying of political assessments. The Secretary does not seem to have decided the question whether General Curtis did or did not belong to the class of employees contemplated by the law. We do not see how the Secretary could leave that question undecided, inasmuch as the law provides that any officer or employee of the Government belonging to a certain class and doing a certain thing shall in the first place be removed. And as General Curtis, in his capacity of special agent of the Treasury, was subject to removal by the head of that Department, it was obviously the province of the Secretary of the Treasury to determine when under the law he was required to remove a certain employee for a certain offence. This was the duty of the Treasury Department just as much as it is the duty of the District Attorney in New York to prosecute General Curtis for a misdemeanor if the facts and the law warrant such a prosecution. To dispense with General Curtis's services for some other reason would look somewhat like shirking the question.

Mr. Cannon, the Mormon contestant for a seat in the House of Representatives as Delegate from Utah Territory, has been examined by the Judiciary Committee of the House for the purpose of getting from him some information about Mormonism in general, and to give him an opportunity to show "why the bill now before them to prevent all polygamists from voting and holding office should not be favorably reported." Mr. Cannon made some statements which will startle the female population outside of Utah, if they are at all nervous. He, for instance, said, "spiritual marriage" meant that "no woman could secure exaltation in heaven unless united in marriage to a Latter-Day Saint of the Mormon Church on earth." This would evidently make female society in the next world very exclusive. Finally Mr. Cannon fell back upon the old hackneyed argument, that "before Congress undertook to regulate the morality of Utah, there were matters nearer home which required attention: for instance, he had read only recently in the Washington newspapers of babes left to die in corner lots, and he thought there was a condition of affairs in the District of Columbia which required the attention of the Committee on the Judiciary more than did the Territory of Utah." To which Mr. Reed, of Maine, very properly replied that we do not defend such things here and that there is a law against it. It is the usual excuse of the advocates of an abuse that things elsewhere are not as they ought to be. But the Mormons carry this kind of reasoning to a rather unusual length. "There is a good deal of illicit intercourse in your society," they say, "and therefore we are justified in legalizing it among ourselves by recognizing polygamy as a divine institution. The bad practices of your society are against your law, but we do the same thing in accordance with our law. Therefore, you are sinners and we are saints." Why not apply the same rule to stealing and manslaughter?

The New York Stalwarts had a little dinner on Monday, in the guise of "the Lincoln Club," at which Mr. Emory Storrs and the Rev. Dr. Newman were the principal speakers, although General Grant told one or two good stories about Lincoln. Mr. Storrs, as the custom is at Stalwart feasts, laid the flattery on General Grant very thick, and then gave his views about what the state of things in this city ought to be. The city ought to be Stalwart, he said, and "independent in its Stalwartism," "because Stalwart influences had made the nation great"; and he declared, somewhat mysteriously, that he for his part would "rather have a thousand years of conflict than four such years of foul, sneaking, lying, blustering, nasty hypocrisy as we have passed through." It would appear from this that Mr. Storrs has been having some very disagreeable experiences recently, but he ought either to have explained what they were, or to have avoided all allusion to them. When his moral indignation is fairly aroused it always excites deep public interest and curiosity, and he ought not to excite these feelings and then leave them unsatisfied. One of the odd things about "the Grant crowd" is that they have always had a chaplain, and their chaplain has of course to be a man of mild and tolerant disposition. Ecclesiastics of this kind are easy enough to find, but it is not easy to find an ecclesiastic who combines this mild and tolerant disposition with an ardent enthusiasm and a burning imagination. The present holder of the office, however, does so, and falls little below his predecessor, Bishop Gilbert Haven, who was reminded by the Grant Administration of the Transfiguration on the Mount. Dr. Newman, in like manner, in a burst of childlike rapture over Roscoe Conkling, declared that this particular name "would live when the bronze had melted, and the marble crumbled, and the canvas faded away, and while the stars shine."

Cadet Whittaker's case, after being passed upon by the Judge-Advocate-General, who found that the court-martial was illegally constituted, is now before the Secretary of War, who is said to be very busy and to have no time to look into it. It is expected that he will shortly refer it to the Attorney-General to see what he thinks about the point of the Judge-Advocate-General. The Attorney-General is, however, we believe, very busy too, and there is no knowing when he will be able to attend to it. All this delay is of course delightful for Whittaker, because, the court-martial having found him guilty, it not only saves him from the consequences of his conviction for the moment, but raises the probability that his conviction will never have any consequence at all. He must often feel puzzled in trying to account for his good fortune, and for the tenderness which surrounds him.

The Reverend Talmage seldom touches a subject without throwing some strange new light on it, and in his Sunday lecture on "Secular Topics of the Week as Viewed from a Religious Standpoint," it occurred to him to utter a thought of some significance as to biennial legislatures. He pointed out that if the Legislature met only once in two years, the members would have "more time for earning an honest living." In "off years," not being able to spend the time in their usual occupations at Albany, their thoughts would naturally turn to other and better avocations, and returning to their homes and seeing those around them gaining livelihoods by honest toil, without murmur or complaint at the hardship involved, they would be tempted to imitate them. At first, of course, this would only lead to their alternating their years of corruption at Albany with years of virtue among their constituents; but, gradually, many of them would find honesty making their lives more cheerful and safe if not more profitable than the dull round of wickedness at the State capital, and finally those who had germs of good in them would become weaned from sin and learn to hunger and thirst after righteousness in legislation. A little leaven leaveneth the whole lump, and thus biennial sessions might alter the whole tone of legislation at Albany. Of course, it may be said that other members would occupy their off years merely in plotting new schemes of plunder, and that the biennial plan would thus only give them greater opportunities than they have now for deep-laid "strikes" and jobs. But this risk cannot be avoided, and in the long run we could rely on the influence of honest example.

Mr. Gladstone's proposed new rules of procedure were introduced in the House of Commons on Wednesday. The principal one is, of course, "the previous question"—the moving of which is given to the Speaker in his discretion, while with us it must be moved by a member and supported by a clear majority. But on the Gladstone plan it can only be carried by a vote of 201, on a division, and must not be opposed by more than 39 in a smaller house. To understand how great an innovation this is, it must be remembered that there has been until now no formal way of finally closing a debate as long as any member wished to speak. A debate could be adjourned, and generally when the question was an important one was adjourned, from time to time until every one who had anything to say had said it. Not that every one who would have liked to speak spoke on it. The discussion was usually closed by an understanding between the chiefs on both sides that the vote should be taken when there had been talk enough, and if any loquacious person or freelance attempted to disregard this understanding, he was coughed, or sneezed, or groaned down, or silenced by shouts of "Divide." But there was no rule enabling the majority to say by resolution that it had heard enough and wished to vote. It can easily be seen what a field this state of things opened to members who, like the Parnellites or the young Tories, cared nothing for party discipline or House usage, and wished simply to impede business. They had only to put up a number of long-winded speakers in succession to protract the debate indefinitely. To make matters worse, a member could discuss the principle of a bill on each of the three readings, although the House usage confined this discussion to the second reading. The obstructionists disregarded this usage, and not only made an exhaustive speech at each reading, but on every motion made while the bill was under debate. One of the new rules ties down such discussion of the principle to the three readings. It was in the Committee of the Whole, however, that the obstructionists did most execution. Here each member can speak any number of times. Under the new rule he is to be restricted, as in the debates of the House, to one speech. Moreover, the practice of moving the adjournment of the House as a mere dilatory proceeding is to be cut off by forbidding it until all the orders of the day or the motions on the paper have been disposed of.

The powers of the Speaker are enlarged not only by enabling him to put the previous question, but to silence members for what he considers irrelevancy or frivolousness, and by annexing penal consequences to "the naming" of a member. The power of "naming" a member has long been possessed by the Speaker, but, as Speaker Onslow said in the well-known joke, "the Lord only knew what the consequences of naming him would be." In fact, it had no consequence which any offender cared for, and only served the purpose of communicating to the House what it knew already, that the disorderly member was called Brown or Jones. Now, however, it is proposed to enable the Speaker to follow up the naming with a positive penalty, by enabling him to propose the suspension of the offender for one week, or for a month, or the remainder of the session in case he repeats the offence. Another great innovation is the introduction of Standing Committees like those of our Congress, to take charge of different branches of legislation. But the function of these committees is to be very different from that of our Standing Committees. The Standing Committees at Washington really do the work of originating or shaping legislation which in England is done exclusively, or almost exclusively, by the Cabinet. The proposed Standing Committees of the House of Commons are intended simply to subject Government measures to that piecemeal examination which they now undergo in the Committee of the Whole, or, in other words, to save the House the process of debate "clause by clause," which now consumes so much time, and which consists so largely of the discussion of frivolous or trifling amendments. A bill coming from one of the Standing Committees will be understood as having undergone all such useful amendment as it would have received in the Committee of the Whole, but it will be still open to the Ministry to accept or reject this amendment, either in the Committee of the Whole or in the House.

The English news seems to make it more likely that the closure difficulty will not be got over without an election in which it will be presented as an issue. The London press seems to be nearly unanimous in saying that the feeling of opposition to the new rules grows stronger among members of the House on both sides, and in London society. The truth is that the rules will, if adopted, greatly diminish the power of individual members, and greatly increase that of the Speaker and of the Minister of the day; and it is hard for the present House to agree to this in the absence of any positive expression of opinion from their constituents. In fact, the situation is somewhat like that created in France by the presentation of the *scrutin de liste* to the Chamber by Gambetta. It amounts to a request that the members will consent to make themselves something different and something less than they were when elected, and they naturally snatch at any excuse for not complying This is one of the cases, too, in which, as during Lord Beaconsfield's Administration, the opinion of society in London, by which members are apt to be very much influenced during the session, is likely to differ greatly from that of the provinces, where Gladstone's strength lies, and there is only one way of making the opinion of the provinces sharply felt in the House, and that is by a dissolution. The country newspapers are not read in London, and yet, if we may judge from what happened in 1880, it is in them that English opinion is to be found.

Mr. Gladstone's difficulties will probably be still further increased by his saying that the proposal to repeal the Union cannot be entertained as long as the Irish are not able to draw the line clearly between local and imperial affairs. This is clearly an indiscreet speech, as it suggests the possibility of a repeal of the Union as soon as the Irish agree upon a plan of separation between the purely Irish interests and those of the Empire at large. It has therefore made "a sensation," but the sensation is probably largely due to the fact that the idea that some sort of local government must be conceded to Ireland has obtained a lodgment more or less distinct in the English mind already, although nobody of prominence has had the courage to confess it. In fact, Mr. Gladstone conceded almost as much during the debates on the Land Bill, when he said he looked forward to the day when the Irish members of the House would manage Irish affairs as the Scotch now manage Scotch affairs. The great defect of Mr. Gladstone's Irish policy is that he has not foreshadowed some sort of Home Rule in his own arrangements now, without waiting for legislation. The retention of an Englishman in the Chief Secretaryship—an Englishman, too, of the Forster type—has been, if not a blunder, the loss of an excellent opportunity. Curiously enough, Mr. Gladstone thinks it is a sufficient defence of Mr. Forster's retention that he is a good man. This would be sufficient if his place were that of a bank president or other purely executive officer. But part, and a great part, of his function is to soothe the irritation and dissipate the delusions of a highly excitable and greatly exasperated people. For this his goodness is actually, to a certain extent, a disqualification.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

On Wednesday the Senate passed a bill ratifying an agreement made with the Crow Indians, by which they cede to the Government a portion of their reservation in southern Montana. The bill provides that the agricultural lands remaining in the Crow reservation shall be divided among the Indians in severalty, and that patents shall be issued to them therefor, and also that these lands shall not be "alienable or subject to incumbrance or taxation of any kind for twenty-five years." The passage of this bill is looked upon as the inauguration of a new policy in legislation for the Indian tribes. This is the only business of importance transacted by the Senate during the week.

Among the bills providing for the relief of the Supreme Court, one was introduced in the Senate on Wednesday by Mr. Pugh which proposes to divide the Court into three divisions, with three Justices in each, to be known as the Federal, Equity, and Admiralty Law divisions. These divisions are empowered to sit separately, and all causes are to be heard in the first instance by one of the divisions, except causes in which a jury is required; these are to be heard by the Court in banc.

The McCoid Apportionment Bill occupied the attention of the House on Wednesday and Thursday. Much opposition to the bill has been developed. On Thursday Mr. Cox of New York gave notice of a motion to recommit the bill to the Committee on the Census, with instructions to report a bill in accordance with the old method of apportionment. Should this motion be made, it will probably be carried by a large majority. Friday was devoted to the consideration of private bills and three appropriation bills—namely, for Immediate Deficiencies, Indians, and the Military Academy.

A bill to fix the compensation of letter-carriers was reported to the House on Tuesday, with favorable recommendation. It fixes the pay of auxiliary letter-carriers at $600 a year, and provides that after one year's service they shall be promoted, with their pay increased to $800 a year, and after two years' service they shall be advanced another step, and their salary increased to $1,000 a year.

The House Committee on Agriculture has adopted a report in favor of making the Agricultural Department an executive department.

The sub-committee of the House Committee on Territories has agreed unanimously on a bill to provide for the admission into the Union of all that part of Dakota Territory south of the forty-sixth parallel.

A delegation of about sixty residents of southeastern Dakota waited on the President on Friday, and submitted a resolution asking the removal of Governor Ordway of that Territory.

There appears to be an absolute necessity of some measure to relieve Congress from the burden of private legislation in the form of petitions and bills for the relief of individuals. The single Committee on Claims of the House has already had nearly a thousand bills referred to it, and the Committee on Invalid Pensions is still worse off. It is said that there is not a standing committee of the House which has not more or less private business on ts calendar.

The President has sent a special message to Congress, accompanied by a communication from Secretary Kirkwood, enclosing letters from the acting Governor of Arizona, in regard to the lawlessness existing in that Territory. Mr. Kirkwood says that in New Mexico and Arizona the difficulty of repressing lawlessness arises from the fact that the sheriffs either are intimidated, or have motives for currying favor with the disorderly elements of society, and he recommends that the Governor of Arizona be empowered to remove or suspend a sheriff for neglect of duty. The acting Governor of Arizona in his letter advises the repeal of the Posse Comitatus Act. In his message the President recommends that the Posse Comitatus Act be modified so as to permit the use of the military to assist the civil authorities in the Territories. The message was referred to the Senate Committee on Territories, and a bill conforming to the President's suggestions will probably soon be reported.

The case of Cadet Whittaker is still in the hands of the Secretary of War, who has been so pressed with other matters that he has not had time to lay it before the President. The case will eventually be referred to the Attorney-General for an opinion on the point raised by the Judge-Advocate-General as to the validity of the findings of the court martial.

More of Mr. Blaine's diplomacy was brought to light on Friday by the publication in a Boston evening newspaper of a correspondence between the State Department and the Government of Mexico, in relation to the settlement of the boundary between Mexico and Guatemala. On June 16 Mr. Blaine wrote to the United States Minister at the city of Mexico that Mexico ought not to extend her territory by force at the expense of her weaker neighbor. This letter of instructions was communicated to the Mexican Minister of Foreign Affairs, who wrote in reply that neither "force nor conquest had been the foundation of the rights which Mexico claimed to that portion of her territory which Guatemala disputed." He then goes on to show that Mr. Blaine had been guilty of "historical errors," one of which arose from "impassioned statement" or ignorance of the history of Mexico.

Secretary Folger has "thought it best" that Special Agent General Curtis's term of service "should end." The Secretary, however, says that he does not look upon it as a removal from office; nor does he undertake to decide the question of whether or not General Curtis was an officer of the United States within the meaning of the law he is charged with having violated. The Civil-Service Reform Association will now probably take steps to get General Curtis indicted by the Grand Jury, which meets on the 20th of February.

Members of the Government Assay Commission who have returned from Philadelphia report that the assay was most satisfactory, and showed less than the usual deviation in the coins from the standard.

Postmaster-General Howe has sent a letter to all the postmasters of the United States asking for contributions for the monument to President Garfield which is to be erected in Washington by the Society of the Army of the Cumberland.

The minority of the Naval Advisory Board on the improvement of the navy have presented a report, in which they recommend that fifty-three ships be built at once, and of iron hulls, on the ground that the steel used for ships has none of the physical qualities of real steel, and is simply a high quality of iron, whose tensile strength is in fact about the same as that of our best merchantable iron, while it costs much more.

The first annual report of the Bureau of Ethnology contains an exhaustive study by Colonel Garrick Mallery of the sign-language among North American Indians, and a paper by Dr. Yarrow on the mortuary customs of the Indians.

The Board of Army Engineers appointed to consider a plan for the improvement of the Potomac flats began its labors on Friday.

Colonel Seaton, Superintendent of the Census, thinks that it will require between eight and twelve months to complete the work of his bureau. The printed report will embrace about 20,000 pages.

The Supreme Court of Tennessee has declared the Funding Act of 1881, which compromised the bonded indebtedness of Tennessee at par and three per cent. interest, and made the coupons receivable for taxes, unconstitutional. Two of the five judges dissented from the decision. This decision has created considerable surprise among persons interested in Tennessee bonds.

Some time ago the City Council of Adrian, Michigan, authorized the issue of bonds for water-works purposes, but doubts were raised as to the legality of the authorization. It has since appeared that the whole issue of these bonds has been negotiated, and over half the money drawn on them. It is now charged that the bonds were not legally authorized, and that they are therefore not valid.

Much disorder having been caused in the town of Greenwood, Steuben county, New York, by an attempt to collect taxes levied to pay certain bonds issued by the town of Greenwood ten or twelve years ago in aid of a railway, and the people having intimidated bidders at the collector's sales, Governor Cornell on Monday issued a proclamation declaring the town in a state of insurrection.

The largest sale of land probably ever made in this country to private individuals was recently completed in Texas. A tract of land in the northeast corner of the State, five times larger than the State of Rhode Island, was transferred to five persons, who have agreed, in consideration therefor, to furnish the money to pay for a new State House for Texas.

A shooting affray took place in the office of the *National Republican*, at Washington, on Thursday, which resulted in the death of A. M. Soteldo, Jr., a well-known newspaper reporter. The city editor of the *Republican* was also shot in two places. The immediate cause of the affray was an article reflecting on Soteldo, which appeared in the *Republican*.

Ko-Kun-Hua, Professor of Chinese at Harvard College, died suddenly from pneumonia on Tuesday. He was a mandarin of high rank and considerable literary distinction, being the author of two volumes of poems, which at the time of his death he was preparing to translate into English.

A despatch was received by the New York *Herald* from Lieutenant Danenhower on Thursday, which stated that De Long's party was "in a narrow wilderness, eighty miles long, devoid of habitation and game." From his further account of the voyage of the *Jeannette*, it seems that the general health of the crew was excellent, no scurvy having appeared during the voyage. The ship drifted in a northeasterly direction, making but forty miles during the first five months, but during the last six months the drift was very rapid. The greatest cold experienced was 58° below zero, and the greatest heat 44° above. The photographic collection and the auroral observations were lost with the ship, but the naturalist's notes were saved. Lieutenant Danenhower gives a short account of the three newly-discovered islands Jeannette, Henrietta, and Bennett.

FOREIGN.

Mr. Gladstone's rules of procedure for the House of Commons are the absorbing topic in political circles in England. There is great opposition to the *clôture*, but it is stated that the Government is determined to stand or fall by the new rules, and it is intimated that in case they are rejected the Government will try to pass some reform bills, and will then dissolve Parliament. The debate on the rules will begin on Thursday next.

Mr. Gladstone's new rules of procedure for the House of Commons are, in brief, as follows: The Speaker shall have authority at any time to "put" the question before the House, but such a proposition must be supported on a division by more than 200 or opposed by less than forty members. No member shall have a right to make more than one dilatory motion in committee of the whole House during the debate on any one question. No member shall move the adjournment of the House before the orders of the day or the motions on the paper have been reached, and provision is made for enabling matters of extreme urgency to be brought before the House without notice and without delay.

The number of occasions on which the principles of a bill may be discussed is limited. When a member is "named" by the Speaker for disregarding his authority or abusing the rules of the House, the Speaker shall propose his suspension, which suspension, if carried, shall on the first occasion be for one week, on the second for a month, and on the third for the remainder of the session. Provision is made for the reference of bills to standing committees, in which case the bills will not be required to be submitted to the committee of the whole House, but discussion and amendment of them will be taken on the report of the standing committee to which they have been referred. The bills referable to these committees, which shall consist of from sixty to eighty members, shall be such as relate to law, trade, shipping, and manufactures. These are the main provisions embodied in Mr. Gladstone's proposed changes in the method of procedure. There are a number of minor rules bearing on technical points, but all with the same end—namely, to facilitate debate and prevent such "filibustering" as was indulged in by the Irish members during the debate in the last session on the Irish Land Bill.

In the House of Commons on Wednesday, in the debate on the address in reply to the Queen's speech, Sir Stafford Northcote accused the Government of allowing matters to "drift" in regard to Egypt, Ireland, and the commercial-treaty negotiations with France. In reply Mr. Gladstone made an eloquent speech, in which he attacked the Land League, eulogized Mr. Forster for his efforts to restore order in Ireland without bloodshed, and upheld the impartiality of the Commissioners under the Land Act, saying that the average of the rent reductions so far was twenty-three per cent. In regard to the Land League's war against property, he said he thought there was every indication that a great conspiracy had been defeated. In the afternoon Mr. Justin McCarthy, on behalf of the Irish members, gave notice of a long amendment to the address, categorically condemning every point in the Government's Irish policy, and urging an immediate return to constitutional methods. On Friday Mr. Forster, in speaking upon this amendment of Mr. McCarthy's, said that the Government had tried the effect of releasing the imprisoned suspects, and pointed to the case of Father Sheehey as an instance of the result of such action. Fair rent, he said, according to Mr. Parnell's views, practically amounted to no rent at all. In conclusion he said that, notwithstanding the signs of improvement in Ireland, the Government would not relax their vigilance.

In the House of Commons on the 14th the address in reply to the speech from the throne was adopted by a vote of eighty-seven to twenty-two, Mr. McCarthy's amendment condemning the Government's Irish policy and urging a return to constitutional methods being rejected by a vote of ninety-eight to thirty.

Lord Granville's despatch of January 7, in reply to Mr. Blaine's despatches in reference to the Clayton-Bulwer Treaty, has been published. He denies that any analogy exists between the cases of the Panama and Suez Canals. He also denies that the unexampled development of the Pacific coast was unexpected, and says that the declarations of President Monroe before the treaty was made show that he and his Cabinet had a clear prevision of the great future of that region. The British Government is of the opinion that the canal as a water-way between the two great oceans and Europe and Eastern Asia is a work which concerns not only the American continent, but the whole civilized world. Lord Granville concludes by proposing an invitation to all the maritime states to participate in an agreement based on the stipulation of the convention of 1850. Her Majesty's Government would be prepared to endorse and support such action in any way, provided it does not conflict with the Clayton-Bulwer Treaty. In a subsequent despatch Lord Granville calls attention to the fact that Mr. Blaine, in using the argument that the treaty has been a source of continual difficulties, omits to state that the questions in dispute which related to points occupied by the British in Central America, were removed in 1860 by the voluntary action of Great Britain in certain treaties concluded with Honduras and Nicaragua, the settlement being recognized as perfectly satisfactory by President Buchanan. Lord Granville says, further, that during this controversy America disclaimed any desire to have exclusive control of the canal

In reply to an interpellation on Thursday in Parliament, Mr. Gladstone said that the outrages on the Jews in Russia must fill every one with the utmost pain and horror, but that as the question was an internal one, the British Government could only, when a fit occasion arose, intercede in a friendly manner.

A memorial signed by M. N. M. de Rothschild, on behalf of the Jews of England, addressed to the Emperor of Russia, setting forth the grievances of the Russian Jews and asking that some measures be taken for their protection, which was presented to Prince Lobanoff on the 19th of January, has been made public. Prince Lobanoff declined to transmit the memorial, in accordance with instructions from his Government.

Three hundred Hebrew refugees from Russia sailed from Liverpool on Saturday.

England and France have sent a collective note to the Powers explaining their attitude on the Egyptian question. This note is said to be couched in very amicable terms.

A despatch from Cairo to the London *Daily Times* on Tuesday says that the situation in Egypt continues to be one of expectancy, and that it is feared that the present Ministry will be forced to take decided action in order to hold their own with the army, as there are distinct symptoms of impatience among the soldiery, of which the Chamber is only the mouthpiece.

The British and French Controllers-General have protested to Mahmoud Barodi, the Egyptian Prime Minister, against the terms in which the ministerial programme mentions the European Control. The protest points out that the Control is not a mere agency for collecting the interest on the consolidated debt, but that it is invested with the fullest right to investigate everything connected with the Egyptian revenue.

The Porte has addressed a circular to the Powers stating that it has instructed the Khedive to observe international treaties and maintain order.

The ceremony of the return of the sacred carpet from Mecca was celebrated at Cairo on Sunday in the presence of the Khedive and the Ministers. There was an unusual display of troops and cannon. Arabi Bey, Minister of War, was present during the ceremony, and received special attention from the court and was warmly greeted by the populace.

France is said to be disinclined to reconvene the Monetary Conference on April 1st, and it is reported to be doubtful whether any English representative will be sent to the conference should it reopen.

The disagreement between France and Guatemala, arising from an assault on an attaché of the French legation, has been compromised. Guatemala is to give satisfaction.

New results of the failure of the Union Générale continue to appear in France. The Banque de Macon and the Comptoir Breton have failed. The official liquidator of the Union Générale has gone to Vienna to ascertain the exact relation between the Union Générale and the Vienna Länderbank, particularly whether the capital of both is the same.

In consequence of the prevalence of smallpox in the United States, the authorities at St. Thomas, West Indies, have ordered fourteen days' quarantine on all vessels from the United States.

A despatch from Vienna to the London *Times* on Monday says, in regard to the Herzegovinian revolt, that the coast line has been cleared by combined operations from Castelnuovo and Cattaro. The captured positions are being fortified, and an advance may shortly take place from various sides. In the meanwhile the revolt is increasing, and the revolutionists have established a provisional government. A number of minor engagements have taken place of late, in all of which the insurgents are reported to have been worsted. A fight occurred on the 10th instant near Tirnova, lasting from daybreak until two o'clock in the afternoon. The insurgents fled, leaving twenty dead and carrying away about forty wounded. The Austrians lost five killed and wounded.

It is reported that in order not to offend Russia, Austria has entirely abandoned the plan of partial or temporary occupation of Montenegro. Negotiations, however, are proceeding with Prince Nikita with a view to the passage of Austrian troops across his territory if necessary.

The first sitting of the committee on the bill to amend the ecclesiastical laws was held in Berlin, on Saturday. Herr von Schloezer, who is now at Rome negotiating with the Vatican respecting the present bill, has been furnished with extensive powers. The German Government, while desiring the revision of the May laws, insists that the discretionary powers vested in it shall remain as a basis for legislation on the subject.

The Papal Nuncio has expressed a desire that the Spanish Government should prohibit the proposed pilgrimage to Rome. The Spanish Cabinet, however, is adverse to taking this step, and would prefer that the Vatican should issue directions to the prelates that they alone should undertake the organization of the pilgrimage, in order that it may not have the appearance of a political demonstration.

Berthold Auerbach, the well-known German novelist and poet, died on Wednesday, the 8th. He was perhaps best known from his "Village Tales from the Black Forest," which have been translated into many languages. On the 14th, two Frenchmen of distinction, Henri Auguste Barbier and Louis Joseph Martel, died. The former obtained great popularity as a writer in France by his satirical 'Iambes' written at the time of the Revolution of July. Martel was prominent in public life, being for a short time President of the French Senate, of which he was a life member.

A treaty of peace has been concluded between Chili and Bolivia. The terms are as follows: The two republics mutually agree to consider the war at an end; Bolivia agrees to respect the Chilian right to occupy all the territories now in its hands which formerly belonged to Peru or Bolivia, and in return for this concession Chili undertakes to permit the transit of goods through Arica at moderate rates of import and export duty.

Mr. Trescott was formally received by the Government of Chili on the 14th of January. His speech on delivering his credentials was reassuring in its character, and calculated to remove all belief in the theory, which seems to have been current in Chili, that the United States was meditating conquest in those regions. The President's reply to Mr. Trescott was couched in very friendly terms. The Chilians have been sending expeditions into the interior of Peru, and endeavoring to restore order in those regions. On the seacoast, business is beginning to revive, and hopes are entertained that the pacific features matters are beginning to assume will result in some degree in the restoration of commerce.

A despatch from Panama says that although more activity is being shown in the prosecution of canal work, still nothing has been accomplished at all in proportion to what the public were led to expect would be by this time.

DEMOCRATIC BANKING THEORIES.

SINCE 1879 we have heard but little of the financial vagaries with which politicians used to divert the public mind during the suspension of specie payments. Even the silver agitation, full as it was of queer sayings and doings, fell far short of the resumption agitation in the oddity of the misinformation and misstatements which were poured forth during the ten years before resumption. A long list of the strange things said by Congressmen in debate on this subject was published in the *North American Review* some years ago by Mr. C. F. Adams, Jr., which, when massed together in this way, had much of the raciness, variety and mirth-producing quality of a good comic almanac, and seemed almost incredible to those who do not follow debates in Congress, or only see Congressional fallacies one by one. But, as those who took part in the discussion will remember, the greatest difficulty in getting the better of the inflationists did not lie in their arguments. These were generally easily enough disposed of. Their strongest weapon was their facts, which were by no means easily disposed of, and which had, perhaps, a more powerful influence than anything else in persuading people that a return to specie payments was not desirable. By their facts we do not mean real facts of nature, but baseless assertions disguised as facts, and presented with the calm and confidence with which truthful and accurate men produce real facts.

There is nothing, as we have said, more difficult to contend with, in public discussion, than this is, because the people, to their honor be it said, while ready enough to believe that a public man has been arguing badly, are not ready to suspect him of misstating the more notorious events of recent or contemporaneous history, and it takes a great deal of trouble to convince them of it. The inflationists and silver-men have both largely availed themselves of this popular charity or confidence, and accordingly have never been for one moment at a loss for evidence or precedent in support of any of their proposals. Whenever it has seemed likely that a foreign example or experience would give plausibility to any of their theories they have unhesitatingly compounded, out of their own heads, some very striking corroboration, to which they sometimes assign date and place, but more frequently describe as having taken place "recently," and somewhere in Europe generally. Not long ago, our vivacious friend Mr. Wendell Phillips helped to prove he was right in advocating a currency of permanent, irredeemable Government notes, by declaring that "the best minds of Europe" were coming rapidly round to this pleasing and simple scheme; and of course no gentleman was so impertinent as to ask whose minds they were, and in what particular part of Europe they carried on their processes of reasoning.

Mr. Buckner, of Missouri, has recently saddled himself with the gigantic task of reforming our currency and banking system, and proposes for this purpose to put an end to the issue of bank notes, and substitute Government paper for them, and to allow Congress to fix the amount required by the business of the country. To support his scheme he alleges that an elastic currency is all humbug, or, as he terms it, "a great financial or monetary folly," and that "since 1844 the credit circulation of Great Britain has been fixed in amount by law, and the same policy is adopted practically by Germany." Now, as both these countries, and particularly Great Britain, have had a much longer and more varied experience in dealing with currency problems than we have, Mr. Buckner's statement, if correct, would be very forcible. But it is not correct. It seems, as he utters it, a well-known and generally accepted fact, and it has been produced as such over and over again by Western papers. But it is nothing of the kind. The circulation of the Bank of England is not limited in amount by law. It may be of any amount, provided it is issued against the deposit of a corresponding amount of coin. The Scotch banks are allowed to issue the amount of notes over one pound which they had afloat in 1845, and any amount whatever in addition to that against deposits of coin. The Irish banks work under the same rule. The Government, in fact, leaves the amount of currency in circulation to be determined strictly by the wants of trade, which is the only way in which the amount of currency needed can ever be accurately determined. It does not undertake to supply currency to the people; nor does it allow anybody else to say how much currency the people ought to have. The whole banking machinery of Great Britain, in fact, since the Acts of 1844–5, works strictly under the laws of trade.

The process is, in reality, a very simple one. The world's stock of gold and silver is treated as the only source on which the British trader can rely when he wants more currency, and the banks are simply the medium through which he makes known his need of a larger or smaller supply. He gives notice of his needs by his applications for discount. When these are numerous and pressing, the Bank of England raises its rate, which draws gold from abroad, and when it receives the fresh supply it issues notes against it, or, in other words, issues the gold in a more portable form. It will draw any amount the British trader needs if he can afford to pay enough for the accommodation, and issues notes against every cent of it. When his need is over or diminishes, he signifies it in like manner by failing to apply for discounts and by returning to the Bank its notes, takes out the gold, and exports it, as something for which he has no further occasion. The greater part of this process goes on in the Bank of England, but it goes on also in the prominent banks of Ireland and Scotland; but the Government has nothing to do with it beyond the police duty of seeing that what the banks issue has gold and silver behind it.

It will be easily seen, however, that to the working of this system, or of any currency adapted to the wants of trade, banks are absolutely necessary. It is through them that trade makes known its need of more money, and they are the agents through which it is procured from those parts of the world which are over-supplied. The Government could not perform this function simply as an issuer of paper even against gold coin. It would have to become a banker and open accounts with traders, and discount their bills, because no trader could carry on business if, every time he needed money, he had to go to the Treasury with a bag of gold and carry away a bag of notes. He does not wish to draw the money at all except for export. He wishes it kept where he can get it when he wants it, and can draw it in sums to suit his convenience.

But is any sober-minded man prepared to have the United States Treasury go into the banking business? Does any one suppose for one moment that it would be possible for it, if it did, to create and maintain public confidence in the purity and fairness of its management? And if it does not go into the banking business, how is the country to communicate to it the demands of trade, varying as they do from week to week, and often from hour to hour, as to the volume of the circulation? And how are the demands, when communicated, to be met without the intervention of Congress? Nobody, surely, proposes to revive Mr. Boutwell's plan of empowering the Secretary of the Treasury to let loose a few millions of Government notes whenever he thinks it necessary, and nobody supposes that, even if Congress had the financial knowledge or experience to act as a bank directory, it could act with sufficient promptness. Mr. Buckner says that if we doubt this, "our objection proves too much; we deny our capacity for self-government." But this argument also, if good, proves too much, because the Constitution itself bristles with restrictions on the power of Congress, based on simple disbelief in the fitness of legislators for a great number of apparently simple duties, and belief in their proneness to commit a great number of apparently obvious mistakes. In fact, there is nothing more uncomplimentary in denying the competency of the Legislature to "run" a bank than denying its competency to discharge executive and judicial functions, which denial is one of the glories of our system of government.

THE GENEVA AWARD FARCE.

THE highly successful legislative farce known as "A bill reëstablishing the Court of Commissioners of Alabama Claims, and for the distribution of the unappropriated moneys of the Geneva Award," was announced for repetition on Wednesday by the Chairman of the House Judiciary Committee, Mr. Reed of Maine. The plot of the piece, with which some of our younger readers may be unfamiliar, is as follows:

Many years ago, long before the panic of 1873, or the Chicago fire, or the Granger movement, a war broke out between the United States and the Southern States, and a distant maritime power called England let some of her subjects build war vessels to help the Southern States. These war vessels burned and sank all the ships and cargoes of the United States or drove them off the sea. England said this was all right because she was neutral. The United States said it was wrong because England was neutral, and a great dispute arose as to what neutrality was, and whether it included the duty of preventing such things. All the

lawyers of the United States said it did; but all the English lawyers said it did not, and so there was no way to settle the dispute but to go to war or else to go to law about it. The latter course was resolved upon, because neither country really wished to fight. So a court was appointed by both countries to decide whether England had done her duty as a neutral, and if she had not, to ascertain how much damages she ought to pay.

Meanwhile the United States had told all its citizens who had lost anything by the war vessels to send in their claims to the State Department, and it would make England pay them. And from all quarters the claims came in—claims from people who had lost ships, and claims from people who had lost goods, and claims from insurers who had paid for vessels, and claims from people who said that the war vessels had diminished their profits because it frightened them out of their business, and claims from people who said that they had been forced to pay too much to insure their goods because the war cruisers had frightened the insurers. So the Government took all the claims, and told its lawyers to present them, with any others it could think of, to the court at Geneva. These lawyers were very clever men, and after thinking a good while they came to the conclusion that the Government had a claim itself, because the war vessels had caused the whole country a great deal of trouble, and given it a "bad time" for many years. They thought this was worth several thousands of millions of dollars. The English lawyers of course insisted that none of these claims were good, but they were all presented to the court.

Then the court decided in the first place that England had done wrong in letting four of the cruisers be built, and that England must pay for what they had done, and took up the claims of the insurers and the men who had lost ships and goods by the acts of the four cruisers, and made an award of damages based on them, and excluded all the other claims as being good for nothing. So they made England pay $15,500,000 in hard coin to the United States, and the United States took the money, and Congress said, "Now we will pay it to the claimants, those poor men who have lost so much and suffered so long." For it was now several years since the war. So the insurers and shipowners were much pleased, and clapped their hands for joy. But just then all the other claimants whose claims had been decided by the court at Geneva to be good for nothing came to Washington and demanded to be paid too. What they said was, "Never mind whether our claims have been recognized or not; we are your constituents, and if you don't pay them you shall not be reëlected." But Congress said, "We will pay the shipowners first, and then we will see about the others afterward. There is time enough to pay the insurers, because all insurance companies are rich and make money; and it would not look well to pay illegal claims just now." So the shipowners were paid off, and then there remained some ten million dollars to be distributed, and then Congress every year referred the matter to the judiciary committees, and the judiciary committees sent for the claimants and heard them. They always told the same story, however, so that this got rather tiresome, and the insurance companies began to make a loud noise about "their money," and ask why it was not paid to them, and the illegal claimants to make a loud noise about the insurance companies, and every year half a dozen bills were introduced into Congress—some to pay the insurance claims and some to pay the illegal claims, and some to let the judges decide who ought to be paid.

But at every session Congress adjourned without passing any bill at all, and so at the next session the bills had to be introduced all over again. Finally the Government got impatient, and said: "We can never decide what to do with this money; let us pay some of our own debts with it."

This year the House Committee has brought in a bill to provide for paying the illegal claimants and to prevent any of the remaining legal claims being paid. The insurers, who are the legal claimants, do not like this, and they will have a bill to pay their claims, which will exclude the illegal claims. Then some members of Congress will favor one bill and some the other, and finally neither will be passed, but Congress will adjourn and the curtain fall, and the audience go home and tell all their friends what a funny play it is. Its run has been one of the longest on record.

THE MORAL OF THE PRIZE FIGHT.

Strong expressions of disgust with the late prize fight continue to appear in the newspapers, coupled with lamentations over the keen interest in the affair displayed by men and boys of the working class all over the country. This interest, indeed, appears to have been as strong in Boston as anywhere, and Boston furnished the victorious pugilist. Sullivan was born and brought up in that city, under all the influences provided by the State for the proper education of its youth. We are greatly afraid, too, that diligent searching of the heart would reveal the fact that there were very few Massachusetts men of any class, who paid any attention whatever to the "mill," who were not secretly pleased that, a mill having taken place, a Boston boy should have won the belt from a Tipperary Irishman. If it has no other value, it shows, as the Heenan-Sayers fight was held to show, that the physique of the European race does not decline in this country. Sullivan is doubtless of Irish origin, but he has been exposed long enough to the agencies to which European philosophers like to ascribe the degeneracy of the American man, to make it clear that the degeneracy is easier to talk about than to prove. His victory is one of a great number of facts, which have been accumulated since the war, going to upset the old theories about the injurious influence of the American climate, which, when Cobden was here in 1833, he treated as no longer open to question. For this reason alone more people than care to avow it, took a clandestine satisfaction in the manner in which Heenan hammered Sayers, in 1860. The present writer in fact in that year heard a discussion in which an Episcopal clergyman displayed a warmth in maintaining Heenan's claim to the belt which would have seemed at least adequate in a sporting dry-goods jobber who had given heavy odds on the event.

A prize fight is a beastly spectacle, but then the prize-fighter has to be a fine animal, with much courage and endurance; and all men like a fine animal, and secretly chuckle over his strength and bottom, especially when they can claim any of the credit of him—just as they chuckle over the performances of their own or their country's horses. The encouragement to prize-fighters, which has happily greatly diminished during the last twenty years, does not in fact come wholly from the coarse and uneducated and vicious class. It is fed by secret rills of sympathy which flow from higher sources. The boys and men who hang round the telegraph and newspaper offices waiting for the story of a great "battle" have less shame, and probably less to do, than their neighbors; but they are not alone in their eagerness to know how the affair ended, and in their capacity for satisfaction or dissatisfaction over the result.

This explanation does not, however, cover the whole ground. An observer of the play of public opinion in an Anglo-Saxon country about a prize fight must, if candid, confess that there is in the popular interest in it a survival of the barbarism of which war is the most striking example. We have got so far as to abhor the vendetta and all violent modes of settling private differences, in this showing an immense advance on our ancestors; but in the matter of settling the larger differences of nations, we have made but little progress since the first recorded Olympiad. There is probably no subject to which the powers of the human mind have been so actively, eagerly, and energetically applied during the last 2,500 years as the means of deciding international disputes; but the principal result has been an immense improvement in the methods of destroying life, and the conversion of the happy warrior from a braggart swordsman and javelin hurler like Goliath into a pale and silent student like Moltke. There is still nothing which rouses and interests civilized people as much as war does—nothing which so disturbs their reason and judgment; and there is no field of human activity in which skill, independent of moral qualities or social usefulness, is so highly honored and rewarded. No statesman, however wise or able or useful to his kind, can win in fifty laborious and illustrious years more of public honor and love and gratitude than nations give in ten to the hero of a few successful battles.

This may be melancholy, but it is true, and it in part explains why a mill between "heavy weights" throws all the youth of the country into a state of excitement. It is, on a small scale, a display of that process of deciding things by force of which war is an example on a great scale. The issue is a very petty one, but it is nearly as rational as the question which is so often debated, with great heat, whether Englishmen or Frenchmen, or Englishmen or Americans, make the best soldiers. The British captain of a man-of-war, who welcomed Sayers on board his ship in the Mersey in 1860, and presented him to

his crew as an honored guest, was not mistaken in supposing that a good fighting crew must have Sayers's qualities—pluck, endurance, insensibility to pain and to the sight of blood, and a love of combat *per se*. In short, the extirpation of the prize-fighting mania from our manners will be accomplished by precisely the same process which makes men shrink from settling international differences by mutilating and destroying the bodies of great masses of young men and horses. A few centuries hence, let us hope, "mills" and great battles will be read of with common horror, not unmixed with amusement.

THE RAILROAD DEADHEAD.

THE Iowa Legislature last month directed the Railroad Commissioners of that State to make a report on the following points:

"1. Whether free or reduced rates of fare should be given to any class of citizens except paupers, mendicants, or other proper objects of Christian charity and benevolence.

"2. Whether persons elected to public office by the people, or members of the press, or political conventions of any kind, shall be allowed to accept these favors.

"3. Whether the railroad companies should be restrained from issuing passes to public officers or members of political gatherings or conventions of any kind at reduced rates of fare.

"4. Whether any or what limitation should be placed on these practices by law.

"5. If the Commissioners deem this to be a wholesome and legitimate practice, that they give this body their reasons for such belief."

The Commissioners have now made an exhaustive report, which is very different in character from what was expected by the legislators who brought the matter up. They say in the first place, that paupers and mendicants in Iowa—and the same thing is undoubtedly true elsewhere—are not given free passes or reduced rates, while the only objects of Christian charity and benevolence who are allowed this privilege are clergymen. This practice the Commissioners defend as tending to the spread of religion and morality, and as resting partly on a convenient application of the law of demand and supply to Christianity. They say: "It has been the practice for many years, and we understand ever since the railroad became the main channel for passenger travel, to extend to clergymen preaching or in charge of congregations along the lines of the various roads a certificate that enabled them to purchase tickets at half the usual rate. The preacher is engaged in the certainly laudable employment of teaching good morals and raising the standard of character in the community in which he lives. For this service he is paid by the voluntary contributions of those who respect his spiritual character and are grateful for his instructions. This we do not regard as charity, for he renders an equivalent for all that he receives as fully as laborers in any other profession." Editors, the Commissioners think, should have free passes "as payment for advertising, or such notices of the roads as seem to be an equivalent." With regard to political conventions they declare that the sentiment of the people of the State is in favor of reduced rates because, "under a republican form of government, the best results are attained where two political parties are nearly equally balanced, and where each, to gain or maintain supremacy, finds it necessary to nominate for positions of public trust its ablest and purest men, and advocate measures that each can demonstrate to be for the best interest of the people"; and "one method of keeping up these party organizations is through the instrumentality of political conventions, where men from all parts of the State meet for interchange of views and for general discussion of public policy." They add, what seems a more conclusive argument, that the Legislature has no power to prevent members of the press or delegates to conventions from taking free passes if they can get them.

With regard to elective officers the Commissioners think the case is different. All the executive and legislative officers, judges, district attorneys, and sheriffs in Iowa are, it seems, deadheads. The sheriffs are given passes for somewhat the same reason that clergymen get them. The latter are encouraged to raise the standard of character throughout the State, and the former to lay hands upon those whose standard of character is so low as to make lay treatment of a penal nature necessary. The railroads feel that the more the parson and the sheriff can be encouraged to travel the more safe life and property on their lines will be, and in this of course they have a direct pecuniary interest. On the other hand, the Commissioners do not think that this argument applies to the Governor, judges, or members of the Legislature, and whether the motives of such officers in taking passes are pure or not, they think that "each member of the General Assembly can best determine for himself."

The Commissioners then proceed with great gravity to narrate the story of Ansel Bascom, a once famous legislator of this State, who in the year 1846 was offered a free pass by the president of the Albany and Rochester Railroad. At this time the canal question was "up," as the canal question usually is at Albany, and Mr. Bascom wrote a letter to the president returning the pass, and saying that he went to Albany to represent the people and not the Albany and Rochester Railroad, that it was part of his duty to "watch" that railroad and see that it did no wrong, and that it would be consequently a fraud on the State for him to take the pass. Mr. Bascom's self-denial made him for the time being a public character; but the effect, the Commissioners say, was ephemeral—so ephemeral that they even add that the railway pass is regarded in this State to-day as a legislative "heritage." The Commissioners have evidently not seen the latest contribution to the literature of the subject contained in the letter of District Attorney McKeon, of this city, who recently returned a pass, stating that when he was a member of the Legislature at Albany he not only never took a railroad pass, but invariably waited till the spring thaw broke up the ice, and "came down by the boat," like the noble old Roman that he is.

The Commissioners declare that as an "abstract proposition" the free-pass system is a bad one, but they think that it cannot be dealt with by the Legislature as an abstract proposition. Several States have taken it up as an abstract proposition, with somewhat curious results.

The Pennsylvania Constitution, adopted in 1873, has article 17, section 8, as follows:

"No railroad, railway, or transportation company shall grant free passes or passes at a discount to any person except officers and employees of the company."

The Arkansas Constitution, adopted in 1874, has article 7, section 17, as follows:

"The General Assembly shall prevent by law the granting of free passes by any railroad or transportation company to any officers of the State, legislative, executive, or judicial."

The California Constitution, adopted in 1879, article 11, section 19, says:

"No railroad or other transportation company shall grant free passes or tickets at a discount to any person holding an office of honor, trust, or profit in this State, and the acceptance of any such pass or ticket by a member of the Legislature, or other public officer, *other than Railroad Commissioners*, shall work a forfeiture of his office."

The Board say in conclusion, with great frankness, that they regard the clause in the California Constitution "as the best model for a legislative enactment," and add: "It is said that these constitutional provisions are practically a dead letter in the States above referred to, as are all statutory provisions of this character, but this Board greatly mistakes the temper of the management of the Iowa roads if any legislative enactment of this kind will not be in every case scrupulously complied with."

There seems to be a difference of opinion in Iowa as to whether the reply of the Railroad Commissioners is the result of deep reflection upon this branch of the railroad problem, or whether it is to be regarded as the product of a sarcastic and cynical spirit. The arguments, suggestions, and facts contained in it, however, deserve wide attention as throwing some light on the limits imposed by circumstances upon reform through legislation.

THE PINE SUPPLY OF THE LAKE REGION.

THE publication of Prof. Sargent's Forestry Bulletin of Michigan completes that portion of the series which treats of the important pine forests of the great lakes, and enables us to offer some considerations upon the present condition of these forests, and the influence they exert upon the prosperity of the country.

It is shown that in the three great pine-producing States—Michigan, Wisconsin, and Minnesota—there were standing, according to the carefully-digested estimates of the Census Office, in the spring of 1880, some eighty-two billion (82,010,000,000) feet of merchantable pine. Of this nearly one-half, or forty-one billion feet, are credited to Wisconsin; the two Michigan peninsulas show thirty-five billion feet, and Minnesota but a little more than six billion feet. The pine cut in these three States reached during the census year a total of over seven billion (7,035,507,000) feet. At this rate of destruction these States would be stripped of their pine forests in less than twelve years.

It should be borne in mind, however, that all estimates of standing timber, from the manner in which, from necessity, they must be prepared, are liable to considerable error; and although such estimates usually greatly exaggerate amounts, it is not, perhaps, unreasonable to suppose that many small and scattered bodies of pine, especially in the northern peninsula of Michigan and in northern Minnesota, have escaped the notice of the census experts, and that the published estimates might be safely increased by a few million feet. It is equally safe to suppose that no great bodies of unexplored forest remain within these States, or that, so far as they are concerned, new discoveries will introduce new elements in the calculations of the lumber supply of the country. The most northern and the most inaccessible wilds of these forests have now been explored; their limits are faithfully mapped, and the uncertainty which has so long existed in regard to their extent and richness has disappeared before scientific methods of investigation.

The Bulletins show, then, that at the present rate of production twelve years will exhaust the pine supply of these States. But is it probable that the rate of production will not increase with the growth of the country? According to the returns of the Ninth Census, 3,912,199,000 feet of lumber were manufactured in 1870 in Michigan, Wisconsin, and Minnesota. These figures represent the total production, and include a

small amount of hard wood. The total production during the last census year, including also hard wood, reaches 7,145,969,000 feet, or an increase of eighty-three per cent. of production in 1880 over 1870. Something, probably 10 per cent. of this apparent increase, should be credited to the better methods of the Tenth Census, and its greater success in collecting the statistics of manufactures. On the other hand, 1870 was a year of great prosperity and excessive production, while in 1880 the lumber industry had not yet fully recovered from the commercial prostration of the preceding years.

An increase of consumption of eighty-three per cent. in ten years, or even of seventy per cent. (which is probably nearer the correct figure), is alarming. Nevertheless, the rate at which these forests will disappear will, we believe, be much greater in the near future. The almost entire exhaustion of the pine supply of Maine, New York, and Pennsylvania; the greater facilities which the improvement of the rivers, and the general introduction of short logging railroads and tramways, afford for getting out logs from regions which ten years ago were still either entirely unknown or considered so remote as to be beyond the reach of profitable markets, indicate that, rapid as has been the removal of these forests, the rate of future destruction must be much greater. It is probable that the annual production of pine lumber in these three States will increase considerably during the next five, or perhaps eight, years, and that it will then cease suddenly, and almost entirely. We do not wish to be understood to prophesy that at the end of eight years no more pine lumber will be manufactured in Michigan, Wisconsin, or Minnesota. Pine in small quantities will continue to grow in these States, and pine lumber will probably be manufactured there always. What we intend to say is, that at the end of eight, or perhaps ten, years the pine forests of these States will have been so nearly exhausted that their production will have ceased to be of any national importance, and will not be available for more than mere local supply.

No steps have ever been taken to preserve or perpetuate these forests. Their destruction has been wanton, short-sighted, and stupid. The goose which has laid so many golden eggs, and has built up cities and fleets and great traffic lines, is dying. There can be no future for much of the immense region from which these pine forests have been removed, and it must remain a desert until generations of humbler plants shall have made another crop of pine upon it possible. Nature is slow to forgive any infringement of her laws, and the great-grandchildren of the men who have destroyed these forests will not live to see the shores of the great lakes covered again with pine forests fit for the axe. A wiser policy and a different management might have secured permanent supply with greater, or as great, individual profit. The northwestern lumberman in his march to the north has made a clean sweep before him. If any tree escaped his rapacity, the fires, which have everywhere followed in his wake, destroyed it, and destroyed, too, the ability of the soil to produce pines again. Had he selected only trees of a standard size to cut, leaving all young trees to grow up and sufficient old trees to furnish the ground with seed for new crops; had he excluded fire from the partially-cut woods, these pine forests might have been preserved indefinitely, and been made to yield crop after crop, and far greater aggregate returns than have now been obtained from them.

The destruction of these forests will drive the men and the capital now engaged in working them to seek new fields of industry, and the failure of the lumber supply in these States must seriously affect the prosperity of Chicago and other points of distribution, as well as many transportation companies depending in whole or in part on the movement of lumber for their traffic. Chicago is now the greatest lumber centre the world has ever seen. More than one billion eight hundred million feet of sawed lumber entered it by rail and lake during 1881. Its shipments reach the Atlantic and to beyond the Rocky Mountains. The Chicago Lumber Exchange regulates the lumber trade of the country. In lumber Chicago is king; but its reign is almost over. Its immense lumberyards will soon be empty, and with the pine forests of the lakes will disappear the commercial advantages which its central position in relation to these forests has given to it as their chief point of distribution.

No city of the United States can ever hope to rival Chicago in the volume of its present lumber business. New Orleans or San Francisco will probably become the successful competitor in the race for second place. Both are the natural outlets for vast forests of great commercial importance, and both are conveniently situated for a great foreign and domestic lumber trade. The information, however, which Prof. Sargent has no doubt succeeded in obtaining in regard to the extent and character of the forests of the Gulf and the Pacific has only been partially published, and we must therefore defer any further predictions upon the future of the lumber industry of the country until the completion of his series of Forestry Bulletins shall have furnished us with the facts necessary to consider this subject intelligently.

THE PAST YEAR IN EGYPTOLOGY.

CAIRO, January 16, 1882.

THE past year will ever be memorable for the valuable and remarkable discoveries that it has yielded to Egyptology. M. Maspero has just published his official report of the great find of royal mummies at Thebes. The narrative is enlivened by numerous photographs, among which are those of the mummies of Thutmes III. and Ramses II.—the grand old monarchs whose titles are inscribed on the Central Park obelisk. The texts of the interiors of the pyramids of the V. and VI. Dynasties, opened at Sakkara last spring and summer, are also appearing in rapid succession in M. Maspero's 'Recueil,' published at Paris. Besides these discoveries, concerning which accounts have already appeared in your columns, three additional discoveries have been recently made which do not deserve to be passed by in silence.

In the desert five miles west of Kom-el-Hamadra—a village on the western border of the Delta, and midway between Cairo and Alexandria—the Bedaween unearthed a large stone which they described as "taller than a man, and covered with fine writing." Herr Emil Brugsch, the Conservator of the Boolak Museum, and brother of Dr. Brugsch Pasha, proceeded at once to the spot and found the stone to be a stela, or tablet, used by the Egyptians to record decrees and epitaphs. This newly-discovered monument is inscribed with tri-lingual texts which prove to be copies of the Decree of the Synod of Priests assembled at Canopus, ordaining the deification of Berenice, the daughter of Ptolemy Euergetes, and creating a fifth order of priests to be called Euergetæ. The decree is dated the 17th of the month of Tybi, of the ninth year of Ptolemy Euergetes (B. C. 238), and is consequently nearly a century older than the famous Rosetta Stone. Another copy of this same decree of Canopus is inscribed upon the stone of Sân or Tanis, in the Boolak Museum, of which the British Museum possesses a cast.

To appreciate the interest that attaches to this new find, it may be well to recall the fact that in 1819–22 it was the tri-lingual Rosetta Stone that yielded to the researches of Young and Champollion the key to the language of ancient Egypt, and thus became, as Mariette says, "the instrument of one of the greatest discoveries that do honor to the nineteenth century." Not, however, until Lepsius and Mariette, in 1865–6, brought to light the Greek, hieroglyphic, and demotic texts of the Canopic Decree engraved upon the Stone of Sân, was the accuracy of Champollion's mode of interpreting hieroglyphics confirmed, and the study of Egyptology placed on sure and solid grounds. The Stone of Kom-el-Hamadra—as, judging from analogy, I suppose this stela will henceforth be called—bears the same decree as that of Sân, except that the texts, inscriptions, and representations are very much fuller and detailed than are those of the latter. The stela is a splendid piece of workmanship: it is of limestone and measures eight feet high by three feet wide and two and a half feet thick. The top is rounded, and represents the winged disk, and pendent *urœi* serpents, together with the upper and lower portions of the crown *pshent*. Below the *urœi* serpents there are some twelve lines of hieroglyphs, and representations of Ptolemy Euergetes, his queen, and his daughter Berenice, the "Queen of Virgins." Then follows the decree in Greek, hieroglyphic, and demotic. This stela has already been placed in the Boolak Museum, which, with the additions of the past year, is now quite as rich in monuments, tablets, mortuary relics, and writings—barring historical papyri—as are the combined collections of Europe. This is as it should be, for Egyptian relics have an artistic value here, which they lose in the uncongenial climate and surrounding of Europe and America.

The second discovery that I have to announce is that of two tombs of the VI. Dynasty, which present the earliest known instances of the *arch*. These tombs are of private persons of high rank. They were discovered near the most southerly group of Sakkara pyramids, and within a stone's throw of the prominent truncated pyramid of King Unas, known as the Mastaba-el-Pharaoon. It should be remembered that in the interior of the Pyramid of Mycerinus of the IV. Dynasty—the smallest of the three great Pyramids of Ghizeh—there is a passageway the top of which, although *resembling* an arch, is not constructed on the principle of an arch—that is to say, blocks were placed horizontally, one projecting beyond that immediately below it, till the uppermost two met in the centre; the interior angles being afterward rounded off to form the vault. Several instances of these pseudo-arches are known to exist in tombs of the VI. and later Dynasties, but no true arch had hitherto been found previous to those in the tombs of the XVIII., XIX., and XX. Dynasties, near Thebes. The arches in the two recently-discovered tombs of the VI. Dynasty are built over the entrances. They have ornamented keystones, and are beautifully constructed of fine bricks.

The third discovery to which I have referred is that of the long-sought-for entrance to the Pyramid of Maydoom—a pyramid which will probably turn out to be at least a century older than the Great Pyramid of Cheops, and hence the oldest known monument in Egypt. This pyramid, situate some fifteen miles to the south of Ghizeh, is one of the most striking landmarks on the Nile. From a distance it seems to stand on the top of a hillock; a nearer view shows this hillock to be formed by the crumbling away of the outer casing of the pyramid itself. It is

called by the Arabs "el Haram el Katdab" (the false pyramid), for they suppose it to be formed of the rock itself. Its general appearance has been described by Miss Amelia Edwards as "an unfinished Tower of Babel." The Pyramid of Maydoom is doubtless the most carefully constructed and altogether the best-built pyramid in Egypt. About fifty years ago Ibrahim Pasha, wishing to effect an entrance, thundered away at it for a whole day with artillery. He neither attained his object, nor did the pyramid itself suffer much material injury. A few weeks ago Maspero's workmen, after a long and careful search, removed the massive blocks which had so long concealed a small opening, that soon proved to be the much-coveted entrance. This aperture was discovered on the northern face of the pyramid, and at a considerable distance from the base. The corridor leading from the entrance toward the interior has been cleared for a distance of forty-five metres. This corridor is similarly disposed, and is constructed in the same manner, as that of the Pyramid of Cheops. The entrance to the central chamber is effectually blocked up by the falling of the roof of the corridor. The workmen are, however, busily engaged in clearing away the débris—a task both difficult and perilous, which may require one or perhaps two months. The only texts thus far found in the corridor are the inscriptions of two Scribes who visited the interior of the pyramid in the time of the XV. Dynasty. Recently discovered collateral evidence tends to strengthen the hypothesis that this pyramid is that of King Snefroo, of the III. Dynasty, who reigned, according to Brugsch, B. C. 3766, or, according to Mariette, B. C. 4200. The picks of the Arab workmen will, however, soon determine the question.

Discoveries of the startling and dramatic nature of those of the carefully preserved Royal Mummies, and the opening of long-closed pyramids and tombs, are perhaps overshadowed, as far as pure scientific value is concerned, by a new region in Egyptology recently opened by the successful exertions of Dr. Brugsch Pasha and M. Revillout. These two savants have made a specialty of the demotic writing of Egypt—a writing so intricate and confused as to be unintelligible to some of the keenest Egyptologists. The hieratic writing, used almost exclusively by the priests, is to the hieroglyphic what the handwriting of the present day is to print. The demotic is a very much abbreviated form of the hieratic, and stands in about the same relation to the hieroglyphic that our shorthand does to the page of a printed book. Moreover, the demotic, being written in the hurry of every-day business, actually presents a penmanship so cramped and careless as to add almost insurmountable obstacles to the already difficult task of deciphering it.

The demotic came into use during the XXVI. Dynasty, and being used for ordinary business and legal transactions, its literature gives an insight into the laws, social state, customs, and manners of the Egyptians that is not to be hoped for from the scholarly and monumental styles of the hieratic and the hieroglyphic. An excellent account of the nature of the treasures which demotic scholarship has in store for us, appeared in a recent number of the London *Times*. It seems that no less than several thousand demotic papyri are preserved in the collections of London, Paris, Berlin, Leyden, and Turin. These documents, mostly of a legal character, are no longer a *terra incognita*, but furnish a solid basis for the study of the law in its earliest development. The demotic papyri provide us with deeds of sale, of transfer, of gift, of partnership, of endowment; leases of houses and lands; mortgages, bonds, receipts for taxes and other payments, marriage settlements, marriage contracts, decrees of divorce, title-deeds, inventories, etc.

The progress in the interpretation of demotic literature strikingly recalls the truth of Bunsen's prediction, that "Henceforth the positive philosophy of universal history, constructing and delineating the curve described by the Divine mind in man through space and time upon this star which we call the earth, . . . cannot be carried on scientifically and successfully without the assistance of Egyptology." The effect which these demotic papyri are destined to have upon our present ideas of ancient law and legal institutions remains yet to be seen. It is too much to expect that Egyptologists shall also be legists; but the moment has now come for the jurist to work hand in hand with the Egyptologist, to utilize the material that science has placed at his disposal, and at length to trace the history of the law throughout that logical and natural course which has been both widened and deepened by Egyptology. B.

Correspondence.

THE REVOLT IN DALMATIA.

To the Editor of The Nation:

Sir: Within the last two or three weeks the newspapers on both sides of the ocean have begun to contain a good deal of news from the eastern side of the Hadriatic. For many months past events have been going on there which have been fully chronicled in the Manchester *Guardian*, and less fully in the *Pall Mall Gazette*, but which seemed to draw to themselves no notice in any other quarter, British or American. This is not very wonderful. Dalmatia is a good way from Britain, and further still from America, and many people have doubtless become tired of anything to do with "the eternal Eastern Question." But more than this, it has throughout been the interest of powerful personages to hinder this piece of present history from being known. Few newspapers, British or American, have any direct and constant communication with Dalmatia, and information from Vienna is worse than no information. It is the story of the lamb as told by the wolf. In England most people take their knowledge of such things from the *Times*, and the Vienna correspondent of the *Times* is well known as one of the bitterest and most unscrupulous enemies of the Southeastern nations. No people in the world have smaller means of making their wrongs known than the South-Slavonic people who are under the Austrian yoke. It is simple ignorance of their case which hinders them from receiving the full sympathy of all lovers of right in both hemispheres. Liberal Europe and America rejoiced at the deliverance of Lombardy and Venetia from the rule of Francis Joseph. But then Liberal Europe and America knew something about Lombardy and Venetia. Southern Dalmatia, Herzegovina, and Bosnia are now in arms against the same foreign oppressor from whom Lombardy and Venetia have been set free. Their cause is the same; their right to the good wishes of freemen is the same. No nobler struggle for right was ever waged on European or American soil than that which is now being waged among the hills by the Mouths of Cattaro. It is the struggle of a few brave men to guard the rights and homes of their fathers against, not indeed the bloodiest, but certainly the meanest and pettiest tyranny to which an unwilling people ever had to bow its head.

There used to be a proverb among schoolboys about "hitting one of your own size." At Solferino and at Königgrätz Francis Joseph tried hitting those of his own size, and he found that those of his own size hit rather too hard for him. Since then he has tried hitting those who are not of his own size, and at that game he has got on better. It is easier to bully Servia and Roumania than to fight France and Prussia. It was easier still for one of the great powers, with the other great powers to back him, to filch from Montenegro a little haven which Montenegrin valor had won from the barbarian and in which not one of his grandmothers had ever reigned. He seemingly thinks it easiest of all to force, in direct breach of his imperial, royal, and apostolic word, a hated burthen on men whom a very modern usurpation has unhappily constrained to be his subjects.

I speak of Francis Joseph personally, because every one who knows the Southeastern lands knows that the boasted constitutional monarchy of "Austria-Hungary" is a mere sham as far as those lands are concerned which are neither Austria nor Hungary, but in which the common sovereign of Austria and Hungary rules as a foreign intruder. There is no constitutional government in Dalmatia, any more than there is in Russia—or rather, there is a great deal less. For the people of Russia can bring a great indirect influence to bear on the policy of their national prince, whose interests are the same as theirs; the people of Dalmatia can bring no influence whatever to bear on the policy of a foreign ruler, whose interests are the opposite to theirs. The only kind of moral or immoral influence which that foreign ruler can exercise in the subject land is to try to play the Italian and the Slavonic elements in the land against one another. Beyond that there is simply the rule of the sword—suppression of newspapers, suppression of municipal corporations—all the usual tricks of foreign tyranny. With all this there is no reason to charge the Austrian people, or even the visible Austrian Ministry. It is all the doing of the irresponsible prince and his irresponsible advisers.

Let me shortly run through the history of these lands as far as concerns present events. In the last century Dalmatia was very unequally divided between the two commonwealths of Venice and Ragusa. The Ragusan territory came in the middle, leaving Venetian territory to the northwest and to the southeast. The Ragusan dominion, though oligarchic in constitution, was native, and not oppressive. The Venetian rule was foreign, better and worse in different times and places, but one which at least kept out something worse in the shape of the Turk. Many towns and districts willingly accepted it. Among these were some of the districts near Cattaro, which commended themselves to Venice on condition that their old rights and customs should be observed, and that, if at any time the Republic should be unable to protect them, she should leave them to themselves, and not cede them to any other power. On these terms, which seem to have been well observed, the men of the *Bocche* remained Venetian subjects till the fall of Venice in 1797. Then the two spoilers, the French and the Austrian, divided the prey, and all Dalmatia, including the privileged districts, fell to the share of the Austrian; that is, the people of the Mouths of Cattaro were, in defiance of their old rights and of old treaties, forcibly handed over to a new foreign master. Next the spoilers quarrelled. In 1805 the Austrian ceded his supposed rights over Dalmatia to France, in the person of the elder Buonaparte. Part of Austrian Dalmatia was occupied, and in 1808 Buonaparte, without any provocation, suppressed the commonwealth of Ragusa and annexed its territory. Between 1810 and 1814 various points were occupied by England—England, Russia, and Montenegro being allies against France. In 1813 the French were driven

out of Cattaro, which became the Montenegrin capital; the mountain principality now again reached to the sea from which Turk and Venetian had so long shut it out. Meanwhile the people of the privileged districts freely united themselves to Montenegro, according to their old rights. It must be remembered that the Slavonic people of Southern Dalmatia, of Herzegovina, and of Montenegro are simply the same people in every sense, parted asunder only by arbitrary political divisions. Montenegro simply means that extent of territory, more or less at different times, which has been able to preserve its independence. At this time, as the ally of England and Russia, the independent land was greatly enlarged. France was driven out; Austria stood by and did nothing; the men of the Bocche—the Mouths of Cattaro—were, by their own act, restored to the rule of their national prince and to full fellowship with their own people.

After the fall of Buonaparte, at the peace of 1814–1815, it might have been expected that the commonwealth of Ragusa, arbitrarily suppressed by him, would have been restored, and that at least those parts of Dalmatia which had voluntarily joined themselves to Montenegro would have been allowed to keep the freedom which they had won. But Francis of Austria—the man who had been the last Roman Emperor and German King, and who devised the new-fangled and grotesque title of "Emperor of Austria"—had the face to ask that all should be handed over to him. Cattaro he could not keep; Ragusa had never been his for a moment. But he had the imperial, royal, and apostolic shamelessness to ask for both; and England and Russia were base enough to let him have what he asked. They betrayed their mountain ally; the newly-won freedom of the Bocche was overthrown, and its people, so lately delivered, were again thrust under the foreign yoke. Montenegro had to give up her recovered sea-coast and her new capital of Cattaro. Ragusa, instead of the restoration of her republic, had to exchange one foreign master for another. The Austrian, in short, took all that French, English, Russians, and Montenegrins had been fighting for. He went off rich with his own former stealings of 1797, and with his son-in-law's stealings of 1808 besides. He did, however, at the request of Alexander of Russia, promise to the men of the Bocche that he would observe their old privileges which Venice had respected. The chief of these was exemption from the Austrian (so-called) *Landwehr*. The mere name should not mislead any one. To a German, *Landwehr* means military service in defence of his own land at the bidding of a national government. To the South-Dalmatian subject of Austria it means military service at the bidding of a foreign intruder, who may likely enough bid him march against his own people. For to him the free people of Montenegro are his own people; their prince is his national prince; Francis Joseph, his self-styled King and Emperor, is merely a foreign usurper, holding his land in bondage by brute force. That is to say, the Dalmatian feels in 1882 as the Venetian felt in 1865, and the Lombard in 1858.

It will be remembered that in 1849 Francis Joseph gained possession of the kingdom of Hungary by Russian and Croat help, and that, after eighteen years' rule as tyrant, he became its lawful King in 1867. From that time dates the so-called *dualism* of Austria and Hungary. This practically means the joint supremacy—the *condominium* one might almost say—of the German and Magyar minorities over the Slavonic majority in the various kingdoms, duchies, etc., which make up the family estate of the House of Lorraine. Francis Joseph, kept on his throne by the help of Slavonic swords, holding all that he has by the grace of Nicolas of Russia and Jellachich of Croatia, has now and then found himself in a singular relation toward his own instruments. He has had before now to seek his tools for his enterprises against the freedom of other nations among the men whose blood he once sought when they were defending the freedom of their own nation. Driven out of Italy, but now firm on his Hungarian throne, Francis Joseph now stretched forth his hands to vex certain of the race to whom he owed it that he had a crown on his head or a shirt to his back. The first act came in 1869, in the shape of an attempt to set aside the chartered rights of the men of the Bocche by forcing the hated *Landwehr* upon them. The attempt was in vain; the brave Dalmatians took to arms and utterly routed the troops which the foreign oppressor sent to bring them under the yoke. I have seen in Dalmatian houses pictures of scenes in this struggle. The defenders of freedom are seen hurling the invaders down their heights with a good will. Never, not at Marathon or at Morgarten, did men wage a nobler or a more successful struggle for right. The foreign lord of Dalmatia had to knock under to the Dalmatian people; the scheme of forcing the *Landwehr* on the men of the Bocche was given up for eleven years. But it was convenient to hush up the overthrow alike of the imperial, royal, and apostolic policy, and of the imperial, royal, and apostolic armies. Solferino and Königgrätz could not be hidden; defeats among the Dalmatian mountains could be. I find that the best informed men both in Britain and America never heard of the Dalmatian war of 1869. But, small as the scale was, freedom assuredly never won a nobler victory.

In 1875 Francis Joseph paid Dalmatia the memorable visit which undoubtedly led to the Slavonic revolt in Herzegovina, and to all that has since happened in southeastern Europe. The visit was understood as a visit of reconciliation, and Francis Joseph was well received in his character of King of Dalmatia and Lord of Cattaro. A noble future was at that moment open to him: he might have put himself at the head of the Slavonic cause—that is, he might have put himself at the head of the great majority of his subjects. At their head he might have done all that Russia did, and more also, without calling forth anything like the jealousy that Russia called forth. For a while his policy was distinctly favorable to Southeastern freedom. When I was first in Dalmatia, in the autumn of 1875, the patriots of Herzegovina, who had just risen against the Turk, were receiving effective Austrian support in every shape short of actual military help. But the King of Hungary and Archduke of Austria could not go on in the course which might have suited the King of Croatia, Slavonia, and Dalmatia. Help given to Slaves was not agreeable to Magyars; and the imperial, royal, and apostolic policy turned about. The patriots were discouraged in every way; the patriot leader Liubibratich was basely kidnapped and kept a prisoner. But no active steps were taken; the policy of the House of Lorraine was, just as it was sixty years before, to stay quiet while others acted, in the hope of thereout sucking no small advantage in the long run.

The Psalmist speaks of certain oppressors of old who lay waiting secretly in their dens that they might ravish the poor. This picture exactly sets forth the policy of the Apostolic King. There is nothing of the *pecca fortiter* about him. He has not pluck for burglary or highway robbery; but he can put his hand into the pocket of his poor neighbour and filch from him his hard-won halfpenny. In the war of 1876–1877 Montenegro won back a seaboard; the men of the mountains won three havens from the Turk—Spizza, Antivari, and Dulcigno. Of these, Spizza and Dulcigno, though small, were possessions worth having, for so small a state as Montenegro; Antivari had been utterly ruined in the siege—ruined mainly through false promises of Austrian help to its defenders. At the Congress of Berlin in 1878 Francis Joseph, like his predecessor, who asked for Ragusa and Cattaro and got them, asked for Spizza, and got it. No demand could be more shameless. He had not the slightest shadow of claim to Spizza; the rich man wanted the poor man's ewe lamb, and that was all. It was the kind of deed the unrighteousness of which is almost outshadowed by its pettiness. Dulcigno, too, was given back to the Turk. It was only Antivari, because Antivari had been carefully made worthless, which Montenegro was allowed to keep, and that only on insulting conditions. As far as Dulcigno is concerned, the cruel wrong done to the men of the Black Mountain has been since redressed by the energy and patience of Mr. Gladstone; but Spizza, perhaps the very smallest stealing to which a crowned head ever stooped, remains part of the family estate of Francis Joseph.

The same treaty of Berlin also handed over to Francis Joseph the "administration" of Bosnia and Herzegovina without any formal cession of those lands by the Sultan. That is to say, the Apostolic King, like some of his predecessors, became the man of the Turk. The annexation was not acceptable to either the Mussulman or the Christian inhabitants of those lands; for both are South-Slavonic, and every man of South-Slavonic blood had by that time taken the measure of Francis Joseph. The provinces to be "administered" were won by the apostolic middle-man of the Turk, but only after a gallant resistance, chiefly from the Mussulman inhabitants, but with some Christian help. Those lands have since been "administered" after a fashion which has united the whole people, of whatever creed, in a common loathing of the foreign dominion. Which form of tyranny, Turkish or Austrian, is the worse is perhaps a matter of taste. The Turk robs, murders, ravishes, when the fit is upon him; but the fit is not always upon him, and in the intervals he leaves his victims alone. The Austrian never has the same outrageous fits as the Turk; but then he never leaves his victims alone for a moment. Every hour of their lives they are worried about some small matter or other. Their national feelings are insulted by all those petty follies which bring no profit to the ruler, while they call forth the hatred of the subject even more strongly than deeper wrongs. At last the *Landwehr* was to be forced upon Bosnia and Herzegovina. That was too much for either Christian or Mussulman endurance; and a large part of Herzegovina and Bosnia is in arms against the stranger.

So in Dalmatia. The defeat of the attempt in 1869 had a wholesome effect for a while, as was shown by the conciliatory visit of 1875. But the events of 1878 gave Francis Joseph a great advantage, in case he should ever dream of a new attack on the rights which he was for a time compelled to respect. Up to that year Montenegro, Herzegovina, and the Bocche, inhabited by one people in every sense of the word, were under three distinct rulers. But whenever any one of the three had any fighting to do, whether against Turk, Gaul, or Austrian, the other two always came to help. After 1878 this could not be so easily done. Francis Joseph had got a great military advantage from his joint possession of Herzegovina and Dalmatia. He had got a great political advantage from the European recognition of Montenegro. Prince Nicolas is now diplomatically bound to keep his people—

if he can—from helping their enslaved brethren. Last year therefore, Francis Joseph thought that the time was come for a second attempt on the liberties which he had engaged to respect. The *Landwehr*, he thought, could now be forced on those who had successfully resisted his agression in 1869. When I was last in Dalmatia, in June, 1881, the storm was beginning. The hateful burthen was being pressed on the lowland districts; the men of the mountains had made up their minds to resist, as they had done eleven years before. At Manchester every detail has been all the while known in full. The rest of the world seems for many months to have taken no notice. Now every paper tells of the details of actual warfare.

What may come of all this none can tell. The odds are fearfully on the side of evil; but a good cause, inaccessible heights, Crivoscian valor, and Austrian stupidity, are four powerful influences on the side of right. Movements on behalf of freedom which looked much more promising have before now been crushed; but movements which looked quite as hopeless have before now succeeded. The movement of 1875 seemed quite as hopeless, and it has changed the whole map of southeastern Europe; the movement of 1881 *may* be destined to put an end to the ugly and upstart imposture which calls itself the "Austrian Empire."

Meanwhile Austrian brags, Austrian predictions, Austrian statements of any kind, go for nothing. The other day, Montenegro was to be "occupied." A pretty hard game that for the hired and kidnapped bondsmen of Francis Joseph, as any one will say who has seen the freemen of Tzernagora on their own heights. But it is a most hopeful sign, if the telegram be true which announced a few days back that thirty-five soldiers of a Dalmatian regiment had left the service of their foreign oppressor and had joined themselves to the defenders of their country. All honor to men who could thus trample under foot the base traditions of their trade, and could prefer clean patriotic duty to the bloody spectre called "military honor." With such men for ensamples, what can be the feelings of a man like Jovanovich, himself a Slave, but who is not ashamed to take the pay of the stranger again his own people? On this side of the ocean, one is inclined to ask whether he knows the history of Governor Trumbull of Connecticut. The original "Brother Jonathan" would not be a bad model at this moment for a Governor of Dalmatia, or of any Slavonic land under the "dual" yoke of Budapest-cum-Vienna.—I am, sir, your obedient servant,

EDWARD A. FREEMAN.

NEW YORK, Feb. 7, 1882.

HOOSIER BIBLIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: If there is to be a bibliography of bibliographies, your note of last week contributes certainly a curious instance toward the material for such a work. But I beg that the future compiler of that work may not overlook the 'Catalogue of the Indiana State Library for the year 1859,' which has long been my wonder and admiration. So far is it from attempting the complexity of the *catalogue raisonné*, that its rigorous alphabeticism sets down 'A Manchester Strike' between 'Agriculture' and 'American.' It invites us to such *tours de force* as the 'Autobiography of Sir Simonds D'Ewes, by Halliwell,' and the 'Autobiography of Sir Walter Scott, by Bart.' 'Bank's History of the Popes' appears under the letter B. Strong in the historical department, it offers a choice between the 'Life of John Tyler, by Harper & Brothers,' 'Memoirs of Moses Henderson, by Jewish Philosophers,' 'Memoirs and Correspondence of Viscount Castlereach, by the Marquis of Londonderry,' and 'Memoirs of Benvenuto, by Gellini.' In fiction, you may find 'Tales of my Lanlord, by Cleishbotham,' and 'The Pilot, by the Auditor of the Pioneers'; while, if your passion for plural authorship is otherwise unappeasable—if Beaumont and Fletcher or Erckmann-Chatrian seem to you too feeble a combination of talents—you may well be captivated by the title 'Small Arms, by the United States Army.'

The State of Indiana has undoubtedly learned a good many things since 1859; but, whoever its present librarian may be, it is hardly probable that his highest flight in bibliography has surpassed the catalogue from which I have quoted.

ROCHESTER, Feb. 6, 1882.

COLLEGE DISCIPLINE.

TO THE EDITOR OF THE NATION:

SIR: I was on the point of mailing a fuller discussion of this subject, when your last issue appeared with the interesting letter from "L. N. D.," stating some facts of which my letter would only be a repetition. Knowing your space is valuable, I shall therefore embody my thoughts in a few short propositions:

1. It seems to me that three stages in a course of education are sufficient. These stages may be named the school, the college, and the university. As it now is, many of our so-called universities are merely schools, while some of our colleges are becoming universities. The cause of this confusion of terms, and of the unsettled state of discipline, is no doubt chiefly found in the constant change and growth of the larger Eastern colleges, and their ambition to hold the chief rank and place among our institutions of learning. This, as the writer from Louisville shows, has led the college into difficulties and inconsistencies in discipline, as well as other things.

2. The name *university* ought to represent an institution where not rudiments but sciences are taught by specialists, and where the learners are responsible young men who have chosen one or more of these sciences for a life-work. Here should be not only *Lernfreheit*, but *Lehrfreiheit*. This alone can promote the best interests both of the ambitious student and the worthy professor. The laggards among both will be left behind. The opposite system is a premium on idleness and a support of dullards.

3. The college should terminate the general preparatory culture of boys or youths, which, where early advantages have not been wanting, ought to be completed at the age of from eighteen to twenty. It should be an institution for training the mind and disciplining the character, and should not aim to be an institution of learning, in the broad sense of the term. Its teachers should be men of character and manhood rather than profundity of knowledge, good drill-masters rather than deep investigators. They should be able to impart rather than discover truth. The teacher's personal interest in the student should not be diverted by ambition for renown as a scholar, nor the efficiency of his teaching encumbered by large numbers of students. A college in this sense is not only not benefited by, but is inconsistent with large numbers. Its success cannot, and its reputation should not, be dependent on vast libraries and collections, costly apparatus, and thick catalogues. Love of bigness may be pardonable in the dry-goods trade, steamships, and hotels, but not in the training-school for young minds and growing characters. These things should belong to the universities. Here numbers will be a source of inspiration both to teacher and learner; here complete equipments in every direction will be an aid to free investigation, and not merely a stimulus to vanity.

4. It has been well said that life is too short to spend all the time from childhood to the age of twenty-five or thirty in preparation for a life-work, no matter how exalted or important its nature may be. Preparation too protracted is pernicious (perhaps the "alliteration" here may attract the notice of "A Father"). The "upper story" of a profession is only reached after long years of faithful, plodding practice, and these, under a sense of responsibility to self and to others, constitute the essential preparation for success. If young men are kept in preparatory training-schools, and not allowed to assume the responsibilities of manhood till the blood is chilled and the ambition dampened, the "thoroughness" of preparation defeats its own ends.

5. Instead of decrying the smaller colleges as intruders, I would predict that they will win the day in the end, if they are not led by the false examples of the East to keep adding to their requirements for admission and the "breadth of their curriculum," and wasting their means in showy buildings and in printing advertisements, circulars, and catalogues. If the race for "bigness" and "breadth" continues as it has commenced, the American college will ultimately be left out in the cold. The young men will go from the high school or the academy to the university, and the college will become an aristocratic and leisurely school of "culture" for wealthy young men who have not the patience for discipline or the ambition for action.

The great Eastern colleges have rendered the country eminent practical services, and merit our gratitude and admiration, but they are now fit subjects for conversion. Let them become universities pure and simple, and no longer attempt the impossible task of governing, drilling, and disciplining mature young men with methods suitable for boys, and in classes numbering over a hundred. Such an attempt can be neither "safe" nor successful. The methods and appliances of the university should aim to produce eminent professors rather than successful students. For in free and emulous action the successful professor will lead the ambitious student along without being hampered by him.

These things are not said in a spirit of dogmatic assurance, but from a long-growing conviction. It is not a voice from one of the "feeble Western colleges," but from an individual connected with one which aims with more success than wisdom to equal the Eastern college in "breadth of learning," and with both wisdom and success to maintain its paternal government.

P. H.

BELOIT, WIS., Feb. 6, 1882.

THE AMERICAN COLLEGE *VS.* THE EUROPEAN UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me to present in your excellent journal a few considerations bearing upon the problems discussed in the editorial of January 19 on Yale and Harvard? The line is there fairly drawn between two opposing systems of education. Harvard has been remarkably successful in imitating the methods of the European university, and Cornell and other schools are following her lead.

The one positive (and commendable) feature of the university is its wide range of electives; beyond this all is negative—no required studies or compulsory attendance, no rules, no responsibility for the moral or even the intellectual improvement of the student. The advantages of this *laissez-faire* system as applied to college

students are not to be overlooked. It is a great relief to the instructor to feel that it is none of his business whether his pupils improve or abuse their opportunities. It stimulates both teacher —or rather professor, for in the university scheme the professor does not condescend to *teach*—it stimulates both professor and pupil to specially fine work in special departments. It has given Germany perhaps the leading position in the intellectual world.

We must remember, however, that German universities correspond rather to our professional schools than to our colleges, and are intended for older students, and designed to give eminence in a single branch rather than general culture. Just here has been their success, and also their failure. It seems to us improbable that any such system can be imported bodily and made to supplant the American college. The latter is a growth indigenous to our soil. Starting with the moral earnestness of the Puritans, it has grown up with other American institutions. It admits of indefinite improvement, but its fundamental ideas, resting upon real human wants, cannot be set aside.

The idea of a curriculum or fixed circle of required studies may be old-fashioned, but so is the multiplication-table. That the required studies may be supplemented by electives all will admit, but to make all studies elective must defeat the very object of a liberal education. Here lies the fallacy of the elective system. It dazzles us with the rich variety of electives, and somehow produces the impression that a student can take them *all* in the four years. Its advocates eagerly point out this and that and the other branch which the student may elect, but they studiously conceal the fundamental and essential branches which the student may omit. A student may graduate from Harvard without studying political economy, English literature, mental or moral philosophy. Natural history is wholly elective. Hitherto logic and outlines of history have been required, but we can all see with President Eliot that there is "reason to believe that the time is not far distant when the few subjects still prescribed for all students will in their turn become elective." The idea that a certain amount of information and a certain familiarity with the lines of thought in each of the leading departments of human knowledge is essential to an education, is wholly ignored. What will Harvard's degree mean? Not that the graduate has been trained in the methods of classical, scientific, and metaphysical thought, and introduced to history, political science, and all the more important branches of study. It will mean simply that he has pursued for four years the studies most agreeable to his yet unformed taste—those which are easiest to him, or which look toward his profession.

There is an immense pressure in our age, and in every age, for superficial education—something to give reputation and polish at the least expense of time and effort. We have scientific, normal, and business schools, each having a legitimate sphere, but each professing to give its patrons all the advantages of a full college course. For these short courses a sort of fiat-parchment is given: "This is an educated man —by order of the president and trustees." Now, the elective system is pandering to this very thing. The colleges in which it prevails virtually say to the student: "You cannot afford, you do not need, to spend four years in general culture. You may omit all that is hardest for you, and spend four years in those branches in which you are already most proficient, and which will shorten your professional studies, and we will give you the same degree."

The idea, also, that the college and its instructors must stand in a sense *in loco parentis* has a justification in the nature of things. The parental relation need not be confounded with that of the policeman or drill-sergeant. Parents who put their sons at an early age into a store or shop desire to know something more of the employer or foreman than that they are successful and efficient in their business. Such men stand *in loco parentis* to the young men under their influence, and ought to have some paternal qualities and some sense of responsibility. How much more the college professor, whose influence is tenfold greater. He is the only friend of mature years the student has. If he feels called upon to expend no part of his energy and ability in stimulating his pupils to diligence, or in dissuading them from folly, but is merely a coleopterist from Dr. Holmes's breakfast-table, he is worth very little to his pupils. He may be a useful and distinguished man, but no college should put him in charge of its undergraduates. The unfledged tutor, if he has still some human sympathy in him, is better than such a professor. In fact, the university knows nothing of those class exercises which Americans call recitations. It gives the student nothing but lectures, which would be far more available in print, and examinations. The real work of education, which the Faculty ignores, is done, and poorly done, by private tutors.

The tendency of any restraint which does not amount to military discipline to stir up opposition is easily overestimated. Such restraint is wholesome in the family; when it is supported in college by the personal influence of instructors whom the students thoroughly respect, its results are most salutary.

It is true that the college needs rarer men for its chairs of instruction than the university—intellect and learning are not enough. It is also true that the size of the school somewhat increases the difficulties of college government. Still, we believe that the schools now conducted on the college plan are fairly successful, and turn out better men, intellectually as well as morally, than those conducted on the university plan.

The university methods have their place in post-graduate courses. We shall all be glad to send our young men to Cambridge or Baltimore after they have completed a thorough curriculum under teachers who really teach, and who feel some responsibility for their welfare; but the American college will not soon be supplanted by the European university. Both are needed. The university is on a par with professional schools, the college is a second home; the university instructs, the college educates.

WILLIAM GOODELL FROST.

OBERLIN, O., Jan. 23, 1882.

TO THE EDITOR OF THE NATION:

SIR: The theory of voluntary training propounded in your article entitled "Yale and Harvard" (*Nation*, No. 864) provokes some comment. All education is of course a process of transition from the helpless irresponsibility of infancy to the self-moved independence of manhood. The former shades off steadily into the latter. The question is, How far ought the process to go during the college stage of study? Nature has something to say as to the age at which the average boy should be surrendered wholly to his own guidance. Is it from sixteen to twenty? Yet at college, away from his parents, the boy must be controlled by the college, or not at all, save as he falls into the current of popular opinion and feeling among the students. Is this a competent guide? A community of college students forms a little world of itself, with standards of right and wrong and of propriety often ludicrously at variance with those prevalent in civilized society: shall the character of the student be surrendered entirely to this authority?

And as to the selection of studies: Are boys from sixteen to twenty years of age qualified by general knowledge and maturity of understanding and judgment to choose freely for themselves? Will they not be likely to select either under the influence of fashion or some other equally invalid consideration, or else the study they like best? In the latter case, a mind by nature somewhat unsymmetrical will be made more so by the effect of elective studies. Not that the principle of division of labor should be finally ignored. There comes a time when the mind should be given up mainly to the work for which nature designed it. But should not a comprehensive and symmetrical foundation first be laid, that the specialist may bring to his work a weight and balance of intellectual action the want of which is often painfully evident in the attitude of the clergy to science, and of science to religion, and in other fields of thought?

Discipline has been regarded as the most vital element, at least in the earlier stages of mental training. But can discipline be attained under a system of complete freedom in conduct and in study? Is there not something gained in character by the habit of obeying orders? Must not the youth first obey orders from without himself? And must not the authority pass but slowly from without to within—to the will itself, but to the will as distinguished from the tastes and desires? Would any amount of hard study, done at the call of attraction, give the will command over the mental faculties, especially attention? If mere attention, as attracted, be sufficient, would not novel-reading be as effective, in a disciplinary point of view, as the study of science or language? In your own fine language ("Chromo-Civilization," *Nation*, No. 482), "Culture, in the only correct and safe sense of the term, is the result of a process of discipline, both mental and moral. It comes by the protracted exercise of the faculties for given ends, under restraints of some kind, whether imposed by one's self or other people. In fact, it might not improperly be called the art of doing easily what you don't like to do." Now, has all this been shown to be a mistake? and if a mistake in the college, what is it in the military school, and in all effective training in art, business, or manual craft? What will West Point say to the theory of voluntary deportment and study? And if nerves are steadied and fibre toughened and order cultivated by obedience and work under authority there, why not elsewhere? An objection is sometimes made to the sameness of prescribed studies for different minds. But here also it may be asked, if this is an evil in college, how as to the same thing in all military, gymnastic, pugilistic, musical—in fact, in all training which deserves the name? Does not this objection, too, arise from confounding the training with the special stage of education?

The free-university system of Europe has been alluded to. But is it certain that the average results of that system are better than, or even as good as those of ours? And may not its best fruits be due to the later stage of culture at which the university takes the student, and the thorough discipline which he has already received in the gymnasium or preparatory school? It is the university, in distinction from the college, that adopts the free system in Europe. Doubtless a certain current of popular feeling is at present in this country setting toward the extreme of freedom in education as in other things. But the laws of nature are very strong, though sometimes unseen by the popular eye. It would be remarkable if the order, the discipline, the law of military organization, which,

from its material and uncompromising nature, conserves itself by the inevitable destruction of the transgressor, should not beget in society a deeper thinking and healthier force, against which, to use your own language again, "the most bumptious youth will hit his head, and be reduced to thoughtfulness and self-examination, and be forced to walk in ways not always to his liking."

In fine, is there not room on this subject for the application of another of your own telling sentences about the value of a type of mind which does not participate too much in the "advanced thinking and general rage for social and political experimentation of the last twenty years"? C. W. CLAPP.

GODFREY, ILL., Jan., 1882.

[There is a good deal of force in the above objections to the "elective system." The elective system assumes that students are competent to elect, and will elect with reference solely to their own highest intellectual needs or powers, or else that they have parents or guardians who are competent to assist them in electing. In a very large number of cases this assumption is not well founded. The student is often not competent to choose his course, or, if competent, has not the moral strength to choose rightly, or comes from an uneducated family which can give him no advice and exercise no influence over him in this matter. We presume it is safe to say that fully one-half the undergraduates of American colleges are the sons of fathers who are unable to help them in deciding what branches of study will make a college education most valuable to them, either for the purposes of intellectual training or of professional success. But it does not follow from this that, as our correspondent seems to think, there is no alternative except the "curriculum, or fixed circle of required studies"; nor do we think anybody of authority has ever seriously objected to this because it was "old-fashioned." What is needed is something between the "fixed circle" and absolute freedom. In other words, the college should assist the student in selecting, with due regard to his needs and his capacity. The best system would be one in which each student should make up his course under the special supervision or with the special assistance of a professor. But this is probably hardly practicable. If not, the best way out of the difficulty would seem to be the division of the studies into groups or courses, and the restriction of the election to these groups. They might be so made up as to meet the needs of every type of mind sufficiently common to be worth recognition, and would prevent the indulgence of pure laziness, or the total neglect of subjects with which every liberally-educated man should be acquainted.

As regards the "loco-parentis" college for which our correspondent pleads, there is only one thing to be said, and that is, that, however desirable it may be, it does not exist. There are no such colleges as he describes, and no professors who supply the student with "wholesome family restraint." Moreover, it is almost certain that in the present conditions of American life they cannot be created. We cannot find the professors competent to be parents to the undergraduates, or find the undergraduates ready to accept professors as parents. One of the most singular delusions of our time is the notion prevalent among American fathers and mothers that they can secure this restraint in small colleges and in colleges where the faculty is religious. Small country colleges doubtless offer fewer temptations and attract students bred in simpler homes than the large ones, but they are also compelled to put up with an inferior quality of instructors and inferior instruction. As regards the large ones, we shall simply say that a boy is notoriously just as "safe"—and we believe safer—in those which are trying hardest to be universities as in those which are trying hardest to stay colleges, and that the influence of the professor diminishes in the direct ratio of his eagerness to exert parental authority.

Nor does all this conflict with what another correspondent, Mr. Clapp, says about the value of discipline. With most of what he says we most heartily agree. But the ordinary American college does not supply this discipline; no school in the country does, except West Point. The others profess to supply something of this kind, but they do not supply it, and it is time that parents got over thinking that they do, and got over sending to college for the four best years of their lives young men for whom they greatly desire it.—ED. NATION.]

THE ELECTORAL COLLEGE AND THE TITLE TO THE PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: I quite agree with you in your criticisms upon the "bill which a committee of the House of Representatives is said to favor," providing for a reference to the courts of a disputed title to the Presidential office. All experience, notably in the case of the "Electoral Commission," demonstrates the futility of expecting a non-partisan decision from partisan judges upon a political question of vital interest to political parties. But that is not the worst of it. You not only get a partisan decision in the particular case, but you lower the tone of the judiciary, and shake public confidence in the courts. You do not clarify or purify a political muddle by dragging the ermine through it, and the ermine only comes out of it just so much the worse for wear.

The fact is, common sense dictates the final abandonment of the pleasing dream that such a thing is possible as ever obtaining from any tribunal, however constituted, a strictly judicial sentence upon such an issue as that presented by a disputed succession to the crown, the imperial purple, or even the Chief Magistracy for four years of a republic fifty millions strong. The pressure is too vast for any human resistance. Could you trust a Holt, could you trust a Hardwicke, a Mansfield, a Marshall, a Story, a Taney, a Chase, to give a perfectly unbiassed judgment in a cause which directly involved the victory or defeat of their party and their friends? To state the question is to answer it.

We do not want to bring our judiciary into contempt. We do want a prompt and final settlement of a disputed title to the Presidency. We must have it, or take all the chances of civil war. But we can get no such settlement except on partisan considerations. With these principles in view, let us look to find where the power can be most conveniently and appropriately lodged.

Not in Congress, for that would make the Executive a mere creature of the Congressional caucus, and destroy the symmetry of the whole system.

If not in the courts, if not in Congress, where then? The only answer is, either in the Electoral Colleges of the several States, or in a college of colleges composed of all the electors of all the States.

The latter strikes me the more favorably, but would require a Constitutional amendment. Objection is often made to the whole system of electors as a failure. That is correct, as the system is now working. But it is an admirable framework for a self-adjusting machine for deciding election contests.

The points which the proposed amendment would cover are as follows:

1. The district system for individual electors, and two electors-at-large for each State.

2. Congress to regulate by law the time and manner of giving notice of contest in any case, taking testimony, etc., as is now the case with respect to contested seats in Congress.

3. All the electors to meet in college at the seat of Government a sufficient time after the election to allow for taking of testimony in all cases of contest.

4. *The Electoral College to be the "judge of the elections, returns, and qualifications of its own members,"* and to choose its own officers.

5. The Electoral College to choose a President and Vice-President of the United States by ballot; and in case both offices become vacant during the term, the same Electoral College to be convened to fill such vacancies for the residue of the term.

By some such system as this the whole problem of a disputed succession would be solved by the settlement of individual contests for seats in the College, and there would be nothing for courts to decide. Of course all such contests would be settled pretty much upon partisan grounds, just as they have always been by Congress and even by judges; but the settlement would be had, nevertheless, and that it would be found on the side of the apparent majority for the time being would be really the best guarantee for a general acquiescence in the result.

This plan of course involves expense. Mileage and per diem would follow as a necessary incident. As an insurance premium against a heavy war risk, the expenditure would be an economy. The office of an elector would be more desirable and attractive, and men of experience and ability would as a rule be the candidates for the office. Members of Congress should be ineligible. The powers of the Electoral College should be expressly limited to the objects specified.

C. E. P.

BALTIMORE, MD.

THE GENEVA AWARD.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly state through the columns of the *Nation* whether there is any reason whatever why the Hon. Charles Francis Adams should not, in response to an open and direct appeal to him, declare, in his official character as ex-Commissioner representing the United States in the Geneva arbitration, whether that body acted upon "national" claims only, or whether they did not discuss, decide upon, and award satisfaction of the claims of private citizens of the United States against the Government of Great Britain? The bill just introduced into the House of Representatives rests its entire equity upon the assertion that the tribunal discussed only "national" claims, and private claimants were only witnesses on behalf of the United States in their action for trespass. The word of Mr. Adams would settle this question beyond

contradiction. Is there any valid reason why he should not give it? G.

BALTIMORE, MD., February 11, 1882.

[The same suggestion was made editorially in the *Nation* (July 27, 1876), in the following terms:

"There is, however, an easy way of settling all disputed points about this Geneva Bill which never seems to have occurred to our correspondents, and which we strongly advise them to take, promising ourselves to abide by the result. When the United States decided to submit its claims against England to arbitration, it appointed as its own member of the court Mr. Charles Francis Adams, who, as our correspondents are aware, was familiar with the history of our whole case from the beginning, and had very strong opinions as to England's liability. He is thoroughly conversant with all the principles and facts involved, and with the whole course of the deliberations of the Geneva Court. He knows, if anybody does, whether the tribunal had before it the claims of insurance companies or not; whether in the award they were treated as having any rights; and whether there was any understanding that the Government could do what it pleased with the money. If Congress had ever really desired to find out what the national honor and a decent regard for the opinion of mankind required them to do with the fund, the first person they would have gone to for information would have been Mr. Adams. They would have inquired of him, Were or were not the insurance claims included in the award? Did the tribunal which interpreted the Treaty of Washington render their decision as final, or did they expect every single point decided in it to be reversed by act of Congress? If our correspondents want to know about this, let them go to Mr. Adams and ask him, and if he does not inform them that they are engaged in helping on a monumental swindle, we are greatly mistaken."

To this a correspondent of the *Nation* answered:

"There is something almost funny in the suggestion contained in your article on the Geneva Bill, that Congress should have inquired of Mr. C. F. Adams whether insurance claims were included in the Geneva Award. Mr. Adams is a good lawyer, and his embarrassment at being called upon to answer the question without showing too plainly the simplicity of the questioners would have made the job the most delicate of his life. He could only have said in substance, clothed, of course, in official phrase, that this submission to arbitration was like all others from the time when the memory of man runneth not, etc., in one respect—to wit, it was in writing, and that the judgment upon the submission was likewise in writing; that these, with a journal of proceedings of the Tribunal, constitute what is called its record, and that the said record imports absolute verity. What it shows to have been submitted was submitted, and all else was not submitted, although every member of the court might solemnly aver that it was. What it shows to have been determined and passed upon and considered, was so determined, passed upon, and considered, and nothing else, although the whole court and all who were in attendance upon it were to say otherwise. This answer would doubtless have displeased you, but it would nevertheless have been the only one Mr. Adams could have made, unless he chose to violate all the proprieties."

To this again the editor replied: "No; it would not have displeased us. It would be exactly what we contend for. The submission was in writing, and so is the award, and neither is, or ever was, or ought to be, in the breast of Messrs. Frye, Butler, or Hale"—*i. e.*, in the breast of Congress. It is now to be further observed regarding the assertion that "the Tribunal discussed only national claims, and private claimants were only witnesses on behalf of the United States," that it is false from beginning to end. There is not one scintilla of truth in it. The private claims were presented as private claims as distinctly as language could make them, and the national claims as national claims. Some of the former were allowed; all of the latter were rejected. The distinction between the two classes was made and discussed before the Tribunal. Any one who now, with knowledge of the facts, says it was not, would say anything.—ED. NATION.]

Notes.

D. APPLETON & Co. will publish this spring the third and fourth volumes of Lecky's 'History of the 19th Century'; Bain's Lives of James and John Stuart Mill; Huxley's 'Science and Culture, and other Essays'; 'Physical Education,' by Dr. Felix L. Oswald; the 'Bryant Birthday Book'; 'Errors in the Use of English,' by W. B. Hodgson; 'The Metropolitan Museum of Art,' an illustrated quarto; a new translation, by Jehu Baker, of Montesquieu's 'Grandeur and Decadence of the Romans'; 'Capital and Population,' by F. B. Hawley; and a text-book with a taking title, a 'Geographical Reader,' by James Johonnot.——G. P. Putnam's Sons announce an illustrated volume of travel by Mr. S. S. Cox—'From Po to Pyramid by way of Palestine,' as the alliterative title reads; and 'Thomas à Kempis and the Brothers of Common Life,' by the Rev. S. Kettlewell.——A new 'Life of Daniel Webster,' by the Rev. H. N. Hudson, will bear the imprint of Little, Brown & Co.——Houghton, Mifflin & Co. publish directly a 'Life of Copley,' by the late Mrs. Charles Amory, one of the painter's descendants; a new and complete edition of Bret Harte's works; and 'Evenings with a Reviewer,' by the late James Spedding.——Roberts Brothers have in press five lectures by William Morris, called 'Hopes and Fears for Art.'——'Saunterings in Europe,' by the Rev. Charles Wood, of Albany, is announced by A. D. F. Randolph & Co.——Among new periodicals we notice the prospectus of the *Illustrated Quarterly of Medicine and Surgery*, edited by Drs. George Henry Fox and Frederic R. Sturgis, and published by E. B. Treat, at No. 757 Broadway; the first number of Judge Tourgée's illustrated weekly, *Our Continent* (Philadelphia), which seems to us a very odd conception, whether considered from a literary or a typographical point of view; and early numbers of Dr. Sauveur's fortnightly *Les Récréations Philologiques*, which is published at 74 West Thirty-fifth Street, New York. The original feature of the last-named journal is that it prints contributed translations into French—*e. g.*, of the 'Vicar of Wakefield' and 'The Lady of Lyons.' As it happens, the current number of M. Jules Lévy's *Le Français* contains the beginning of a French version of Aldrich's 'Marjorie Daw.' The editor also reprints, with some condensation, a late criticism in the *Revue Politique et Littéraire* of the Howells-James views of Americans abroad.——L. Prang & Co. send us samples of valentine cards intended to elevate the art of these missives, and the major part of them may have a reformatory effect. Still, when catering for young children, the designers have not always observed the line between innocence and sophistication; and generally the legends and poetic adjuncts need literary censorship.——"Æstheticism" is one of the topics in the Providence Public Library's Monthly Reference List for January.——L. W. Schmidt sends us the sixth and concluding part of Stacke's popular 'Deutsche Geschichte,' which covers the period from the accession of Frederic William III. to the throne to the end of the war with France in 1870–71. Princess and Queen Luise appears in a variety of pictures of the royal family, one of which shows the present Emperor as a little boy. While on the whole the illustrations are both more sparse and less curious than in the preceding parts, there is a fine array of portraits of the men who raised up the fallen Prussia—Vom Stein, Hardenberg, Scharnhorst, Gneisenau, Blücher, along with the luckless Schill, Andreas Hofer, W. von Humboldt, Metternich, a striking likeness of Bismarck in 1847, Moltke, Von Roon, etc., etc. In the Napoleonic contest Leipzig naturally receives the most illustration from contemporary prints. Add to the foregoing a facsimile of the *Schlesische Zeitung* of March 20, 1813, containing the royal announcement of the alliance with Russia, and a map showing the historical development of Prussia. The completed work pictorically can never become "out of date."——From the same source we have received parts 3 to 7, inclusive, of the current edition of Brockhaus's 'Conversations-Lexikon.' Here the important geographical articles are Afghanistan, Africa, Algeria, and Egypt. There are excellent maps of North America, the Alps, and the Antilles; and the illustrations include American Antiquities, and Apes.——*Le Livre* for January (J. W. Bouton) exchanges its gray cover for one of blue, with a new design in a kindred tint. Various initial letters, and some more or less happily conceived headpieces marking the standing departments, give an altered aspect to this magazine. In illustrations the foremost piece is the Rouen Museum's portrait of Corneille, by the painter Philippe de Champaigne, now for the first time engraved. The text gives weighty reasons for prizing this likeness more than Le Brun's, which has been generally followed in myriad reproductions. To a limited extent, indeed, the article will serve as a Corneillian iconography. More interesting than M. T. de Mare's reduced *eau-forte* after one of Boucher's illustrations of Molière, is Toby Johannot's vignette for the *Revue des Deux Mondes* in 1830, with its lank female personifications of the Old World and the New. How far away it seems from the "fleshly school" of art now fashionable.——A paragraph in an Athens newspaper announces the discovery of a very ancient MS. of the 'Iliad' at Mount Athos. It is a papyrus roll, and purports to have been copied by Theophrastos, an Athenian, in the 117th Olympiad, when Simonides was archon—that is, in 311 B. C.

—Houghton, Mifflin & Co. have published in more than one size and style an 'Analytical Index to the Works of Nathaniel Hawthorne.' To this is prefixed a minute account of his life and of his productions in chronological sequence. The task has been well performed, and lays the public under a lasting obligation. But one thing is left to Hawthorne's admirers, and that is to prepare a vocabulary indicating the range of his masterly English.—— The first and second series of 'Every-Day Topics' continue the Messrs. Scribner's uniform edition of the late Dr. Holland's works.—— Mr. Rolfe's illustrated, annotated, and expurgated edition of Shakspere (Harpers) has just had the "Merry Wives of Windsor" added to it.——Leypoldt & Jones's 'Books of All Time'—a pocket *catalogue raisonné* in which "scarcely an author is given whose works are not counted among the treasures of literature," and which embraces not less than twenty-five American poets, will be found serviceable as a guide to editions, etc. The title is a little pretentious, and may be misleading, as if it were "Books *for* All Time." Mr. Leypoldt has also issued a pretty 'Reading Diary,' in the line of fiction alone, bolstering up the weak-kneed by a preliminary citation of respectable authority in favor of novel-reading. A carefully selected list of authors and works follows, with room for noting the name of the friend who recommended it, and the diarist's own judgment after reading.——A. C. Armstrong & Son have reprinted Miss Gordon-Cumming's entertaining 'At Home in Fiji,' already reviewed in these columns. The two

volumes have been compressed into one, but otherwise the work appears to be unchanged. ——Dr. James A. Emmerton, of Salem, Mass., has printed privately a volume of 'Materials' toward a genealogy of the not numerous family bearing the name (generally spelled with a single *m*). It is a cautious and solid work, resting nowhere on conjecture, and not establishing an English connection. Several members of the two leading American stocks, whose relationship is undetermined, have achieved distinction in science, scholarship, and otherwise. —— The eighth volume of Collections of the Maine Historical Society is the first publication since the well-advised removal from Brunswick to Portland. Its contents, both historical and biographical, are mainly local, or contributions to New England history; but exception must be made of Dr. Israel Washburn's paper on the settlement of the Northeastern Boundary, which, though written nearly three years ago, has, in consequence of the late Webster celebration, a certain timeliness. The Society has in press the 'Trelawny Papers.'——The 2,000th volume of the Tauchnitz Collection of British Authors (Leipzig: Bernhard Tauchnitz; New York: F. W. Christern) was expressly made commemorative of the progress of the series, and Professor Henry Morley was selected to write 'Of English Literature in the Reign of Victoria, with a Glance at the Past.' The "glance at the past" occupies nearly a quarter of the book. The author's proper theme is treated, of course, with great succinctness, but with much dexterity and perfect readability. The chronological arrangement is ingenious, beginning with the literary veterans whose lives and sometimes productions overlapped the year 1837, and then coming down to their juniors by decades until we find ourselves among "Men of the Times." Carlyle has the better part of a chapter to himself—eighteen pages, against one to Ruskin, four to Macaulay, ten to Dickens, etc. Baron Tauchnitz has prefixed to this convenient summary nearly complete "facsimiles of the signatures of authors in the Tauchnitz edition, photographed from their correspondence and agreements" with himself. American authors are freely represented here. The Messrs. Putnam, by the way, have announced their intention to reprint this work of Professor Morley's.

— The recent suspension of Antioch College nas called forth comments in various quarters marked at once by ignorance and unfriendliness. It is the second time that this college has suspended its work, and both times the cause has been the same—the cause of most such suspensions—the want of funds. The college was founded by the Christian denomination (not that known as Campbellite); and as this denomination is anti-Trinitarian in its theology, some assistance was obtained from Eastern Unitarians, and two Unitarians in succession—Horace Mann and Thomas Hill—occupied its presidency. But it never was adequately endowed, and when the war came it went to the ground, as many smaller institutions did at that time. After the war it was conveyed directly to the Unitarian body, who raised a fund for its support, and opened its doors again in 1865. The Christians still retained some control over it, members of this denomination composing a minority of the Board of Trustees. But now, again, the endowment was inadequate: the college was reorganized on the scale of the endowment that was hoped and expected, but when it was once in operation, it was found that no more money could be raised, and in 1866 began that succession of "shrinkages" which have ended at last in a second suspension. Under the presidency of Dr. Hosmer, President Orton, now of the Ohio State University, and Professor Derby, of the same institution, it struggled along until a large part of its fund, unfortunately invested, ceased to yield any income; under these circumstances there was nothing to do but to close the doors and allow the funds to accumulate. Meantime it has maintained a high standard of scholarship and instruction, and has ranked in the popular estimation far higher than the majority of Western colleges. The character of its Faculty is illustrated by the fact that it is hard to mention a member of it who is not now, if alive, connected with some institution of high rank. We need only mention President Orton and Professor Derby, of Ohio, and Professors Russel of Brown (late of Cornell), Clark of Yale, Hall of Williams, Chandler of Cornell, Langley of Michigan, Allen of Wisconsin, Anthony of Iowa, and Hosmer of Washington (St. Louis). As to the theological tone of the administration, it is enough to say that Presidents Hill, Hosmer, and Orton all belonged to what is known as the conservative wing of the Unitarian body. The complaint, therefore, that the prevailing influences have been anti-Christian has no weight except with those who would deny to these men the Christian name. But the fact is that the spirit of the institution, at least since its reorganization, has been more in harmony with the Harvard than the Yale theory, as defined in the *Nation* of January 19; but this theory of education is sure to be pronounced "ungodly" and "unchristian" by those who prefer the other system. It is certain, at any rate, that this did not materially affect the attendance, for when the college was reopened in 1865 as distinctively Unitarian, the numbers and the success of the first year promised a rapid growth. Of course the partial collapse the next summer put an end to all such hopes.

—What is called, for want of a better name, the "dictionary catalogue" has got a foothold in Germany. Gustav Wolf in Leipzig has published a 'Medicinisches Vademecum' (which has already reached a second edition), a 'Juristisches-staatswissenschaftliches Vademecum,' and a 'Theologisches Vademecum,' "in which the book-titles," says Petzholdt, "after the American custom, are mingled in a sort of name and subject index, which presents to the public the matters which it seeks in the way best adapted for finding them." This, from a conservative German—one of the high-priests of the straitest sect of bibliography—is remarkable. In this country German and Germanizing critics have objected to the "dictionary catalogue" its unscientific mixing of name, subject, and title in one alphabet—a practice which one man declared threw him into such confusion of mind that he could make no use of the catalogue. Probably, after all, Petzholdt would agree with this so far as to repudiate utterly the hybrid genus in a work intended for the learned; but for the "public," who cannot be expected to have such nice sensibilities, nor to be able to puzzle through the intricacies of a strict scientific arrangement, the alphabetical plan is good enough. Another American practice, that of including references to the separate parts of collected works, is followed by Dr. Brunnhofer in the lately-published subject-catalogue of the Aargau Cantonal Library, which exceeds 1,000 pages. We have called it an American practice, but the Italians may claim the priority. Ilari's catalogue of the Siena Public Library is very full in this respect. In this country it was first used to any extent in Prof. Abbot's card-catalogue of Harvard College Library; and the first one published in which it appears is that of the Boston Athenæum, which is just completing at once its alphabet and its decennium of printing. The Brooklyn Library, the Mercantile of San Francisco, and the Library of the Surgeon-General's Office, are the only others that have done much work of this kind. Their references are mainly to periodicals, while Dr. Brunnhofer's are especially to the great collections, like Grævius, Gronovius, Pertz, and other *Sammelwerke*, such as we gave a list of on Dec. 22 and 29. Petzholdt expresses some doubts whether the Swiss librarian's successors will be willing to follow up his work in the same laborious and costly style.

—The late Saint-René Taillandier had contributed to the *Revue des Deux Mondes* various essays on the modern revival of Provençal poetry, of which the "Mirèio" of M. Mistral is the best-known example, and he had intended to work these papers over into a connected study of the movement from its origin to the present. He died without doing so, and the scattered essays have just been gathered together to fill the final half of a volume called 'Études Littéraires' (Paris: Plon; New York: F. W. Christern), the first pages of which contain a more nearly complete sketch of the life of Boursault, the only one of Molière's literary adversaries whom he deigned to notice on the stage directly and by name. In this sketch, which he called "Un Poète comique du temps de Molière," M. Taillandier shows that Boursault was instigated to his attack on Molière by other and older enemies, and that he speedily forgave and forgot Molière's contemptuous retort, for he took occasion to praise the great humorist after his death in lines of ample eulogy, although not of as much poetic worth to us as they seem to have been to M. Taillandier. The chief value of this half of the 'Études Littéraires' is in the light it sheds incidentally on the condition and circumstances of literary and dramatic life in France in Molière's day, and immediately thereafter. There is not much warmth in M. Taillandier's work, but it is painstaking and accurate.

—A fresh proof of the vitality of the new Japanese civilization reaches us in the form of the "Third Annual Report of the Central Sanitary Bureau of the Home Department." That the registration statistics are based on a defective system of nomenclature is to be regretted. The absence of the titles "scarlatina" and "typhus maculosus" is noteworthy, and excites a question whether the diseases themselves are unknown in Japan. It is also questionable whether the mortality rates are to be trusted. But even this attempt is wonderful, in a country where most of the practitioners of medicine belong to the ancient school, and only a few hundred among 33,000 are as yet supplied from the school at Tokio. The very fact that statistics of mortality are attempted is a proof of a spirit not to be daunted by the most difficult problems. It is interesting to find 1,659,298 cases of vaccination recorded during six months, and a percentage of 32.48 of success in cases of revaccination. The most curious bits of information are those relating to the traffic in patent or secret remedies (mostly harmless in their nature), which are sold to an extent justly deprecated; there being recorded 10,576 different kinds sold by their makers, 226,835 sold by retailers, and 173,070 by travelling peddlers. The document was printed in 1881, though the period covered terminated on June 30, 1878.

— Many persons have felt the need of a brief and comprehensive treatise upon Roman antiquities which should contain the latest results of scholarship, without the minuteness of detail which characterizes the great works of Mommsen and Marquardt, and of Lange. It will probably be a long time before any book in the English language meets this want; but fortunately most scholars can make use of either French or German, and each of these languages affords a book of the desired character. Willems's 'Droit

Public Romain' is no doubt the best and most complete brief treatise that exists. For the German language the veteran J. N. Madvig—distinguished alike as grammarian, editor, and antiquarian—published last year the first volume of a work entitled 'Verfassung und Verwaltung des Römischen Staates.' This volume contains the whole of the Constitution (*Verfassung*) properly so called; the other volume, to be published this year, is to contain the administration (*Verwaltung*)—the military, financial, judicial, etc., departments of the state. It may be remarked that none of the great treatises—neither Lange, nor Becker-Marquardt, nor even Mommsen-Marquardt as yet—covers the whole of the ground. Madvig's qualifications for his task are illustrated by the fact that he was the discoverer of one of the most fundamental principles of classification as regards the Roman colonies and *municipia*. His point of view in the present volume is, on the whole, a conservative one. He holds (p. 89), against Mommsen, that the patricians were the exclusive occupants of the public land, and refuses to recognize, as even Lange has done at last, that the plebeian tribal assembly was a different assembly from the *Comitia Tributa*, composed of patricians and plebeians alike (p. 234). On the other hand, he agrees with Mommsen that the plebeians belonged to the *Comitia Curiata* (p.99), and to the Senate of the early Republic (p. 125), and that the *patrum auctoritas* was a special power of the patrician members of the Senate (p. 234). On the whole this book will be found a safe guide to the subject. It is, however, hard to consult, consisting of long paragraphs, without helps either in the margin or at the top of the page. It is to be hoped that the next volume will contain an index.

—The promise of a new symphony and the reappearance in New York of Mrs. E. A. Osgood at the fourth concert of the Philharmonic Society raised anticipations of an unusually attractive entertainment, which, however, were not fully realized. The new symphony was by Hans Huber, a young Swiss composer whom a majority of the audience on this occasion probably heard of for the first time, although his symphony is numbered opus 63. In giving this work the sub-

Tell," Herr Huber boldly incurred a double responsibility by making it incumbent on the critic to judge it not merely from a purely musical point of view, but also in reference to the appropriateness of its title. And it may be stated at once that if the printer had by mistake substituted Napoleon Bonaparte or Julius Cæsar for Tell, nobody would have known the difference. Opponents of programme music continually assert that if any descriptive hint is to be given at all on the programme, it is best to limit it to the title simply, and not to give an extended description of the scenes the music is supposed to illustrate. It is just the other way. If a composer has written a work under the inspiration he received from witnessing or imagining some particular pictorial scene or historical event, the audience will always gain an advantage by having this scene just as vividly brought before their minds. This can only be done by giving a brief and pregnant description of it either in prose or poetry. A series of emotions will be aroused by this description which will greatly increase the enjoyment of the music, for the reason that music is never so effective as when we are already in a state of emotional excitement or depression. We do not know whether Herr Huber has written an analysis of his symphony. If he has, it should have been printed; if not, he might as well have omitted the title too. Otherwise, the symphony is a work of considerable merit. Its logic—*i. e.*, the inferences drawn from one chord to another—and the treatment of the melody, are modern. The same is true of the instrumentation, which is rich and full, but not sufficiently varied. Indeed, a want of variety is the greatest defect of the symphony regarded as a whole, neither the movements nor the individual ideas being sufficiently contrasted or original to subdue a slight sense of monotony. The opening allegro is characterized by a vigorous movement which has some of the bracing effect of mountain air, but it is surpassed in poetic beauty by the following adagio, the instrumentation of which is particularly fine. The two remaining movements are down hill. Mozart's D major Symphony (No. 5, ed. Breitkopf & Härtel), and the minuet and finale of Beethoven's string quartet No. 9 in C, were the other orchestral numbers. Mrs. Osgood sang alone, "Ah, That my Heart's Blest Freedom," from Gluck's "Armide," and with Mr. Toedt the duet. "O Teresa," from Berlioz's "Benvenuto Cellini," in which nothing is more remarkable than the truly marvellous and inexhaustible originality of the instrumental combinations. Mr. Toedt's voice was not in prime condition, but Mrs. Osgood sang her part with the purity of intonation, grace, and natural simplicity which made her a general favorite in England during her absence from this country.

BISHOP THIRLWALL.

Essays, Speeches, and Sermons. By Connop Thirlwall, D.D., late Lord Bishop of St. David's. Edited by J. J. Stewart Perowne, D.D., Dean of Peterborough and Honorary Chaplain to Her Majesty. 1880.

Letters to a Friend. By Connop Thirlwall. Edited by Arthur Penrhyn Stanley, D.D., Dean of Westminster. 1881.

Letters, Literary and Theological, of Connop Thirlwall. Edited by J. J. Stewart Perowne, D.D., Dean of Peterborough, and the Rev. Louis Stokes, B.A., Corpus Christi College, Cambridge. With Annotations, etc., by the Rev. Louis Stokes. 1881. London: Richard Bentley & Son.

CAN it be a mere accident that Thirlwall's most elaborate piece of literary criticism is an essay on irony? We find it difficult to believe that the subtle analysis of Sophoclean irony was not, unconsciously of course, dictated by a deeper feeling than the mere desire to explain the essential characteristic of the most perfect, if not the greatest, of Greek tragedians. It is impossible not to suspect that Thirlwall's true motive for the profound study of a moral and literary quality the full significance of which escapes thousands of readers, lay in the interest with which every reflective being regards, whether knowingly or not, the peculiarities of his own nature. Criticism often becomes self-portraiture. The article on the irony of Sophocles throws curious light on the genius, and even on the career, of Thirlwall. We doubt whether it would be possible for the most ingenious of critics to paint one aspect of Thirlwall's mental attitude more forcibly and more truly than in these words:

"There is always a slight cast of irony in the grave, calm, respectful attention impartially bestowed by an intelligent judge on two contending parties, who are pleading their causes before him with all the earnestness of deep conviction and of excited feeling. What makes the contrast interesting is, that the right and the truth lie on neither side exclusively; that there is no fraudulent purpose, no gross imbecility of intellect, on either; but both have plausible claims and specious reasons to allege, though each is too much blinded by prejudice or passion to do justice to the views of his adversary. For here the irony lies not in the demeanor of the judge, but is deeply seated in the case itself, which seems to favor each of the litigants, but really eludes them both."

Here is, one might fancy, an exact description of the position of the Bishop of St. David's when called upon to deal with the plausible claims and specious reasons put forward by High Churchmen, by Low Churchmen, or by Latitudinarians, before the calm and unbiassed tribunal of his judgment. Newman and Littledale, Williams and Baden-Powell, Bishop Colenso and Archdeacon Denison—a score of other men more or less famous and more or less fanatical—each at one time or another appears as an excited litigant, attempting to gain the approbation or support of the grave, calm, judicial intellect which gives to the case of each of the enthusiasts, pleading his own cause with the earnestness of deep conviction, "respectful attention" and, it must be added, "nothing more than attention." For the irony of the judgment-seat contains one element which, oddly enough, is not noticed by Thirlwall. To the litigants the matter at issue seems one of life and death; to the serene magistrate the cause which he decides may have speculative interest, but is of no personal importance. Add to Thirlwall's analysis this overlooked element, and you have a perfect picture, not perhaps of his real, but assuredly of his apparent, attitude toward the earnest theological reactionists or theological innovators whose tenets are stated, criticised, and refuted in elaborate charges which, unlike most episcopal compositions, are racy with all the flavor of thoughtful irony, expressed with something approaching literary perfection.

"There is, however, an irony which deserves to be distinguished from the ordinary species by a different name, and which may properly be called *dialectic irony*. This, instead of being concentrated in insulated passages, and rendered prominent by its contrast with the prevailing tone of the composition, pervades every part, and is spread over the whole like a transparent vesture closely fitted to every limb of the body."

If this had not been written by Thirlwall, the conjecture would at least be plausible that the passage was a fragment from a critique on Thirlwall's own style. Of him, if of any one, it is true that the style was the man. But the essay which affords the very language that most appropriately reproduces the impression made by the intellectual attitude, no less than by the literary manner, of an author who, beyond all others of his age, lays claim, as it were of right, to credit for judicial gravity and weightiness, also supplies the conception which does not solve, but which certainly does describe, the enigma of the Bishop's career.

"Without departing from the analogy which pervades the various kinds of verbal irony, we may speak of a *practical irony*, which is independent of all forms of speech, and needs not the aid of words. Life affords as many illustrations of this as conversation and books of the other."

There is something in this utterance almost prophetic. The irony of Thirlwall's intellect, the irony of his style, are all as nothing compared with the practical irony of his life. No one will deem this language exaggerated who meditates on the singularities of Thirlwall's career; who compares the splendid promise of his youth and manhood with the apparently inadequate results achieved by extraordinary talents, high character, and exalted position, and who perceives that, as far as observers can judge, the one great external success of Thirlwall's life was in large measure the source of its apparent failure.

Thirlwall was richly endowed by nature. Literary talent with him, as with Macaulay, was not the result of training or labor, but of inborn capacity for clothing thought in appropriate language. At the age of thirteen he wrote better than most men write at twenty.

He was born in 1797, and on the 4th of January, 1810, he writes to a school friend :

"If you have visited Oxford, you have seen, in spite of what I said of my father's prepossessions, by far the finest of the two universities. You should, as I have done, have seen Cambridge first. Its inferiority would not then have appeared so striking. I shall belong to the former. Your conjecture respecting Kirke-White is, I think, a very probable one. He would have been a second Cowper, although he might not have enjoyed so long the use of his transcendent powers. From such studies and from such honors may I always be free. I prefer a long life a thousand times to such immortality."

This letter savors, it is true, a little of the pomposity of precocious youth, but it was the rare mark of Thirlwall's genius that early maturity was in him consistent with permanent strength. We can more than half pardon the parental folly of printing the writings of a boy of eleven when we know that the capacity of the boy was not the result of too early development, and foretold the intellectual powers of the man.

Nor was Thirlwall's knowledge inferior to his literary skill. His life was, from youth to age, a life of reading and study. His recreations were what to other men would have been severe labor. Of science he knew nothing, but it may fairly be said that of all other branches of study—of history, of philology, of philosophy, of divinity—he had not only profound knowledge, but, what is a very different thing, a real and substantial command. He was not oppressed by his own erudition. No one could say of him that "the coals had put out the fire." The brightness of his genius was not overweighted by the weightiness of the material accumulated by his energy. People forgot the vastness and accuracy of his information in respect for his judgment and admiration for his logical powers. John Mill's tribute to his genius as a speaker is well known, but bears repetition :

"The speaker with whom I was most struck, though I dissented from nearly every word he said, was Thirlwall the historian, . . . then a Chancery barrister, unknown except by a high reputation for eloquence acquired at the Cambridge Union before the era of Austin and Macaulay. His speech was in answer to one of mine. Before he had uttered ten sentences I set him down as the best speaker I had ever heard, and I have never since heard any one whom I placed above him."

The Bishop's speech on Jewish disabilities, or his speech on the disestablishment of the Irish Church, is conclusive proof that Mill's language is not the expression of reminiscences tinged and falsified by the enthusiasm of youth. The eloquence of perfect argument belonged to Thirlwall from his earliest to his latest days. That perfect command of all the instruments of logic which Mill acquired under the arduous and unceasing discipline of his father, was with Thirlwall the free gift of nature.

Power of literary expression, immense learning, and logical acumen may yet occasionally be possessed by persons deficient in judgment, wanting in insight, and incapable of that self-control which enables a man to direct his own life. It is not possible to believe that Thirlwall suffered from any of these deficiencies. It is not possible to write or speak of him without a too frequent use of the word judicial. The universal belief of his friends that, had he kept to the bar, he would have become preëminent among the great judges of England, is one of those prophecies which, though never put to the test of experience, would, one may feel certain, have, if so tried, met with its fulfilment. His mind was open to light. His interest in Niebuhr, his translation of Schleiermacher, showed that he turned naturally toward the new thought and the new feeling of his age. But if there was one quality in which, to judge by his early letters, he seemed preëminent, it was the power to direct his own steps, to work out his appropriate destiny, to be master of his fate. All his judicial powers were brought to the selection of his profession. He found the bar distasteful and unsuited to a life of thought, literature, and study. He was free from vulgar ambition ; and he chose the Church as his profession not, as we gather from Mr. Perowne, under any violent impulse of excited feeling, but under the deliberate conviction that in the discharge of clerical duties he would find the appropriate sphere for his moral and intellectual activity. He adopted the career of the priest and the student, and it is no discredit to Thirlwall to believe, what every expression he uses and the whole course of his life until he became a bishop proves, that he sought the position of a priest in great part because clerical duties were, on his view, easily compatible with the noble duties of a serious and earnest student. Even the friends who deplored his retirement from the bar may have felt during the years of Thirlwall's life at Kirby Underdale that his deep judicial wisdom had led him to select his proper path, and many, though not, one would think, all, of his admirers may have fancied that Thirlwall's promotion to a bishopric sealed the wisdom of his choice. Yet it is at this very point that the true and almost painful irony of his career begins.

When the crisis of Thirlwall's career came he was not master of his fate. The caprice or the public spirit of Lord Melbourne changed and fixed the whole tenor of Thirlwall's existence. He had never sought promotion. The *nolo episcopari* was in his mouth perfectly sincere. His first impulse when offered a bishopric was to refuse. "He was anxious to complete his 'History of Greece,' and was meditating a visit to the land of art and song during the autumn. It is said to have taken all the power of suasion of his friends to make him agree to be a bishop." He did agree, and, we may fairly conjecture, agreed against his own judgment ; yet his very interview with Melbourne must have warned even a less sagacious person of his error :

"Very glad to see you ; sit down, sit down. Hope you are come to say you accept. I only wish you to understand that I don't intend, if I know it, to make a heterodox bishop. I don't like heterodox bishops. As men, they may be very good anywhere else, but I don't think they have any business on the bench."

This was the language of the clever *pococurante*, worldly, good-natured old premier, who probably thought a good income, a seat in the House of Lords, and a dignified position the deserved reward for the liberalism of one among the very few theologians who forty years ago were inclined to protest against bigotry. Lord Melbourne's sagacity was not at fault. The translator of Schleiermacher's 'St. Luke' did not turn out a heterodox bishop. We cannot doubt that he accepted the see of St. David's with perfect honesty, and cannot but regret that George Eliot should, if rumor be correct, have been the person to charge the Bishop of St. David's with having found in the path which leads to a bishopric "a royal road to orthodox faith." But it is clear, as far as human judgment can penetrate into the mysteries of human conduct, that Thirlwall, when he yielded to the persuasion of Lord Melbourne, wandered from the path of wisdom. From that moment his career became filled with contradictions. A student and a thinker, he was compelled to undertake the work of administration. He had at once to turn from the study of divinity, or the composition of history, to writing letters like the first written in his official capacity, which explains to an unwise parson, in language probably a good deal above the clergyman's comprehension, the folly, not to say the illegality, of refusing the communion to parishioners whose only offence was attendance at a theatre. In Wales, indeed, Thirlwall's linguistic talents availed him something. He learnt to speak and preach in Welsh; but though he could learn the tongue, he was not the man to reach the hearts of Welshmen. "I am glad," he writes, "to find that anybody listened to my sermon. I admired the patience of the congregation, who, though three-fourths of them were longing for Dr. Griffith, did not make any scraping with their feet or show any outward sign of suffering." Congregations of Ranters and Methodists never heard Thirlwall's passionless and convincing arguments without "longing for Dr. Griffith." He was scarcely more in harmony with the feeling of the clergy than with the sentiment of the common people. Incidental expressions in the 'Letters to a Friend' (obviously a young lady) show that Thirlwall himself felt that a cold and stiff manner shut him out from the sympathy and intercourse which his real kindness, wisdom, and lovableness ought, but for his chilling exterior, to have secured to him. Few, except here and there an intimate friend or a favored correspondent, knew the goodness of the Bishop's heart.

This is of itself pathetic ; but what makes the moral isolation of the Bishop something more than pathetic is that it must have been an almost insuperable bar to the adequate discharge of his duties. His statesmanlike breadth of view and his unrivalled capacity for cogent argument must, it would be thought, have found room for their display and exercise in the debates of the House of Lords. To a limited extent this probably was so ; his speeches were memorable. The miserable fallacies which are, to the disgrace of the nineteenth century, being reproduced in England and in Germany as an apology for or an extenuation of attacks on the Jews, and which might have excited horror even in the Middle Ages, are anticipated, exposed, and rebuked by Thirlwall's speech on Jewish disabilities delivered in 1848. But, though none but fools or bigots could despise, and none but the most skilled debaters and dialecticians could meet, Thirlwall's arguments, he did not apparently greatly influence his audience either in the House of Lords or in Convocation. The present Archbishop of Canterbury, Bishop Wilberforce, Bishop Magee, or the late Dean Stanley has each of them, it may fairly be conjectured, produced greater effects on the feelings, and even the actions, of the audiences he addressed than were ever produced by the incontrovertible reasoning of the Bishop of St. David's. Mill is no fair type of ordinary Englishmen.

Thirlwall's true sphere was his study, which he happily nicknamed "Chaos." Here his incessant application added daily to his immense knowledge. Yet, by some strange turn of fate, his learning and his wisdom were, from the time of his consecration as a bishop, of little avail to the world. His 'History of Greece' was, when he wrote it, by far the best work on the subject to be found in the English language. It has merits of its own which have never been surpassed ; yet it was superseded by Grote's great work, which had a kind of "body," so to speak, and life not to be found in Thirlwall's sensible and cautious sentiments. No one acknowledged the merits and the superiority of Grote's book with more ample and unstinting liberality than Thirlwall. But critics who admire and appreciate the generosity of the Bishop may also note that the ultimate cause of Grote's triumph, if so it can be called, in the magnanimous contest between the two friends, lies in the fact that the London banker possessed a sort

of largeness and force of character which somehow or other was wanting in Thirlwall. Grote was not a more remarkable or a more learned, but he certainly was in some way a bigger, man than the Bishop.

In the sphere, at any rate, of theology Thirlwall might have been expected to influence his age. In him profound learning and unrivalled dialectical skill and supreme soundness of judgment coexisted in a rare combination. The candid perusal of his letters makes it apparent that his mind was constantly occupied with the theological problems which have now exercised and tormented two generations of Englishmen. He was prepared to sum up the never-ending case of scepticism against revealed religion in favor of Christianity. His high character and his intellectual eminence were calculated to give to every expression of his convictions a weight, with the English public at least, as great as ought in reason to be attributed in matters of religious belief to the authority of any individual. But though Thirlwall was prepared to sum up the case, he never (if one may be allowed to follow out a metaphor irresistibly suggested by the idiosyncrasies of his genius) delivered judgment. A sermon such as that on the resurrection proves that he held the dogmas of Christianity to be not inconsistent with the dictates of reason; but he left no permanent or monumental work to explain, to defend, or support his theological beliefs. Moreover, his official position detracted from the influence of his opinions. A bishop defending orthodoxy is, however honest his own convictions, an apologist for dogmas which he can hardly deny to be true without some slur on his own honesty. An anonymous sceptic published toward the close of Thirlwall's life a book entitled 'Supernatural Religion.' The new writer was, whatever his other merits, deficient in accurate scholarship. The intelligent public and many acute critics, nevertheless, rushed to the conclusion that the author of an attack on revelation was the Bishop of St. David's. This stupid blunder proves the dulness of educated readers and educated writers. It also demonstrates past a doubt that the Bishop had failed to make any impression on the opinions of his generation. *Cor sapiens et intelligens ad discernendum judicium*, is the inscription on his monument. It contains far more truth than is generally found in epitaphs; but between the lines of the appropriate and deserved tribute to the memory of an eminent man those who have studied his life will read the thought that Connop Thirlwall — "scholar, historian, theologian"—though, or rather because, he was "for thirty-four years Bishop of St. David's," failed to make any permanent mark on his time, and will reflect that the lives of men have, no less than the dramas of tragedians, their touch of profound irony.

RECENT AMERICAN POETRY.

THE wrongs of the American aborigines are doubtless great, but these have had their revenge upon the pale-faces by tantalizing them with a perpetual theme for ineffectual verse. The Indian names are often graceful and plaintive, their legends are poetical, yet who but Longfellow has succeeded in making anything out of them as literary material? Even he barely succeeded; and Whittier's "Mogg Megone" and "The Bridal of Pennacook" are left unread. What hope is there then for humbler bards, except perhaps to give pleasure to themselves and to their own households? Yet the longest poem thus far composed in America is said to be an Indian epic, called "Teuchsa Grondie," reviewed in its day in these columns, and comprising some ten thousand lines. Compared with this, Major Mayer's 'Mendota' (Madison, Wis.: Atwood) seems exceedingly modest, with its thirty pages; and he borrows mainly the Hiawatha measure, thus securing ease to the reader, while he carefully avoids the less melodious Indian names. It is impossible to say as much for Mr. Hathaway's 'League of the Iroquois' (Chicago: Griggs), although it comes to us with a printed circular in which Mrs. M. E. Starrett, of the *Inter-Ocean*, describes it as "*the* American poem, the Indian epic which the literary world has long been waiting and looking for." But did the literary world —one may modestly ask—expect to find in this much desired epic a collection of proper names so formidable as the following verses, from the

"SONG OF NYAH-TAH-WANTA."

"Hayo-went-ha, Hayo-went-ha, great is he;
Come to woo Nyah-tah-wanta—can it be?
And he calls her lovely Kax-aa—is it so?
But a lowly, simple maid—Nyah-tah-wanta—
That I know.
He, the Home-wind, sweet Kee-way-din, soothly singing,
Seems to tell:
"Hayo-went-ha come to woo Nyah-tah-wanta—
That is well." (P. 99.)

Mr. Hathaway's picture and autograph are prefixed to the volume, and the whole is evidently the work of a gentle-hearted and painstaking man; but he has undertaken a task in which success is almost impossible, if the past results achieved by bards more experienced may be taken for a warning.

If it is hard to write readable Indian poetry, to produce good religious poetry is almost as difficult. If, as is sometimes intimated, the American church is in danger, it certainly will not be saved by clinging to such floating straws as are most of the volumes of devout verse which come to us; there seems no theme on which our authors demand so little of themselves. 'The Voice of St. John,' by Rev. William W. Newton (New York: Randolph), is the best of these; it has the serious and well-expressed thoughts of a cultivated man; and it is a small and modest volume. We cannot apply these terms to 'Search the Scriptures; or, The Way of Truth is the Way of Life' (San Francisco: Bancroft). Why should any one be led to search the Scriptures by books which are themselves far less searchable than the Scriptures? 'Moses Resisted,' by W. T. Helms (Nashville, Tenn.: Haynes & Camp), has far more to offer to the reader; it is a poem in twelve cantos, aimed nominally at Jannes and Jambres, who withstood Moses (2 Tim., iii., 8), but actually at the three "infidel scientists" of the day—Huxley, Darwin, and Tyndall. Every miracle wrought by Moses is hurled in long stanzas at the heads of these three guilty men; and as if this were not enough, the poet has a vision of his own respecting three serpents, whom he expressly identifies with these sinners in a foot-note. That they and their followers may know the worst, we state the application of the vision:

"Need I interpret what is here expressed
In allegory, as of form the best?
Need I to these three serpents give the name
By which each revels in an earthly fame?
Three scientists are they who lead the way,
And God and truth would with their fossils slay.

"As if they sat supreme in Wisdom's gates,
And knowledge centred in their sickly pates,
They and their smaller satellites assume
That Moses' record is laid in its tomb;
That Christian men of learning must agree
God's Book must yield to their geology!

"Forth from this Babylon, O Christian! come,
And make the Word of God alone your home;
Forth from their company, lest they enthrall,
And you with them should to perdition fall:
Wear not their title vain, but let it be
A synonym for infidelity." (Pp. 6, 7.)

We should say that, as stated in this volume, and with such dangers and such defenders, it is as clearly a contest of fossil against fossil as the war in Bret Harte's celebrated scientific society.

'Theon,' by Sallie Neill Roach (Philadelphia: Lippincott), is a poem, half-narrative, half-dramatic, and inscribed "To the Lost Cause." We can only say of it that its execution is not quite commensurate with the ardor of its purpose. Another Southern volume, looking more to the future, and far richer in poetic quality, is the collection called 'Down the Bayou, and Other Poems,' by Mary Ashley Townsend (Boston: Osgood). These poems, though printed in Boston, seem to have been mainly written in New Orleans—which we regret to find the author rhyming with "demesnes" — and have that wealth of unhackneyed material to which Mr. Cable's novels have been introducing us of late. The long, lazy, floating strain which gives its name to the volume is as delicious as a trip to Florida. Who would not be a poet, the reader asks, among palmettos and bananas, and within reach of Aztec remains and picturesque Mexico? The enlarging figures of our national census are, after all, less interesting than the steady introduction into our literature of new words and symbols drawn from Southern and Western travel and from the renewed exploration of Creole life and Spanish empire.

Still another Southern volume, 'Poems and Essays,' by Charles W. Hubner (New York: Brown & Derby), has a preface dated at Atlanta, Ga, but has no local coloring and might have been written anywhere. It is painstaking and devout, but not poetic, and might rather be classed among religious works. The prose part of it is fragmentary and rather sensible than striking.

From South we turn to West, for our supply of verse. According to the author of 'Maurine, and Other Poems,' by Ella Wheeler (Chicago: Jansen, McClurg & Co.), it is clearly to the West alone that we are to look for poetry, henceforward:

"Not to the crowded East,
Where, in a well-worn grove,
Like the harnessed wheel of a great machine,
The trammelled mind must move—
Where Thought must follow the fashion of Thought,
Or be counted vulgar and set at nought;

"But to the mighty West,
That chosen realm of God,
Where Nature reaches her hands to men,
And Freedom walks abroad—
Where mind is King and fashion is nought:
There shall the New World look for thought."
(P. 163.)

But we must honestly say that when we look for thought in this lady's volume we find that fashion is "king" instead of being "nought." She cannot tolerate a hero or a heroine with plain English names; the most commonplace youth must be named Roy Montaine or Vivian Dangerfield; and the most trivial maiden must be Helen Trevor or Maurine La Pelle. Why not be simple? Why not take the life of every day, East or West, and make it poetic? In a city of half a million inhabitants, like Chicago, there must surely be good enough names in the directory. It is useless to talk about the Mighty West, and then have nothing to show for it but such broad prairies of insipidity as the following stanzas:

"We always were meeting some way after that.
You hung up my hat,
And got it again when I finished my call.
Sixteen and *so* sweet!
Oh, those cute little feet!
Shall I ever forget how they tripped down the hall?

"Shall I ever forget the first kiss by the door,
Or the vows murmured o'er,
Or the rage and surprise of Maude-Belle? Well-a-day!
How swiftly time flows!
And who would suppose
That a *bee* could have carried me so far away?"
(P. 219.)

But this utter refusal to find poetry in the life of every day is not limited by any meridian of longitude. The author of 'Arsiesis, and Other Poems' (N. Y.: Putnam), who is anonymous, except for the mystic letters "Sx" in the middle of the title-page, asks the natural question:

"Why is't that poets of the modern time
Seek in the graveyard of the buried Past
Fit subjects for their rhyme?
Is it that topics in the day they live
Are all unworthy of a poet's thought,
That they no record give?" (P. 109.)

But the author answers his question by printing a poem, long and not especially interesting, with

the scene laid in Egypt, and by making the interlocutors in the longest minor poem bear the names of Orvaldo and Alicia. There is food for reflection also in the author's standard of blank-verse, which is no worse than that of many volumes that come to us, but shows almost anywhere, by a cross-section, as it were, how remote is its construction from anything that suggests a flowing or continuous rhythm, or anything indeed but a series of syllables chopped into regular lengths. Take, for instance, the following (p. 73):

"A lovely night, a quiet night and still, not
E'en the faintest suspicion of a sound to
Render less the silence. All is calm; calm
As the conscience of a maiden pure, too
Young by far to know of any sin.
. . . How far beneath the moon this
Pretty mountain dell—a volume bound in
Silver and in green—like unto lands which
Have creation in the poet's mind, where," etc., etc.

In each of these lines the reader seems to come with a bump against the final syllable, as against a gate-post. Yet the author has poetic thought and sensibility, and in the easy, slipshod measure of the main poem he goes on well enough, and is sometimes melodious. Blank verse is as inevitably the test of a man's poetic ear as is a dress-suit of his capacity to look like a gentleman.

A good foil to the remoteness and vagueness of the volumes just mentioned may be found in the thin volume called 'Lora, a Romance in Verse,' by Paul Pastnor (Philadelphia: Potter & Co.). Here is a frank and honest theme, taken near home, and founded on the actual adventures of some young hunters in the upper regions of Vermont. It is a good example of the advantage gained by young poets when remaining on familiar ground and extracting poetry from that. The incidents are sometimes melodramatic, the pentameter measure sometimes halts; but the reader finds no difficulty in getting through it, and this is after all the first and most essential test of a poem. The main story is simple and wholesome, though the end is somewhat abrupt; the plot turns upon the charm exercised over the young farmers and hunters by a young French maiden, daughter of a well-to-do farmer on the Canada border; and there is something in the general situation which reminds one of Clough's delightful 'Bothie of Tober-na-Vuolich' and sometimes of Goethe's 'Hermann and Dorothea,' yet without suggesting imitation. The local coloring, at any rate, is wholly cis-Atlantic. Here, for instance, is the farmer driving his cattle:

"Meanwhile, through the smooth, tempered air there
came burdensome sounds:
The crush of loose, toil-heavy feet in the road-bed of
gravel;
The bowing and swaying together of huge, weary
creatures;
The creaking and rattling yoke; the sighs of submission;
The meek, muttered groans of the oxen; the swish of
the ox-whip;
And now and anon the guidance, in tones of moroseness,
And the slow, labored step of the farmer, desiring his
rest." (P. 10.)

Nothing can be more genuine than this; and scarcely less so is this picture of the exhausted sportsmen at their supper, surrounded by the picturesque French-Canadian children, but too busy to lift their eyes from their food:

"Meanwhile the children drew round, flocking out of
the shadows:
Beautiful children they were, and of lineage taintless.
Pure blood of France coursed their veins like a river of
sunshine:
Liquid-eyed girls, with cheeks red as the grass-hidden
berry;
Dark, princely boys, like young noblemen playing
the peasant.
Now the door opens, and Lora, the eldest and fairest,
Enters and stands with the children. How charming
her picture
In the dim light, half surrounded by gipsy-brown
faces:
'Supper is ready,' she said in a voice soft and modest;
'Follow me, please.' Whereupon the young men rose
and followed
Her eagerly into the low, dusky space of the kitchen.
There were huge dishes that steamed with a wholesome
provision;
Over the table their cloud and aroma were floating,
Sweeter than spice-laden breezes, or breath of deep
gardens,
Unto the sportsmen. They, when they had taken their
places,
Spake not a word, nor looked up, but ate deeply, in
silence,
As on a slope fresh and fragrant, and kissed by the
morning,
Browses an ox with his dew-dripping face in the
clover." (P. 17.)

With all its crudeness, this book shows a keenness of observation and a felicity of epithet which give signs of promise for the future. We would especially commend it to young writers like George Macdonald Mair, the author of 'The Bride of Bar-Cocab' (N. Y.: C. Wesley Jones), who, with a poetic temperament and painstaking execution, has failed because his task was hopeless. The most experienced artist would probably fail in the attempt to extract materials for an attractive poem out of the books of the Maccabees and Numbers xxiv., 17; and a beginner needs especially to make his first experiment on a subject near home, even if it is only a yoke of oxen.

Mrs. Anne C. L. Botta has long held a creditable place in our literature, and the volume of her poems (New York: G. P. Putnam's Sons) seems rather like a reprint than a new addition. There is in it no indication of any recent theme, and poems addressed to "Fredrika Bremer" and to "Byron amid the ruins of Carthage" speak the voice of a generation ago, suggesting what may be called the Mrs. Sigourney period of American poetry. It was a clear, simple, reasonable period, when æsthetes were not, and all that was asked of any one was to give a plain tale in a quiet way. Two poems in this volume, "The Ideal," and "The Ideal Found," tell of profounder experience, and have a good deal of emotional power.

The volume of Mrs. Harriet Prescott Spofford's poetry (Boston: Houghton, Mifflin & Co.) suggests a little of that disappointment which has been inspired by her whole literary career. She is surpassed by no one among her country-women in some of the best gifts of authorship—in imagination, in wealth of language, in ear for an effective phrase—and yet, through some want of a sense of intellectual perspective, or through some defect in the focus of her genius, she has failed to take, as a prose writer, the place which seemed waiting for her to fill it. Her first story in the *Atlantic Monthly*, "In a Cellar," awakened expectations which she has never fulfilled; and now her volume of poems also brings some sense of incompleteness. She has at several times done what few women in America have accomplished: she has produced lyrics; a remarkable fact for one whose most obvious fault lies in exuberance. Twenty years ago, when criticising this lady's first novel, 'Sir Rohan's Ghost,' Lowell pronounced the ballad "In the Summer Even" an absolutely perfect thing, and then went on to nullify his own criticism by retouching it. He did not, however, improve it, but he altered the first line, no doubt unconsciously, to "In a summer twilight"—as good an instance as ever occurred, perhaps, of the very uncertain value of the very best criticism. As Mrs. Spofford has really never surpassed this little strain, it may be well to quote the whole of it, with careful avoidance of all attempts to make it better:

"In the summer even,
While yet the dew was hoar,
I went plucking purple pansies,
Till my love should come to shore.
The fishing lights their dances
Were keeping out at sea;
And, Come, I sung, my true love!
Come, hasten home to me!

"But the sea, it fell a-moaning
And the white gulls rocked thereon;
And the young moon dropped from heaven,
And the lights hid one by one.
All silently their glances
Slipped down the cruel sea,
And, Wait! cried the night and wind and storm—
Wait, till I come to thee." (P. 119.)

There are later poems, as "A Four-o'Clock," "Boat-Song," "Magdalen," and others, which have kept up the succession of these verses, exhibiting that sort of accidental perfection which is, after all, the true test of song. It is a pity that the inevitable necessities of a thick volume have required the addition of many that were not conceived in an hour so happy. This being the case, we are all the more surprised, and rather sorry, that Mrs. Spofford has not reprinted her longest poem, "Pomegranate Flowers," published many years ago in the *Atlantic*, a production which had indeed her characteristic overabundance, but gave the promise of her power.

On the principle—so consoling to many a post-prandial orator who has been nearly forgotten by the head of the feast—of keeping the best wine to the last, we must close with expressing the heartiest enjoyment of a little volume entitled 'Love Poems and Sonnets,' by Owen Innsley (Boston: Williams). The prompt reception everywhere accorded to these modest strains is a most refreshing fact; it shows how sincere and spontaneous a thing is the public taste, after all, and how little it needs preliminary puffing and manipulation. It shows, too, that a young author may gain a certain advantage by letting thought accumulate and execution mature, and then giving a whole volume of fresh work, instead of first testing and perhaps palling the public taste through the magazines. "Owen Innsley" is now well understood to be the *nom de plume* of Miss Lucia W. Jennison, of Boston. Her father has long held a high place among the musical amateurs of that city; her uncle, Mr. Levi Thaxter, is well known through his sympathetic and studious readings of Browning's poems; and she is niece by marriage of Celia Thaxter, as well as of that gifted and wayward child of genius, the late John Weiss. She has thus had around her from childhood an unusual atmosphere of artistic cultivation, and has also had peculiar opportunities of travel and study in Europe. These things we mention, not by way of gossip, but to illustrate the advantages given by inheritance and training as to all that concerns artistic form; although doubtless, when natural genius is wanting, all the rest goes for naught. At any rate, the result here is that we have a volume full of deep passion, high imagination, and accurate expression, marked, moreover, by a quality of clearness which certainly does not suggest a disciple of Browning and of Weiss. It is this last trait, above all, which has helped the book to its ready popularity; and the verses in French, German, and Italian, even if viewed only as *tours de force*, have no doubt added something to the reputation the authoress seems destined so easily to win. We can think of no first volume by an American poet since 'Verses by H. H.,' which suggested so much promise, and it is only when the new writer attempts—incautiously and perhaps unconsciously—a theme like "Burnt Ships," or "The Zone of Calms," which Mrs. Jackson had handled before her, that we feel the greater strength of touch of the elder poet over the younger. The revelation of the sex of the author adds yet more to the interest, and makes the book a curious psychological study. Many women have written to many other women what might pass for love-poems, but never, within our knowledge, in a strain so close to the emotion of a high-minded man as here; and yet the note is touched with such delicacy that we experience no repugnance at the feminine origin—less than sometimes comes over us, for instance, in reading Shakspere's sonnets. It seems hard to believe that any but a man wrote the following strong lines:

BONDAGE.

"'And this is freedom!' cried the serf; 'at last
I tread free soil, the free air blows on me';
And, wild to learn the sweets of liberty
With eager hope his bosom bounded fast.
But not for nought had the long years amassed
Habit of slavery; among the free
He still was servile, and, disheartened, he
Crept back to the old bondage of the past.

Long did I bear a hard and heavy chain
Wreathed with amaranth and asphodel,
But though the flower-wreaths stole the weary pain,
I cast it off and fled, but 'twas in vain:
For when once more I passed by where it fell,
I took it up and bound it on again." (P. 89.)

It must be confessed, however, that this volume will probably incur nothing but contempt from the admirers of Whitman and Wilde, for with all its strength and passion it must seem to them basely and despicably pure.

SIR CHRISTOPHER WREN.

Sir Christopher Wren: His Family and His Times, with Original Letters and a Discourse on Architecture hitherto unpublished. 1585–1723. By Lucy Phillimore. With two illustrations. New York: Harper & Bros. [Franklin Square Library.]

THE unwary book-buyer will surely be ensnared by the title of this book. Instead of the orderly account which he might expect of the distinguished builder's private and professional life, with something pertinent of the gossip of his times and his family, he will get a strange medley of sometimes wildly unreasonable statements, for the presentation of many of which the book's title and its avowed design furnish but the shadow of an apology. The preface says that the author intends her work as "a contribution toward that full and worthy biography of the great architect which may yet, she trusts, be written before London is finally robbed of the churches with which Wren's genius endowed her"; and the succeeding pages certainly offer a multitude of alleged facts and dogmatic generalizations which are evidently designed to "contribute" to something, albeit we cannot see that a large part of them bear upon the "full and worthy biography" of Sir Christopher. More than a third of the book is mainly devoted to a rather pathetic and unmistakably partisan biography of Bishop Matthew Wren, Sir Christopher's uncle, and abounds, as does the whole book, in direct and implied denunciations of every act which derogated from the authority and dignity of the Crown and "the Church" in that memorable seventeenth century in which so many germs of political and religious liberty broke painfully through the soil.

The writer's temper toward some of the controversies of that time is clear from her outspoken discussion of Bishop Wren's administration of the diocese of Norwich, and of his impeachment, of the downfall of Strafford, Laud, and Charles I., and of the Restoration and the reinstatement of Episcopacy, and from such words as these: "The consequences of" Bishop Abbot's promotion to the primacy over the head of "the saintly" Bishop Andrewes "were disastrous indeed. Had Andrewes succeeded Bancroft, and had Laud succeeded Andrewes, 'the Church had been settled on so sure a foundation that it had not easily been shaken.'" "The difficulties of his [Laud's] task had been doubled by the lax, un-Catholic rule of his predecessor." "The issue of that iniquitous trial [Strafford's], perhaps as great a perversion of justice as England had ever then known." "His [Laud's] murder was an immense triumph to all the sectarians." "When we look back to the years of the Rebellion, their darkness is lightened for us by the knowledge that the Restoration came at last." "This return [of Charles II.] was a promise of deliverance for the Church, and an end to that difficulty of preserving the Apostolic Succession which had so nearly proved a fatal one." Notwithstanding this narrow and antiquated blindness to the true value of those momentous struggles, the author's remarks upon questions of general history might be pardoned if they were in any way necessitated by her conception of Sir Christopher's career; but they are not. They throw no light upon his character, his opinions, his work, or his fame. They are lugged in by the ears, at an utter loss of dignity and good taste.

Passing now to that part of the book which keeps within the legitimate limits of its subject, we find the main events of Sir Christopher's life set forth in a clear and entertaining manner. The author objects to Mr. Elmes's memoir (London, 1823) as dry and somewhat inaccurate, and there is no doubt that she has produced a more spirited narrative and one more trustworthy in minor details. Nevertheless she has failed in presenting a vivid picture of Sir Christopher or of his works. His numerous scientific discoveries and speculations are referred to, it is true, in connection with pleasing descriptions of the beginnings of the Royal Society. His architectural works are enumerated with careful regard to chronological exactitude, with many interesting antiquarian notes, with frequent apostrophes to their beauty and their supposed excellence of construction, and with frequent laments over their destruction at the Philistine hands of modern progress. But there is no attempt to trace the inner development of Wren's genius, or to bring him into relation with the history of thought or of art except a few such references as those to Fergusson's 'Modern Architecture,' where, we suppose, the inquisitive reader is expected to look up all such things. In a word, for a satisfactory idea of the significance of Wren's career, we must still consult the despised memoir of Mr. Elmes, or Britton and Pugin's 'Public Buildings of London,' or Longman's 'St. Paul's,' or Dr. Sprat's 'History,' or Dean Milman's 'Annals,' or go back to the fountain-head, the 'Parentalia' of Sir Christopher's son Christopher.

The probable interest of a critical study of Wren's life may be inferred from a rapid glance at its prominent features. Wren was a civil-engineer before he was an architect, and an astronomer, mathematician, physicist, and anatomist before that. He became the Gresham professor of Astronomy at twenty-four, an Oxford professor of the same science at twenty-eight, and he made his début as an architect at thirty. He was the son of a well-known and versatile clergyman, from whom he inherited much of his talent. From early youth he attracted attention by his precocity in physical and mathematical studies. He held many prominent positions, and was one of the best-known men of his times outside of political circles. Throughout his life he displayed a fidelity and patience in the discharge of trusts, a persistency in overcoming difficulties, and a cool common-sense in all his social, civil, and professional relations that rendered him an invaluable public official. To these qualities as a scientist and a man, rather than to his force as an artist, he owed his popularity and his independence during four successive reigns. He kept out of political and ecclesiastical quarrels, and devoted himself to the unselfish performance of duties. He was indefatigable, honest, prudent, shrewd. He was encouraged and broadened by a greater or less acquaintance with men like Evelyn, Bernini, Hooke, Flamsteed, Halley, Newton, and Pascal.

The accident of the great fire of 1666 first tested his architectural ability, and was the occasion of his greatest successes and greatest failures; for it brought upon him, as Surveyor-General, the task of rebuilding St. Paul's and the many parochial churches of the city, a work of grand opportunities, but too extensive for one man. The list of buildings erected or repaired by him between 1663 and 1723 embraces no less than 60 churches and cathedrals, 35 guild-halls, 8 colleges, 4 palaces, more than 20 civic buildings, hospitals, and theatres, besides many private houses. His labor upon St. Paul's extends over the long period of thirty-five years, and the vicissitudes of that undertaking have been often discussed. In all his works Wren's mechanical overshadows his artistic talent, although if he had had a thorough professional training, such as Inigo Jones had, he would probably have ranked among the foremost of architects. As it is, he often developed his favorite classical motives with conspicuous originality and good taste; and no one can deny that he was a consummately skilful and learned *builder*. The dome of St. Paul's, the interiors of St. Stephen's, Walbrook, and of St. James's, Westminster, and the spires of Bow Church and of St. Bride's have substantial and permanent value to the student.

In spite of these fine opportunities in the breadth and dignity of her theme, and in spite of her patience and care in consulting authorities, her unusual access to information, and her evident ability as a writer, we are forced to say that our author has not given us the critical study of Wren that is needed, nor "contributed" much to it. The reader lays down the book with no adequate conception of Wren's power as a thinker or of his style as an architect, and with a very distorted view of the times in which he lived. The lover of gossipy, unphilosophical history will find the work entertaining and fresh; the historical student will find it only a provocation to controversy; while the architect may read it in the assurance that it will do him professionally neither harm nor good.

Home Decoration. By Janet E. Ruutz-Rees.—*Home Amusements.* By M. E. W. S. [Appletons' Home Books.] New York: D. Appleton & Co.

THE plan of the "Home Books" seems to be to leave nothing untouched, even at the risk of some overlapping or repetition. The home has been built and furnished, the garden and grounds laid out, hints for domestic arrangements and for cookery supplied, and the family instructed in the "amenities." It is now to be "decorated," so far as it may be done by the needles or the brushes of the presumptively feminine side of the house.

The first of the above-named books will pave the way for the specific instruction-books rather than supplant them; for it is neither very full nor very definite. The same may be said of the drawings, which suggest enough perhaps to the expert, but for beginners are inadequate. The descriptions are pretty, even if sometimes a little overdone. For instance, we should hardly have made so much of the piano-cover, No. 64, as the author does: "Two little birds in an apple-tree bough are pouring out floods of melody, while a rabbit, entranced, pauses in his delight and erects his ears to their utmost limit in his desire to catch the strain in its entirety. This design, worked upon crimson or deep-blue satin in outline-work, the blossoms only in raised French knot, would be simply charming." Painting is only hinted at, and but four pages are devoted to wood-carving. It is possible that the other eleven-twelfths of the book represent fairly the proportion which should be given to embroidery in house decoration while the present craze for it lasts. But since the author's aim is evidently to awaken a taste for it in circles not yet reached, it is well to warn the uninitiated of the perishable nature of much of such work. These decorations need constant renewal to prevent shabbiness, exposed as they must be to coal-dust, etc., through our long winters. The book gallantly follows the lead of its

superiors in insisting upon "artistic" feeling, purity of design, and the like; but we fail to see wherein the ornamentation of curtains with patterns made out of brass rings or white buttons is any more artistic than the now much-scorned shell or leather-work of twenty years ago.

The subject of 'Home Amusements' deserves more careful treatment than it has received from "M. E. W. S.," who gives a catalogue of names, not a treatise on the subject; for very few games are more than mentioned. The premise of the book is that all amusements are home amusements, and that nearly everything else may be made into an amusement; so that it begins in the attic with theatricals, and ends in the kitchen with clear-starching. *En passant*, it includes the "Archery Club," which could never be strictly a home affair, and lawn-tennis, which can but rarely be so; while it excludes, of all things the most fit for the parlor fireside, chess, in this cavalier fashion: "As for chess, the devotee of this heavy, remorseless game has no further need of our help or sympathy. We can offer no suggestions except that he may be left undisturbed." There are some sprightly pages on such subjects as fans, tapestry, and garden-parties, but they are not improved by an extravagance like this: "The old tapestry, done by hand when there were no Gobelins, had a meaning and a use. So has the modern tapestry done by hand. It is cheap, it is individual, it is original; but for the Gobelins, that favorite luxury of kings, we fail to see an excuse." Or, "Favors for the German now often cost $5,000 for one fashionable sale." The whole of the concluding chapter is written in a similar vein, to the effect that the modern young lady is vastly better off than her grandmother, who was shut up "within four dreary walls," with no "Kensington stitch," no painting, "artistic, sincere." "There were quiet dinners, and very many 'Germans,' but they were conducted inexpensively, at the hotels almost universally."

We need quote no more to show the writer's entire ignorance of social life fifty years ago. As to the dress, is not she the most envied girl of her set who is radiant in her grandmother's brocade? As for needle-work, how many baby's caps and socks are carefully worn once by each succeeding child, for the sake of the great-grandmother's stitches? and what more precious than the embroidered vest which grandfather wore on his wedding-day? It would not take much research to prove that in proportion to the wealth of the community and the possibilities of travel and intercourse, they had and did in the thirties quite as much as, if not more than, we. In the chapter on theatricals more might have been said about them as a resource for children, of course limiting them solely to a home amusement. The French have made great use of them for this purpose, and there are numerous plays, for girls and boys, or for either sex apart, that are as beautiful as they are simple. "Les Sabots de Noël" and "Le Déjeuner de l'Empereur" are each a little idyl; while "Le Laquais de Madame," a fitting pendent for "Le Bourgeois Gentilhomme," is an actual study in history, and yet not at all beyond bright girls. The need is growing for occupation that is a little more than amusing, in the long summers now spent in rather remote country-houses, and a French play for the children will entertain both old and young.

The Journal of Hellenic Studies. Vol. II. London and New York: Macmillan & Co. 1881.

The second issue of this work is perhaps hardly equal in interest to its predecessor. Certainly no article of the same literary excellence as Prof. Jebb's monograph on Delos in vol. i. enlivens the somewhat dull average of most of the new papers. The editors have, we think, done wisely to issue the work in two yearly parts; for attempts such as this is to popularize subjects so remote from every-day interest as excavations in Greece and Asia Minor, with the results they yield in fragmentary inscriptions and mutilated works of art, need artificial help merely to live; and readers who put down a complete volume of 400 pages with a shrug, will sometimes brace themselves to the task of mastering 200 without tedium.

The only purely literary article in the present series is Mr. Tozer's on Byzantine satire. Anna Comnena, in a passage of the 'Alexiad,' speaking of a conspiracy among the courtiers against her father Alexius Comnenus, says they wrote scurrilous pamphlets (φάμουσα) and flung them into the Emperor's tent. A good many such Byzantine satires of various dates exist in manuscript—not less than twelve in the National Library of Paris alone. Two of them, 'Timarion's Sufferings' and 'The Sojourn of Mazaris in Hades,' have been published, the first by Hase, the latter by Boissonade. 'Timarion' was written in the first half of the twelfth century; 'Mazaris' in the beginning of the fifteenth. The subject of both is the same—an imaginary visit to the infernal regions. The author imitated is Lucian, whose writings were much studied under the Byzantine Emperors, and who has introduced this topic—life in the under-world—in four of his works, the 'Dialogues of the Dead,' the 'Cataplus,' the 'De Luctu,' and the 'Vera Historia.' The work, however, which is most directly imitated in 'Timarion,' the 'Necyomantia,' though ordinarily ascribed to Lucian, is now generally believed to be by an imitator. Abstracts of both 'Timarion' and 'Mazaris' are given by Mr. Tozer, as interesting as such highly shadowy creations usually are. There is some fancy in both, and a good deal of real humor in 'Mazaris'; but, speaking generally, the classical model is too palpable. The remarks on the Greek in which these satires are written are, however, of much value, and written with Mr. Tozer's usual care.

Next to this in importance is Prof. Jebb's 'Homeric and Hellenic Ilium,' in which, after premising the ground-fact ascertained by Dr. Schliemann that Hissarlik was inhabited at a prehistoric period, and *might* therefore be the site of the Homeric Ilium, he contributes to the controversy a review of the passages in ancient authors in which (1) the belief of these writers as to the site of Homeric Ilium is stated; (2) the history of the Greek city known in historical times as Ilium is traced. Whatever Dr. Schliemann's researches will eventually be considered to prove, there can be no doubt as to the importance of such an historical review of ancient testimony as Prof. Jebb here gives us; and this will atone for the comparative absence of literary finish which this paper presents as contrasted with that on Delos in the first volume.

Those who are interested in excavations will read with pleasure Dr. Schliemann's 'Explorations of the Bœotian Orchemenos.' Two previous attempts have been made to excavate the Treasury of Minyas, early in the century, by the artists in Lord Elgin's employ, and in 1862 by Gadakes, demarch of Skripu. Dr. Schliemann excavated systematically *from above*, and ascribes his success mainly to doing so. He used crowbars, pickaxes, shovels, and broad hoes, and employed from 100 to 121 laborers, one-half of them women. Pausanias describes the Treasury as a round stone building, rising into an obtuse point. Of this K. O. Müller believed a large marble slab to be the single surviving remnant; it was reserved for Dr. Schliemann to uncover it sufficiently to ascertain its measurement and to be able to describe it in detail. It is smaller by three feet and some inches than the Treasury of Atreus at Mycenæ (which is 50 feet in diameter), and contains, besides, a thalamos, on its east side, approached by a corridor. The ceiling of this thalamos has a splendid ornamentation, a sculptured border of small squares, followed by a border of large rosettes. Throughout the whole length of the thalamos are rows of fine spirals interwoven with palm-leaves, between each pair of which a long bud shoots forth. We look for an illustration of this rare discovery with interest.

Far inferior in result to these explorations are Mr. W. M. Ramsay's contributions to the history of Southern Aeolis. The "finds" cannot be pronounced important, or in any way considerable. Their chief interest is in the new light they throw on the geography of Cume and the towns near it—Temnos, Myrina, Larissa, Ægææ, and Neon Teichos. Coming to inscriptions, one of the principal departments to which the Journal is devoted, we are pleased to find articles by such eminent men in this line as Mr. C. T. Newton, Mr. E. L. Hicks, and M. Domenico Comparetti. M. Comparetti's article on two inscriptions from Olympia challenges special attention, partly by the ingenuity with which it treats two very obscure epigraphic remains, partly by its freedom of treatment. Mr. E. S. Roberts continues his account of the Dodonæan inscriptions recently given to the world by M. Karapanos. His former notice of these inscriptions has elicited a letter from Dr. Wordsworth, Bishop of Lincoln, who shows, with pardonable pride, that fifty years ago, at a time when the site of Dodona was still a problem, his divination had fixed on the right spot.

Among the papers devoted to art may be mentioned Mr. A. S. Murray's, on Perspective as applied in Early Greek art; Mr. C. Smith's, on a kylix containing the exploits of Theseus, and on vase-representations of actors with bird-masks; and Mr. Waldstein's continuation of his article on Pythagoras of Rhegion and the Early Athlete statues. None of these can compare in fulness with Mr. Sidney Colvin's learned diatribe on the Centaur, in the first volume of the Journal. The only other article which calls for special mention is Mr. Percy Gardner's interesting paper on Boat-races among the Greeks. Mr. Verrall's continuation "On some Ionic Elements in Attic Tragedy" is as unconvincing in its conclusions as it is vigorous in style.

America. A History. I. The United States. II. Dominion of Canada. III. South America, etc. By Robert Mackenzie. London and New York: T. Nelson & Sons. 1882. 8vo, pp. 564.

Mr. Mackenzie's 'America' is well planned to meet the needs of those Englishmen who wish a compendious history of all the American States; and it will not be unacceptable to Americans who desire to know something of the history of the other nations of North and South America. For the latter class it would be well worth while to reprint parts 2 and 3 by themselves; but even for these, again, part 1 contains a very good history of their own country, and all the more valuable as being from an English point of view. The book is to be commended in every way—in temper and spirit, in accuracy and fulness of knowledge, in graphic and interesting narrative. The first part, on the United States, contains 308 pages, rather more than half the work. A postscript of six pages (p. 303) gives the administration of General Garfield; and from a foot-note on this page we regret to learn that the author died after completing the work. Perhaps it would have been hard to illustrate with suitable maps a history which covers so much

territory; but if there had been such a map, it would probably not have been said (p. 117) that "Burgoyne marched deep into the New England States."

An Elementary Treatise on Electricity. By James Clerk Maxwell, M. A. Oxford: Clarendon Press; New York: Macmillan & Co. 1881.

THE announcement of the appearance of this treatise has excited the interest of all students of electricity; for the author had shown in his little book on 'Heat' that he could write a most suggestive work on the elements of a scientific subject. The present work, however, is disappointing, if the student looks for new matter; for, with the exception of a few paragraphs upon electrical distribution, and portions of chapter x., which treats of electrical entrophy, he will find nothing which is not contained in the larger treatise on 'Electricity and Magnetism,' by the same author. The editor of the 'Elementary Treatise' informs the public that the friends of Maxwell, finding the manuscript in an unfinished state, resolved to print it with such additions from vol. i. of the larger work as would make it cover the ground of the latter. Its chief *raison d'être*, therefore, appears to be in the fact that the non-mathematical portions of vol. i. of the larger work have been separated from the analytical portions, in order to make the former more accessible to the general reader.

BOOKS OF THE WEEK.

FREE TO ALL.

D. M. FERRY & CO.'S
ILLUSTRATED, DESCRIPTIVE, AND PRICED
Seed Annual for 1882
Will be mailed *free* to all applicants, and to customers without ordering it. It contains five colored plates, 600 engravings, about 200 pages, and full descriptions, prices, and directions for planting 1,500 varieties of Vegetable and Flower Seeds, Plants, Fruit-Trees, etc. Invaluable to all. Send for it. Address
D. M. FERRY & CO., Detroit, Mich.

Lovett's Catalogue.
MANCHESTER STRAWBERRY.
Catalogue of this berry, *free*. SOUHEGAN and CUTHBERT RASPBERRIES, specialties. 13 New Grapes, Hybrid Pears, etc. LOVETT'S SMALL FRUITS are the best. The Catalogue, richly illustrated (colored plates), tells how to get and grow them. The most beautiful and useful Small-Fruit Catalogue ever published.
J. T. LOVETT, Little Silver, N. J.

HELIOTYPE.
PERMANENT PHOTOGRAPHIC BOOK ILLUSTRATIONS.
THE HELIOTYPE PRINTING COMPANY
Are producers of illustrations by the most approved Photo-Mechanical, Photo-Lithographic, and Photo Engraving Processes. Employed by the United States Government in illustrating Scientific and Medical reports; by Scientific, Historical, and other learned Societies; by the leading Publishers, and for illustrating Town and Family Histories, Trade Catalogues, Show-Cards, etc. Fac-similes of Medals and Coins, Ancient Manuscripts, Paintings, Drawings, Sketches, and Autograph Circulars, Views and Portraits from Nature, Medical and Scientific Objects, Antiquities, etc.
Estimates and specimens furnished on application.
THE HELIOTYPE PRINTING COMPANY,
Near Boylston Street. 211 Tremont Street, Boston.

DAVID G. FRANCIS,
17 Astor Place, Eighth Street, New York,
DEALER IN NEW AND OLD BOOKS.
PRICED CATALOGUES, containing valuable standard literature, as well as rare, curious, and out-of-the-way books, are issued from time to time, and will be forwarded to any address.
BOOKS PURCHASED.

OLD POINT COMFORT, VIRGINIA.
THE HYGEIA HOTEL,
Situated 100 yards from Fort Monroe, open all the year. Equal to any hotel in the United States as a Winter Home or Seashore Resort. Send for pamphlet describing hygienic advantages, etc.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 23, 1882.

The Week.

EARLY in the week there were further exports of gold to Europe, to the amount of $1,328,157, which brings the total specie exports since January 1 up to $7,080,177, or much the largest in the corresponding time of any year since 1875, when $13,467,000 were sent out between the 1st of January and the middle of February. About the middle of the week the rates for foreign exchange fell below the gold-exporting point, and so continued, although at the close the market for foreign exchange was firmer. The fall in these rates was due, first, to the fact that the foreign money markets had become easier, the Bank of England and the Bank of France having steadily gained specie; and, second, to the collapse of the "bull speculation" in breadstuffs, provisions, and cotton, which enabled larger exports of these commodities, and therefore increased the supply of commercial bills. As the week closed, however, the speculation in breadstuffs and provisions at Chicago appeared to be gathering strength again, and threatened to clog the export movement. The New York banks lost about $3,000,000 of their surplus reserve last week, which left them with only a little over $1,000,000 above twenty-five per cent. of their liabilities. The Treasury is steadily drawing into its vaults money from the banks (its receipts last week exceeded its disbursements by nearly $3,500,000), and no order has yet been issued to prepay without rebate any part of the $40,000,000 of bonds included in the 107th and 108th calls. At the Stock Exchange United States bonds declined ⅛@⅜; Southern State bonds first advanced 1@4 per cent. for Tennessees and then fell 1@6 per cent. In the stock market, prices generally declined, and there were several stocks which fell heavily. The chief of these was Louisville and Nashville, which sold early in the week as high as 90⅜, and late in the week as low as 67½. Memphis and Charleston fell 19½ points, Wabash preferred 12, the common 7¼, Denver and Rio Grande 9⅝, Chattanooga 8, Canada Southern 6½, Kansas and Texas 6, and Michigan Central 5¾. There was no general panic, and no failures; and the breaking down alluded to appeared to be the closing up of the liquidation which has been going on since last June. General mercantile business continues large in volume and satisfactory as to profits. Collections were never more promptly made.

The immediate result of the break in the wheat market has been to force speculators in that commodity to sell Stock Exchange securities in order to sustain themselves as holders of grain. There never has been a time when these two branches of speculation were so closely dovetailed together. There are large brokers' houses in New York, originally confined to dealings in stocks, where grain and stocks are handled in about equal proportions, while some have added cotton also to their other lines of business. When these diverse branches of trade are brought together under the same roof and in the same broker's office, it is a sure sign that the buyers and sellers of stocks and grain are in many instances the same persons, and that any shock received on one side will be immediately felt on the other side. Such has been the case in this instance. Nevertheless, the reasoning which led the public to look for relief in the stock market from the long depression consequent upon the railroad war, the change of Administration, the collapse in Paris, and the rise in the foreign exchanges, was founded upon sound premises. The grain speculation was the standing menace to all other kinds of business. It not only clogged the channels of commerce, but it imposed artificial burdens upon all productive industry. It was a private bread tax which rich and poor alike were compelled to pay. The first requisite of renewed activity in trade was to force this barrier. It seems to have been broken down, but if not wholly demolished it has been much shattered. Perhaps another convulsion will be needed to clear away the débris. If we have more grain and provisions on hand than is needed for home consumption between now and next harvest, the surplus will infallibly go abroad, and prices will infallibly go down to the point at which foreigners are willing to buy it. The speculators have miscalculated the amount of grain in the country, and are now paying for their error.

Secretary Folger's reply to the Senate Committee on Finance, regarding the bill now pending to prevent the over-certification of bank checks, implies that he has serious doubts as to the expediency of such legislation, although as a lawyer he holds that existing laws ought to be either enforced or repealed. There is a statute in force which prohibits over-certification; but as there is no penalty attached to it, and as it is opposed to business interests as understood by prudent and conservative bankers, it has remained a dead letter. It is proposed by Senator Beck's bill to provide such penalties for over-certification as will actually deter bankers from the practice. If the bill passes, and has the intended effect, the result will be the establishment of a stock clearing house on the plan of the "settlement days" of the London and Continental Exchanges. The rule in New York requires that all purchases of stocks and bonds made to-day shall be paid for in cash before 2:15 P. M. to-morrow. If anybody fails to pay, his stock is bought in or sold out "under the rule" before three o'clock. In this way every day's business is swept out of the way before the next day's business begins. There are no leavings or tailings to be looked after, nor any anxious thoughts to arise regarding a future "settlement day." As compared with the system prevailing in the foreign Bourses, ours is decidedly the safer and more conservative, and we should look upon any legislation or movement having the tendency to abolish the cash payment and to substitute deferred payments, or the payment of differences, with great distrust. So far as the proposed legislation seeks to check stock speculation, it will prove a failure. The requirement of cash payment is itself the best possible check upon reckless speculation, for the money market is its daily controlling force. Under the clearing system, cash is not required to nearly so great an extent. Consequently, the proposed bill, instead of putting an additional curb upon stock gambling, will remove the most efficient one which now holds it in check.

The conference between high naval officers and the House Committee on Naval Affairs at the office of the Secretary of the Navy last week, on the best manner of restoring our navy, was very interesting, but leaves us somewhat in the dark as to the kind of navy which such men as Admiral Porter and Admiral Rodgers think we ought to have. Admiral Porter alleged that in two instances of recent occurrence the construction of "fast and powerful vessels intended to prey on an enemy's commerce" had averted war. The first instance was when "trouble was threatened by France and England" during the rebellion, and the other was when "Great Britain was on the eve of war with Russia," in 1877. In both these cases the construction of fast cruisers had, according to Admiral Porter, imposed peace on England. At the same time, both he and Admiral John Rodgers asked for big ironclads, and approved of Mr. Harris's plan of building three large ironclads and three torpedo-boats for the protection of harbors. Admiral Raymond Rodgers, however, went back to the first cruiser idea, and said that "magnified, greatly improved *Alabamas*" would "greatly impress every property-holder in England with a sense of the great danger of making war on this country." Now, if it is *Alabamas* which would strike so much terror into foreign enemies, terror so great as to prevent them from thinking of war at all, it would seem as if it was much more important to have them in readiness than the large ironclads, or at all events as if we needed a little fleet of them besides the ironclads. We may add that we think the picture which Admirals Porter and Rodgers draw of the bellicose attitude of the "English property-holder" is simply a survival of an old naval tradition. That personage is occupied, and likely to be occupied for many a year to come, with other ideas than that of making war on the United States. If he is our principal European enemy, we shall not need much of a navy to fill his breast with the deepest sense of the brotherhood of man and the horrors of war.

The common-sense view of the matter seems to be that the building of an ironclad fleet is too expensive a luxury to be indulged in by a nation that is not in constant apprehension of

warlike complications. It is expensive, not only because the first outlay is very great, but also because when the ironclads are two or three years old they are apt to be useless. There is a constant race going on between defensive armor and artillery. To-day an armor is constructed which no projectile as yet in use will pierce. To-morrow a gun is made that will shoot an iron bolt right through it. Then still stronger armor is made, and immediately afterward a gun still more powerful. It is with ironclad ships now as it was, after the invention of gunpowder and the introduction of firearms, with coats of mail and other defensiye contrivances of warriors. As firearms came into more general use and became more perfect, breast plates and shields were abandoned altogether, care was taken to make the soldier more agile and light as to arms and accoutrements, and rapid manœuvring became the correspondingly important feature of military tactics. If the development of naval warfare lies in the same direction, the heavy ironclads will in no very distant future be abandoned; and the policy of nations which are not obliged to provide for immediate warlike necessities is evidently to build unarmored but very swift vessels, with a few heavy guns, which in a conflict make up for the lack of defensive strength by rapidity of movement, and which are best adapted to the business of sweeping an adversary's commercial marine from the seas. This is really what the naval officers in the conference mean, but it does not form part of the committee's report.

The objections to General Logan's bill to put General Grant on the retired list only grow in force as time goes on. The strongest argument in its favor two years ago was that he was at that time poor, or was supposed to be poor, or poorer than a man who has rendered the country such distinguished service ought to be. Since then this argument has been knocked to pieces. He has accepted a quarter of a million of dollars as a gift from wealthy capitalists, and has been engaged in railroad enterprises, from which it is fair to presume he has issued with more or less profit. He is living, too—and there is, under the circumstances, no indelicacy in mentioning the fact—in apparent affluence, and has just paid one thousand dollars for a year's occupancy of a pew in a fashionable church. In fact, he is anything but a warworn veteran in reduced circumstances. If it be said that, no matter how well off he is, the country owes it to itself to reward him substantially, the answer is that it has done so. It gave him at the close of the war a permanent and highly paid office of great dignity. He threw it up of his own accord. It then made him President for as many terms as any President had ever received, and for one term he received double the salary ever paid to any of his predecessors. If it owes him something still in money, it must be on grounds which will cover the case of every other man who has served the state with distinction in any field, whether as inventor, or statesman, or thinker. If this be true, it is absurd to use the retired list of the army as the means of rewarding him. The best plan is to bestow a pension on him without disguise, on the simple ground that he has deserved well of his country; but if we do so, it ought to be by a general act, under which all distinguished Americans who think they deserve well of their country may file their claims to an annuity. There was one other argument in favor of the Logan bill, of which we at one time thought well—namely, that if General Grant were put on the retired list, he would go out of politics, and thus relieve the minds of a vast number of his truest friends and admirers. But it appears to be now certain that the more money he has the fonder of politics he grows, and that we shall probably in every canvass hear him on the stump.

The House of Representatives on Thursday adopted an amendment to the Apportionment Bill fixing the membership of the House at 325. With this number only three States have any smaller representation than before—Maine, New Hampshire, and Vermont each losing one member. South Carolina gains two and Texas five, and the entire delegations from these States voted for the bill, as did also several Democrats from Louisiana and Maryland, States which are unaffected by the reapportionment. The new bill will add thirty-two members to the House. It provides that in the States to which additional members are assigned these members shall be elected at large, unless the State itself provides otherwise, and likewise that where the whole number is decreased the entire number shall be elected at large, unless the State creates a district system by law. The result was a disagreeable surprise to the Democrats, and at one time there was such an excitement over the bill that the clerk could not call the roll, while the Speaker disclaimed all responsibility for the moblike behavior of the House. Every Democrat of any prominence had a "favorite number," the adoption of which he thought would be calculated to have the happiest effect on the numerical future of the country; but the Republicans, knowing what bitter passions mathematical disputes of this kind are apt to arouse in the calmest breasts, wisely sank their private individual differences in a caucus-number for the sake of harmony, and accordingly triumphed over their opponents. We are sorry to see it stated that the chief consideration among them was "the probable political division of the electoral vote." This can only be among those who are accustomed to take low, partisan views of great mathematical questions, and not among the real scientists of the party.

Mrs. Julia Ward Howe has published a letter, with regard to the social treatment of Oscar Wilde, that has attracted a good deal of attention in Massachusetts. Colonel T. W. Higginson, it seems, objects to the entertainment of Mr. Wilde in private houses, and Mrs. Howe, having entertained him herself, feels called upon to make a statement of her reasons. Admitting, she says, that Mr. Wilde is a bad young man, still "to cut off even an offending member of society from its best influences and most humanizing resources is scarcely Christian in any sense." Women, she says, are not merely "the guardians of the public purity," but they are also "the proper representatives of tender hope and divine compassion." Consequently, "if, as alleged, the poison found in the ancient classics is seen to linger too deeply in his veins, I should not prescribe for his case the coarse, jeering, and intemperate scolding so easily administered through the public prints, but a cordial and kindly intercourse with that which is soundest, sweetest, and purest in our own society." This is a new view of the relation which society ought to adopt toward the æsthete; and that it should exist at all, accounts in a measure for the increasing seriousness of the discussion about him in New England. The suggestion that the author of "Charmides" may be made pure and good by cordial and kindly intercourse with the ladies of Boston, will probably make the young man and his manager weep for joy.

The accounts which have been coming in of late from the smaller colleges and the "safe" country colleges do not seem to support the confidence of parents in the manners and morals of these institutions. It is only three weeks since a large body of Princeton students were indicted for riotous behavior in the streets of Trenton, and pleaded guilty. Cornell has just had to suspend a large body of students for kidnapping freshmen. At Lafayette College (Penn.), some of the undergraduates have just been arrested and fined for riotous conduct and resisting the police in a public hall. At Williston College (Mass.), the two upper classes have mutinied because the Faculty refused to reinstate three students who were suspended for hazing. Six of the ringleaders have been expelled. On Wednesday week there was a riot in the streets of New Haven, caused by a fight between two bodies of students, and it had to be suppressed by the police. This arose out of an attempt of the sophomores to prevent the freshmen from carrying "bangers," or canes. In fact, the origin of all these rows is so silly as to show either that the young men are not fit to leave home and be released from parental authority, or that the college rule is of a kind to maintain the childish spirit without having the power to keep it within proper bounds. We commend the subject to the consideration of those who are deploring the attempt to convert the American college into a university.

Lord Granville's despatches to Mr. West are mainly occupied with a reply to Mr. Blaine's argument that the Clayton-Bulwer Treaty ought to be modified, because it has been the cause of so much misunderstanding and irritation between the United States and England. By a mass of extracts from the correspondence which passed between the two Governments between 1856 and 1858, Mr. Blaine undertook to establish that "the vexatious and imperfect character of the treaty has been repeatedly recognized on both sides," and to explain his wish "to free it from those embarrassing features, and to leave it, as its framers intended it should be, a full and perfect settlement for all time of all possible issues between the United States and Great Britain with regard to Central America." In answer to this, Lord Granville

says in substance that the reason Mr. Blaine was able to show this was, that he did not bring his history of the dispute about the Clayton-Bulwer Treaty down far enough; that if he had continued it for two years, the correspondence would have proved that all the causes of dispute and annoyance had been removed, to the satisfaction of our Government, and that the settlement was even officially announced by it. The trouble over the Clayton-Bulwer Treaty which arose soon after its ratification had nothing to do, as one might infer from Mr. Blaine's despatches that it had, with the question of a joint guarantee. The policy of a joint guarantee was never repudiated by our Government till Mr. Blaine became Secretary of State, and Mr. Fish, as late as 1877, entered into a correspondence with the Nicaraguan Minister with a view to carrying into effect the scheme of a general maritime guarantee. The matters in dispute on which Mr. Blaine grounded his despatch to Mr. Lowell related to the interpretation of other clauses of the treaty: the question of the boundary of Belize; the transfer of the Bay Islands to Honduras, and other matters relating to the Mosquito Indians; the British protectorate of the Mosquito Coast, and the claims of British subjects. That part of the correspondence to which Mr. Blaine omitted to refer shows that the first was settled April 30, 1859, by a treaty between Great Britain and Guatemala, and the remainder by treaties with Honduras and Nicaragua, on November 21, 1859, and January 28, 1860; that copies of these three treaties were officially communicated to the United States Government, with the expression of a hope on the part of the British Government that they would finally set at rest the questions respecting the interpretation of the Clayton-Bulwer Treaty, which had been the subject of so much controversy between the two countries; and finally, that in his last message to Congress Mr. Buchanan declared that the dangerous questions arising from the Clayton-Bulwer Treaty had been "amicably and honorably adjusted. The discordant constructions of the Clayton-Bulwer Treaty between the two Governments, which at different periods of the discussion bore a threatening aspect, have resulted in a final settlement entirely satisfactory to this Government."

In other words, Mr. Blaine proposed that the treaty should be modified on the express ground that there was an outstanding dispute as to its interpretation, the fact being that the misunderstanding had been declared removed by the President of the United States in a message to Congress; so that the only way in which Mr. Blaine was able to show that there was any dispute was by bringing its history down to the point where England yielded the question at issue, and closing his narrative as if nothing more had been done. It looks as if Mr. Blaine must have had some theory of his own about the true method of conducting the foreign business of the Government, based on principles hitherto unrecognized in diplomacy. Unfortunately he left the State Department just as he was beginning to show what it was and how it would work in practice, so that its exact nature will probably always remain a profound mystery. There could scarcely be a more striking commentary on his "policy" than the news that Guatemala has quietly offered a treaty to Mexico to settle their boundary dispute by conceding all that Mexico claimed.

It now appears that the "first-class American house" which M. Suarez said he "promised" Mr. Evarts, on behalf of the Crédit Industriel, should be made the American agents of the company for the sale of the Peruvian guano and nitrates, if it got hold of them, was the banking house of Morton, Bliss & Co., of this city. The object of going to a "first-class American house" was, M. Suarez reported to the president of the company (February 18, 1881), "to render the grounds for American intervention more evident, and fully justify the dominant attitude of the United States Government on the Pacific question," or, in plainer English, to create a pecuniary interest for some one which would be useful in precipitating American intervention for the benefit of the company. We have several times asked what, if anything, has been done under this promise, and the answer has been furnished by the publication, by the Boston *Advertiser*, of the contract between the Crédit Industriel and Messrs. Morton, Bliss & Co. We believe the negotiations for this contract were begun with General Noyes, but dropped when it was found he was coming home; were resumed when Mr. Morton came out, and concluded with him in August of last year. As Mr. Morton occupied, when the contract was made, the position of American Minister in Paris, a satisfactory explanation of his entering, or allowing his house to enter, into this truly remarkable agreement will be very appropriate; in fact, it may be pronounced absolutely necessary to his retention of his post. The scandal has now penetrated into the Stalwart camp.

Mr. Gladstone has explained his language about Irish Home Rule, but the explanation is not much if any clearer than the thing explained. He says now that decentralization to the utmost extent consistent with Imperial supremacy should be the policy of Parliament toward Ireland, as well as other parts of the country, and that when the Irish prepare a plan of decentralization it ought to receive due consideration, not as a step toward separation, but as a step toward improvement in the Government. The Tory and Whig press is, however, firmly of opinion that in even speaking of decentralization at all he has given encouragement to the Irish Separationists, and that it is dangerous to talk of Home Rule as even a possibility. There is no doubt that his speech will encourage the Home Rulers, and there is equally little doubt that the Home Rulers mean by decentralization a good deal more than Mr. Gladstone means. But it is also to be remembered that every concession made to the Irish has when first mentioned been denounced by the English press, on the ground that it would lead to some greater and less desirable concession. Catholic Emancipation was long fiercely resisted, not because it was in itself a bad thing, but because it would lead to the overthrow of Protestantism. Some Home Rule will have to come, and it cannot come without full discussion of all Home Rule. No discussion of human affairs can, in our time, be treated as dangerous.

Mr. Gladstone has struck one of his somewhat sensational blows in moving in the Commons that it is inexpedient to inquire into the working of the Land Act in Ireland. This is in reality a vote of censure on the Lords, who have lately carried a resolution to inquire into the working of the Land Act by a large majority against the Government; and it was received as such with loud Liberal cheers in the Commons. The matter is likely to excite a good deal of interest, because it touches on one of the anomalies of the British Constitution which every year becomes more embarrassing. A Tory Ministry always has a majority in both Houses, because the majority in the Lords remains permanently Tory, while a Liberal Ministry has only a majority in the Commons. This state of things is only made tolerable to Liberals by the majority in the Lords remaining very quiet and discreet when the Liberals are in office. If they became obstreperous and obstructive it would be intolerable. Their proposal to inquire into the working of the Land Act is, however, a direct and rather audacious attempt to impede the operation of the law, and bring it into discredit, and would only be justifiable if the Liberals had been beaten and driven out of power, or the Opposition in the Commons was able to carry a similar resolution Mr. Gladstone means now, however, to bring the strength of the Tories in the Lords into sharp contrast with their strength in the Commons, and thus administer a rebuke which it is to be hoped they will heed.

General Skobeleff's outburst has at least given a more distinct outline to the somewhat threatening situation which the Austrian troubles in Dalmatia and Herzegovina are creating in southeastern Europe The revolt has become, like most of the late revolts in that region, rather obscure in its progress and origin. The Austrians are pouring a large army into the provinces for its suppression—so large that the Servians and Russians and Turks begin to say that the insurrection has been encouraged, if not set on foot, for the purpose of furnishing an excuse for expansion in the direction of Salonica, which is now impending. In the meantime, all the neighboring Slavs, as in 1876, are beginning to sympathize or make common cause with the Dalmatians and Herzegovinians. The Prince of Montenegro is trying to stay neutral, but it is becoming more and more doubtful whether he can control his subjects. The Servians, too, are agitated just as they were in 1876 over the Bulgarian outrages, and General Skobeleff's denunciation of the Germans will certainly not have a pacifying effect. It has caused great annoyance at Berlin, and will undoubtedly have either to be formally repudiated, or countenanced, at St. Petersburg. In the latter case, we should perhaps enter on the last stage of the Eastern Question. But it is proper to add that it now begins to be ascribed to too much champagne.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

More correspondence in relation to Chili and Peru has been sent to Congress; among others, letters which passed between Mr. Blaine and Mr. Morton, United States Minister at Paris. From these letters it appears that, in August last, President Grévy had an informal talk with Mr. Morton in regard to the desirability of a mutual understanding between France and the United States in regard to some policy which might be adopted "to secure an early return of order and stability in the affairs of Chili and Peru." President Grévy also said that "another attempt at mediation on the part of foreign governments, and especially that of the United States," might have satisfactory results. Mr. Morton communicated this informal talk to Mr. Blaine, who thereupon wrote a despatch to Mr. Morton, in which he called President Grévy's proposed mediation "a concerted effort by France, Great Britain, and the United States," and objected to it. To this M. Grévy replied that he accorded entirely with the position taken by the United States in the matter.

On Friday, in response to a resolution adopted in the House, the President transmitted to Congress a letter from the Secretary of State, accompanied by a mass of documents, concerning the correspondence with the State Department in regard to the "Peruvian Company." Mr. Frelinghuysen states that only one of the eight missing letters of the correspondence with the State Department has been found.

On Wednesday the Senate discussed Mr. Edmunds's Anti-Polygamy Bill without being able to reach a vote. On Thursday, however, it was passed. The bill disfranchises and incapacitates for holding office all persons guilty of polygamy.

A resolution was presented to the House of Representatives on Saturday from the Legislature of Utah, which is principally composed of Mormons. The resolution recites that there are now pending, in the Senate and House of Representatives of the United States, bills having in view the disfranchisement of certain citizens of Utah and the appointment of a committee irresponsible to the people, but empowered to control the affairs of the Territory, and asks Congress, "in the name of the Declaration of Rights and the grand provisions of the Constitution, to pause, reflect, and investigate before responding to a wild, unreasoning pressure of public opinion wrought up by a misguided and misinformed religious influence"; and praying Congress not to resort to extreme measures, but to appoint a Commission to go to Utah and investigate the affairs of that Territory, with power to send for persons and papers.

On Monday Senator Logan called up his bill restoring General Grant to the army and retiring him with the pay of General, and a lively debate ensued.

On Tuesday, much to the surprise of every one, the Senate laid the Ingalls resolution respecting the Arrears of Pensions Bill on the table by a vote of 26 to 23.

The Apportionment Bill was amended in the House on Thursday, and in its final shape provides that there shall be 325 Representatives apportioned according to the old method. On Friday the bill was perfected and passed.

On Monday Mr. Cox's bill to promote the efficiency of the Life-Saving Service was passed by the House under a suspension of the rules. It provides for the establishment of thirty additional life-saving stations and six houses of refuge. On the same day the bill reported from the Committee on Foreign Affairs, to restore the Japanese indemnity fund, was passed. This bill provides that about $235,000 of the fund shall be given to the officers and crew of the United States ship *Wyoming* and to the officers and crew of the steamer *Takiang*. The remainder, amounting to about $1,500,000, is to be returned to Japan.

A bill was passed by the House on Thursday granting a pension of $5,000 a year to the widow of President Garfield.

Senator Miller, of New York, presented to the Senate, on Friday, a memorial from the Union League Club, of New York, in favor of the bill introduced by Mr. Blair to aid in the support and establishment of common schools.

The Senators and Representatives in Congress from New Jersey have addressed a letter to the President asking him to review the findings in the Fitz-John Porter case.

A bill has been introduced in the House to compel the Kansas Pacific Railroad to pay the whole cost of surveying, selecting, and conveying certain lands in the State of Kansas, amounting to more than 3,000,000 acres, which have hitherto been exempted from taxation under two decisions of the Supreme Court, which held that though the land had been granted to the road, it was still the property of the United States until patents for it had been issued therefor. In this way the company has been evading taxation on this large amount of land, which was granted it for purposes of construction.

The President has formally accepted the resignation of Ward Hunt as Associate Justice of the United States Supreme Court, and will soon nominate his successor.

The House Committee on Pensions recently called for a list of officers of the Internal Revenue Bureau and the Department of Justice who have been killed or wounded in the execution of the revenue laws. The reply shows that in the last five years twenty-eight persons have been killed and sixty-four wounded in the struggle against illicit distilling.

The House Committee on Coinage, Weights and Measures have under consideration the subject of additional mint facilities, and bills are now pending before them which provide for the creation of mints at four or five different places.

It is said that the report of the Senate committee which has been investigating the Treasury contingent expenses will exonerate Senator Sherman and Major Power, chief clerk of the Treasury Department, from all the charges which have been made against them. The censure of the report will fall upon ex-Custodian Pitney and those around him, most of whom have been removed by Secretary Folger, who based his action on the testimony taken before the committee.

It is announced that the Grand Jury at Washington has presented for indictment, by a vote which was practically unanimous, Brady, the Dorsey brothers, Miner, Peck, Vaile, and others of the more prominent Star-route swindlers. This is looked upon as a great success for the prosecution. It is probable that the trials will be begun in April.

The failure of the prosecution in the Nebraska Star-route cases is said to have been due to the fact that the Postmaster of Deadwood, who had made a full confession, had fled, and the only other important Government witness refused to testify.

The Civil-Service Board of the New York Custom-house has announced the result of the recent examination of applicants for appointment. Nineteen of the eighty-five applicants for clerkships, fifty-five out of the one hundred and eighteen applicants for inspectorships, and forty-nine out of the eighty-seven applicants for night inspectorships passed the examination. There are no vacancies at present for one hundred and twenty-two of these successful candidates.

The Director of the Mint has decided that as soon as a coin is mutilated it ceases to be a coin, and is simply bullion, and that no patching or filling up of the holes can make it good.

Governor Cameron, of Virginia, has made a brilliant naval expedition during the week against certain piratical oystermen who have for some years caused great annoyance in the tide-water counties of the State by their bold depredations. They sailed in squadrons of from fifteen to twenty vessels, dredging the streams of the State and offering armed resistance to any one who might oppose them. Governor Cameron succeeded in capturing seven boats and sixty men after a short campaign which he led in person.

On Saturday a resolution offered in the Virginia Senate, rebuking Senator Mahone for his continued absence from sessions of the United States Senate and requesting him to return to his post of duty, was indefinitely postponed by a vote of 20 to 14.

The "deadlock" in the Virginia Legislature was broken on Friday by a straightout Republican, who has hitherto voted with the Democrats, voting with the Readjusters.

The Republican State Committee of Vermont has decided to hold a State Convention at Montpelier on the 21st of June next.

There have been great floods in the West. The Ohio and Missouri and Arkansas Rivers have risen so as to put an entire stop to traffic on many railroads, while great damage has been caused in the lower parts of Cincinnati in particular; Helena, Arkansas, is quite overflowed; and vast cotton-raising tracts in Mississippi have been submerged through the breaking of the levees.

There was a great fire in the city of Haverhill, Mass., on Friday, which destroyed most of the business portion of the town. The loss is estimated at over $2,000,000.

Bishop O'Farrel, of the newly-created Roman Catholic diocese of Trenton, New Jersey, has written a pastoral letter enjoining upon the clergy and laity a strict observance of the rules of the Church respecting marriage. The requirement that the banns of marriage must be public in all cases where a special dispensation is not obtained, is to be again enforced. The banns must be published from the altar, and a dispensation will be granted only under extraordinary circumstances. The marriage of Catholics with persons of other religious faiths is almost prohibited.

Mr. Joseph E. Sheffield, well known through his benefactions to Yale College, died in New Haven on Thursday. He founded in that city the Scientific School which bears his name. He gave the building in which the School was started, twice refitted and enlarged it, and gave a fund of $130,000 for professorships, as well as a number of other funds which have made the School the best-equipped institution of its kind in this country. It is stated that he has left a large amount of money to the School by his will.

Samuel Johnson, a well-known New England clergyman, died at Andover on Sunday evening. He was the author of a considerable but unfinished work on the religions of the East.

FOREIGN.

In the House of Lords, on Friday, a motion of the Earl of Donoughmore for the appointment of a select committee to inquire into the working of the recent legislation in reference to land in Ireland was carried by a vote of 96 to 53, notwithstanding the strenuous opposition of Lord High Chancellor Selborne.

On Monday Mr. Gladstone moved a suspension of the orders of the day for the introduction of the rules of procedure. The motion was carried without a division. He then made a speech, in which he said that the Legislatures of the United States had found it expedient to adopt measures restricting discussion, and the restrictions had never been found to work badly. Sir Stafford Northcote replied to the effect that the new rules would destroy freedom of debate and of voting, and that everything that restricted freedom of debate in the House of Commons would give a

greater handle to the House of Lords in dealing freely with measures which they would say were not the outcome of free discussion. Mr. Gladstone also gave notice that on Monday next he would move that an inquiry into the working of the Land Act would be injurious to the interests of good government in Ireland. This motion, which is intended as a counter-stroke to the Earl of Donoughmore's resolution in the House of Lords, was received with prolonged cheers. The Opposition denounce it as an attempt to gag the House of Lords.

On Saturday Sir Stafford Northcote, referring to Mr. Gladstone's utterances regarding Home Rule, said they were "something between a dream and an electioneering move, which, though sufficiently characteristic of Mr. Gladstone, were exceedingly dangerous."

In the House of Commons on Wednesday, the 15th, Sir Charles Dilke, Under Secretary for Foreign Affairs, replied to various attacks on the foreign policy of the Government. He said that the Government still adhered to the European concert as a means of adjusting foreign difficulties. In regard to the Jews in Russia, he said that all precedents showed that English interference in the internal affairs of a foreign country would meet with a rebuff, and do more harm than good. On Thursday Mr. Gladstone made a speech defending the Irish policy of the Government. In regard to local government for Ireland, he declared that the supremacy of the British Parliament must be maintained, and that the country cannot give Ireland what it cannot give Scotland. He considered, however, that the decentralization of Parliament should be a cardinal rule of policy; that local institutions are a source of great strength, and that the only limit which in principle is necessary for them is adequate provision for the supremacy of the central authority.

The Catholic Bishop of Cork, in his Lenten pastoral, refers to the immense benefit conferred by the Land Act, and says the "violation of the just laws of property, individual rights, and personal safety afford a dark cover for the introduction of a system of brigandage by wild and unprincipled persons."

Mr. Gladstone has written to Mr. Bradlaugh that he is not at present prepared with any fresh proposal relative to the latter's admission to the House of Commons.

On Tuesday, in the House of Commons, Mr. Labouchere moved that a new writ be issued for the election of a successor to Mr. Bradlaugh, as the latter was disqualified by a resolution of the House. An amendment was offered to the effect that Mr. Bradlaugh was legally disqualified. Both the motion and the amendment were rejected, upon which Mr. Bradlaugh walked up to the table, produced a New Testament, and took the oath, and declared that now, having taken the oath, he would take his seat. He was not permitted to do this, however, and Mr. Gladstone finally moved an adjournment of the House until the next day, in order that the matter might be discussed more calmly. The matter has caused great excitement in the House of Commons, many members feeling that Mr. Bradlaugh's conduct can only be adequately met by his expulsion.

Mr. Chaplin, member for Mid-Lincolnshire, stated in the House of Commons on Saturday, that all the evidence before the Royal Commission tended to show that the United States had reached the acme of agricultural prosperity, and that the worst, therefore, had been seen of foreign competition.

The British Foreign Office has published consular reports on the Jewish outrages in Russia. The reports tend to extenuate the seriousness of the anti-Jewish riots. The reports of loss of life and outrages on women are generally denied, but those of the destruction of Jewish property are fully confirmed. The statement that about 100 Jews were shamefully maltreated at Warsaw, ten or twelve of whom have since died of their injuries, is also confirmed.

The Lord Mayor of London's Jewish relief fund has reached £50,000.

The Russian press has expressed the warmest gratitude to the English Ministry for the tone it has adopted in replying to questions in Parliament regarding Russian affairs.

General Ignatieff, the Russian Minister of the Interior, has informed a Jewish rabbi that the Government would neither encourage nor oppose the emigration of the Jews.

Archbishop Macaire, the Metropolitan of Moscow, who is an influential personage in the Russian political world, addressed a letter to the Czar urging him to quit his seclusion, which he said suggested poltroonery and was injurious to the national tradition, and would lead to disunion between the Emperor and the people, who would finally accustom themselves to dispense with their sovereign. The Czar was irritated by the letter, and sent for the Procurator-General of the Holy Synod, of whom he inquired if he could dismiss the Metropolitan. The reply was that he could, with the sanction of the Holy Synod.

The Russian General Skobeleff, receiving some Servian students recently, delivered a speech which has called forth much comment, He said that Russia had hitherto been held in check by the influence of Germany, and that the sword was the only means the Russians had of ridding themselves of this incubus. He said that a struggle between the Slavs and the Teutons was inevitable; that it would be long, sanguinary, and terrible, but that the Slavs would triumph. The German and Austrian press have expressed great indignation at this speech. In an interview with a representative of the *Voltaire* newspaper in Paris, General Skobeleff is reported to have refused to disclaim "one jot or tittle" of the anti-German sentiments which he had expressed. He added that he believed the only way of keeping the balance of power in Europe was for the Slavs to unite with France against their common enemy, Germany. In another interview General Skobeleff said that he had made his recent speech solely as a private individual. Additional significance is attributed to the General's remarks from the fact that he is reputed to be high in the Czar's favor, and also because, as one of the Vienna newspapers expressed it, "thousands of Russians hold the same view."

A despatch from Berlin on Monday says that the Emperor William has expressed the deepest indignation and sorrow at General Skobeleff's remarks, adding that if such wanton provocation continued, he should be obliged to resort to energetic measures. It is, however, understood from semi-official sources, that the German Government intends to ignore the speech for the present. The St. Petersburg *Official Messenger* published an article on Monday denying that the policy of the Government was in any way determined by the utterances of a private individual.

Russia, in her negotiations with the Vatican, is said to demand, as the price of peace and liberty for the Catholic Church in Poland, that the Church shall not pretend to be called national, and that the Pontiff shall use religious sentiment to foster Slavism.

The Pope has addressed a letter to the Italian Bishops, commanding them, in view of the dangers surrounding the Church, to increase their activity, to encourage Catholic societies among the laity, to develop the Catholic press, and to advocate boldly the temporal independence of the Pope.

At a meeting of the Spanish Council of Ministers on Thursday, King Alfonso was informed that the proposed pilgrimage to Rome might be considered at an end.

At a banquet given at Madrid by the Cuban Senators and Deputies on the occasion of the Government sanctioning the construction of the Cuban Central Railway, the Minister of the Colonies, replying to a toast, said that the Cuban representatives should propose reforms assimilating the administration of Cuba to that of the other Spanish provinces.

A despatch from Vienna states that General Jovanovich has issued a general order to the effect that the extent of the Herzegovinian insurrection makes it necessary that the troops should wait for reinforcements and an improvement in the weather.

A despatch from Ragusa, dated the 21st, announces that the Herzegovinians, after a few days' siege, have captured a fort commanding a defile of the upper Drina, between Fotcha and Gorazda, which was followed by the whole population of the upper Drina joining the insurgents. This is the insurgents' account of the affair. The Austrians have been representing the rebels as very much demoralized of late.

The Servian Skuptschina has passed the commercial treaty with the United States.

The British and French Consuls-General in Egypt still maintain that the voting of the budget by the Notables is contrary to international obligations, and have declared the present state of affairs a nullification of Control.

The London *Daily News* says that all the Powers have agreed that it is the peculiar right of England and France to deal with the joint control of Egypt and with the navigation of the Suez Canal, without the intervention of Turkey.

The Egyptian Ministry have decided upon the total abolition of slavery, and in view of the execution of this decision, Kader Pasha has been appointed Governor of Soudan, which is the headquarters of the slave-trade, and a special department for that province will be created at Cairo. Detailed instructions relative to the slave-trade and slavery are being prepared.

The Sultan of Turkey was invested with the decoration of the Order of the Black Eagle by a special German embassy on Saturday.

An agreement, from a diplomatic point of view, is reported to have been completely established between France and Tunis, and a "foreign legion," to act independently of the French, is to be constituted to occupy various places by way of a guarantee.

General Forgemol has gone to Algeria with special instructions from the French Government to act in accordance with his own judgment. The return of the troops from Tunis has been postponed.

In the matter of the Anglo-French commercial treaty, England has for several months been persisting in the demand for the reduction of the duties on woollens and cottons fifty and twenty per cent., respectively, below those fixed in 1860, in return for a reduction of England's wine duties by one-half. The French Cabinet Council, however, have decided that it will be impossible to accede to this demand.

MM. Bontoux and Feder, of the Union Générale, have been released on 160,000 francs and 62,500 francs bail respectively. The amount of the bail shows that no criminal charge was made against them in connection with the failure.

A despatch from Paris on Monday announced the death of Mme. Céleste, who was one of the leading actresses and danseuses of the last generation. Her last appearance on the stage was in London in 1874.

The steamship *Bahama*, of the Quebec Steamship Company, was lost in latitude 12 degrees 30 minutes north and longitude 72 degrees 15 minutes west on Friday, the 10th. The British steamship *Glenmorag* picked up eleven members of the crew and two passengers, but it is feared that the captain, two second-class passengers, and seventeen members of the crew have been lost.

TUESDAY, February 21, 1882.

SHIPHERD.

THE career of Shipherd, who figures so prominently in the Peruvian correspondence which has just been laid before Congress, seems to have been that of an adventurer of the lowest order, running from place to place to escape his own character, engaging in one speculation after another, some positively disreputable, all a little shady, and "bursting up" with a sort of periodicity. There are thousands like him in the United States. They are found in considerable numbers in every through passenger train and on board every European steamer. They rarely engage in any industry that can rely for success on its own merits. Their schemes have almost always to be bolstered up by some species of pretence, or intrigue, or jugglery, by bribing somebody, or by some form of hypocrisy. If religion seems likely to help them, they become religious; if newspapers, they try to toady or corrupt editors or reporters; if politics, they become fierce party men, and try to place their stock where it will do most good.

Shipherd appears to be one of these men, but with a more powerful imagination than they usually have. He seems to have sincerely believed that he could drag the United States into a protectorate of Peru, as against Chili, and that under that he could carry out a gigantic nitrate and guano speculation. He began corresponding with General Hurlbut, the Minister to Peru, in June, 1881, and he wrote to him at intervals till December, telling him wonderful stories of the aid he was to have in his undertaking. It was not till December 17, however, that General Hurlbut declined all further communication with him, although he had received a month previously a peremptory order of Secretary Blaine, dated October 29, directing him not to use "the influence of his position in aid of any financial or speculating association."

There are four letters of Shipherd's on file in the Department of State, copies of which have been presented to Congress, but the only answer to him is the Hurlbut letter of December 17 above mentioned, while eight letters are said to be missing, and Mr. Frelinghuysen reports that all search for them has been fruitless. It seems very improbable, however, that Shipherd went on writing the kind of letters he did, discussing his plans at length, multiplying suggestions as to what the policy of the Government in the Peruvian trouble should be, and making a gallant stand for the honor of the flag in the hope that he should eventually have it wave over his guano beds, without getting any response. The following observations on the arrest of Calderon, made in a letter of November 15, 1881, to General Hurlbut, have a positively grotesque air, especially when we find that Mr. Blaine, writing instructions to Mr. Trescott a fortnight later (December 1), takes substantially the same view. Said the patriotic and resolute Shipherd (November 15):

"Senator Blair writes me that Hurlbut telegraphs that the Chilians have captured Calderon and carried him to Chili. The Senator adds that there may be trouble now. Have General Grant do his duty. American influence in America is at an end if Chili can slap our face as flatly as this. We have heard also by cable of Montero's acceptance. We appreciate the gravity of the new phase and the new problem which you must now face. The letters I enclose with this were already written when Senator Blair's letter came to hand, and I will not change them. The need for a protectorate is but increased by all that has happened, and I doubt not Chili will continue to force the issue. Our people hope she will. What we want is, our Government to the fore and that all the winds that blow may fill our sails.

"I replied to the Senator: 'I totally agree with you as to Chili. She must unconditionally return Calderon to execute liberty, or must all take partners for the dance. I trust Mr. Blaine will plant his flag and his guns right there, and he will, won't he? I shall consult General Grant today, and he and I may go to Washington on Thursday. We shall do what lies in our power to second all the vigor you have used on the main issue.'"

Said the Secretary of State (December 2):

"The President does not now insist on the inference which this action would warrant. He hopes that there is some explanation which will relieve him from the painful impression that it was taken in resentful reply to the continued recognition of the Calderon Government by the United States. If, unfortunately, he should be mistaken and such a motive be avowed, your duty will be a brief one. You will say to the Chilian Government that the President considers such a proceeding as an intentional, unwarranted offence, and that you will communicate such an avowal to the Government of the United States, with the assurance that it will be regarded by Government as an act of such unfriendly import as to require the immediate suspension of all diplomatic intercourse."

That such a man as Shipherd should have received countenance or recognition enough from any officer of the Government to enable him to get his correspondence even filed in the State Department, when its proper destination was the pigeon-holes of a New York police station, is of itself a little scandalous.

Shipherd's published works are voluminous in extent, and embrace a large part of the history of the Peruvian Company, but the precise points intended to be covered by that corporation in its dealings with American and European governments have not been made altogether clear in the correspondence recently furnished by the Department of State. The *Evening Post* has supplied the deficiency by reprinting in full a document promulgated by Shipherd some time since, entitled "Suggestions of Points to be Included in an Agreement between the Government of Peru and the Peruvian Company." It should be premised that the foundation of the Peruvian Company is a claim of one Alexandre Cochet (deceased), that in the year 1840 he "discovered guano"; that by virtue of a decree of the republic of Peru, dated February 13, 1833, he was entitled to one-third of all the guano in the country, and that in some way not distinctly specified the claim of Cochet became vested in the Peruvian Company, or Shipherd. It is worth mention that Minister Hurlbut, in a despatch to the State Department, under date of November 2, 1881, denies that Cochet discovered guano, denies that Peru ever recognized his claim, and denies that his rights, whatever they were, descended "to his illegitimate son under whom these parties claim"—"these parties" referring to Shipherd and his alleged company.

The points to be included in an agreement between the Peruvian Company and the Government of Peru provide in substance that the Company shall "take over" the assets of Peru and administer them upon certain clearly defined principles, first paying to itself $900,000,000 and interest thereon at six per cent. from January 1, 1881, as liquidated damages, together with one-third of all the guano remaining in Peru, and afterward settling all other valid claims against Peru, including those of Chili, by buying the same in with its own scrip and redeeming the scrip out of the proceeds of the estate—the company to be exempt from taxation while the liquidation is in progress, and to be recognized and treated as "the lord of the soil." This comprehensive adjustment is embodied in twenty-three stipulations, to be made on the part of the Government of Peru.

The company, on the other hand, stipulates that it will make no other demand upon Peru for payment so long as the net revenue derived from the property shall suffice to pay the interest annually accruing upon its claim of $900,000,000; that it will set apart a sinking fund to meet the other valid claims against Peru, such sinking fund to consist of one-half of the annual net revenue of the company in excess of thirty millions of dollars; that it will maintain toward the Government of Peru "an attitude of sincere friendship and good will"; that it will observe "a strict neutrality toward all political parties and interests, domestic and foreign," and that whenever its own interests shall require the expression of a preference in politics, "such expression shall be made in the company's name, upon competent authorization, frankly and kindly"; that it will submit to arbitration all claims which it may hereafter acquire by purchase against Peru, which have not as yet been recognized by the Government as valid; and finally, that "each party shall maintain a resident representative near the Executive of the other, duly accredited to such Executive, and that the ordinary intercourse of the parties shall be maintained through these representatives according to diplomatic usage." The assets to be administered upon in this wise are all the guano and nitrate deposits which were within the territory of Peru on the 1st of January, 1881. This description of the property was obviously important in view of the fact that it subsequently fell into the hands of the Chilians. In order to secure faithful compliance with all the stipulations, it is provided that the company may maintain such armed force as may be necessary for the protection of its interests, "including detachments from the land and naval forces of the United States of America, and of any other government whose citizens are shareholders of the company."

In comparison with Shipherd's the wildest schemes of Wilkins Micawber, Mulberry Sellers, and the Tichborne claimant dwindle into insignificance. If any dramatist or novelist of the present day had drawn a picture even faintly resembling Shipherd, he would have been justly derided for extravagance of fancy and unbridled imagination. An unknown adventurer hires an office in New York, prints a lot of documents setting forth a project to annex a foreign country to a private corporation founded by himself, enters into correspondence with a Minister Plenipotentiary, and indirectly with the Secretary of State, gets a Senator of the United States to act as attorney for his alleged company, and an ex-Secretary of the Treasury to draw papers for him, produces a commotion in Congress,

and gets himself talked about as an important personage on three continents. The maximum of noise, and confusion, and brass, with the minimum of capital, is Mr. Shipherd's undoubted achievement as a party to the Peruvian complication. The reader may well be pardoned if he suspects that there must be some fire under so much smoke. Yet, so far as appears, nobody of any prominence lent any countenance to Shipherd's scheme, except possibly Senator Blair of New Hampshire, and his share in it is still a matter of doubt, as his side of the story has not been heard. Secretary Blaine at an early stage of the proceedings expressed doubts of Shipherd's sanity, and even Hurlbut came finally to take that view of him. The fact appears to be that all sorts of buzzards were gathering together over the supposed carcass of Peru—some from France, some from America, some in high places and some in low. Shipherd was only one of them, and his distinction consists in being the most preposterous of the lot. He has, perhaps, been useful in some degree by throwing an air of ridicule over all the other schemes for plundering Peru under pretence of rescuing her by foreign intervention from the grasp of Chili.

THE NEW ANTI-POLYGAMY LEGISLATION.

The Anti-Polygamy Bill reported by Mr. Edmunds from the Judiciary Committee—the first of a series, he says—has passed the Senate. It reënacts the existing statute against polygamy, or cohabitation with more than one woman, and the disqualification for jury duty, in all prosecutions for polygamy or unlawful cohabitation, of all polygamists or persons holding polygamous opinions. The new provisions legitimize the offspring of polygamous marriages, and create a registry or returning-board of five, who are authorized to do every duty relating to the registration of voters, the receiving or rejection of votes, and the canvassing and returning of the same, and who will execute the eighth section of the act excluding from office and from the franchise all polygamists, bigamists, and persons cohabiting with more than one woman.

It was the creation of this board, to inflict what is undoubtedly a punishment, that called forth most of the opposition which the bill met with in the Senate. It was contended that the board would have no right to disqualify a man for office and for the franchise, for polygamy, unless he had been convicted of the offence by a jury, and that in finding him guilty of it, and affixing a penalty to it, the board would be usurping the functions of a judge and jury, and therefore acting unconstitutionally. Mr. Edmunds made two defences to this. One was that the disqualification was not a punishment—that it was simply recognition of a man's status, such as takes place when, under State laws all over the country, the votes of paupers, and lunatics, and women are refused by the election officers. But the distinction between the man who is disfranchised for polygamy and the man who is disfranchised because he is a pauper or a lunatic or a foreigner, is too broad to be got over in this way. The pauper or lunatic or foreigner has his vote refused because he is incompetent, and for very much the same reason that the cashiership of a bank would be refused to a man otherwise fit who could not give a proper bond. The polygamist has his vote refused because he has wilfully done something which the law condemns, and to refuse a vote under such circumstances is clearly to inflict a penalty. It is like dismissing the bank cashier from his situation because he drinks.

It must also be admitted that an examination by a returning-board into the question not only whether a man is a Mormon polygamist—that is, lives openly in what he believes to be lawful marriage with more than one woman—but whether any man of any persuasion cohabits with more than one woman, will be attended with considerable inconvenience. Under the act any man, whether Mormon or not, may have his right to registration challenged before the board, on the ground that his domestic life is scandalous to the extent of living with two women; and should he deny it, the board will be compelled to undertake an investigation which may sometimes be amusing, but will always be scandalous and indecent. Nevertheless, if irregular sexual relations are to be made a ground of disqualification for office or for the franchise, this inquiry must be conducted by some one, and it is doubtful whether it would be proper to take up the time of the courts with it, and whether a returning-board is not as good an instrument as could be invented for the purpose. It is not possible to attack Mormonism with very delicate weapons. If the "peculiar institution" of the Territory is to be suppressed, it can only be done by a good deal of dirty work and by some rough-and-ready methods. There is no legal machinery in existence which can profitably be entrusted with the duty of finding out how many women a man cohabits with, when he is surrounded by neighbors who think the more he lives with the luckier he is.

The most complete defence of the powers of the returning-board is Mr. Edmunds's second one, that Congress has in the District of Columbia and in the Territories the power to deal with the franchise in any manner it pleases: to give it to every man and woman, or to take it away altogether, or to confine it to the red-haired men, or attach any condition it chooses to its exercise. It has in the District of Columbia abolished it altogether. It can in Utah confine it to monogamists, bachelors, or widowers, and make all applicants for it prove their qualification before any officer it chooses to appoint, by any sort of proof it chooses to designate. On this ground Mr. Edmunds easily overthrew his antagonists. Any one may say that his methods are not nice, as a matter of taste, or not wise, as a matter of expediency; but it is idle to contend that they are not constitutional. The question which will probably interest the public most is whether they will prove effective. This bill alone will certainly not accomplish its object, and Mr. Edmunds admitted as much. But it remains to be seen what other measures the Committee has in store.

AGNOSTIC WORSHIP.

The Reverend George C. Miln, whose conversion to agnosticism has led to his withdrawal from the Unitarian pulpit in Chicago, has made a statement of his religious position. It is not a new story. On the contrary, the mental process through which he has passed is one the nature of which is more or less familiar to all active and inquiring minds at the present day. Mr. Miln began a few years since the study of Herbert Spencer and what he calls "the English school of materialistic philosophy," and gradually, under the influence of this school, came to regard the articles of the Christian faith, and finally those of all religion, as mere unverifiable theories about matters of which we know, and can know, according to the canons of human reasoning, nothing whatever, and the truth of which we can consequently neither affirm nor deny.

He remained in his pulpit for some time holding these views and conducting services under Christian forms, apparently on the theory that agnosticism was only a broader kind of Unitarianism; and at first a large part of his congregation seem to have agreed with him, for when he made up his mind that he could stay no longer, a committee of the church waited upon him and asked him to withdraw his resignation. But finally his new teachings excited so much dissatisfaction among the congregation that they decided by a large majority to dispense with his services altogether. Mr. Miln has therefore formally resigned, and thrown up his connection with the Christian Church. He says that he has not decided whether to establish an independent congregation in Chicago, similar to Dr. Adler's Society for Ethical Culture in this city, to practise law, or to go upon the stage.

The failure of his attempt to establish an agnostic pulpit is valuable as a practical proof of the impossibility of perpetuating the observance of religious forms and ceremonies in connection with an abandonment of all religious belief. English and American agnostics have all along been fond of insisting that, while dogmatic belief as to the supernatural is proved by modern science to be an absurdity, still religious emotion and aspiration have such deep foundations in the human heart that the disappearance of religious dogma will have no effect on them, and that they will be directed to new objects through new channels. According to Mr. Miln, while it is impossible to predict in detail what the future of the Church will be, it is easy to perceive "the general tendency." It is toward "the substitution of a basis of impartial and natural ethics for the basis of supernaturalism in which the Church has rested." "Human sympathy will take the place of dogma, and, with the speculative beliefs thrown aside, it will have more time for practical philanthropy, and will become the great educational and formative force of society."

Now, practically, the difficulty with the establishment of any such church consists in the fact that what mankind in general regards as the object of religion, the object for which it builds churches, and pays ministers, and

assembles in congregations every Sunday, is simply the worship of God; and that worship without having a God to worship seems to ninety-nine people out of a hundred exactly as it did to Mr. Miln's parishioners—a contradiction in terms. The experiment could hardly have had a fairer field than a Unitarian pulpit, for in the Unitarian Church dogma is already reduced to a minimum, and the ritual is very much under the control of the minister and the congregation. But what would the agnostic substitute for a Christian ritual? A week ago Mr. Miln opened his service with the following "prayer":

"We turn our feet from the common path of life into the seclusion of this sacred hour, made sacred to us by our own intentions. At least for a little while we bid farewell to the fret and worry of our daily life, to the burdens which we in silence carry, and to the trivial pleasures which do so much to dissipate our fine energies and purposes. We come here to find rest, to find light, to gain strength for the duties which are before us. We come here that by the planting of holy purposes we may grow stronger and nobler in all the ways of life. May the stillness of this moment breathe a sweet serenity into every heart. Looking backward, may we learn to regard with scorn all that has been unworthy of us—all pettiness, all littleness, all counselling with ignoble and time-serving motives. Looking forward, may our aspirations reach after the highest ideals for ourselves and for our fellows. May we be above despair, above hopelessness. May we look into the future with calmness and determination, prepared for its duties and for whatever of conflict may await us. And may our intercommunication lift us into a realm where we shall be emancipated from suspicion and misinterpretation of each other. We do not forget the poor. They are always with us. May men help the poor, the blind, the sick, and those who are beaten down by the trampling of many feet in all the ways of life. O that our hearts may at least be full of sympathy and our hands always full of help for such! And may we look with yearning eyes for the coming of that day in which there shall be no pain, no crying, nor weariness of heart! Amen."

This is nothing more than a series of bald statements of facts, or else ejaculations. It would no doubt be possible to go through the entire litany of the church and parody all its services in this way. But there is nothing in the nature of worship in such emotional expressions. We might as well call "Oh, how tired I am!" or "Oh, how I wish it would stop raining!" prayers. The publicity of ejaculation makes no difference. Real prayers are prayers, whether they are offered up in church or in solitude.

The fact is—and neither religious people nor agnostics ought to shrink from recognizing it—that while on the one hand the number of agnostics in the world is constantly increasing, on the other all attempts to build up an agnostic church are futile. It is only in England and the United States that this is not generally admitted by thinking men. There are plenty of agnostics in Germany, France, and Italy; but a Frenchman, German, or Italian who reaches this condition of mind does not go about discussing with his friends the possibility of building up a new ecclesiastical organization, on the basis of a common agreement that there is no rational foundation for any supernatural belief; nor collect subscriptions for the purpose of "hiring a hall" in which to worship without worshipping any one in particular. He simply conforms his behavior to his conclusions, and ceases to talk or to think about matters of which he believes himself to know nothing. It is a strong proof of the deep hold which religion has on our race, that Englishmen and Americans will do almost anything rather than this.

THE FALL OF GAMBETTA, AND ENGLISH OPINION.

LONDON, February 3, 1882.

"THERE *was* a Palmerston." This, it is said, was Mr. Disraeli's comment on the Foreign Secretary's expulsion from the Whig Cabinet of 1851-2. This sarcasm is now remembered solely as a proof that its author was at times as blind a prophet as the stupidest squire among his followers. Yet Lord Beaconsfield was no mean judge of men and of events. He had studied deeply the personal side of public life. He thoroughly understood the character of his opponents, and the Parliamentary world in which he and they moved. That such a critic should mistake the opening of a long career of almost unbroken success for a final fall from power, is no serious impeachment on Lord Beaconsfield's sagacity. Human foresight is at best but a complimentary name for human shortsightedness. But now, when all the able editors are in effect repeating, "There *was* a Gambetta," it is well to remember that ordinary Englishmen can hardly possess with regard to the affairs of a foreign country an amount of foresight and insight assuredly not possessed by one of the most subtle and best-informed of English statesmen with regard to that class of English affairs which it was his special business and pride to understand. Whether the common judgment of Englishmen in respect of Gambetta's fall may ultimately turn out to be correct, I assuredly will not undertake to predict. What I do confidently assert is that two opinions in respect of French politics are at the present moment prevalent and, so to speak, accredited in English society; and that while each of them contains a certain element of truth, each is open to criticism, and may prove one of those half, or even quarter, truths which are for all practical purposes equivalent to errors.

"There *was* a Gambetta." This is the first and the all but universal conviction of English critics. The man who was two months ago the leading statesman in France has (it is believed) ceased to be a power in French politics; he is "completely played out." Should he ever return to power, which is doubtful, he will be, not the Léon Gambetta of the Government of Defence; not the Gambetta who resisted and defeated the "Government of Combat"; not the Gambetta whose word or whose nod has till recently made and unmade Ministries; but a Gambetta whose position and influence will be certainly not greater, and will perhaps be less, than the position and influence of the dozen or so of unknown and forgotten premiers who have, every two or three months since the foundation of the French Republic, attained office without obtaining power, and have departed from office without leaving any permanent memorial of their existence. There is, it must be confessed, considerable prima-facie reason for holding the opinion which I have attempted to describe. Gambetta has had his chance, and for some reason or other has not been able to use it. "The great Ministry" has turned out, as President Grévy is said to have predicted it would, a "great disappointment." In truth, the expected great Ministry never in reality existed, and the little Ministry headed by the great Minister failed from the very first to satisfy the hopes of the nation. What is much worse than this, it cannot be disputed that the character and the prestige of the great Minister himself have been seriously damaged. A good deal of allowance must be made for the reckless malignity of French political warfare. No sensible person would care to condemn even a pickpocket simply on account of the accusations or slanders circulated by Rochefort and men of his kidney. A professional libeller cannot obtain credence even if he chances to tell the truth. Still, it is difficult not to believe that Gambetta was somehow or other connected with the nasty intrigues which cluster round the monstrous blunder of the expedition to Tunis. Foreign observers are driven to the conclusion that if, as is probably the case, he was not himself in any way tainted by corruption, he yet showed cynical leniency toward agents less clean-handed than himself. Indeed, the most patent feature of his short ministerial career has been the display of a kind of cynical insolence, which, however, has occasionally been the temporary fault of statesmen not really wanting in self-control and patriotism.

In any case, Gambetta has betrayed an inability to hold his own with the present Assembly. Whichever be in fault, this is for him a serious matter. What France needs is a Minister who can control the French Parliament and act with it. Gambetta was thought able to accomplish this. It is now known that he is even less competent to lead the existing Republican majority than any one of his predecessors. His career ended in a personal quarrel with the Deputies. Admit, for the sake of argument, that his opponents acted badly; admit even that his friends betrayed him; the fact still remains that he was not able to exert that kind of influence by which great Parliamentary leaders —Pitt, Palmerston, Gladstone, Cavour—have somehow kept themselves at the head of partisans many of whom were not thoroughly loyal to their leader. Others have failed before Gambetta, but his prestige depended on the belief that he possessed the secret of success. Failure is a serious calamity for a man credited beforehand with victory. The worst feature in Gambetta's prospects is that he is no longer the "coming man." He is rather the man who has come, has been seen, and has not conquered. The difference between the two is immense, and fidelity to fallen greatness is not the special virtue of Frenchmen. This, and a great deal more of the same sort, may be said about the seriousness and even the fatal nature of Gambetta's fall. A bad fall, however, is not the same thing as a fatal accident; and there are one or two considerations which suggest the idea that Gambetta may at last, and possibly at no very distant time, be again as truly the chief man in France as he was up to the moment when he took office. These reasons are twofold. They are supplied partly by the known character of the man himself, they are supplied in part by the very circumstances of his fall.

Gambetta is a politician of bold, his foes say of reckless, ambition. He has before this committed immense blunders, but his mistakes, great as they might be, have not been more remarkable than his power of recovering from them. His talent for management, for diplomacy or intrigue, is admired or blamed according to the point of view from which it is regarded; but no one disputes that he has great capacity for the management of mankind. To suppose that such a man will, because he has been hard hit, throw up the cards, is a simple absurdity. The one thing which is certain is, that Gambetta has neither the vices nor the virtues which induce a statesman to retire from the stage of public life. That he means, and will attempt, to play a leading part in French politics, may be taken for granted. Critics who think that this attempt is sure to fail, must base their belief not on Gambetta's character so much as on the circumstances of his fall. Yet, if these circumstances

be carefully considered, they will be found to favor the conclusion that Gambetta, if he has suffered severe losses, is not as yet politically a bankrupt. He would, of course, have been in a far better position if his short administration had been a success. This is a truism hardly worth stating, were it not often confounded with the very dubious proposition that the circumstances of his expulsion from office are such as specially to damage his influence in France. The truth appears to be that, owing either to adroitness on his part, or to want of skill on the part of his opponents, he has, though defeated, been enabled to effect his retreat from office on terms which may prove very favorable to his return to power. He is, it is alleged, unable to govern with effect unless armed with something like dictatorial authority. If so, a year or two of office would, under the present state of affairs, have thoroughly worn out his prestige. To carry on the work of administration respectably while hourly thwarted by a majority who nominally support but really oppose their leader, is an achievement almost beyond the capacity of the most skilful parliamentary tactician whom England has at any time produced. The task is one utterly unsuited to the genius of Gambetta. It is a considerable point in his favor that he has escaped the ordeal which has again and again undermined the reputation of some of the most popular and strongest Ministries in England. The body of reforms which he proposed to introduce were, it is said, ill-conceived. If so, he has gained a good deal by not being forced to pass or attempt to pass through the French Parliament a series of definite measures each of which, whether good or bad, would have excited a great deal of criticism and hostility. It were easy to point to cabinets which have been ruined in the effort to embody in specific laws the general principles on which they and their supporters were in theory agreed. But Gambetta's great advantage is, that it may well appear to the mass of Frenchmen that, as regards the points on which he was defeated, he was far more in the right than the Assembly, and that his overthrow was due to the treachery of supporters who, in driving him from office, were really attempting to disobey the constituents whom they represented.

Whether Gambetta's interpretation, for instance, of the Constitution was the right one, is a matter on which only an eminent French constitutional lawyer could pronounce an opinion worth having; but it is perfectly clear that Gambetta's view was in conformity with good sense. No one who does not wish for a revolution can believe it to be well that France should be unable to change a single constitutional law without opening the question whether the Constitution shall not be changed from top to bottom. It were simply madness for any one to occupy a house on the terms that he should not be allowed to put in a window without exposing himself to the risk of having the house pulled down and rebuilt. It is quite an open question whether, on general grounds, the mode of voting advocated by Gambetta is preferable to the existing electoral machinery; but it appears to be quite clear that the Republican electors have no objection to the *scrutin de liste*, that most of the Deputies were practically pledged to it, and that they would have accepted it had it not been, first, for the fear that under the new system many of them might lose their own seats, and, secondly, for the desire to drive Gambetta from office. Yet, assuredly, whenever the popularity of the Parliamentary majority (if such popularity exist) begins to wane, the motives which induced members to vote against the Government will not be favorably viewed by the electors. A representative almost condemns himself when he shows a fear of meeting a larger constituency. A member who has been elected as the supporter of a well-known statesman is apt to find it hard to make farmers or artisans understand why he at once turned out of office the very leader of whom he had avowed himself a devoted follower. Gambetta's own fall will, moreover, to his admirers, seem to afford strong corroborative evidence in favor of his scheme of electoral reform. He had always alleged that the present system of election made it impossible for any Minister to obtain that permanent and loyal support from a compact body of Deputies on which the success of parliamentary government depends. He and his friends will undoubtedly assert that he fell a victim to the very spirit of parochialism and faction with which it was his special mission to contend.

If, indeed, everything goes well, Gambetta's complaints of the treatment he has received may, whether just or not, have little effect with the great public. But there is, unfortunately, every reason to anticipate that things will not go well. France is in the midst of a financial crisis; there are difficulties in Tunis, difficulties in Egypt, dangers everywhere. Unless Gambetta be a patriot of very rare purity, he will not strengthen the hands of the present or of any future Ministry. The chances are that one weak Cabinet will succeed another, and the Assembly become more and more split up into factions who can agree in nothing but hostility to any government which happens for the moment to be in office. If, as is too likely, times grow dark, and the Chamber becomes, as chambers are too apt to do in France, contemptible, it is at least probable—I should be inclined to say it is certain—that the eyes of ordinary Republican electors will turn toward the one leader whose name is known to every peasant in France. If events should take this course, Gambetta's opportunity will have arrived. It will be vain for his opponents to allege that he has shown himself incapable. The reply, whether at bottom satisfactory or not, is obvious: "He failed," it will be said, "because Parliamentary factions would not allow him to succeed; the men elected to follow him proved his foes; he must return to power supplied with a party who will loyally carry out his policy, and not disappoint the wishes of the nation."

Gambetta's fall is a blessing to France, as it saves her from the peril involved in the system of personal government. This is the second opinion propounded by English critics, and naturally commends itself to optimists convinced of Gambetta's "ruin." That this should be the view of English critics who remember the endless evils caused to France by the personal government of Louis Napoleon, is intelligible enough; but observers who so easily convince themselves that France gains by the fall of her most eminent statesman make two assumptions, neither of which can be accepted without considerable hesitation. They assume, in the first place, that every kind of rule which can be embraced under the vague term "personal government" is necessarily injurious to France. The expression, however, includes two totally different things—viz., the rule of men such as Cromwell, Napoleon I., and Napoleon III., who were strictly despotic rulers (because, whether they governed ill or well, they could not be removed from power without a revolution); and also the rule of men such as Walpole, Chatham, Pitt, Gladstone, Cavour, and Thiers, who were not despotic rulers at all, and could be said to exercise a system of personal government only because they had, from different circumstances, the power of making their individual will strongly felt in the conduct of national affairs. Now, personal government, when it means despotism, is, unless liberal principles be entirely false, always and everywhere in the long run an evil. In France it is even a greater evil than in other countries. But that kind of personal government which means the predominating sway of one individual's influence may or may not be an evil; and many of the best observers have long held that the best chance of founding permanently a system of representative government in France is, to combine bona-fide representation of the national will in Parliament with such a predominant influence on the part of some leading statesman as may prevent, for a time at least, parliamentary government changing into the very different thing—government by Parliament. One great peril in the path of French progress is the danger that the Chambers should become contemptible. A Parliament is never so respectable as when it is firmly guided by some one statesman of eminence. The overthrow of Gambetta increases for the moment the power of the Chambers. Whether it will increase their dignity or influence is a matter at least open to question. The overthrow of Gambetta may have been rendered necessary by his own defects; that it was necessary to drive him from office does not show that the check given to personal government was a blessing.

The optimists who hold everything for the best assume, in the second place, that Gambetta's fall necessarily decreases the danger of personal government. This appears rather an odd conclusion on the part of men who, very possibly with reason, hold, to use the expressions of an English journalist, that "there is much of imperialism not only in his temper, but also in his political ideas. In resisting Bonapartism Gambetta seems to have imbibed something of its spirit." If this be so, the natural result of Gambetta's retirement from the Government will, it may be suspected, be a still further development of the worst sides of his political character. The benches of the Opposition are not a good school of public morals. Gambetta the statesman is likely to become Gambetta the agitator and the intriguer. Whatever his defects as a Parliamentary leader, no one can doubt his capacity as a leader of opposition. Sooner or later he will assuredly become the avowed and powerful opponent of the statesmen who have driven him from office. There will be a Gambettist party and a Gambettist programme. The country will be cursed with one more faction, and the inevitable demand of that faction will be the restoration to office of the man who can with plausibility assert that he represents the will of the country more truly than the Parliamentary factions which, as he will allege, effected his ruin by means of an unnatural coalition. Gambetta against the Assembly will, indeed, mean something like personal government pitted against government by Parliament. In such a conflict France may lose much; she can gain nothing. Optimists have a talent for discerning what is called a blessing in disguise. In this case I confess the disguise is too complete for my eyes to discern the blessing. That the most eminent of Republicans should be unable to guide the destinies of the Republic may be the result of his own faults or follies; but it is difficult to believe that it is other than a grave misfortune to the French commonwealth.

A. V. Dicey.

JUDICIAL CHANGES IN ENGLAND.

London, January 26.

An unusually large number of changes have taken place recently in our judicial bench. Besides three Lord Justices of Appeal, all eminent men, and one of them, Lord Justice James, a judge of quite remarkable quickness and pene-

tration, several of the ordinary justices and vice-chancellors have died or resigned, and been replaced by barristers comparatively unknown to the general public. There is some reason to fear that the office of an ordinary judge of the High Court of Justice is no longer so attractive as it once was to the profession. Its emoluments are still fixed at £5,000 a year (less than $25,000), although the cost of living in England, and the style which people of position are expected to maintain, have greatly risen during the last decade or two. In more than one instance counsel in large practice have refused ordinary judgeships, a course which no one would have taken thirty or forty years ago unless he felt sure of getting within his grasp a great prize like the Chancellorship. Every new appointment is therefore watched with a certain feeling of uneasiness, men doubting whether we ought not to raise the salary or take some other step to enhance the dignity of the office; and a corresponding satisfaction is felt when a thoroughly good man finds his way to the bench. It need hardly be said that it is an axiom in this country that the judges must be at least the equals in ability and knowledge of the best counsel who practise before them.

No appointment has been made for a long time that has given so much pleasure both to the legal profession and to the public as that of Sir John Holker to be a Justice of the Court of Appeal. There are circumstances about it which may make it interesting to American readers, for it is the appointment by a Liberal Government not only of a political opponent, but of one who had been Attorney-General of the last Conservative Government.

The English system of selecting judges, like most things in England, has been somewhat vague and fluctuating, neither distinctly political nor wholly non-political. The Government of the day, to whom the right of appointment belongs (the Lord Chancellor, as head of the judicial system, having usually a special responsibility in the matter), naturally tend to look first among their own supporters for a capable man. Other things being equal, a barrister who had rendered services to his party in Parliament, or who had even fought an unsuccessful election with spirit, would be likely to be preferred. He would not, however, be held to have any positive claim to a place, and any inferiority in professional ability, or any slur, however slight, on his professional reputation, would be considered to disqualify him. The Prime Minister or the Lord Chancellor would then proceed to search among the more eminent practising counsel for the person best qualified, and would scarcely inquire which belonged to his own, which to the opposite party. It often happens that a leading lawyer is a lawyer and nothing more—has no pronounced political views which have attached him to either party; and this would, of course, not stand in his way. Such is the usual course. But it sometimes happens, and it happened not unfrequently under Lord Beaconsfield, who always sought to strengthen party ties, that men were chosen whose party loyalty was their chief claim to promotion, although they could not be declared unfit. And it has rarely happened that an opponent half so conspicuous as Sir John Holker has been promoted even by a Liberal Government, in which party feeling goes for less than among Conservatives. His career has been a remarkable one. It began in Manchester, where he practised as a local counsel for some ten years, gradually winning his way from small beginnings to a large share of business on the Northern Circuit. Then he migrated to London, and, becoming a Queen's Counsel, rose rapidly to the leading place on the Northern Circuit, and was elected member of the House for Preston, a staunchly Conservative town. Very shortly afterward, when Lord Beaconsfield came into power in 1874, he was appointed Solicitor-General. He had taken scarcely any part in politics, and was known even by sight to comparatively few people in the House of Commons: but the Tory party had at the moment few good lawyers in Parliament, and chose him rather from hope than from gratitude.

Two years after, he became Attorney-General, and therefore the chief legal adviser and advocate of his party in the lower house of Legislature—a position which usually makes a man, if it does not find him, a violent partisan. A partisan in a certain sense he has certainly been. In speaking on matters of general politics, no one has assailed the Liberal Opposition and, since 1880, Mr. Gladstone's Government, with more vehemence on the platform. He seemed to think that it belonged to his position as a counsel retained for his party, to use strong language to the jury. But in the House of Commons the natural fairness and clearness of his judgment came out, and came out more strongly the longer he remained there, and the higher his influence rose. There was a breadth of view and an underlying honesty about him which won the regard of his opponents. Latterly he came to be as much respected, and perhaps even better liked, by Liberals than by Conservatives. Mr. Gladstone in particular, though he several times dealt severely with the arguments advanced by Sir John Holker, did not conceal the high opinion he had formed of his abilities and his character, an opinion formed solely from his observation of him in public, for it may be doubted whether they ever exchanged a word in private. This high opinion has now found its fit expression in his appointment to a very high judicial place, an act creditable not only to the present Government, but to English public sentiment, for this bestowal of honor and emolument on an active antagonist has not provoked the least discontent among the lawyers of the Liberal party, who upon a "spoils system" would have had good reason to complain.

Sir John Holker is not a learned lawyer. The race of learned lawyers has almost disappeared from England since the death of Mr. Justice Willes. Neither was he a brilliant speaker. Eloquence is now rarely heard in English courts: a plain, direct, matter-of-fact style of speaking is in favor, which diverts even those few who might make themselves forensic orators from any cultivation of rhetoric. But he is a man with the characteristically English gift of strong and penetrating sense raised to an exceedingly high point. His legal opinions enjoyed a great reputation, because he went straight to the point, never beguiled by subtleties nor indulging himself with crotchets. Though he did not seem to carry in his mind a great mass of cases, he always knew, as if by a sort of instinct, what the courts would pronounce the law to be. A tendency to a somewhat too logical and rigid carrying out of legal principles, which might have been charged as a fault on him, was corrected in practice by a strong love of substantial justice. As an advocate he was remarkable for two merits in particular: his rare power of dealing with a complicated mass of facts, selecting from them those which proved to be really material, and presenting them in a concise and lucid way; and the great judgment with which he conducted a cross-examination. Where ordinary advocates would have gone on worrying a hostile or browbeating a timid witness, he was content to ask a few questions, usually in a quiet and apparently careless tone, yet one which never failed to fix the attention of the jury on a vital point. His own kindliness of nature made him sometimes spare a witness even to the extent of seeming to endanger his case; but the jury usually saw how the land lay, and he never committed the fault, so common in our courts, of putting the sympathies of the audience with a witness by unfair treatment.

The same tact and insight were observable in his speeches. He was short, plain, direct, never seeking an opportunity for display. Casual observers thought him sleepy or listless, till they perceived after a while how much shrewdness, how much knowledge of character, how much covert humor shone through his seemingly negligent manner. And when the occasion required it, no one could become, suddenly, yet with no effort, more forcible, more crushing. It is long since any one has mounted the English bench who gives greater promise of excellence as a judge, for he was seen to possess, even as an advocate, those qualities in which judicial eminence consists.

As the meeting of Parliament approaches, the tension, so to speak, of the political atmosphere increases daily. The latest sign of it is the extraordinary, and indeed unreasonable, amount of interest with which the election for the North Riding of Yorkshire has been watched by both parties. In times of excitement these by-elections, as we call them, are regarded as an indication of the temper of the nation, and as foreshadowing the results of the next general election. Very often they are nothing of the kind, depending on circumstances special to the locality, or on the respective personal merits of the candidate. In this instance the conditions were sufficiently fair and typical, but the result proves little, for although a Conservative candidate was elected in the place of a former Conservative member, the majority was so small, compared with the size of the constituency, that all one can say is that the two parties are about equally strong. The Conservatives have succeeded, but it is by the exercise of the influence of the great landlords as much as by any popularity of their own programme. The Liberals have been disappointed in their hope of carrying a Conservative position, but it was a hope which they had no grounds for indulging. Such significance as the election has, lies in the evidence it gives of the extent to which the English tenant farmers are organizing themselves as a separate party, instead of blindly following the lead of their landlords. The Liberal candidate stood rather as a tenant farmer than as a Liberal; the Conservative candidate was obliged in the course of his campaign to promise to support many planks in the platform of the tenant farmers which the Conservative party has hitherto opposed. Any awakening toward independence of this important class is a wholesome sign, whatever results on the balance of political power it may ultimately have. Y.

BISMARCK IN A RAGE.

BERLIN, February 6, 1882.

THE first short session of the fifth Reichstag, which was closed last week, has disappointed the hopes or fears of those who, from the day of its opening, had either expected or apprehended its dissolution. There were a great many excited debates, many incriminations and recriminations, but the animosity of parties and Government representatives did not go beyond bitter words, and the practical results of the session were rather small. With the exception of the defeat of the proposed creation of the "Volkswirthschaftsrath" the Government carried all its bills. The budget did not meet with any serious objections; the incorporation of Hamburg into the Zollverein was passed by a two-thirds

majority; some consular conventions, as for instance with Greece, and the act for the navigation of the Danube met with the approval of the House. On the other hand, the negative results of the session are more important. The Chancellor did not dare to introduce any of his so-called great reforms. The tobacco monopoly was prudently withheld; not only was the insurance of workingmen against old age and accidents kept back, but nothing was done to carry it out in the shape in which it was adopted last summer by a majority of the Reichstag. Bismarck himself admitted that this kind of insurance could not be made by the Government; that in place of a bureaucratically organized institution private companies must take the risk, and that he wished to base such companies on coöperative associations; but he has not yet given a nearer definition of his meaning.

It would, however, be rash to infer from this smooth outward appearance a state of good feeling and general peace. The legislative results of the last session are only due to the fact that all the Government plans which, during the last elections, dominated the campaign, have been postponed. In every debate which embraced the general political field, the sharpest differences were manifested, as was to be expected from the last elections. It is therefore impossible to predict how at the next session an agreement will be reached between the present Reichstag and the Government, if Bismarck does not in the meantime once more change his views and choose to modify or abandon his pet plans. In my opinion, however, he will not do so. He is in a fighting spirit, and resentful to the utmost degree. He groans under what he considers a defeat, and is not too weary to take up the cudgels again as soon as a favorable opportunity offers itself.

If it be true that the character of a man can best be judged when he is in anger, I must say that the Chancellor in the session of January 24th did not appear much to his advantage as a sober statesman. I was present at that tumultuous parliamentary scene. Deputy Haenel, an able expounder of public law and a gentleman in every respect, had attacked the royal rescript of January 4th, chiefly directed against the participation of civil officers in elections, and had blamed the Ministers for shielding themselves against attack by the royal authority. There was not the least personal offence in these words; they did not imply the least doubt of the personal courage of a Minister, and they were considered perfectly in place by all who listened to them. Bismarck answered immediately. If he had really been wounded as deeply by the above remarks as he afterward feigned to have been, he would at once have refuted the objectionable criticisms of Mr. Haenel. But instead of doing so he began a quiet and easy discussion on constitutional questions, made some good witty remarks, told some stories about his relations with the Emperor, and then suddenly began to work himself into a passion and, by a queer process of reasoning, attacked Mr. Haenel for having called him a coward. And now a most riotous scene took place. Rage repressed for half an hour, and then suddenly bursting forth, without any evident reason, is certainly a psychological curiosity. Saying that he was above the reproach of cowardice, the Chancellor left his seat, stepped forward to the tribune, and in the course of his excited remarks advanced toward the Left side of the house, in front of that part of it which is occupied by the party of Progress. Some of its members replied that no such reproach had been made by any of them. Mr. Haenel repeatedly corrected Bismarck's mistake. "You ought to be ashamed of yourselves," sharply retorted the latter; "I would rather never see you again." (Great noise, laughter, and murmurs on the Left; vociferous cheers and cries of "Bravo!" on the Right.)

The Chancellor now became still more excited; the replies and repartees from within the House made him lose all control over himself. He evidently mistook what was intended as a correction for a new offence. The clang of voices, the shrill tones of attack and defence, in short, the general confusion, for a moment dissolved the order of the House. "Who is there," Bismarck exclaimed, with rolling eyes and with a browbeating air, "who dares to call me a coward?" "You are mistaken," was once more the answer of half a dozen members; "nobody has done so." Nevertheless, the Chancellor still continued in his excitement, "Let him step forward and let him give his name." No answer came; the House was quiet again. It seemed as if Bismarck had finally perceived his mistake. Slowly he returned to his seat and muttered between his teeth, "Thank your God that you have not done so." If the surprise created by this scene had been great, it was increased when the Chancellor, as if nothing had happened, coolly and briliantly took up again the defence of the royal rescript, explaining the terms used in it, in relation to the civil officers, in the most liberal way. When the next following speech of Deputy Von Treitschke drove more than one-half of the members from the hall into the lobby, the criticism of what they had heard and seen manifested itself in dumb amazement.

The general uneasiness and suspense under which the Reichstag has been closed will be transferred to the lower house of the Prussian Landtag, which was convened before the adjournment of the German Parliament, and will sit for the next three months. There are two very important measures pending before it—namely, the coming to terms with Rome, and the purchase of the rest of the private railroads by the Government. As to the first, I consider any hope of an ultimate settlement as quite hopeless. The so-called distressed condition of the Roman Catholic Church in Prussia has been reduced, during the past few years, to a comparatively small number of parishes which have no priests, partly because the bishops refused, and still refuse, to give notice of their candidates and appointees to the Government, partly because there is a lack of persons competent to perform the ministerial offices. To do away with this state of things the Government has occupied a position which contradicts itself, and about which that man can only be deceived who *will* be deceived. While these shortcomings, it argues, have not been caused by the Administration, it nevertheless feels a moral and political obligation to remove them. But if the Prussian Government be entirely innocent of this distress, it is therefore the clergy who must be blamed for it, not only by their actions in the past, but by their present conduct, too, which daily repeats itself. Now this mild spirit and these conciliatory efforts to efface the faults and guilt of others can only be realized when the guilty party tries to repair the consequences of its acts, or at least does not continue them. The Government, however, in declaring itself under moral obligations to repair the wrong which a third party has committed, and is daily committing, exposes itself to unlimited pressure and exaggerated demands on the part of the very men whom it is trying to relieve. In my opinion it is the Roman clergy before all who have first to prove their repentance, and next are in duty bound to remove the present distress of their faithful adherents. They, therefore, ought to do everything in their power to secure for them the consolations of their religion, and even to make sacrifices to that end. The Prussian Government has never saddled the Roman Catholics with duties with which they cannot comply. If it nevertheless wishes to meet the Roman See half way, and expects that the latter will cheerfully coöperate with its benevolent aims, it proves that it does not fully appreciate the character of the papal policy, with which it ought to have become more intimately acquainted since Niebuhr's negotiations. Or has Rome ever respected the laws of a heretic power when it found a means of opposing and defeating them, or has it ever found itself bound by its own treaties when it could avail itself of a loophole? Herr von Schloezer, who is now in Rome, may be a very able diplomatist, but in this case all his arts and dexterity will not help him much, for the premises are wrong on which he must act. A diplomatist whose master has thrown away his best cards, cannot beat an adversary who still holds the trumps in his hands. Herr von Schloezer is on "a fool's errand." I pity him personally, but I despise a policy which has richly deserved a humiliating defeat, and which will finally be buried in shame and disgrace.

Of our present railroad policy I shall give you an analysis as soon as the bills laid before the Landtag have been carried. Their passage admits of no doubt. The result of the measure will be the exclusive ownership of all Prussian railroads by the Government, and consequently a most powerful, if not formidable, state monopoly. † † †

Correspondence.

A STRANGE MATHEMATICAL COINCIDENCE.

To the Editor of The Nation:

Sir: I have just found another instance of the well-known facility with which two great minds, working on the same subject, produce ideas which are similar and similarly expressed.

Mr. George Bruce Halsted (whose work on 'Mensuration' was recently reviewed by the *Nation*) is the author of an article in the *Journal of Speculative Philosophy* for October, 1878, on the "Statement and Reduction of Syllogism." After giving a table of the six possible combinations of premises, he says:

"And of these there are only two which give rise to a conclusion or relation between the extreme terms.

"As regards the negative case this is at once seen to be so—thus, $x\,y=0$, $z\,y=0$ (no x's are y's, no z's are y's), leads to no conclusion in regard to the positive terms, x, z.

"As regards the positive cases the conclusions may be easily proved to be valid by general symbolical reasoning. Thus, whatever Y may be, we know $Y = Yx + Y\bar{x}$; but in case 2, since $XY = 0$. $\therefore$. $Y = Y\bar{x}$. But also we are given $ZY > 0$; therefore, substituting, we have $ZY\bar{X} > 0$. $\therefore$. $Z\bar{X} > 0$.

"Again, $XZ = XZ\bar{y} + XZy$ always; but in 4 a factor of XZy, namely, $X\bar{y}$, is equal to nought; and a factor of $XZ\bar{y}$, namely, $Z\bar{y}$, is equal to nought; therefore, $XZ = 0 + 0 = 0$.

"The logical signification of each step is obvious."

In a "Note on the Calculus of Logic" in the *Quarterly Journal of Pure and Applied Mathematics* for 1871, Professor Cayley, after giving the same table, says:

"And of these there are (as shown by the third column) only two which give rise to a conclusion (or relation between the extreme terms). As regards the negative cases, this is at once seen to be so—thus, $X\,Y = 0$, $Z\,Y = 0$ (no X's are Y's, no Z's are Y's) leads to no conclusion in regard to X, Z. As regards the positive cases, it is also at once seen that the conclusions do follow; but we may obtain the conclusions by symbolical reasoning—thus:

(2) $Y = YX + YX', = YX';$

therefore, $ZY = ZYX'$, not $= 0$;
therefore, ZX' not $= 0$.

(4) $X'Z = XZY + XZY'$,

where on the right-hand side each term (the first as containing XY, the second as containing ZX') is $= 0$; that is, $XZ = 0$; where the logical signification of each step is obvious."

It may be mentioned that X' and $\overline{X}$ are different notations for not-X.

This remarkable coincidence might be taken by the competent critic as a "sign of a Cambridge residence" on the part of Mr. Halsted, from which he had derived "inestimable benefits," were it not for the express remark—"and such is the nature of the reduction of syllogism which we now present."—Respectfully, H.

BALTIMORE, MD.

Notes.

HOUGHTON, MIFFLIN & Co. publish immediately Senator Geo. F. Hoar's eulogy upon President Garfield, and will be the American publishers of Lansdell's 'Through Siberia.'

A. C. Armstrong & Son publish next month a new and cheapened library edition of Napier's 'History of the War in the Peninsula.'

Fifty years ago any schoolboy could have named the "Lynn Bard." Now, though it is but a little more than twenty years since he died, Alonzo Lewis is almost unremembered and unknown outside of New England. Mr. Lewis was a journalist and the historian of his native town, and had an early and honorable share in the organization of the anti-slavery movement in Massachusetts. Mr. Ion Lewis, of Lynn, is reprinting his father's poems in a subscription volume, adding some not found in earlier collections.

Macmillan & Co.'s popular edition of their successful novels is continued in Kingsley's 'Hypatia' and 'Westward Ho!' The binding, in simple blue cloth, befits any library, and the print of these volumes is clear and pleasant to the eye, except that the plates of the 'Hypatia' begin to show wear. With these qualities it seems as if cheapness in price (at a dollar a volume) could no further go. The series already includes, besides the above, 'Hogan, M.P.'; and 'John Inglesant' is to be added directly.

The Century Co., like the Messrs. Harper, have resolved to destroy the early plates of their magazine. November, 1881, is the limit of this devastation.

The Messrs. Putnam's reprint, by arrangement, of Prof. Henry Morley's 'English Literature in the Reign of Victoria,' is a somewhat larger and more open volume than No. 2,000 of the Tauchnitz edition. The autographic facsimiles are retained.

Miss Sarah Brook's 'French History for English Children,' already reviewed in these columns, has been put in a condensed and handier form by Harper & Bros., who have added to the nine maps a number of illustrations, including Chapu's beautiful statue of Joan of Arc, which serves as a frontispiece. Mr. George Cary Eggleston has revised and edited this work, which, it should be repeated, is not for the youngest children.

The original 'Great Artists' series of Sampson Low & Co. (New York: Scribner & Welford), having reached its full number of twenty-four volumes, and the demand for these popular little biographies not being satisfied, a second series is now begun with 'Murillo' and 'Meissonier.' The former is written by Ellen M. Minor, and is based upon Stromer's 'Murillo, Leben und Werke.' It contains about sixty pages of pleasantly and carefully written text, ten engravings, and an excellent list of Murillo's principal works with their present whereabouts. The 'Meissonier' is collated by John W. Mollett, largely from criticisms and notes in recent journals, and naturally provides a convenient summary of rather inaccessible matter. It frankly confesses itself at the outset to be premature and unsatisfactory, and while refraining as much as possible from active participation in the debate about Meissonier's merits, it expects to "contribute a few tumbrils of ammunition to either side" in the attempt to arrange together the few known facts of the painter's life and the best criticisms upon his work. The task is executed with enthusiasm and considerable brilliancy of style. The price of the new series is one shilling less than that of the old.

The Boston Public Library's Bulletin for January contains a valuable list of indexes to periodical literature in all departments of science. It is worth knowing that this library has a card index, embracing more than 40,000 titles, to its Congressional documents, of which the collection is believed to be unrivalled. We also learn from the Bulletin that by recent purchases at Amsterdam there have been acquired "a considerable number of historical views, portraits, and caricatures of the time of the Revolution, most of which, it is believed, are wholly unknown in this country." Finally, notice is given that Mr. Hubbard's list of objectionable works in circulation has led to their temporary withdrawal for examination. This is proper and honorable in the trustees; but the restoration, be it more or less extensive, will have the effect of a sanction which the original purchase and circulation did not imply.

In the January *Portfolio* is the first of a series of papers, which is to be illustrated by twelve etchings by M. Brunet-Debaines, on the Ruined Abbeys of Yorkshire; also the beginning of a short series on Ornament, by H. H. Statham. Frederick Wedmore writes of William Müller and his Sketches, especially of those made in the East, and now bequeathed to the British Museum by Mr. John Henderson. Various works attributed to Hans Holbein the Younger afford Mr. F. G. Stephens occasion for a thoughtful essay, in which he concludes, on technical grounds, that certain paintings at Basle should be ascribed to an unknown painter of that city instead of to Holbein. The continuation of these studies in the February number discusses the famous *Passion*.

Under the auspices of the Society of Decorative Art, Mr. F. D. Millet, whose share in the costuming of the Harvard "Œdipus" will not be forgotten, will give four lectures on Roman Costume at the Union League Theatre on February 28, and March 7, 14, 21. The subjects will be, respectively, Dress of Men, Military and Gladiatorial Costume, Dress of Women, and Etruscan Costume. Those who desire may use sketch and note-books.

—The salient article in the *Century* for March is Mr. Richard Grant White's "Opera in New York," the first of a series whose tendency clearly appears to be to assert the metropolitan hegemony of this city even in matters musical, and especially, perhaps, over Boston. Mr. White, before he begins to be entertaining, lingers over a debatable proposition about the average New Yorker's memory, without, however, anywhere precisely fixing the range of his own in the matter in hand. He had Aaron Burr pointed out to him by his father as a lad, and this implies a date prior to 1836; but just where the line should be drawn between the traditions he heard from his elders or has gathered from books and newspapers, and his personal reminiscences, is left uncertain. This is, however, of small consequence to the reader who wishes to be amused, and is not disposed to stop and question some rather positive generalities about the relative worth of artists of a past generation. Mr. White has enlisted in his behalf a great number of rare prints from the portfolios of our dramatic collectors, and for their sake at least we might wish to see these papers eventually collected and reissued in book form. The most substantial feature of the contents is Dr. James Bryce's masterly sketch of Lord Beaconsfield's career, analysis of his character, and attempt to explain his extraordinary success in a worldly sense. The writer's confessed bias against him has not prevented a close approach to the aim of this paper—to look on Beaconsfield and to sum him up as the historian may, and probably will, some day do. Mr. Bryce's freshness and fluency (for the sketch reads like unpremeditated oratory) will surprise those who could not have believed it possible to say anything new about the subject. Nor is it his least merit that his incidental remarks are often models of felicitous characterization. "That minister," he says of Lord Palmerston, "had, in his later years, settled down into a sort of practical Toryism, and both parties acquiesced in his rule." "He [Disraeli] felt himself no Englishman, and watched English life and politics as a student of natural history might watch the habits of bees or ants." The Tory protectionist remnant after Peel's desertion "were broad-acred squires, of solid character but slender capacity. Through this heavy atmosphere Mr. Disraeli rose like a balloon." But the whole of Mr. Bryce's sixteen pages deserve to be read and re-read.

— New to us in the March *Harper's*, and very well told, is the story of the religious imposture of James Jesse Strang, an outgrowth of Mormonism, suppressed by violence in 1856. The seat of Strang's kingdom was Beaver Island, at the northern extremity of Lake Michigan, and his career forms a most curious chapter in the history of American superstitions. Mr. W. H. Bishop's concluding paper on Mexico seems to us the best of the three, and Mr. Ruskin might pause in his attacks on the nineteenth century if he should read on p. 541 of "the very different sentiment with which it is customary to surround a manufactory in this country [Mexico] from that prevailing with us" or in England. Besides the grist and paper mills of the Cervantes family, which are combined, as an architect might say, in one general "motive" with the house and chapel, and of which the water-power is used to embellish the grounds, there is also the cotton factory at Orizaba, with "a fine architectural gateway, and a statue of Manuel Escandon, the founder, in the court"; and "in the sugar haciendas, which, with their tall chimneys, all have the look of factories, this union of the domestic and refined with the practical is universal." Professor Newcomb describes very lucidly the constituent parts of a telescope, to the practical end that the reader may manufacture a modest one for himself, if so disposed; and also describes the capacity of a small glass for discerning celestial objects, and for materially furthering scientific discovery by sweeping the heavens for comets or watching the phases of the planets and nebulæ. The paper is of course illustrated. The antiquarianism of the number is contained in Mr. John Austin Stevens's "Old New York Coffee-houses," which, after all the entertainment which both writer and reader derive from them, seem little memorable. "The New French Minister of Public Instruction" is already an anachronism, but at least we are shown M. Paul Bert's strong and certainly not pious physiognomy, and there is no harm in recalling his exposure, in the French Chamber three years ago, of Jesuit morality of

the present day, as exemplified in John Peter Gury's 'Compendium Theologiæ Moralis' and 'Casus Conscientiæ.' The worst features of these works had to be suppressed by the writer of the sketch before us. Miss Elizabeth Stuart Phelps makes some guarded extracts from the latest letters she received in a correspondence with George Eliot; Professor Luigi Monti suggests pictorially and by means of classical citations a connection between the *cock-horse* of the nursery rhyme and a fabulous monster figured on an Etruscan vase, and identified with the Greek "hippolectryon, or horse-cock"; and there is much other readable matter of the quality and variety usual in this magazine.

— *Lippincott's* March number has a second paper on the Gulf Coast by Mr. Barton D. Jones; and an account of the burning of Columbia, by S. H. M. Byers, a Union prisoner. He ridicules the idea that the cotton was fired by the Union forces, and, as he was an eye-witness, his testimony is of some value, though his means of observation were limited. The magazines have, by the way, made very little as yet of the magazine material which might be collected among the survivors of the Southern prisons. What with Libby, Belle Isle, Americus, Andersonville, and the Texas and South Carolina prisons, and the extraordinary escapes that were made in some instances from them, one would say that much might still be made out of Southern prison life in the way of reminiscences. The accounts written during the war and immediately after it were in great measure controversial in character, and turned on the question of the cruelties practised on prisoners in the South. But apart from this, there were many other features of it very different from prison life as it is ordinarily understood, though of course it needs a somewhat rare descriptive faculty to bring them out vividly. Mr. Theodore Child gives a rather curious account of "Washington on the French Stage," his latest appearance being last year in "Le Patriote," a dramatization of Cooper's 'The Spy.' It is difficult to understand the very considerable theatrical popularity which Washington has enjoyed in France, but the anachronisms and blunders with which the French Washingtonian drama abounds, really help to explain it. An audience which knows so little of this country or its history as to tolerate a representation of Yorktown as a feudal fortress with Gothic towers and dungeons, is just the audience to enjoy a melodramatic "Sir George Vashinton" as its besieger.

—The *Atlantic* contains an interesting sketch, by H. A. Huntington, of the life and plays of a once popular dramatist, whose name is now hardly recollected by the theatre-going public—Farquhar, the author of the "Beaux' Stratagem," and "Love and a Bottle." Farquhar died at the age of twenty-nine, after a life of constant struggle with poverty, but to the last he faced adversity with a smile, fighting the wolf at his door, and, as Mr. Huntington says, "shielding to the last, with his worn body, the wife and children behind him." His final comedy was at the height of its success at the Haymarket when he died. His plays, like all comedies, reflect the manners of his time, and our manners are different, better, purer, more refined; but in one respect we are worse off than our ancestors of two centuries ago —that we have lost much of that vitality and spontaneity of action which made their comedies, like the life they painted, seem so much more real and vivid than ours. Edith M. Thomas, in some verses called "Syrinx," deals with an old subject in what can hardly be called a new way. The deep regret expressed by so many modern poets over the disappearance of Pan from the world is often tempered to their minds by the fact that his disappearance furnishes a "timely topic" for the muse. A sigh over his non-existence is as handsome a tribute to classical sentiment as a poet or poetess can pay, and classicism is itself so very nearly "clean gone" out of modern poetry, that even the most Christian reader cannot but feel grateful to Pan for what he still does in his downfall to keep alive the memory of it. "Hymns and Hymn-Tinkers," by A. P. Hitchcock, gives some extraordinary specimens of the hymn-tinker's work. Nobody has suffered more at his hands than Wesley, whose beautiful hymns have had for the tinker a fatal fascination. Punishment in another world of a lasting character will surely overtake the author of the following lines:

> "Other refuge have I none.
> *Lo, I, helpless, hang* on thee;
> Leave, *oh!* leave me not alone,
> *Lest I basely shrink and flee.*"

What Wesley wrote was:

> "Other refuge have I none.
> Hangs my helpless soul on thee;
> Leave, ah, leave me not alone,
> Still support and comfort me."

Mr. N. H. Eggleston gives an account of the Hoosac Tunnel which is more readable than such accounts are apt to be, and enables the unprofessional reader to understand some of the triumphs of engineering skill which the tunnel represents. Most people imagine this to consist simply in the excavation, and have probably wondered why so much noise should be made about blasting and boring through a mountain, even if this be five miles thick. The reader of Mr. Eggleston's article will, however, discover that there was more in the excavation of the Hoosac Tunnel than this. To the Massachusetts taxpayer the most startling and singular fact in connection with the tunnel always was the manner in which the cost increased as the work went on. The final expense was, it seems, fourteen times the original estimates.

— The *North American* for March contains an article by Senator Edmunds on the Guiteau trial, in which he reaches a conclusion which few lawyers will probably be disposed to question—that much of the scandal which its conduct caused would have been avoided had Judge Cox made vigorous use of his undoubted power to keep the audience in order. If, after a reasonable warning, the Court had made one or two examples of spectators guilty of disorderly or indecorous behavior, by punishing them for a contempt of court, "all demonstrations on the part of the audience would doubtless have ceased, and the public would have been taught the valuable lesson that courts of justice are not theatres, where the acting is to be applauded or condemned as it may strike the various tempers of the beholders." He had also the power, which is sometimes resorted to in criminal trials, of clearing the court-room, and in most cases a warning that this will be done has an admirable effect on a too demonstrative audience. Since the verdict Guiteau has been entirely cut off from all communication with the public, and this, whether it results from orders of the Court, the District Attorney, or the Marshal, proves that the ribald and blasphemous appeals to the public issued during the trial through the press were entirely unnecessary. With regard to punishing the prisoner himself for contempt, Mr. Edmunds thinks that the prohibition of "cruel and unusual punishments" limits that to fine and imprisonment, and suggests that if the trial were to be delayed while the accused was being imprisoned, most guilty persons on trial would deliberately create a disturbance in court in order to prevent the trial from going on, while the objection to going on with the trial in his absence is his constitutional right to be present. Mr. Edmunds holds that this right cannot be waived by the prisoner's misconduct, any more than he can waive jury trial, or the finding of an indictment. The argument against removing him from the court-room we have not seen so forcibly put before. Fining a prisoner like Guiteau would of course be an empty form, and imprisonment, it may be added, is nugatory for a reason not mentioned by Mr. Edmunds—that he is in the jailer's hands already. Judge Edward A. Thomas has an article on trial by jury, in which he "claims" that "a court composed of one or three judges will arrive at a proper decision more frequently, more speedily, and with less expense to litigants and taxpayers, than a court will which is compelled to call in a jury to aid in its decisions." There is no question about the speed and economy, and possibly the decision would be more just in most cases; but there is another consideration which advocates of the abolition of juries frequently overlook—that the judicial machinery provided for the settlement of disputes must be satisfactory to litigants. In large classes of cases—suits, for instance, against corporations, and criminal cases—the popular character of the jury is what the litigant relies on; and though it may not furnish an ideally perfect mode of trial, its bias in favor of popular rights and life and liberty and against the supposed tyranny and avarice of corporate bodies, or the severity of judges, reconciles him to litigation as he finds it. In suits against coporations, plaintiffs can always dispense with jury trial, if they wish to do so, now, and the corporations are never likely to object to their doing so. Mr. Neal Dow contributes an article on prohibitory legislation, at the conclusion of which he makes the surprising statement that the persistence of the liquor traffic in the large cities is "due entirely to some defects in the law as it now stands, which we know perfectly, and which will be corrected by and by," after which "the last vestige of this great evil will be summarily swept away."

—The folio 'Comprehensive Atlas and Geography—Modern, Historical, Classical, and Physical,' of which the Messrs. Putnam are the American publishers, only carries out on a large scale and with the necessary changes in the maps the plan of their 'Library Atlas' published in 1875. The descriptive letter-press, then as now, is the work of Drs. James Bryce, W. F. Collier, and Leonhard Schmitz, except that there is now added an Introduction to Physical Geography, by Dr. Bryce, which in a measure overlaps the same author's Descriptive Modern Geography, and indeed appears to be of even date with it, for the results of Stanley's exploration of the Congo are ignored. This is made the more striking by the fact that the map of Africa has been brought up to date in this and other respects, although, in Map I., we still wholly miss the Congo among the rivers of the earth whose lengths are compared. One must say, therefore, that either the foreign publishers should have altered the text conformably to the plates, or should have confessed the date of the former, which nowhere appears. In general, it is to be observed of this atlas that it will supply all ordinary family needs, and meet the requirements of general historical and political study. From its origin, it is naturally fuller in respect to the British Empire than to all other political divisions; so that in Africa, for example, besides Egypt, there are enlarged maps only of Cape Colony and Natal, and one could get no special help from it for military operations in Tunis and Algeria. The United States are repeated in some detail, with a whimsical division which emphasizes the merit of Mr. Gannett's recently-proposed scheme. A group of the Lake States is given which omits Ohio, with its large watershed lakeward, and includes Indiana and Illinois, which are almost wholly in the Mississippi basin. There are special railway maps of certain European

States, but as a rule railroads are unrepresented, except that we notice the yet mythical Canadian Pacific put down in Manitoba and the Northwest Territory. In semi-civilized countries of unstable government, like Afghanistan, boundaries are occasionally indicated too positively; on the other hand, Bosnia is perhaps justly represented without remark as belonging on one map to Austria, on another to Turkey. A question which suggests itself in the case of an American edition is, whether the United States have a history. We find among the historical series, Europe in 1815 and Europe in 1871. Would there not be something instructive in showing the United States at the same dates—*i. e.*, after the wars of 1812 and of the Rebellion? The index of names greatly enhances the convenience and utility of this atlas.

—It is not often that the *Nation* feels called upon to review the circulars of the patent-medicine men. From Ayer's Cherry Pectoral down through Schenck's Pulmonic Balsam and Van Buskirk's Sozodont we have left them quite to their own devices. Neither art, literature, nor science had any interests involved, and our duty to our readers as well as our own inclinations prompted and justified this line of conduct, in which we took a blithe and careless pleasure; we confess it without shame. But these days of childlike freedom are now past. A recent circular-advertisement of the Hop Bitters compels us, out of a sense of our obligations to the march of intellect on this continent, to chronicle its appearance, and to detail and examine its facts and inferences. We can still leave to the *Pharmaceutical Review* the discussion of the astounding claims for Hop Bitters as a steady drink for man and beast; and most of the illustrations (woodcuts) which accompany the circular we turn over, without a sense of regret, to the editors of the *Century*, who, it is rumored, have founded a new school of American wood-engraving and may therefore be supposed to know something about them. The literature and the art of the advertisement we are well rid of; but we feel we have a duty to perform toward its science.

—Two full-page cuts give views of the exterior and the interior of the Warner Observatory. We know this, because the side of the exterior which is turned toward us, bears in large letters its name. What may be on the other side is a question which reminds us of our prevailing ignorance of the earth's satellite. In the latter case we have no *a priori* knowledge. Here we may guess that the reverse inscription refers to absolutely safe remedies. The interior view has for legend: "Interior. Warner. Observatory. Rochester. N. Y.," and below it we read:

"The Warner Observatory is of Lockport white sandstone, and, excluding the $13,000 telescope, cost $60,000. It is the most noteworthy building in Rochester. The Telescope is twenty-two feet long, sixteen-inch aperture, and weighs with mountings two tons. It is the finest instrument in the United States."

In spite of all this legend, we are prepared to maintain that the telescope above mentioned is not in the United States at all; and we base our bold statement on well-established rules of criticism, and on the astronomical fact that the elevation of the north pole above the horizon is equal to the latitude of the place. We have measured the elevation of the pole of this instrument from the drawing, and we find it to be 53°. Hence it is inevitably somewhere in Canada, since our northern boundary nowhere surpasses 49°. Moreover, the cut represents, line for line (except in its errors), the 26-inch equatorial of the Naval Observatory at Washington even to a pair of opera glasses which were standing on a box when the photograph (from which this was partly copied) was taken. One material change has been made, however, and this is to give the telescope an aperture of forty inches, so that our previous guess about Canada appears to be confirmed, since there is certainly no forty-inch telescope in the United States. Add to this the fact that the comet of 1811 is represented as in sight through the opening of the dome, and we think we have made out our case, especially when we say that the Warner telescope has not yet left the hands of the makers; that the dome even is not finished. Clearly the *Nation* had a duty here, and this duty is now performed. It was unfortunately necessary to show the proprietor of the safe remedies that he was laboring under an hallucination. His telescope is not the finest in the United States. He does not own the Naval Observatory. Rochester is not in Canada. Confident of having corrected notions which a too credulous public might imbibe, we may leave this disagreeable task; we knew the remedy and we felt bound to administer it. It is positively safe, and will probably be of no effect.

—The *Inter-Ocean* of Chicago takes exception to our predictions in regard to the loss of supremacy which that city must in a few years undergo as the great centre of lumber distribution of the United States. Without denying the accuracy of the estimates of standing pine in Michigan, Wisconsin, and Minnesota, made by the experts in the employ of the Census Office, or of the returns of pine lumber manufactured in those States, our Chicago contemporary asserts that because Professor Sargent's maps show that large areas in Wisconsin and in the northern peninsula of Michigan are still occupied with pine forests, and because we made no allowance for the growth of young trees in districts from which the heavy timber has been removed, Chicago must, for many years to come, remain the great lumber market of the world. Its assertions are, we believe, based upon imperfect information in regard to the actual condition of the pine forests of these States; and we refer the *Inter-Ocean* to the Bulletins themselves for light upon the first point raised in its objection to the accuracy of our prediction. While the maps show that the areas in the northern peninsula and in Wisconsin on which pine is still standing exceed the areas from which pine has been removed, Professor Sargent takes occasion to explain this apparent anomaly by a statement of the fact that the northern pine forest, which now alone remains, carries few and small trees to the acre, and that it is everywhere interspersed with innumerable lakes, swamps, and barrens. Estimates, then, must be based upon the actual condition of the forest in different regions, and not upon comparative areas, cut and uncut, without reference to the nature of their formation or tree-covering. Nor can the growth of young trees be counted on to any great extent in considering the future of Chicago as a lumber market. As we have already pointed out, such trees as in these States escape the axe fall a prey to the fires which are allowed to lick up what the logger finds too small for his market. In the virgin forest, where fires are less numerous than in the rear of the logging camps, the annual increase in the size of individual trees is often considerable, but the best woodsmen are unanimous in their belief that in the States in question the increase is more than offset by death from old age, or destruction by the escape of hunters' camp-fires into the forest, or by tornadoes, which are of frequent occurrence and great extent in these northern forests. Chicago holds her sceptre of pine in a feeble grasp. It must fall from her hand entirely unless she devote her energies to preserving and protecting the scattered remnants of the noble forests to which she owes so much of her prosperity.

—Evidences of the steady improvement in educational matters in Japan come to us in the form of the 'Calendar of the Departments of Law, Science, and Literature' of the University of Tokio. This, in the same patriotic spirit which draws the central meridian of the earth's longitude through the Mikado's castle, is dated 2540-41 J. E. (from the foundation of the Japanese Empire), or A. D. 1880-'81. With it are two monographs by professors of the University, which we may notice hereafter. The Tokio Daigaku (Great Learning, or University) being the head of the educational system of the empire, its health and vigor are diffused and felt in all the provinces and lower schools. It is the slow evolution through a century and a half of the application of the native mind to foreign sciences. The Yedo scholar, Arai Hakuseki, by inquiry of the Hollanders at Nagasaki, and the Government inquisition (against Christian heretics, especially the Italian priest, John Sidotti) led to the introduction of Western learning into Japan. Hakuseki published an account of what he learned, which was translated, about 1865, by the Rev. S. R. Brown, an American scholar. An astronomical observatory and translation office were subsequently established, which, after Perry's visit in 1854, led to the recognition of the Dutch and English languages as part of the curriculum in the old Confucian College, and finally to the Kai-sei-jo (Place of Civilization) school, and the despatch of students to Europe. The institution in its present form may be safely said to have been founded by the Rev. Guido F. Verbeck, whom the Mikado's Government, on its accession to power in Tokio, called from Nagasaki to be its president, and to organize a national educational system. Mr. Verbeck, who is an American gentleman, though of Dutch origin, had, at Nagasaki, instructed in Dutch or English most of the younger leaders of the Revolution of 1868, and perhaps a full half of those who formed the embassy of 1878. From 1868 to 1876, the polyglot and ever-changing experiment was conducted in the three languages, English, German, and French; but from that year, 1876, English was made the sole basis of culture, while other tongues were employed only as special studies. Gradually, the places of the twenty-five or thirty professors from abroad were filled by native graduates of Rutgers, Cornell, Oxford, Cambridge, and London, thus greatly diminishing the expense. Twelve foreign instructors are still employed.

—The Daigaku issues its stout annual calendar bilingually, in English and Japanese, and is written and printed by natives. The three departments are law, science, and literature, the courses in which require each four years to complete. In science there are six courses—viz., Mathematics, Physics, Astronomy, Biology, Engineering, Geology, Mining, and Metallurgy. Literature has two courses—(1) Philosophy, Political Philosophy, and Political Economy; and (2) Japanese and Chinese Literature. For preparatory instruction in the languages and rudiments of education, the Yobimon, a well-organized academy, exists in the old Kai-sei-jo buildings. The summary shows that ninety-two students have been graduated, fifteen of whom were sent to Europe and America, while two hundred and eight undergraduates remain. The president is H. Kato, the accomplished tutor of the Mikado, and the author of a brochure on political economy which is reckoned as a modern classic, and is usually studied by missionaries and others as an example of the best contemporaneous Japanese style. The vice-president is I. Hattori (Rutgers, '75), who may be remembered by his contributions

to *St. Nicholas*. Other instructors are Toyama (who wrote in the *Tribune* on Thiers and the Chinaman—"The Giant and the Dwarf"); Nakamura, the translator of Mill on 'Liberty,' 'Self-Help,' and the three most important documents of American history from 1776 to 1800; Matsui, Yatabe, Mitsukuri, and others less well known. The "boys" prepared by the American teachers in Japan, at Fukui, Shidzuoka, and other places, appear now to be giving a good account of themselves. The curriculum seems to be fully up to that of a first-class American college, when it is remembered that the working language is foreign. The mere mention of the equipment of apparatus, museums, library, and reading-rooms, is enough to make an ex-instructor envious, when the progress of a decade is compared with the chaos of the beginning. Among text-books American authors are well represented, and the various scientific monographs on Japan by foreign writers, from Thunberg to Rein, are utilized. Ultimately, the courses will be all in Japanese, with, however, the retention of European languages as means of culture, and the consequent degradation of Chinese from its former supremacy to the level of Western tongues. We are glad to see that the classic native literature is critically studied. It is only by the cultivation of their own long-neglected language that the Japanese scholars can ever hope to possess a vehicle by which the thought of the world can be given to the masses of their countrymen. The seed is living yet, though held for ages in their dead classics, which for six centuries have been wrapped and mummied in the swathings of Chinese characters. It is to the rising school of native journalists and writers who bravely put their thoughts in pure Japanese, discarding the pedantic and mongrel Chinese words and phrases, that we are to look for future progress along the right lines.

—Schubert's unfinished Symphony in B minor opened the fourth concert of the Brooklyn Philharmonic Society. It is one of those works which adherents of both the old and the new order of things in music admire; the former because of its sweetness of melody and symmetry of form, the latter on account of the novelty and originality of its modulations, its harmonic depth, its exquisite instrumentation and incessant flow of fresh ideas. The fact that the symphony is unfinished is to be regretted, but does not greatly lessen the enjoyment of the movements that exist, for the reason that musical impressions are consecutive in time only, and not coexistent in space; wherefore the missing movements are not felt as mutilations, like missing limbs of a statue or an unfinished picture, but simply as happiness cut short—something like the feeling of regret we all experience on finishing a novel whose characters have interested us, and whose life-experiences have been brought to an arbitrary close by the will and plan of the author. After the symphony had been played in the usual refined manner of the Philharmonic Society, Miss Cary sang the aria "O, pardon me," from Bach's Passion Music, and subsequently Beethoven's "In questa tomba" from "Fidelio." Miss Cary's artistic style and impressive voice are too well known to call for comment. The two arias were separated by the introduction to the third act of Cherubini's "Medea," and after a brief intermission came the second part of the concert, which was devoted entirely to Liszt's symphony to Dante's "Divina Commedia." The impression given by this work at a first hearing is apt to be somewhat confused. Those who look for a regular symphony will miss the usual division into contrasted movements, the periodic structure, and the various orthodox devices of thematic treatment. The principle adopted here, as Wagner so clearly explains in his essay on Liszt's symphonic poems, is not that of change, or alternation of quiet and slow with quick and gay movements (all based on the original dance form, even in the most elaborate symphony); it is the principle of development of a poetic idea in a natural, methodical manner. Although music without form is simply impossible, there are nevertheless critics who pronounce Liszt's music formless and chaotic, the reason for this being simply that they cannot find in it their favorite dance-form, and, being too lazy to study the new form of development, find it more convenient to dispose of the matter by using the word "formless." The people, however, being less hampered by considerations of form, at once recognize the originality of Liszt's motives, which are often so strikingly characteristic and definite in conception that Wagner declares that he often had to exclaim after the first sixteen bars, "Sufficient, I have it all!" In saying this he doubtless had in mind, among others, the recurring motive expressing the words "All hope abandon, ye who enter here," in the Dante Symphony. But, although we are among the admirers of the Dante Symphony, we frankly admit that we do not admire it so much as some of Liszt's shorter works, as for instance the fourteenth Hungarian Rhapsody and the Battle of the Huns. But it is a sufficiently original and impressive work to retain a place of honor on our concert programmes for years to come.

THE MENDELSSOHNS.

The Mendelssohn Family (1729–1847). From Letters and Journals. By Sebastian Hensel. Translated by Karl Klingemann. With a Notice by Geo. Grove. New York: Harper & Bros. 1882.

THE voluminous work by Sebastian Hensel on the Mendelssohn family, which appeared in Germany about a year ago, met with such a favorable reception that a second edition was soon in demand. Of this second edition the present is a translation. It differs from the first chiefly by the omission of numerous passages which were found to be of no interest to the general reader. The book has doubtless lost nothing by this treatment, and the only thing to be regretted now is that the process of reduction was not carried on still further; for it cannot be denied that any one not a member of the Mendelssohn family will still find a great part of these two volumes of 340 and 359 pages rather dry and somniferous reading. Eight portraits are given from drawings by Wilhelm Hensel, and the first volume has also a short introductory note by Mr. George Grove. Mr. Grove's excellent article on Mendelssohn in his 'Dictionary of Music and Musicians' was in preparation about the same time as Hensel's work, so that each was enabled through advance-sheets to profit by the labors of the other.

The sources from which Herr Hensel drew his narrative were chiefly a rich collection of letters, his mother's journals, and personal recollections. Most of the material is new, including several scores of letters by Felix Mendelssohn; and whenever anything is inserted that had already appeared in print, it is only to prevent a break in the narrative. The interest, of course, centres in Felix; but the *raison d'être* of the book seems to be rather to show that some other members of the family are also worthy of consideration. The narrative begins with Moses Mendelssohn, the philosopher and author of the modern 'Phædo,' the transmission of whose genius to his grandson Felix affords one of the most interesting cases of atavism, comparable to that of the Darwins. The thirty pages devoted to Moses Mendelssohn give a clear view of those qualities of character and intellect which made him so widely esteemed; and they also show that, however much the Berlin Jews of the present day may suffer from the petty persecutions of the Christians, there has been a decided improvement in their lot within the last hundred or hundred and fifty years. In the middle of the last century residence was in many German towns absolutely forbidden them, and in others they were crowded into certain quarters of the city. Under Frederic William I., we are told, they were obliged to buy the wild boars killed by the royal hunting parties; and under Frederic the Great every Jew was obliged to purchase, when he got married, a certain amount of china from the royal manufactory in Berlin—not according to his own choice, but whatever the manager of the factory wanted to get rid of as otherwise unsalable. Moses Mendelssohn thus came in possession of twenty life-size china apes, some of which have been preserved in the family to the present day.

Moses Mendelssohn had three sons and three daughters, to whom two separate chapters are devoted. His second son was Abraham Mendelssohn. Abraham, as revealed through his letters, was an honest, sensible man, and a good father; but he was not brilliant. His letters to his children are like thousands that are written every day; and there is nothing in them to contradict his own sarcastic remark that formerly he was the son of his father, but now he was the father of his son. Abraham married Leah Salomon, whose brother had adopted the Christian faith and the name of Bartholdy. This name he also advised Abraham to adopt as a distinction from the other Mendelssohns; hence its origin. Abraham's children—Fanny, Felix, Rebecca, and Paul—were also brought up as Christians, secretly at first, to avoid hurting the feelings of their Jewish grandparents, especially old Madam Salomon. This old lady was very orthodox, and when her son Bartholdy abandoned his religion she disinherited him. An anecdote is told in connection with this affair which reflects credit on the character of Fanny. She was in the habit of playing for her grandmother, who was very fond of her. One day, in return for some excellent playing, she was told to choose anything she desired as a reward. Instead of asking for a new bonnet or other piece of finery, Fanny begged her to "forgive Uncle Bartholdy"; and the old lady was so touched by this unexpected request that she became reconciled to her son—"for Fanny's sake," as she wrote him.

A large number of letters written by Fanny and Rebecca to various relatives are printed, some of them being curiously suggestive of their famous brother. Yet, as Mr. Grove says, "they are entirely distinct, and each paints herself in unmistakable colors. Their journals are full of ability, and bring a number of distinguished persons in various walks of life—painters, statesmen, musicians, princes, men of business—favorably and characteristically before us." Fanny married Wilhelm Hensel, the famous painter, and thus had other opportunities besides those offered by her brother's fame for meeting distinguished people; and as she accompanied her husband on his travels in Italy and elsewhere, she could impart additional interest to her letters by descriptions of travelling experiences and the constant change of local color. The distinguished people she met did not always please her fancy. On Börne she is quite severe. Being asked why she never mentioned his stay in Berlin, she replied: "Because in all the wide, wide world nothing is to be said of him." She had seen him often, on all possible occasions, but "he has always been the same little man, hard of hearing,

and still harder of comprehending, to whom the simplest things were new and strange, who, like all the common people at Frankfort, wondered to see the Berliners walk on their hind-legs and eat with their fore-legs; wondered that the trees here were really green, and the snow really white." Heine fares no better. She writes (Berlin, March 22, 1829): "Heine is here, and I do not like him at all; he is so affected. If he would let himself go, he would, of all eccentric men, be the most amiable; or if in good earnest he would keep a tight hand over himself, gravity also would become him, for he is grave too. But he gives himself sentimental airs, is affectedly affected, talks incessantly of himself, and all the while looks at you to see whether you look at him." Rebecca's letters are equally entertaining, and there are indications that she occupied as high a place in Felix's affections as the more gifted Fanny, who wrote compositions of her own after a fashion (she played twenty-four Bach preludes by heart at thirteen), and was always consulted and taken into confidence about the early works of her brother.

But whatever interest may attach to these feminine letters, they would never have got into print had it not been for the artificial value given them by Felix's musical successes and genius; and it is the new sketches and jottings from his own pen that, after all, give these volumes the greatest value and interest. Felix's letters from London and Paris, in the first volume, are extremely amusing and clever. He had not only the gift of observation, but a faculty of literary expression extremely rare among musicians. The account of the performance of *Hamlet* by Kemble at Covent Garden (vol. i., 189, 190) may seem remarkable for a youth of twenty, but finds its explanation in the statement he elsewhere makes, that he entered a coffee-house where he picked up the *Times*, and in his "true Berlin way looked first for the theatrical news." In the street he had something else to look for, chiefly "those fat John Bulls, with their slender, beautiful two daughters hanging on their arms. Oh, those daughters!" The frequent references to "those daughters," and to lovely pairs of brown eyes, as well as his occasional naïve confessions of romantic attachments, show that Mendelssohn was a connoisseur in flirtation regarded as a fine art. A case may be cited in his own language, as it is at the same time a good illustration of his style:

"I was very happy on Saturday; and at the dinner-party to which I afterward went I became intoxicated, but only from the effect of two very wonderful brown eyes, such as the world has never yet seen, or not often. To describe or praise them is unnecessary; for if they please you, I shall be jealous *par distance*, and if they do not please you, I shall be vexed—that, however, is impossible. The lady next to me had the said brown eyes, and they are wondrously beautiful, and their name is Louise, and their owner spoke English, and retired at dessert, whereupon I immediately drank claret, as I had nothing more to see. I had to be off into the country, found no carriage, and was obliged to walk in the cool of the evening. Many musical ideas came into my mind, which I sang out loud to myself; for I went a lonely path through meadows, and met no one; the whole sky was gray, with a purple streak on the horizon, and the thick cloud of smoke behind me."

There is in almost everything Mendelssohn has written a provoking lightness and an unmitigated happiness that Schopenhauer would probably have sneered at as the result of shallow Semitic optimism. It cannot be denied that this endless gayety, like the eternal sunshine and sweetness of his compositions, becomes after a while monotonous; and we find ourselves unconsciously marking the isolated passages which make an exception to this rule. Mendelssohn's intense subjectivity prevented him from being fond of national music, even in the form given it by Beethoven. One day at Llangollen he got so much of it that he burst out: "No national music for me! Ten thousand devils take all nationality! Now I am in Wales, and, dear me! a harper sits in the hall of every reputed inn, playing incessantly so-called national melodies—that is to say, most infamous, vulgar, out-of-time trash, with a hurdy-gurdy going at the same time. . . . Scotch bagpipes, Swiss cow-horns, Welsh harps, all playing the Huntsmen's Chorus with hideously improvised variations. Then their beautiful singing in the hall! Altogether their music is beyond conception." Hensel says that Mendelssohn, whenever he was unable to express approval, preferred to be silent rather than blame; but there is at least one page in these volumes which does not tally with this assertion—the criticism of "famous Auber's famous 'Léocadie,'" in vol. i., p. 126. In this he condemns everything—the clumsy libretto, the tame music, without substance, life, and originality, and the orchestration. The last dozen lines may be quoted as an amusing finale to this sketch:

"The overture begins with a tremulando on the stringed instruments, and then the piccolo instantly begins on the roof and the bassoon in the cellar, and blow away at a melody. In the theme of the allegro the stringed instruments play the Spanish accompaniment, and the flute again drawls out a melody. *Léocadie's* first melancholy air, 'Pauvre Léocadie, il vaudrait mieux mourir,' is again appropriately accompanied by the piccolo. This little instrument serves to illustrate the fury of the brother, the pain of the lover, the joy of the peasant-girl; in short, the whole opera might be transcribed for two flutes and a Jew's harp *ad libitum*. Alas!"

METTERNICH.

Memoirs of Prince Metternich. Edited by Prince Richard Metternich. Vol. V. Translated by Gerard W. Smith. New York: Charles Scribner's Sons. 1882. Also, as Vol. III.: Harper & Bros.

THE fifth volume of Metternich's 'Memoirs' embraces only five years of his long career, extending from April, 1830, to March, 1835—years, we may say, of adversity. His own affairs are in a very flourishing condition. He is powerful, rich, honored, feared and flattered, implicitly trusted by his sovereign, blindly adored by his young wife—the third and last. Dying at the close of the period, the Emperor Francis leaves these written counsels to his son and successor, Ferdinand: "Govern, and change nothing. . . . Repose in Prince Metternich, my truest servant and friend, that confidence which I have bestowed upon him through the course of so many years. . . . Decide no question relating to public affairs or to persons without first hearing what he has to say." And the Princess Mélanie says in her diary, from which we have considerable extracts in this volume: "I lament every day that I cannot put down in writing the things I see and hear, and which would give posterity a true conception of the heart and character of this great man." "It touches me to see the pleasure it gives him to talk with me on business, read me what he writes, give me information, and see me, over and over again, in a position to judge of the wisdom, conscientiousness, and uprightness of his policy in their fullest extent. I wish the whole world could see them, so that it might learn to know him." But Metternich is not a man to be satisfied with all this. He is too ambitious, too fanatical as a theoretical politician, too combative as a statesman, to rest content without a constant flow of success over opponents, without power to crush hostile combinations. And as a "world-statesman" he has now ceased to be successful. Austria is still tranquil, and apparently content, but in the larger field of European politics, in which he has so long been the leading figure, things are now constantly going against him, and the hostile current waxes stronger and stronger. He is on the defensive, and, though strongly entrenched, feels his position weak, the ground under him virtually undermined. He is still fully confident in himself, in his wisdom and his theories. But what avails it? The world is mad—with liberalism—and grows madder from day to day; and with madness even demigods wrestle in vain.

In April, 1830, he still hoped, but not without misgivings, that reaction was going to be victorious in France. "The King who has the *will* ought also to have the *power* to do much. Now it appears that Charles X. has the *will*." But would he choose the proper means? "M. de Polignac ventures much. It is to be hoped he will succeed; but who can answer for it?" On July 31 he expressed his delight over Polignac's manifesto of the 26th: "That such truths should be sent out into the world, and that by a Government which so long disowned them, is a great event, come what may! The month of August will be a great month! It may be said of it in any case—*Novus ab integro nascitur ordo!*" When he penned these lines, Charles X. and Polignac were already fugitives, the legitimate throne of France had been destroyed, and the "novus ordo," inaugurated even before August, meant liberalism and revolution triumphant in western Europe. Metternich fully comprehended the meaning of the change, so threatening to the existing order everywhere. Not entirely unexpected to his watchful pessimism, the blow was yet staggering. Only perfect harmony between the three great conservative powers could save the world, and Metternich exerted all his diplomatic powers to make Russia and Prussia follow closely in the wake of Austria. He made frantic efforts, like a man in despair, with a last glimmer of hope before him. "The thought I secretly cherish," he wrote to Nesselrode on September 1, "is that ancient Europe is at the beginning of the end. My determination being to perish with it, I shall know how to do my duty." A few days later the revolution broke out in Brussels. He underestimated its force, and hoped for timely concessions on the part of the King of the Netherlands and for moderation among "the enlightened portion of the Belgian nation"; and when he saw his mistake, and found that England and France were ready to act in accord in favor of Belgium, the Belgian "question" filled him "with the utmost abhorrence." One of the principal creations of the treaties of 1815 was thus broken down, and conservative Europe was unable to help; for the Polish revolution of November, 1830, followed closely on the Belgian, and Czar Nicholas's hands were tied up by it. Prussia had to guard her Polish frontiers, and even Austria needed an army corps of 60,000 for "the preservation of public health and safety in Galicia."

All this in 1830. The events of the following years, though less striking, were on the whole no less unfavorable. It is true, Metternich saw with satisfaction, in 1831, the errors committed by the Polish leaders, the strength of the armaments which Nicholas was able "to employ for the maintenance of his just rights," and, in the fall of Warsaw, "the end of the great drama which occupied the attention of Europe for . . . nine months, nourished the revolutionary spirit universally prevailing, and paralyzed any chance which existed of doing good"—that is, of curbing France and stifling her liberal propaganda. But did not the sword under which Poland bled also destroy one of the creations of

1815, and that a barrier to the insatiable ambition of the Russian neighbor? Had it not struck a heavy blow at the future of Austria? And the victory of the "just rights" of the Czar—we may charitably presume that Metternich blushed when he wrote these words—came too late for much effect on the political chessboard on which France was the great player. The "just rights" of the King of the Netherlands had in the meanwhile been irretrievably compromised. Italy was a prey to demagogism, the focus of which was Paris, and though Austrian arms had succeeded in extinguishing the first revolutionary conflagration in the Papal States and elsewhere, she was in full, though disguised, retreat before the bold and aggressive attitude of France, which in February, 1832, culminated in the occupation of Ancona by French troops—an act of open hostility to Austria's influence south of the Po.

However wicked, intrinsically absurd, and politically monstrous the whole new French régime appeared to Metternich — with its bourgeois throne surrounded by republican institutions, its impudent doctrines of non-intervention and *rayons d'influence*, and its ambiguous declarations and actions—he could hardly believe that Casimir Périer had seriously planned that atrocious *coup*. Casimir Périer died; but worse came. The French crossed the Belgian frontier, besieged Antwerp, and reduced it—liberal England applauding, and conservative Europe looking on in impotent anger. Germany itself, as the *Hambacher Fest* and other symptoms showed, was undermined and near being convulsed by the revolutionary propaganda. It had to be saved by fresh decrees of the Bundestag. Metternich led in repression, but the statesmen of Germany followed hesitatingly. He preached, taught, and inculcated resistance to liberalism and France with passionate fervor, in perfect consistency, and often with commendable boldness; but Russia was exhausted, and Prussia timid and vacillating, and thus both concert of action and material strength were wanting. In the east and west of Europe, too, everything went wrong. The work of creating independent Greece, which Metternich had so long opposed, was crowned by the election of a king, who had to be acknowledged, as was also the crowned head of revolutionary Belgium; Ibrahim Pasha, with his victorious Egyptians, shook the throne of Sultan Mahmud, and Metternich was happy to see it barely saved, and that by Russian intervention—a dangerous interference; Dom Pedro's constitutionalism triumphed, in 1833, over Dom Miguel's despotism in Portugal; and England, in 1834, united with France in forming a quadruple alliance for the defence of the liberal throne in Spain against the absolutist pretender Don Carlos, for and with whom Metternich intrigued. He saw in this alliance "a danger for the whole world, including, first and foremost, those who framed it." London appeared to him "one vast centre of general conflagration," and France a "focus for a universal conflagration." And Switzerland? "Quarantine against the Eastern plague has long been known to civilization; we shall draw a moral sanitary cordon round Switzerland, and we shall see whether the Swiss nation or Europe will be the one to suffer most from it."

Metternich was thus in these years, as a statesman, very far from happy. He had also grown old. Hence *illæ lacrimæ* which repeatedly appear on the pages of his wife's diary: "I read Clement an article from the *Revue de Paris* on the history of Charles Edward of Scotland. He told me he had induced George IV. to have a memorial set up to that Prince; and as he related the circumstance he burst into such a violent fit of weeping that it quite terrified me." "Clement read a new book aloud to me, Görres's 'Maid of Orleans.' Görres, from being an abominable Jacobin, has become one of the best men in the world. This book clearly proves it, and the tears came into Clement's eyes as he read." This latter quotation may also serve as a specimen of his young companion's faithful echoings. Here are some others: "May God . . . have pity on our old, worn-out world." "The Emperor, he added, was doubly necessary to him, because the former's uprightness and discernment always came in to influence his ideas. May God preserve them both; for, in truth, one of them, bereft of the other, cannot save the world." Elsewhere she says: "You hear the Emperor's voice mingling with his own, and in conjunction they form a godlike voice indeed, which may yet save the world." No wonder that she often enough prayed for both to "God and His Holy Mother." Mélanie was very pious indeed; but, after her Clement, she allowed herself to applaud Börne's wit, and admire a novel of Sue's, and make this unchristian entry in her diary: "Lafayette is dead—too late for the world." The following, dated Münchengrätz, September 16, 1833, is probably the most interesting, and historically the most characteristic, of her communications:

"A great review was held, at which every one was present. . . . On reaching home, Windischgrätz . . . told me the Emperor Nicholas was so delighted with Lato Wrbna's Hussar regiment, which he had seen going through some manœuvres, that it would be only proper to present him with it; but it must be done this evening. . . . I spoke about it to Clement, who at once laid it before the Emperor [Francis]. Meanwhile I waited in the Empress's room. The Grand Duchess overwhelmed me with kindness, and the Emperor Nicholas was very pleasant. He also expressed himself repeatedly in the warmest terms of praise of the Hussar regiment. Our Emperor came at nine, took him aside, and told him that he presented him with the regiment. The Emperor Nicholas fell upon his neck, embraced him like a child, and could not master his excessive joy. He sent at once to the regimental tailor's to have a uniform made for him, and gave orders that it should be ready by the morning. . . . Every one is charmed. All the Russians came to me, and the whole conversation turned on the Emperor's delight."

The volume before us is translated by another hand than that which gave us the rendering of the first four volumes. The translation is equally smooth, and equally disfigured by blunders and slips. Thus we find "Jacobites" for *Jacobins* (p. 18); "Prague" for *Praga*, a suburb of Warsaw (p. 86, and again p. 141); "Siebenbürgen" for *Transylvania* (p. 403); "clavier" for *piano* (p. 407); and even "rays" for *rayons*, immediately after "*rayons d'influence*" (p. 372).

RECENT NOVELS.

Dick Netherby. By Mrs. L. B. Walford. [Leisure-Hour Series.] New York: Henry Holt & Co.

A Happy Boy. By Björnstjerne Björnson. Translated from the Norse by Rasmus B. Anderson. Boston: Houghton, Mifflin & Co.

A Son of Belial. By Nitram Tradleg. London: Trübner & Co.

Marco Visconti. From the Italian of Tommaso Grossi. London: George Bell & Sons.

The Comet of a Season. By Justin McCarthy, M.P. Harper's Franklin Square Library.

My Wife and My Wife's Sister. [No-Name Series.] Boston: Roberts Brothers.

THE announcement of a new book by Mrs. Walford will always start a thrill of expectation in any one who remembers her simple, noble portrait of 'Mr. Smith.' If 'Dick Netherby' is disappointing, it is not because it is inferior, but only quite other. It is a plain story of the temptation, the yielding, the punishment, and the final struggle into a new life of the hero, an humble country lad. It should be in every Sunday-school library, not simply because it will do good to every one who reads it, but because it is a model of what Sunday-school books ought to be. The side-figures are drawn with that same light, accurate touch which gave us Lord Suffrenden in 'Mr. Smith,' and in 'Troublesome Daughters' Marjorie, the brightest, truest portrait of the girl of the period that has ever been painted.

'A Happy Boy' renews delightfully the impression made on the world when this generation was young by Miss Bremer's novels. Björnson's work has a stronger, steadier fibre in it than hers, without losing the tenderness, at once so delicate and so frank, which characterizes the northern idyl. As a story, nothing could be simpler—only the love of a village lad and lass, faithful against the opposition of the ambitious and angry grandfather. The placid village has in it nothing more exciting than the anxiety of the children upon the day of confirmation, and the great man is the schoolmaster; yet there is a quaint charm about it all, spite of a baldness which it seems to us cannot belong to the original. Accuracy in translation is a term which has various meanings. It is not enough that a word corresponding to the original according to the dictionary is given: it must correspond to the place where it stands. For instance, the girl writes to her lover of the verse which her disappointed suitor has sung about her—satirical, of course, and no doubt very unpleasant; but to make a girl of seventeen say, "He has made a lampoon about me," is ridiculous. The word "priest" is entirely misleading when applied to the minister of a Protestant church in Norway, yet it is used throughout. There are, moreover, several places in the book of which no sense can be made from any light afforded by the story. The songs are by another hand, and it is hardly the fault of any translator that songs will not sing themselves in a foreign tongue. Marit's good-night song is an exception, however, and very well done it is. Here are the first stanza and the last:

"Lovest thou but me,
I will e'er love thee
All my days on earth so fondly;
Short were summer's days,
Now the flower decays—
Comes again with spring, so kindly.

. . . . . .

"I my window close,
But in sweet repose
Songs from thee I hear returning;
Calling me, they smile,
And my thoughts beguile—
Must I e'er for thee be yearning?"

'A Son of Belial' is the unprepossessing title of a book purporting to be "Autobiographical Sketches." We should do it too much honor to call it an imitation of Mallock, though it is plainly inspired by some of his work. It presents a childhood of unhappy strictness, though the author confuses Evangelical and Calvinist in a way to excite suspicion of the genuineness of the story as autobiography. The history of the college career of "Tradleg" is made the opportunity for an attack upon almost everybody of mark at Oxford between 1860 and 1870. The real names are very thinly disguised, such as Prof. Jewell, of Belial, and the Rev. Robert Short, "who had some share in a Greek lexicon." The hero takes holy orders, but the liberal tendencies which at first were the reaction against the narrowness of early training, finally result in conversion to the Unitarian faith. As to the merit of the book: in the first place, it is at times as vulgar and unpleasant as a book could possibly be without anything of "impropriety" in it. In the second place, it is perfectly useless for the good of any cause, since the Anglicans might well say with congratulation, "Such are

the men who go out from us"; and no Unitarian would ever admit, "Such are the men who come to us." What disappointed ambition, what ungratified spite may have prompted the book, it is impossible to say. The man who would write it could never have been wise or kind; but at least, to use his own words of the bishop who ordained him, "He might have tried to be a gentleman—if he had only known how."

'Marco Visconti' is the sixth of the "Novelists' Library"—a selection from the more famous novels printed in the familiar form of the Bohn editors. We have almost called them classics, but hesitate to apply the word alike to 'The Betrothed' of Manzoni and to 'Uncle Tom's Cabin.' Of the present book there can be no doubt of its assured position as one of the great examples of the romantic school in Italy. Yet so little is Italian now cultivated that many to whom the exquisite song of "Pellegrina Rondinella" is familiar would see it here for the first time in its original setting. Grossi was the last poet to write in the popular dialect of the Milanese. His early poems are quite unknown on this side the water, but they had made him famous before he turned to novel-writing. One poem glowing with patriotism, though circulated only in manuscript, awakened the suspicion of the Austrian police; and, perhaps to save others from trouble, he gave himself up and was imprisoned. Happier, however, than Silvio Pellico, he was released after a few days. 'Marco Visconti' is his principal work, and illustrates the fourteenth century as 'The Betrothed' does the seventeenth. The subject of one of his first poems was "Maria Visconti," another of the same family, proving how deep and abiding was his interest in the early history of his own country.

The Waverley novels make the standard by which such work is judged—often to an unjust disadvantage; for Scott's heroes, whether crusader or border chieftain, are so much nearer us in sympathy than, for instance, these leaders in the small Italian commonwealths, that we are likely to pronounce unreal that which in fact we ourselves are unable to realize. It must be admitted that Grossi in this book does, by his own conscientiousness, in frequent reference to chronicle or history, prevent us from forgetting ourselves in the story. It is the same theme so often chosen by Italians of his day, the hapless love of a maiden who is purity and sweetness incarnate. Her love is fondly returned, but for her sorrow she is the object of the great Visconti's passion. The reader is led to believe that he himself would have been merciful and honorable; but over-zealous servants mistaking, wilfully in part, his wishes, carry off Beatrice to a solitary castle, whither relief comes too late, and she dies of her terror and pain. Marco, "beside himself with rage and grief," kills outright the guilty Pelagrua, and then rushes impetuously to court death at the hands of his enemies in Milan. Few translations are so well done as this. The English is smooth and flowing, and has almost a style of its own. The verses are graceful, and perhaps give all that can be expected in translating from a musical into an unmusical tongue.

Some decided word of acknowledgment is due in these days to any writer who makes an interesting story out of other materials than those which current fiction so largely presents. In Justin McCarthy's last novel there is not even a pretence of mystery about the principal personage Montana, the Comet; for his humble birth and early misfortunes are frankly narrated in a preliminary chapter. He disappears from his home, seeks and finds fortune in America, and at the opening of the story is returning to London upon a mission.

"Of course he had more than one mission. . . . But the especial object of his visit to Europe just now was to found a great colony in the United States, where men and women might seek and find the perfect life. . . . The New Atlantis was to be a community on which all good men and women must smile benignant approval. . . . Thus, with the ages, the hopes and energies of the race would centre in the New World, which had this still newer world, an empire within an empire, enclosed within its vast domain. . . . All that was wanted for the beginning was land, money, and colonists."

"Singularly handsome" in person, in manner always "stately, grave, and sweet," his success is immediate. "His ambition had now nearly reached its crowning-point. He was the hero of a London season, the prophet of a large number of faithful followers, the leader of a great new enterprise in civilization which had not yet become troublesome, inconvenient, or disappointing, for the good reason that it had not yet even begun to move; and he was the idol of a great many admiring and attractive women." The preacher at the Church of Free Souls describes him as "one who had been warrior, explorer, pioneer, political leader, and spiritual guide, and who now had been able to lay the hand that had wielded the sabre and the pickaxe in the soft clasp of London fashion, and had bidden the West End to throb with a new and noble pulsation." Such a triumph was the dream of his life, yet it seems not to intoxicate him. He maintains a strict personal integrity. Of all the women who lavish their admiration upon him, he loves only her who never believes in him. In her despite he marries a something foolish but all-loving child to whom he is only less than a demigod. Then, conscious of threatening doubts in the ranks of his followers, both high and low, he departs for America, ostensibly to forward the plans for the new colony. A day's sail from New York he commits suicide.

The portrayal of such a character ought to make a great book, and the reader is partly puzzled, partly disappointed, at the failure. The reason may be the want both of enthusiasm and of clear conviction in the writer's own mind. Was he a deliberate impostor or only self-deluded? The author has barred himself from the plea that it is for the reader to decide, by his own disclaimer at the outset of any attempt at mystery. To call Montana "a dreamer, not a man of imagination," is to draw a distinction which needs very vivid illustration; but we are left with only chance glimpses of the man's own purposes and the side-lights of the confidence or suspicions of others. The original conception is worked out with various episodes which, however meant to throw light, are made hardly relevant to the story. Such incidents as the recognition of Montana by his father, and Montana's visit to the old man's deathbed, would, in a well-constructed plot, have some proportionate effect or would not appear at all. It is not enough to say that a man was admired or that he had a great following; some inherent reason must appear which will convince the reader against his will if need be. As the book is left, the admiration which Montana received is as little justified as his own suicide.

The *cause célèbre* has so long been considered common property for purposes of fiction that the identity of names in 'My Wife and My Wife's Sister' with those of the principal characters in 'La Peau d'un Autre,' by Boisgobey, need only prove that both authors have used, without any change in this respect, the same records of the criminal courts. The further and more essential similarity in the incidents of the two stories—the escape of the *forçat*, his assumption of another's name, his subsequent discovery and punishment—may be explained in the same way. Here the likeness ceases. So far are we from suspecting the author of 'My Wife and My Wife's Sister' of using Boisgobey's work, that we are inclined to say that if she had she would have made a better book, or none at all. This is not to commend the extravagance of the French story, which is a very ordinary affair of robbery, murder, etc., but to say that it is logical and coherent from first to last. Such virtues as the hero has are the virtues of his class and are not incompatible with his vices. On the contrary, the other book is puzzling in its incongruities and contradictions, and the evident want of conviction in the writer's own mind as to the good or evil of the character portrayed. As the patching of a sort of story, quite distinctively New England in its type, upon a true history of revolting crime, the book may be ingenious, but it lacks the first elements of reality. The early career of the hero is so sketched as to prove him a rascal ingrain, coarse and mean; but later he is supposed not only to be held in high esteem by the Court of the Restoration, but to be loved with utter devotion by the purest and sweetest of women. This last is an improbability more than gross, it is shocking. He might have played a part to win her, but he could not have concealed his true nature from a wife. It is not the want of knowledge of the world, so called, that leads to such misconception of life; it is the want of that power of observation of life without which even experience is not fruitful. The book has been characterized as "strong," but with this clew to the sources from which it was drawn, it will be plain that the strong points are all in the original version of the story. The attempt to fit it in to the recollections of a garrulous old man is something almost comic—doubtless the last thing the writer intended.

The Antietam and Fredericksburg. By Francis W. Palfrey, Brevet Brigadier-General U.S.V., etc. [Campaigns of the Civil War. Vol. V.] New York: Charles Scribner's Sons. 1882.

Two features are distinctly noticeable in the book which General Palfrey has here given us: first, there is a certain flavor of the time itself, which could only be recalled by an actor in it; second, there is abundant evidence of historical qualifications in the author—conscientious study of all the data available, good judgment in digesting and reconciling these data, clear and straightforward expression of well-founded opinions. The story is one of great interest, both to the generation which took part in it and to that which has grown up since the war. Its manner of treatment and its literary execution are admirable. One battle being a dismal failure, and the other little more than a half-success, the narration of them must involve any author in constant criticism. General Palfrey has not been sparing of this, but we believe his strictures are in general abundantly justified by the facts.

Of McClellan the author holds substantially the same opinion that has been expressed by General Webb and Mr. Ropes in the preceding numbers of this series:

"A growing familiarity with his history as a soldier increases the disposition to regard him with respect and gratitude, and to believe, while recognizing the limitations of his nature, that his failure to accomplish more was partly his misfortune, and not altogether his fault. . . . His capacity and energy as an organizer are universally recognized. He was an excellent strategist, and in many respects an excellent soldier. He did not use his own troops with sufficient promptness, thoroughness, and vigor to achieve great and decisive results, but he was oftener successful than unsuccessful with them, and he so conducted affairs that they never suffered heavily without inflicting heavy loss upon their adversaries."

This faint praise is the most that can be said of a man who possessed "a sort of incapacity of doing anything till an ideal completeness of preparation was reached"; who, in decisive moments, "was not equal to the occasion"; and who, "from first to last, never made his personal presence felt on a battle-field." Such a man may be very useful in certain places, but he is not a great commander of troops. The battle of Antietam is his principal claim to gratitude. He had quickly restored order and confidence in an army greatly bewildered, if not demoralized, by its experience under Pope, and he there put it into battle in such a way as nearly to gain a victory and actually to bring his enemy's invasion to an end. The opportunity for a great and overwhelming victory was, as is plainly and admirably explained in this book, thrown by fortune into his hands; but the limitations of his nature prevented him from utilizing more than half of it. It is not necessary to go into the details of the battle; the account of it here given is as clear and intelligible as any account ever can be, in view of the conflicting and vague character of the official reports.

Concerning Burnside's capacity for the command of an army, there never was much difference of opinion; yet we hardly remember to have ever seen so unrelenting a judgment passed upon him as is given in this book. The story seems almost cruel; yet his incapacity wrought cruelty a thousandfold more intense in the space of one short winter's day at Fredericksburg, and it is well to guard against a similar occurrence hereafter by letting these facts stand forth without apology. "Few men, probably, have risen so high upon so slight a foundation as he." Yet every one liked him, and "it is probably true that that man's manners made his fortune; for he remained long in the service in high places, and yet his presence was an element of weakness when he was a subordinate, and was disastrous when he held a great command." At Fredericksburg he committed the fatal mistake of dividing his army on the field, in the very face of an enemy nearly, if not quite, equal to him in numbers, and posted in a position of extraordinary strength. He had an ill-defined idea of turning the enemy's right flank and coming behind his line so as to cause his retreat. Any such flank march was doomed to hopeless failure with such antagonists as Lee and Jackson, and the more men engaged the greater the useless slaughter. Franklin, however, who commanded the troops opposed to the enemy's right, only brought about half his men into battle; and the Committee on the Conduct of the War reported that had he used all his force, Burnside's plan "would have been completely successful, and our army would have achieved a most brilliant victory." The question of Franklin's action is discussed at considerable length in this book, but not very satisfactorily; for the author thinks that "he was most unjustly blamed," and yet "he might have done something more than he did." A man in command of half an army in a great battle, who does less than everything possible, is very justly blamable. He is perhaps not wholly at fault, for Burnside must share the responsibility of the unintelligible orders which he sent him. Even had Franklin done more, it is almost certain that Burnside would have accomplished nothing but defeat and slaughter on that day. He had a vague idea of doing, in full view of the enemy in a strong position, what Lee actually did accomplish at Chancellorsville behind a screen of woods. But between a vague idea and a clear idea there is the same difference as between incapacity and genius. Whether or not we share the author's opinion that the Southern troops fought better than the Northern, we must admit that they certainly had better generals in Virginia in 1862. No comparison can properly be made between Lee, Jackson, and Longstreet, on one side, and McClellan, Burnside, and Hooker, on the other.

Massachusetts in the Woman-Suffrage Movement. By Harriet H. Robinson. Boston: Roberts Bros.

THIS work is apparently the expansion of a paper on the same subject read before a Jubilee Woman's-Rights Convention in Worcester, in October, 1880. The author has meanwhile had the benefit of the Massachusetts chapter in Mrs. Stanton's more comprehensive history, but brings her own review down to date. Mrs. Robinson came late into the cause as a worker, and does not write with either the fulness or the accuracy of a veteran, but in two particulars she testifies of her own knowledge. One is in regard to the famous *Lowell Offering*, of which she was among the contributors; the other concerns the political manœuvres of the Woman Suffragists during the past decade.

The *Offering* finds a place here by the loose construction which connects with the suffrage "movement" any exhibition of female intellectual capacity in unusual directions, and all struggles for the higher education enjoyed by men. Mrs. Robinson, indeed, cites one article from it, during the first year of its publication (1840), on "Woman's Rights," but the aim of the magazine was literary in the vein of that period. What secured attention for the *Offering* was the fact that the writers for it were mill-hands—a fact whose significance in Dickens's and Miss Martineau's mind must have been exaggerated by comparison with factory-girls in England, just as it might now be by confounding with the present class of spinners the farmers' daughters who first answered the call of industry at Lowell. The Anglo-Saxon names of the contributors enumerated by Mrs. Robinson make their performance now seem little wonderful; at the same time they remind us forcibly of the social changes which soon followed the suspension of the *Offering* in 1849. There has never been a time when the female rural population of Massachusetts was not mechanical. Hannah, redomesticated, is still to be found "at the window, binding shoes," or weaving cane-bottoms, or fashioning some other part of the fabric which is put together at the neighboring factory. Meantime she has seen the Irish Celt before whom she gave way supplanted measurably by the Canadian, and the journalistic phenomenon of the mill-town become, instead of a literary monthly, a French daily newspaper. Mrs. Robinson's whole account of the *Offering* is very interesting, and by far the fullest that we have ever met with. Of the other writers for the magazine, one, Miss Foley, has achieved at least a local reputation for sculpture, while Lucy Larcom has something more than a local reputation as a poet.

The abolitionists, it is universally allowed, paved the way for the woman's-rights movement, and furnished gratis the methods of agitation. Their example has not been followed in one essential particular—the refusal to enter into political combinations to secure their ends. Mrs. Robinson's fifth chapter describes the effect of this deviation. In 1870, the year after the founding of the *Woman's Journal*, two representative women (the editors) were for the first time admitted to the Republican State Convention, and presented a memorial for the suffrage, together with some appropriate resolutions. The latter were rejected, but the affirmative vote was large enough to inspire a hope that the Republicans would come out right, and the thought of opposition was abandoned. The next year, in fact, the Convention endorsed woman suffrage; and again in 1872, following the National Republican Convention at Philadelphia. Accordingly, in the Grant campaign of that year the women took the stump for the party, and worked vigorously for its success; but the Legislature of 1873 immediately threw out a woman-suffrage bill by a large majority.

"To close the subject of suffrage planks, or resolutions in the platform of the Republican party, it may be said that they continued to be put in and seemed to mean something until after 1875, when they became only 'glittering generalities,' and were as devoid of real meaning or intention as any that were ever passed by the old Whig party on the subject of abolition. After 1872 the suffrage resolutions passed in Republican Conventions were treated, almost invariably, with contempt by the Representatives chosen by that party to the Legislature; but this same attempt was made year after year, and all the satisfaction the Suffragists got was what some one called a 'new note of hand, of the same amount as the other, never to be paid, but still perfectly good—as a note'" (p. 78).

Odder still, after the right of women to vote for school committees had been conceded by the Legislature, in 1880 the Republican Convention unanimously voted down a resolution "endorsing the new right." This was all the more disheartening to the Suffragists because they had meantime (in 1876) been coquetting with the Prohibitionists, who kindly threw open their primaries to women, and in return had their State candidates "endorsed" and advocated on the stump by the leading Suffragists. But the majority of the nominations which the latter helped to make in caucus were repudiated in fresh caucuses from which they were excluded by their allies, and in one town a distinct woman-suffrage ticket—the first ever seen at the polls—was the result. Mrs. Robinson wisely concludes that if the question is to be settled at the ballot-box, it must be, not by trading votes with one party or the other party, but by forming a new one on the suffrage issue.

On the whole, the facts given in this history show that such a course is not necessary even if it be practicable. Since 1868 woman suffrage has been a part of the regular order of the day in the Massachusetts Legislature; in 1870 a joint special committee on the subject was permanently established; in 1871 Gov. Claflin officially favored the enfranchisement of women, and nearly every gubernatorial message since has taken the same ground; in 1879 the Senate went so far as to pass a general suffrage bill, which the House defeated, though assenting to woman suffrage in school affairs. Mrs. Robinson's chapter reviewing the result of thirty years' agitation (with six years of total suspension on account of the war) is full of suggestiveness.

The Life of Joseph Raynor Stephens, Preacher and Political Orator. By George Jacob Holyoake. London: Williams & Norgate.

ANY fair account of the time in which Stephens, the fervid anti-poor-law orator, was famous—the time when Carlyle first attracted attention by his lectures and writings on the condition of England—would be a welcome addition to the little as yet authentically put forth. In those days, outside of Parliament, the three most prominent men in English public life were perhaps Henry Hetherington, Richard Oastler, and Joseph Raynor Stephens. Hetherington's history is the history of Chartism (of which he may be called the founder), and of the fight for a free press in England (of which he was the head and front). Oastler, a generous-hearted Tory, Church-and-Queen man, also of the sturdy Cobbett sort, devoted himself to the rescue of women and children from their till then unnoticed suffering in factories. Stephens rather stood forth

as the opponent of the Poor-Law Amendment Act, that most important of the acts of the Whig party coming into power with the Reform Bill, which, admitting the middle classes, shut out the working population from the franchise. Hetherington was a political leader; the other two were not politicians at all—only men of strong feeling, stirred to indignation by the miseries surrounding them, with added indignation for the harshness with which the political economists began their rule.

Stephens's own story, however, is a very brief one. A Wesleyan minister (as was his father also), highly esteemed in his vocation, he was suspended for taking too active a part in public matters, and thereafter seems to have been without position, preaching where he could, sometimes writing also. An educated, thoughtful man, warm-hearted and eloquent, he was soon popular. He was indeed the voice of the wrath of the poor, at a time when hatred of the new poor-law was almost a sufficient password to popularity. A more than usually vehement speech, at a torch-light meeting at Hyde, on the borders of Lancashire, subjecting him to a Government prosecution, he was sentenced to eighteen months' imprisonment and to find sureties for good behavior during five years. This effectually silenced him. Of his later life there is nothing worth recording. His death occurred so late as 1879. The old, notorious agitator had long before passed out of public memory.

Mr. Holyoake did not need 236 pages to tell us no more than this; for his desultory remarks on the history and men of the period are too loose to be of any value, and the general reflections are of the same unimportance. For the rest, his book has neither order nor method, is slovenly, and altogether badly written. As a biographer, he does not bring his man before us; as historian, he writes of the "Count D'Orsay, a great leader of fashion, and companion in the revelries of George IV."; as a writer, he is slipshod, stumbling continually into phrases such as, "Mr. Stephens had the happy taste of domesticity"; "Public questions that came within the scope of his ministry" (but no account of what the ministry was); "Space would not suffice to tell in how many contests he was engaged"; and the like. But a false note is struck in the very introduction to the book, written by a nephew of Stephens, who points to John Arthur Roebuck as one of the public men with whom his uncle's "heart beat most in unison." What possibility of unison or sympathy could there have been with Roebuck, a strict Parliament-man, a thorough Benthamite, unpopular, despite his acknowledged integrity, simply because of his determined advocacy of the poor-law to which Stephens was fiercely opposed—that opposition the passion of his heart? The one man was an advanced Liberal, the other a pious Conservative; one, though nervously irritable, was eminently sagacious and prudent; the other, reckless of consequences. One was a close reasoner, a man after the mind of Stuart Mill; the other, if not a sentimentalist, led entirely by his feelings. So vaguely begins the book, and it is as vague throughout. Of Mr. Holyoake's accuracy of statement one instance may be enough. He writes that Stephens "spoke in defence of the People's Charter, but it was because no other means seemed open whereby the people could be helped." Yet he has before him Stephens's own words of "detestation of the doctrines of Chartism."

A good man, honest, eloquent, and enthusiastic, thrown to the surface by circumstance, Stephens was notable rather than great. He should have had a better biographer, or none.

The Book of Oddities. By William Andrews, F.R.H.S. London: Simpkin, Marshall & Co. 1882.

THIS booklet, which faithfully fulfils the promise of its title, will amuse a vacant hour or two. Some of its topics are Revivals after Executions, Female Jockeys, Odd Showers, Singular Funerals, Whimsical Wills, Curious Epitaphs, Dog-whippers and Sluggard-wakers. The chapter headed "A Blind Road-maker" commemorates a man who, though he lost his sight entirely when six years old, soon grew to be expert at bird-nesting, and afterward at field-sports and at fishing with a net. Then he officiated as a guide over the moors and wilds of Yorkshire, and not only trained horses, but rode them at races. Next he did good service as a soldier, set up and drove a stage-wagon, became a surveyor of highways, built houses and bridges, laid out hundreds of miles of road, and finally died at the age of ninety-three. Such, as represented, was John Metcalf, of Knaresborough, the details of whose history are worth reading. Among the epitaphs collected there is one over a tavern-keeper, in which the piety glimmers but dimly amidst the suggestions of an eye to the main chance:

> "Beneath this stone, in hope of Zion,
> Doth lie the landlord of the 'Lion'
> His son keeps on the business still,
> Resign'd unto the Heavenly will."

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, MARCH 2, 1882.

The Week.

EARLY in the week the Stock Exchange came very near drifting into a panic. As it was, there was a heavy decline, chiefly in the stocks of the Southern railroads, which have been under clique manipulation for several months. The chief of these in the decline which took place was Richmond and Danville Railroad stock, which had been marked up from about par to about 250, and which suddenly dropped on Thursday from 219 "ex-privilege" to 130. A kindred stock, Richmond and West Point, fell from 255 to 180, and other stocks less subject to clique control fell 1@16¼ points—the latter, Louisville and Nashville. This last-named stock has been doubled within two years, and has declared 6 per cent. annual dividends since. The system of roads which this company controls is the best in the Southern States, but the company, in its extensions, used its own credit, rather than the securities of the roads which it built or acquired, and the result was that while it had in its treasury as assets many millions of securities, it also had incurred a floating debt of many millions. This, on becoming known, made the stock of the company a subject of attack in the stock market, with the result, in less than two weeks, of driving the price down from the nineties into the sixties. Such a decline in a presumably good stock affected confidence, and was really the cause of the general depression which prevailed. At this juncture the friends of the company consulted with others who are interested in preventing a general discrediting of railroad securities, and a scheme was devised for changing the floating debt into debenture bonds, which friends of the company subscribed to to the amount of $10,000,000. This restored confidence in this stock and in the general stock market, and the result was a recovery in prices of 1@13 points, and of 38 points in Richmond and Danville. The recovery was also assisted by the purchases by the Vanderbilts of the stocks of their own roads.

The market for foreign exchange advanced early in the week so that gold exports again became possible, and the specie shipments for the week amounted to $1,709,563, making the total since January 1 $8,789,740. The Bank of England reduced its discount rate during the week, as did also the Bank of France and the Bank of Belgium, and the tendency in all the foreign markets was to an establishment of confidence as well as to lower rates for money. The New York banks, partly because of the specie shipments, partly on account of the drain of currency to the West, but largely on account of the steady absorption of money by the Treasury, showed a reduction of $4,529,500, which left them $1,433,075 short of a 25 per cent. reserve. Nevertheless the rate for money did not rule above 6 per cent. for any length of time, and was much of the time as low as 4@5 per cent. The Treasury disbursements during March for pensions, bond redemptions, and interest on the public debt amount to $32,500,000. The price of silver varied little during the week.

The "flurry" in Wall Street has called forth the usual homilies from the newspapers, as well as other moralists, addressed to that unfortunate class, the "weak holders," whom the bears periodically "shake out." It would be curious and interesting to know how many men were ever prevented from speculating in Wall Street by advice, and how many of those who advise the weak holder to keep out of the street do so themselves. The attitude of the newspaper moralist toward him is, moreover, almost always too hard and stern, and his cruel admonitions are apt to reach him just when he is in the deepest distress. It seldom consists of anything more cheering or helpful than "I told you so," or "Now you see how it is yourself," when what he most needs is more margin, or some sort of recoupment for his losses. But one thing is very plain, that the small speculator in our day must either suffer or be strong. He cannot avoid suffering if he be weak. The great speculators now command such enormous masses of capital that they make great raids without difficulty and without giving any sign. No watching of the market can prepare anybody for them, and there is no salvation for anybody who cannot survive a heavy fall, for a day or two at least. Some of the great operators, too, make the nearest approach to Satanic methods, in their falsehood, treachery, and indifference to the fate of friends and foes, which the modern business world has yet witnessed. They remind one of Clovis, the king of the Franks, who is reputed to have killed all his relations that he could discover, and then began wailing and lamenting his desolate, kinless state in the hope that more relations would show themselves, so that he might kill them too.

As might have been expected, an investigation has been ordered in the House and moved in the Senate into the contract between the house of Morton, Bliss & Co. and the Crédit Industriel. It was impossible that it should be regarded as a purely commercial contract, in view of the avowal made by M. Suarez in his report to his President as to the object of giving the agency to a "first-class American house," and in view of that clause of the contract which provides that in case it should fail to become "operative and effective," "in consequence of the failure of the United States to mediate between Chili and Peru and Bolivia, and thus to secure peace and the recognition of the concessions, rights, and privileges granted to and secured by the contracts above mentioned," it should cease within six years. This, read in the light of the Suarez avowal, was a distinct stipulation that the continuance of the contract would depend on the success of the firm of Morton, Bliss & Co. in securing the political aid of the United States for the company. It was made all the more significant by the fact that when the contract was negotiated Mr. Morton had been appointed United States Minister to Paris. Mr. Robert E. Randall, who signs the contract in behalf of the firm, pleads in extenuation, in Saturday's *Sun*, that the negotiations began before Mr. Morton was appointed. But Mr. Morton was appointed on the 9th of March, 1881, and the contract was not signed till the 27th of August following; so that he had six months to consider what the effect of the contract on the proprieties of his official position would be. It is as well to add here that the Crédit Industriel is really M. Dreyfus, a very wealthy Jewish banker and speculator of Paris, who has long been in contention with Peru, and we believe gave M. Grévy his first conspicuous case at the bar in litigation arising out of that contention, and is still in intimate relations with him. Moreover, the conversation with Mr. Morton, in which M. Grévy suggested joint mediation, and which Mr. Morton reported to Mr. Blaine, was apparently not called for by Mr. Blaine at all, but was eagerly seized on by the latter as an occasion for producing the American eagle, which he caused to give such a terrible scream that it seems to have scared poor M. Grévy into complete silence. It was plainly no part of Mr. Blaine's plan to have any European partners in the mediation business.

When the desire of the President to make ex-Senator Sargent, of California, Secretary of the Interior was made known to the country, so decided and persistent an opposition was revealed by a large and respectable section of the Republican party that the appointment was wisely withheld. It was not necessary for the President to decide whether this opposition was based upon perfectly valid grounds or not. So far as it was grounded upon the Desert Land Act we think that Mr. Sargent was subjected to some injustice. There is no evidence to show that he was governed by any improper motives in any steps which he took in promoting the passage of that act, or that he ever derived, or hoped to derive, any personal advantage from it. If rascals took advantage of it, they did so in the same way that other land-laws have been perverted from their true intent. Swamp lands, school and university lands, old Mexican grants, military bounty lands, and even lands subject to preëmption, have been made the subject of dishonest practices. But all of these rogueries and those perpetrated under the Desert Land Act in addition have been trifling as compared with those growing out of the Arrears of Pensions Act, yet nobody thinks of holding Senators who voted for this act responsible for the rascalities rendered possible by it. There is no more evidence that Mr. Sargent is culpable in the matter of the Desert Land Act than that Senator Logan or any other Senator who voted for the Arrears of Pensions Act is chargeable with the frauds of pension claim-agents. Nevertheless, the opposition

to Mr. Sargent on the part of a large and well-meaning section of the party was sufficiently pronounced to make his nomination for Secretary of the Interior unwise, and the President did well to reconsider his original purpose. He has now sent Mr. Sargent's name to the Senate as Minister to Berlin. We see no reason why the nomination should not be promptly confirmed. He is a man of marked ability and of large experience in public affairs, a good lawyer, and a gentleman by culture and instinct. We have small sympathy with the division of politics to which he is attached, but it would be unfair to deny him the possession of qualities which go to make up the equipment of a dignified and able representative of the country at a foreign court.

Mr. Blaine's memorial address on President Garfield contained nothing sensational or controversial. It told the story of his life with a certain plainness and simplicity which probably surprised those who only knew Mr. Blaine's style from his diplomatic papers. His judgments, too, were moderate and moderately expressed. He rates his hero highly, but not too highly, as a political philosopher and statesman; acknowledges his unfitness for the office of parliamentary leader, owing to the depth of his intellectual candor; tells of his conciliatory plans and projects with regard to the South, and disposes of the controversy which followed his entrance into office in a short passage of great dignity and reserve, in which he claims for the late President simply the merit of honestly believing his course to be that which the interests of the country and the dignity of his office called for. He says that this course was one from which, such was his dislike of controversy, General Garfield would willingly have receded if personal interests only had been involved. The passage in which he declares that General Garfield was deeply impressed with "the evils arising from the distribution of an overgrown and unwieldy patronage," and that had he lived, he would have proposed to Congress "a comprehensive improvement in the mode of appointment and in the tenure of office," would have been more effective if it had contained also an expression of Mr. Blaine's own feelings on this subject, he having been the late President's chief adviser on it at the period when it most perplexed him.

Mr. Thurlow Weed has written another of his amusing letters to the *Tribune* complaining of the prosecution of General Curtis, instituted by the Civil-Service Reform Association, for collecting assessments from Government employees. The prosecution is based on the United States statute which makes the offence with which General Curtis is charged a misdemeanor, punishable with fine or imprisonment. What makes Mr. Weed's letter amusing is that he takes no more account of the law than if it were a newspaper article, and censures President Arthur and Secretary Folger for winking at its execution, and deplores the withdrawal of Custom-house officers from their duties to appear as witnesses before the Grand Jury. He says that the contributing to campaign funds which the statute prohibits and makes punishable, is "not only a privilege but a duty," and he apparently relies on General Curtis's gallant behavior at Fort Fisher to procure his acquittal. The letter, besides being amusing, is instructive, as showing how thoroughly imbued the old hands have been with the belief that the civil-service reform movement is a joke, and that any attempt to treat it seriously is, therefore, somewhat insulting.

Mr. Elihu Root has been called in to settle the curious controversy as to Mr. Conkling's greatness as a lawyer, and he says without hesitation that "he is a lawyer of the first class," and was nominated by the President simply as the best man for the place. Lawyers of the first class in any country are few in number, and their names must be well known, and therefore it is singular that there should be any dispute about it. What Mr. Conkling's opponents say is not merely that he is not a lawyer of the first class, but that he has no standing at the bar at all, and cannot support himself by his practice. Mr. Whitridge, in his article on Mr. Conkling published some months ago, stated that his argument in the well-known case of the People *vs.* Dennison in the Court of Appeals is not mentioned by any lawyer except as a laughing-stock; and two lawyers of repute who heard it said to the writer that "if it had been anybody else but Conkling, the court would have stopped him after the first fifteen minutes." In twenty years Mr. Conkling had six cases in the Supreme Court of the United States, while Garfield had thirteen, and Mr. Blaine, in his eulogy of the latter, declares that "though admirably equipped for the profession, he can scarcely be said to have entered on its practice." The *Tribune* publishes, from time to time, an extract from his argument in the Court of Appeals with a derisive heading, which it would hardly do except under the impression that the effort itself would tend to bring him into ridicule and contempt. Nominations to judicial offices are, of course, frequently followed by discussions as to the nominee's standing at the bar, but we believe Mr. Conkling is the first lawyer whose nomination to the highest tribunal in the country has been followed by a bitter dispute as to whether he has any standing or practice at the bar at all. The mystery is deepened when we reflect that he has been offered the Chief-Justiceship of the same court once before, and declined it as beneath his notice.

Judge Lowell, in the United States Circuit Court at Boston, on Thursday, rendered a decision in a libel suit against the *Advertiser* which is of interest to railroad constructors and managers, as well as journalists. The plaintiff Crane, it seems, tried to get control of the New York and New England Railroad, and the *Advertiser* discussed and criticised his plans and qualifications for such control in good faith and without malice. The court held that in doing so it was guilty of no libel, on the ground that the character of Crane was a matter of importance to the public, and therefore a discussion of it was among the regular duties of a newspaper. "The distinction is that when a railroad is to be built, or a company to build it is to be chartered, the question whether it shall be authorized is a public one. When the company is organized and the stock is issued, anything which merely affects the value of the stock is private." This distinction is, however, rather fine. Under it, when a monopolist or an operator is organizing a new company, the press may point out that he is a notorious criminal or laid the foundations of his fortune in an act of successful embezzlement, but when the road is built, and he is engaged in a "bear" raid on the stockholders for the purpose of getting control of the stock, we must say nothing about him. This may be good law, but it will never work in New York or in any other great financial centre.

The Pennsylvania law taxing foreign corporations has been copied in this State, and the question as to its proper construction, now pending, is therefore of considerable interest here. The law provides that the capital stock of any corporation, foreign or domestic, *doing business in the State*, shall pay a tax based on dividends paid during the year; or, in case none have been paid, on the capital itself, at a valuation made under the act. For many years the act was construed in Pennsylvania, so far as foreign corporations were concerned, to cover only so much of the capital as was actually used in the State. The State, however, has now taken the ground that the tax must be paid on the entire capital, and has brought a suit against the Standard Oil Company, an Ohio corporation, to test the matter. In this State the act was interpreted last year by the Comptroller according to the view first taken, but now abandoned, in Pennsylvania. Should the decision of the Pennsylvania judges be in favor of the State, the law will probably have to be modified either in Pennsylvania or New York, or both. A statute requiring the taxation of the entire capital of corporations doing business in each State would, in the case of many corporations, result in double taxation of a very glaring character. Some corporations "do business" in every State of the Union—as, for instance, telegraph companies. Laws taxing them in this way might result in a confiscation of their entire property.

The Grant Retirement Bill has passed the Senate, many of the Southerners voting for it, ostensibly in order to prevent General Logan from making a sectional speech. In fact, the difficulty there is now in getting materials for such a speech is very great, and has sealed the fountains of much eloquence. The general silence about the South in the Stalwart ranks is one of the most curious phenomena of the day, because it used to be supposed that a stern and implacable view of the condition of the South was the central dogma of the Stalwart creed. This appears to be gone totally, but the disciples persistently refuse to tell what there is left. Dr. Newman said at the Stalwart dinner the other night that he was a Stalwart "from religious principle and intellectual principle," but he carefully avoided saying what the doctrine was to which his religious principle and intellectual principle had

caused him now to adhere. The South was, in the Stalwart eyes, in a highly dangerous condition up to March, 1881, and had been so for twenty years. What has produced the sudden quiet which, it would now seem, prevails in that region?

The appointment of M. Roustan as Minister to Washington lends a fresh interest to the verdict in his recent libel suit against Rochefort. The charges on which the suit was based were substantially that the expedition to Tunis was a stock-jobbing affair, to which M. Roustan was a party, and that in connection with it he allowed himself, while acting as Consul-General at Tunis, to become the tool of the low gang of adventurers who infested the Bey's court. For the publication of these charges in the *Intransigeant* Roustan sued Rochefort, and the jury returned a verdict of not guilty. The result of the trial was generally accepted not merely as a vindication of Rochefort, but as leaving M. Roustan's reputation under a serious cloud. M. Roustan's friends, however, insist that this is unfair to him, and that the verdict settles nothing as to the truth of the charges. The French press law of libel differs from ours in many respects, but the Roustan-Rochefort proceeding closely resembled at all points what we should call a criminal libel case—that is to say, it was really a trial of Rochefort for the crime of defamation. In proceedings of this kind, under the French law, if the libel touches the private life of the complainant, the defendant is not allowed to prove the truth of his charges, but is punished whether they are true or false—in other words, the law is very much what it was in England and the United States in the last century. In the case, however, of publications relating to official conduct, the accused cannot be convicted unless the charges are false. If Rochefort had been convicted, therefore, the result would have been a complete vindication of M. Roustan; for it would have involved a complete disproof of the charges. His acquittal, however, does not by any means, as a matter of law, involve the opposite conclusion—that the charges were true. The jury may have found Rochefort "not guilty" because they came to the conclusion that he published the libel in good faith, believing it to be true, although, as a matter of fact, it was false, because he was misled by false information, or because he was not actuated by private malice, but by zeal for the public good. Therefore, M. Roustan's friends say, the verdict throws no light on the truth of the charges at all.

But the fact is—and the argument of M. Roustan's friends cannot obscure it—that while, in the present state of the law, the verdict turns technically upon the guilt or innocence of the libeller, still the truth of the facts has to be gone into, and the evidence as to them spread before the public; and the public will consequently draw its own conclusion as to whether a verdict of not guilty was really reached because the jury thought the facts were true, or because they thought there was a lack of criminal intent. In Roustan's case the public, examining the evidence as it was submitted to the jury, made up its mind that the jury must have thought that enough of the facts were true to justify Rochefort in taking them up—in other words, that M. Roustan's proceedings in Tunis were scandalous. The argument in defence of M. Roustan therefore leaves the matter pretty much where it found it. He comes here under a cloud, and his appointment should, according to the traditions of European diplomacy, be regarded as a slight to our Government. Our practice, however, of rewarding stump orators of shady reputation with diplomatic posts abroad makes any resentment on our part at M. Roustan's appointment a matter of doubtful good taste, and perhaps the best thing we can do about it is to take the official view of the verdict, and to give him a cordial welcome to Washington. His appointment may in one sense be regarded as a compliment, for it looks as if the French Government were beginning to break loose from the old monarchical theories of diplomacy, and adopt our own view that one of the proper uses of a foreign service is to furnish places to politicians whose "claims" cannot be recognized at home without scandal.

All attempts to impugn seriously the justice of the reductions of rent made by the Irish Land Sub-Commissions have failed. Recently in Ulster the Commission sitting in appeal employed two of the most eminent valuators in the province to go over the farms on which the Sub-Commissioners had passed, and they came substantially to the same result. The Land Act has in its operation just reached the well-known Mr. Bence Jones, who did so much writing in the English papers last year and the year before in abuse of the Irish tenantry, and in glorification of himself. Nobody, he maintained, who was sober and industrious could have any difficulty in paying the rent on his farms in the County Cork, and he held that to complain of his rents was a virtual confession of idleness and intemperance. The Sub-Commissioners have just attacked his estate and played sad havoc with his just and reasonable rents, cutting down that of one farm from £82 to £59, and that of another from £126 to £86. The effect of all this on English opinion, in making clear the real nature of the Irish question, begins to be marked. In fact, the Commissioners are doing what no amount of discussion could have done in depicting the situation—an island with no industry but agriculture, and held in monopoly by a small class, who spend nothing on the land, and steadily follow the tenants' improvements with rising rents, while avoiding all the duties and responsibilities of any kind of leadership, moral, social, or intellectual, and in all cases in which the income is large living abroad, and making a very considerable contribution to the sporting and frivolous element in English society.

The rumor circulated in London that Mr. Gladstone means to resign in consequence of the inquiry instituted by the Lords into the working of the Irish Land Act, probably explains the object which the Peers had in view in setting the inquiry on foot. The enthusiastic support with which Mr. Gladstone's motion of censure on the Lords' resolution was received in the House of Commons, indicates clearly enough that he will have no difficulty in inflicting a formal rebuke on this last attempt of the Peers to make remedial legislation in Ireland impossible. They have put their best man, Lord Cairns, in the chairmanship of the committee, and Lord Salisbury has explained that the committee is not intended to interfere with the working of the Act, but simply to see whether something cannot be done to right the grievous wrongs of the landlords. That the effect of it on the Irish farmer's mind will be, however, an impression that the Act is not a finality, there is little question. The Land Leaguers will certainly use it to produce such an impression, and the Ministers will therefore be justified in using every means at their disposal to show the Irish that it amounts to nothing and will amount to nothing.

A formal contradiction was hardly needed to dispose of the Tory story that Mr. Gladstone was so appalled by the difficulties in his path arising out of the House of Lords' inquiry into the working of the Land Act that he was going to resign He is not going to resign, and will not dissolve Parliament unless he finds that he cannot obtain the changes in the procedure of the House which he considers absolutely necessary to secure the passage of the measures relating to England, which, now that Ireland is out of the way, constitute the Liberal programme. He has triumphed in the first move toward the censure of the Lords' inquiry, by carrying a motion for a postponement of the order of the day by 300 to 167. If he is forced to a dissolution, the most serious consequence will be a reinforcement of the Parnellites in the House. That their number would be doubled by a general election is considered a moderate estimate; that is to say, their strength would probably be increased from under thirty to over sixty.

The House of Commons has expelled Bradlaugh from his seat, nobody knows for what except that the majority thinks him a bad man, and does not like him. As the affair now stands, it is undoubtedly the most extraordinary in Parliamentary annals—much more extraordinary than the Wilkes affair, because when that occurred the powers of the House had not been settled as they have since been. Mr. Gladstone, who probably secretly sympathizes with the Conservative view of Bradlaugh, not only refused to treat it as a Cabinet question, but refused to vote himself, and his followers split—the Whigs voting for the expulsion, the Radicals against it. The only thing which can possibly furnish a justification for the House in the eyes of the public is the personal odiousness of Bradlaugh, who is considered not only an atheist, but an obscene atheist. If the Northampton electors should send him up again, however, and stick to him, the House would unquestionably have to back down in the end, and the more atheistical and obscene he is the more humiliating will the back-down be. The majority, it is said, already begins to be conscious of the difficulty into which it has got itself.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

On Friday the President sent to the Senate the names of Roscoe Conkling, of New York, to be Associate Justice of the Supreme Court, and ex-Senator Sargent to be Minister to Germany. The nominations, especially that of Mr. Conkling, have excited great surprise throughout the country. They were reported favorably to the Senate on Feb 28 from the Committees on the Judiciary and on Foreign Relations respectively, but no action was taken by the Senate.

The services ordered by Congress in commemoration of the life and public services of President Garfield were held in the hall of the House of Representatives on Monday. The feature of the occasion was the oration of Mr. Blaine, who acquitted himself in a manner universally acknowledged to have been graceful and appropriate. Much curiosity was shown by the audience in regard to the way in which Mr. Blaine would treat the political difficulties that preceded the assassination, and there was a "rustle and sigh of relief" at the termination of the passage in which the orator, with great tact and delicacy, reviewed this episode in President Garfield's Administration.

A member of the select committee to audit the accounts of the expenses of the sickness and death of the late President Garfield, gives the following as the corrected list of items which the committee will recommend: For Dr. Bliss, $25,000; for Drs. Agnew and Hamilton, $15,000 each; for Dr. Boynton, $10,000, and for Dr. Edson, $5,000. Surgeon-General Barnes is recommended for promotion to the rank of Major-General, and Surgeon Woodward to the rank of Lieutenant-Colonel. The committee will also recommend that there be paid to Mrs. Garfield an amount equal to the salary of the President from the date of his death to the end of the year.

On Friday resolutions were adopted in the Senate and House directing the Committee on Foreign Affairs to inquire and report concerning the abstraction of certain letters relating to the Chili-Peru complication from the files of the State Department, and also concerning the making of any contract, in Paris or elsewhere, by and between any foreign corporation or company and American citizens, in relation to any concession made by Peru to any foreign corporation wherein allusion was made to the diplomatic action of the United States.

The missing letters referred to in the resolutions are eight in number, five written by Mr. Shipherd to Mr. Blaine and three by Mr. Fisher to Mr. Blaine. The latter part of the resolutions refers to a contract, a copy of which has been published, alleged to have been made between the Crédit Industriel and the banking-house of Morton, Bliss & Co., of New York, of which Mr. Morton, American Minister in Paris, is the head, assigning to the said banking-house the sole agency in this country for the sale of Peruvian guano, the commission to be five per cent. The contract was to become void at the expiration of six years if the Crédit Industriel's contracts with Peru should fail to become operative and effective in consequence of the failure of the United States to mediate between the belligerents and thus secure peace and the recognition of the concessions, rights, and privileges granted to the Crédit Industriel.

On Thursday both Houses of Congress adopted a joint resolution, appropriating $10,000 for the relief of persons in the districts recently overflowed by the Mississippi River. The inundated district embraces all the Mississippi delta between Memphis and Vicksburg, four-fifths of the population of which is composed of colored laborers, who will not have the means of support during the period for which this overflow will necessarily interrupt labor.

On Thursday the Senate passed the bill placing General Grant on the retired list, with the rank of General and pay at the rate of $10,125 a year. Thirty-five Senators voted for the bill and seventeen against it.

It is stated that the Appropriation Committee of the House has its work well in hand, and will be ready at any time, at two days' notice, to report two or three of the general appropriation bills, one of which, the Pensions Appropriation Bill, will probably call for an expenditure of $90,000,000.

The House of Representatives passed the Post-office Appropriation Bill on Saturday, and the Military Academy Bill on Tuesday.

The House Committee on Naval Affairs has agreed to the report of the sub-committee, which recommends that $10,000,000 be appropriated for beginning the construction of a new navy

A resolution was adopted in the House on Saturday, for the appointment of a select committee of nine members, to which shall be referred all petitions, bills, and resolutions asking for the extension of the suffrage to women and the removal of their legal disabilities.

The Senate Committee on the Civil Service continued its regular weekly investigation of the subject on Saturday, by hearing Mr. George William Curtis.

Commissioner Dudley reports to the Senate that the records show that since July 1, 1876, 9,608 pension cases have been investigated, with the result that the names of 2,188 pensioners were dropped from the rolls and 1,976 pending claims were rejected. In 500 cases, in which the evidence of fraud seemed strongest, it is shown that there were over 3,000 false affidavits made and 113 cases of forgery.

The House Committee on Elections have resolved that Delegate Cannon is not entitled to a seat in the House as Delegate from Utah. The ground on which this decision is based is that the House has a right, at any time, by a majority vote, "to exclude from the limited membership which it now extends to Delegates from Territories, any person whom it may judge unfit for any reason to hold a seat as a Delegate." The reason for excluding Mr. Cannon is that he is not free from the "taint and obloquy of plural wives," and that, from his own admission, "he practises, teaches, and advises others to the commission of that offence."

The Census Bureau has completed the estimate of the population of Utah Territory. From this it appears that there are in the Territory 120,283 Mormons, nearly 37,000 of whom are of foreign birth, 6,988 Apostate Mormons, 820 Josephite Mormons, and only 14,156 Gentiles.

Large anti-polygamy mass-meetings were held in various cities throughout the country on Wednesday evening, at which speeches were made and resolutions adopted denouncing polygamy. On the same day petitions praying Congress to half in legislating for Utah were presented for signature at "probably every house in the Territory." The children in all the Mormon schools were made to sign, and a great number of Gentiles were asked to sign.

The Legislature of Utah adopted a memorial to Congress on Saturday, setting forth that "persons whose aim is to gain control of this now wealthy and prosperous Territory and manipulate its finances," are at the bottom of the anti-polygamy movement, and that the measure before Congress, "while ostensibly aimed at the marriage relations of a small portion of the people, will, if carried into effect, deprive the whole Territory of its vested rights." The memorial then goes on to deny the charges which have been made against the Mormons, and accuses the representatives of the Federal Government in Utah of every description of wrong-doing.

A meeting was held in San Francisco on Saturday evening, at which were present delegations from the Chamber of Commerce, Board of Trade, and Board of Brokers, to arrange for a mass-meeting, irrespective of politics, to be held shortly, to express the sentiment of the business men of the community in favor of the Anti-Chinese Bill now pending in Congress.

At a dinner of the Merchants' Association, of Boston, on Saturday, Mr. Charles Francis Adams, jr., set forth, by request, his views on railroad legislation, and read the draft of a bill prepared by himself for the establishment of a Bureau of Inter-State Commerce, with a board of commissioners to be composed of an eminent lawyer, a practical railroad man, and a "statistician and economist." As men eminently qualified to fill these positions, respectively, Mr. Adams mentioned Judge Cooley, of Michigan, Mr. Robert Harris, General Manager of the Erie Railroad, and Mr. Francis A. Walker, recent Chief of the Census Bureau.

An important suit, involving a matter of much importance to corporations, has been brought before the Court of Common Pleas of Pennsylvania. The State of Pennsylvania has sued the Standard Oil Company for taxes, and the principle involved is whether the State has the right to tax such portion of the corporation's capital as is employed outside of the State.

It is stated that the case of General Fitz-John Porter has been several times before the Cabinet, and that indications point to the nomination of General Porter to be a Colonel of Infantry, which will carry with it, when confirmed, a relief from all disabilities imposed by the verdict of the original court in his case. A very elaborate defence of this verdict was made on Tuesday by Gen. J. D. Cox before the Army and Navy Society at Cincinnati.

The Flipper court-martial case is in the hands of Judge-Advocate-General Swaim, who is engaged in revising the proceedings of the court which recommended Flipper's dismissal from the service.

The trial of Sergeant Mason for the attempt to shoot Guiteau is now going on before the court-martial at Washington.

The steamship *Illinois*, having on board 325 Jewish refugees from Russia, arrived in Philadelphia on Thursday. They came mainly from the Province of Kieff, and from Odessa, and Warsaw, most of them being tradesmen and a few farmers. They were met on their arrival by the Citizens' Reception Committee and a corps of volunteer physicians, and every effort was made to minister to their health and comfort.

The annual dinner of the Massachusetts Democracy was held in Boston on Wednesday last.

There was a riot in Chicago on Tuesday, caused by a number of striking rolling-mill hands attacking a number of men who had been employed by the Union Iron and Steel Company to fill their places. The police were not in sufficient force to protect the workmen, who were pelted and hooted by the mob.

Señor Zamacona, Mexican Minister at Washington, has presented his letter of recall to the President.

Mrs. Caroline Leroy Webster, the second wife of Daniel Webster, died at New Rochelle, N. Y., on Sunday.

FOREIGN.

In the House of Lords on Friday a committee proposed by Lord Donoughmore to inquire into the workings of the Land Act in Ireland was agreed to without a division. Lord Cairns was chosen chairman. Lord Salisbury stated in the House of Lords on Saturday that the object of the committee had been misrepresented. He said that it would neither try the Land Commissioners nor seek to repeal the Land Act, and that if any change were to be made, it would be in the direction of redressing the wrongs of the landowners rather than of diminishing anything which the tenants might have acquired by the act.

In the House of Commons on Monday, Mr. Gladstone moved the postponement of the orders of the day in favor of his resolution declaring that an inquiry into the workings of the Land Act would be injurious to the interest of good government in Ireland. The motion was adopted by a vote of 300 to 167. In moving his resolution Mr. Gladstone said that the course the Government proposed to take was one of extreme necessity, and that feeling the beneficial operation of the law was threatened by this action of the House of Lords, the Government desired to show the administrators of the Act that they had the House of Commons behind them. He then pointed out that the House of Lords committee was composed almost exclusively of landlords, and that it was inexpedient that the relations between landlord and tenant should be overhauled by the promiscuous inquiry of a prejudiced tribunal. The debate was then adjourned till Thursday. The situation is thought to be serious, since the Opposition and the Irish members, by resorting to moderately obstructive tactics, can prolong the debate on Mr. Gladstone's motion until the Easter recess. There are various reports to the effect that Mr. Gladstone is determined to resign on account of the continuation of the difficulty in dealing with Irish matters, but these rumors are said to be entirely without foundation.

Two hundred Liberal members of Parliament were present at a meeting held at Mr. Gladstone's house on Monday. The proceedings were private, but it was learned that Mr. Gladstone explained the importance of pressing his resolution, and that his views seemed to meet with general assent.

In the House of Commons on Wednesday a number of propositions were advanced to relieve the House from the difficulty in regard to Mr. Bradlaugh. Finally, during the discussion of Mr. Lyon's motion declaring Mr. Bradlaugh guilty of profanation and therefore incapable of sitting in the House of Commons, Mr. Labouchere demanded that Mr. Bradlaugh be heard at the bar of the House. The House received this motion unfavorably, and Mr. Bradlaugh thereupon passed the bar and took a seat. In consequence of this fresh act of disobedience, and because Mr. Gladstone refused to act, Sir Stafford Northcote moved that Mr. Bradlaugh, having disobeyed the chair and being in contempt of the House, be expelled. Mr. Gladstone supported this motion, which was carried by a vote of 291 to 83. A new writ for Norhampton was then ordered, Mr. Labouchere stating that Mr. Bradlaugh would be a candidate.

Mr. Michael Davitt has been elected to Parliament from Meath to fill the seat made vacant by the resignation of Mr. A. M. Sullivan.

It is said that Mr. Parnell has just completed a week's solitary confinement in consequence of a warder having charged him with trying to bribe him and smuggle a letter out of prison. Mr. Parnell denied the charge.

A large meeting of cotton masters took place in Manchester on Wednesday. The chairman dwelt on the serious position of the trade caused by the decline in prices and the increase in stock. A resolution was passed unanimously declaring that it is necessary to cut down the production.

The Lancaster cotton manufacturers unanimously resolved, at a meeting on Tuesday, to close their mills for a fortnight before the 12th of April.

A meeting of the executive committee of the Mansion House Fund for the relief of the Russo-Jewish refugees was held in London on Wednesday, and a sub-committee was appointed to select places for the formation of agricultural settlements, attention being particularly directed to Palestine and the Canadian northwest. The sum of £10,000 was placed at the disposal of the sub-committee.

The Crystal Palace International Electrical Exhibition was formally opened in London on Saturday evening. Experts state that it is even more complete than the exhibition recently held in Paris.

In the House of Commons on Monday Sir Charles Dilke, Under Foreign Secretary, said that Lord Lyons had been corresponding with the Mexican Minister at Paris, with a view to the resumption of diplomatic relations between Great Britain and Mexico.

The Prince of Wales, speaking at a meeting of the promoters of the International Fisheries Exhibition to be held in London in 1883, said he hoped the American Government would contribute at least as liberally toward the expenses of it as it did toward the Berlin exhibition.

The results of General Skobeleff's recent speech are beginning to manifest themselves. One of the Russian newspapers states that henceforth precautions will be taken to prevent Russian public servants in high office from discussing matters of state policy on their own account. Meanwhile the Czar has ordered the General to return to St. Petersburg, and it is expected that he will be required to explain his speech. It is also positively stated that Prince Bismarck has demanded explanations from the Russian Government in regard to the matter.

It is stated in diplomatic circles in Vienna that General Skobeleff's recall was mainly due to the representation by Prince Orloff, Russian Ambassador in Paris, of the personal intercourse which General Skobeleff had begun to establish with French politicians of the *Revanche* party, and of the impression his speech had produced in Paris. It is also announced from Berlin that Prince Orloff has assured Prince Bismarck that the Czar is greatly offended at General Skobeleff's attitude in Paris.

The trial of the twenty-one Nihilists, charged with "robbery, assassination, and attempted assassination," ended on Tuesday, Feb. 28. It is difficult to get any accurate account of the proceedings at the trial, which is said to have been conducted with greater secrecy, severity, and disregard of the ordinary usages of legal procedure than any political trial heretofore. The prisoners, only fifteen of whom were represented by counsel, were very disorderly and reckless. They all objected to the jurisdiction of the Court, on the ground that they were accused of crimes against the Government, which was an interested party, and the Court, therefore, which was the Government's organ, could not legally pass judgment upon them. One of the despatches states that they all pleaded guilty, except two, who pleaded an alibi. On Thursday, one of the prisoners, Sutchanoff by name, is said to have drawn such a vivid picture of the abnormal social conditions that had driven him to a career of crime that even the judges were deeply affected. All of the accused declared that they were Socialists and were willing to carry on a peaceful propaganda, but that they had been driven to illegal acts by the Government's cruelties. Ten of them, including one woman, were sentenced to death; the remainder to various terms of penal servitude.

It is officially announced that the Austrian column encountered 1,000 insurgents at Krstac on Thursday last, and after nine hours' fighting defeated them. Herzegovinian refugees are flocking in great numbers to Montenegro, and the Montenegrin Senate is discussing relief measures for them. Several thousand of them recently, becoming desperate in consequence of severe weather, broke through the cordon of Montenegrin troops, and are now said to be in a state of "indescribable misery."

The Austrians have lost 116 killed and wounded, including ten officers, in skirmishes with the insurgents in Herzegovina since the 16th instant.

The London *Standard's* correspondent at Constantinople says that the mobilization of 150,000 troops is projected, in view of probable complications in Bulgaria, which may make necessary the occupation of the Balkans.

A bill introduced into the French Chamber of Deputies by M. Tirard, Minister of Commerce, in regard to the importation of English goods, has been adopted. It authorizes the prolongation of the present treaty until May 15th.

Elections were held in France on Sunday to fill two vacancies in the Senate and fourteen in the Chamber of Deputies. With one exception, where a Bonapartist was elected, Republicans of various shades were successful. Five second ballots, however, will be necessary. M. de Freycinet, who was elected Senator in four constituencies, has announced his intention of sitting for the Department of the Seine.

A despatch from Paris states that the appointments of M. Roustan as Minister to Washington, and M. Cambon, formerly Prefect of the Department of the North, as Minister to Tunis, have been gazetted.

The French Government has resolved to modify the law relating to the expulsion of foreigners, so that every foreigner who has been convicted of a crime in his native country may be expelled from France immediately, without any formality.

M. de Freycinet, replying to an interpellation in the French Chamber of Deputies on Thursday, said that the situation in Egypt might have serious consequences; that England, perceiving this, had proposed to submit the matter to the powers. He further said that the French agent in Egypt had been instructed to assume an attitude of extreme reserve toward the new Government.

Mahmud Baroudi, President of the Egyptian Council, has written to the Governor of Sudan, informing him that the functions of the new Special Committee for the province will include taking steps to insure the complete suppression of the slave trade.

The Opposition in the Greek Chamber of Deputies has defeated the Government on the question of invalidating the recent election on the Island of Milo. This is the first trial of strength between the Government and the Opposition.

A London despatch from Madrid says that political circles in Spain are unusually animated. Resistance to the collection of the new taxes is increasing, and Señor Comacho, Minister of Finance, is materially injuring the popularity of his Cabinet by the severe measures taken against the leaders of the trade syndicates. The Cortes will probably be convoked in March, as the state of public opinion requires an early examination by Parliament of the financial policy.

Senhor Barbosa has introduced a resolution in the Portuguese Chamber of Deputies proposing an alliance between Spain and Portugal, on the ground that united nations need fear no foreign aggression; that they would be able to reduce their armies and navies to such a footing as would suffice for the requirements of their colonies, and that Lisbon and Oporto would become centres of intercourse with Brazil and the Spanish American republics.

Don Carlos has written to his representative in Madrid, apropos of the Spanish pilgrimage to Rome, that he does not intend to go to Rome, as he does not wish to cause the Pope any inconvenience.

Copies of an indictment covering twenty-six pages of folio have been handed to eight persons in Vienna, charged with contributing by their negligence to the recent fire at the Ring Theatre. Among the accused are the ex-burgomaster of Vienna, the manager of the Ring Theatre, and the chief commissary of the police. Two hundred and twenty-six witnesses have been summoned, and the trial will begin on the 2d of May.

TUESDAY, February 28, 1882.

MR. CONKLING'S NOMINATION.

THE nomination of Mr. Conkling for the Supreme Bench has apparently taken everybody by surprise, and yet, when one comes to reflect on it, it seems the natural product both of President Arthur's own state of mind and of the policy he has thus far pursued in making appointments. It was folly to suppose that after having worked in politics for twenty years under Mr. Conkling's leadership, and having supported him in the disastrous contest at Albany over the Senatorship last spring, Mr. Arthur would, in consequence of anything that has happened, change his estimate of his friend's capacity and character. He probably feels about both as he felt a year ago. Mr. Conkling's immediate followers have an admiration for him which is nearly as great as Dr. Newman's, though they would not express it in such extravagant language. There is no denying that in the peculiar system of political management which has grown up since the war, through the enormous increase in the Government patronage controlled by Senators, Mr. Conkling has attained the greatest excellence. There is no man who believes in that system and has formed part of it but must, therefore, rate his capacity exceedingly high, and think him fit for any place of dignity or trust. Indeed, one of the most curious features of the spoils system is the effect it produces on the imagination of those who work under it, as to the universality of talent which must belong to those who reach in it the rank of "boss." Mr. Conkling has for many years enjoyed among them the reputation of being a great statesman without ever having originated any important legislation, or shown much interest in any great question of the day; and the reputation of a great lawyer without ever having followed the profession of the law continuously or successfully. When he left the Senate last spring there did not seem to his friends anything ridiculous in the story that a New York firm had offered him a partnership with a guaranteed income of $50,000 a year.

The President, too, has, ever since he began to make appointments, followed the plan of doing something for both factions of the party. He has managed to do so thus far with great skill and discretion. He has made no conspicuous selections from his own wing (except Mr. Howe's) that seemed decidedly objectionable, and has made some which were in every way creditable. He has moved so slowly, too, as to create a highly favorable impression as to his care and deliberateness. But he has probably felt from the very outset that it was not possible for him to let his old chief languish in obscurity and discredit without a certain amount of personal humiliation for himself, and without tacitly acknowledging the folly or malignity of the attacks made by his own political friends on the Administration of General Garfield. "Recognition," as it is called, of Mr. Conkling, in some shape has, therefore, been a necessity with him. It would perhaps have been asking too much of human nature to ask him not to give it.

"Recognizing" Roscoe Conkling is, however, no easy task, because recognition must be acceptable to the object of it to be of any real use. There is probably no office yet created by man, since the foundation of political society, which the ex-Senator considers entirely equal to his merits and powers, and yet all American offices are surrounded by legal restrictions, and the offices in the President's gift are not the most desirable. The only conspicuous or dazzling things he has to bestow are the foreign missions, the custom-house collectorships, and the United States judgeships. Collectorships are far beneath Mr. Conkling's notice. There is only one foreign mission which could have any attraction for him—that of London; but no one knows better than he that, even if he could get over his contempt for the exile which foreign missions involve, no man of prominence in public life is much less fitted than he either to shine or be comfortable in London society. There thus remained nothing but the Supreme Court, and it must be confessed that it is difficult to see how this can answer the President's purpose, whether that purpose be to satisfy Mr. Conkling or give the Court a good judge. It can hardly flatter Mr Conkling now to offer him an associate-justiceship in the court of which ten years ago he refused the chief-justiceship. Moreover, if he is now engaged in making money by his profession, the salary of an associate justice cannot be very tempting. Besides this, he has been accustomed to living alone in whatever sphere he chose for himself. To have to share his authority with several others, and be compelled to agree with them, or be overruled by them, would, unless he has undergone some great spiritual change, be what quiet is said to be to quick bosoms. In fact, it would be difficult to conceive of a person less fitted as regards temper for a court containing many members, all of whom would probably consider him less well equipped than they for their common duties.

Of his fitness for the place, considered apart from his peculiar claims on President Arthur, we fancy there can be but one opinion. Men as violent in their partisanship, and as difficult in their temper, have many times before now made good judges. The history of the English bench is full of such cases But we cannot recall any case in which a man was put on such a bench as that of the Supreme Court with so little preparation in the way of practice at the bar. Unless everything that lawyers have been saying for two thousand years as to the requirements of their profession be pure pretence, Mr. Conkling is a lawyer only in name, and must make a poor judge. He has passed his life in politics. The few briefs he has held have come to him mainly because he was a politician of prominence. Legal learning he has not, and cannot have, nor can his mind have that sort of saturation with legal habits of thought which has always been supposed to be absolutely necessary to judicial efficiency.

If President Arthur has offered him the place —as some have suggested—to fulfil a personal or party obligation to a political chief, and with the expectation that he will decline it, he has put the Supreme Court to a use which cannot for one moment be defended or excused. Nothing is more important—and nothing is more difficult—than to maintain popular respect for such a court in a country like ours, in which the excitement of party politics searches every nook and cranny of the Government. Nothing is better calculated to bring it into contempt than the use of the judgeships as complimentary offerings the acceptance of which is not looked for. In fact, it is the duty of the President never to offer one of them without knowing that it will be accepted. It is not an office of which any President can afford to make little publicly.

For similar but still stronger reasons, it is not an office which any President can afford to use as a refuge for battered old friends, with whom the world has gone hard. The Custom-house has long—too long—served that purpose. It would be a most disastrous thing for the Constitution and the laws if the Supreme Court ever came to be looked on either by the politicians or the bar as a similar retreat. It is not now and never has been a place to which active politicians looked forward as a prize, and it is not desirable that it should be. But everything should be done to keep it as the goal of honorable legal ambition, and the reward of legal eminence. Time was when success in New York politics was, as in Mr. Seward's case, in no way incompatible with fitness for high judicial office. Perhaps that time will soon come again.

RAILROADS AS PRIVATE PROPERTY.

MR. REAGAN, of Texas, being challenged last week by Mr. Wayne MacVeagh, who was arguing before the House Committee on Commerce against Congressional power of railroad regulation, to say what remedy he would propose for the admitted evils of railroad management, made answer that he would propose three things: A law denying the theory that railroads are private property; a law prohibiting them from "insulting the popular intelligence" by claiming the right to fix the cost of transportation; and a law prohibiting discrimination between places in fixing rates. We presume, however, that he would really embody all these things in one act. The second of his provisions it would be difficult to enforce, and would probably be made unnecessary by giving the State the right to regulate charges. If the corporations were not allowed to fix rates, they might be allowed to "insult the popular intelligence" by claiming the right to do so as much as they pleased.

It is very plain that in this, as in so many other cases, the extreme view of neither side is correct. The railroads, as they have been made in this country, are undoubtedly private property, as Mr. MacVeagh and Mr. Alexander, of the Louisville and Nashville Road, maintain. The American railroads have in the main been constructed with the money of individuals, and without any state guarantee, or protection against loss, except the land grants, with which many have been aided since the war. On the greater part of their cost—about fifty-two per cent., we believe—they pay no dividends. Very few of them have been made without loss to the first projectors, who have never received from either Federal or State Governments the slightest

countenance for the notion that their venture was not exclusively their own affair. In fact, it may be said in general terms that the railroads of the United States have been constructed strictly on the private-property theory, and that such state aid as has been given them has been given with the view of inducing them to push their lines into regions where there was no population, and to which the Government wished population to go. In no other country has the private-property theory been so fully recognized; and while hundreds of individuals have been enriched, hundreds of thousands have been ruined by it. So far Mr. MacVeagh has the facts on his side.

But, on the other hand, it is also true that no Government has ever recognized any such thing as absolute control by individuals of any kind of property. No man enjoys even possession of his house, except under conditions created for the safety, or health, or comfort of his neighbors. There is no older legal principle than that which makes your use of what is your own dependent on your not injuring what is your neighbor's. Every Government has applied this principle to all property the management of which greatly affects the public welfare or prosperity.

The most conspicuous illustration of it is the legislation of all countries with regard to landed property. Property in land has hitherto been the kind of property by which the whole community was most affected in health and happiness, and on which national prosperity has been most dependent. Accordingly there has never been anywhere absolute property in land. Legislation has everywhere and always bristled with restrictions on the use of it. The mode of acquiring it, as well as of holding it, is the subject of limitations to which personal property is not exposed. Moreover, there are few modern countries in which landed property has not passed through a process amounting to partial confiscation because absolute proprietorship had been found to work public injury. France, Prussia, Austria, Russia, have all gone through this process. Ireland is now going through it. England will probably very shortly go through it.

In the United States no mass of property has hitherto arisen the management of which has created interests really or apparently antagonistic to the public interest. We have not had, and are not likely to have for a long time to come, any land question, because we have still more land than we know what to do with. Railroad property has, however, undoubtedly begun, in its relations to the community at large, to furnish an analogy to European landed property. It has in its more absolute form begun to develop evils and inconveniences very much resembling those created in France, and Ireland, and England, by the concentration of land in the hands of a few owners over-conscious of their proprietorship. It affects the interests of commerce, and agriculture, and manufactures at so many points, in short, as to make the private-property theory untenable, and to make state interference not only justifiable but imperative, for the very reasons which call for the existence of government at all. Private property should be in every civilized state a very sacred thing, but no state was ever yet willing to have its rate of progress diminished, or the comfort and safety of the bulk of its citizens sacrificed to the sacredness of any kind of property.

We may take it for granted, therefore, that there will be state interference here with railroad management before long. Nay, there must be; and it will, we trust, be attempted on neither Mr. MacVeagh's theory nor Mr. Reagan's. Railroads are private property, but private property with serious limitations; and in regulating them, as in regulating land tenures in older countries, the object aimed at, as long as the state is not ready to buy out the owners, is to interfere no more than is absolutely necessary, and to do as little as possible to diminish their attractiveness as an investment for prudent people. It is quite clear that the private-property theory is, even in the eyes of investors, rapidly breaking down. The victims of the pending "war" between the great trunk lines begin to see that they could hardly fare worse at the hands of a Government Commission regulating rates than they now fare at the hands of their own "kings" indulging in the royal pastime.

THE SCRUTIN DE LISTE IN ITALY.

Ten years of Italian unity and independence have passed, and, in the opinion of all impartial men, the representative system has proved an entire failure. Considering that only 600,000 out of 30,000,000 are electors, and that of these barely sixty-two per cent. take the trouble to register their votes, the Chamber of Deputies can scarcely be called a representative Assembly; still less the Senate, whose members are elected for life, nominally by the King, but in reality by the existing Government, whenever it wishes to carry a measure obnoxious to the majority of that august body. Under the present system the most striking individualities, whether for patriotism or for intelligence, have been used up and exhausted. Men such as Spaventa and Cairoli, pillars of their respective parties, have utterly lost caste through their ministerial failures; in short, every thinking member of the nation decided long ago that a very radical reform must be introduced into the representative system if monarchical institutions were to take root in the country. The Conservatives as a whole trembled at first at anything approaching to universal suffrage, fearing the inroads of the Republican workingmen. Many staunch Liberals, on the other hand, objected through the fear that the most disciplined party, which assuredly is the Catholic, would carry the day. Bills were brought in and shelved until outsiders took up the question thoroughly; hundreds of meetings in favor of universal suffrage were held, and the existing Ministry realized that the last shadow of their popularity would vanish if they did not satisfy the country with a sweeping measure of reform. Hence the Reform Bill recently passed, which is next door to universal suffrage, as all who can write the sacramental phrase, "I demand to be inscribed on the electoral lists," acquire the right in virtue of this simple act. The measure, passed by a large majority in the House, was slightly modified by the Senate, and, with their practical common sense, the Deputies, instead of hesitating and cavilling, accepted the modifications in order not to postpone the passage of the bill, and the Ministry, with equal prudence, separated the question of the extension of the suffrage from that (far more complicated) of the *scrutin de liste*.

During the recess, however, the question was very seriously mooted and thoroughly sifted. Zanardelli, the ablest man in the Ministry, had in his report on the Suffrage Bill warmly advocated this measure as the only one tending to change the phys'ognomy of the House, which now, as is recognized by all, is composed of a large majority of mediocrities and, still worse, of jobbers. Able Conservatives, and as able Progressists, have drawn startling pictures, which but for the seriousness of the question would be also amusing, of the methods adopted for becoming a member of the Italian Legislature, and of the gymnastics and manœuvres necessary to keep the pledges given to electors. The purchase of votes by money is very unusual in Italy, but the successful candidate has to give more than money's worth in promises and pledges to his electors. Taken as a body, possibly, they want a railroad to pass through their town, or a bridge thrown over the neighboring river; separately, one wants the vacant pharmacy, another the right to open a shop for the sale of tobacco and salt (Government monopolies); posts under Government are wanted for the sons of everybody, advancement for those who have already obtained them. So, when the successful Deputy arrives in Rome his first care must be to obtain access to one or more of the Ministers and proffer his plea; and, with a dubious majority, Ministers again and again accede to the most unreasonable requests rather than disgust a new Deputy. This is one of the crying evils that the *scrutin de liste* will, it is hoped, put an end to, because local influences will have little weight with men no longer elected by a group of voters in the same town or commune, but by all the men of the same party throughout the province.

Another of the evils which the *scrutin de liste* is supposed to obviate is that of undue Government influence in favor of this or that individual. Under the Conservative Government this influence was used most unscrupulously: Government servants were sent in a body to vote; prefects and syndics were duly instructed as to what candidates they were to support. Less openly but scarcely less effectively has the influence of the Progressist Ministers been felt, especially in Naples, the hotbed of intrigue, where Liberal Ministers in power set themselves openly to defeat the candidates of ex-Liberal Ministers, and in many cases succeeded. It is believed that it will be far more difficult for the reigning Ministry to influence a whole body of electors, throughout a province, in favor of a list of candidates, than single and separate electors in favor of a single and separate candidate. The large majority which voted for the *scrutin de liste* shows that much is expected from the measure by men of all parties; hence their approval of it, many of them saddling the vote with the proviso that they by no means intended it to be taken as a vote of confidence in the Ministry.

A minute analysis of the various systems of elections has been given by Zanardelli in his report on electoral reform, and he has also given the opinions of the ablest champions on either side. In Italy the adversaries of the *scrutin de liste* are able to cite Count Cavour, who once, in a long speech, expressed his fear that it would render the national representation altogether illusory. He maintained that the right of the elector consists in choosing as his representative the man whom he deems fittest to make the national laws and conduct the affairs of the country. How can he do this if the candidate who solicits his vote is unknown to him? Will it not be more difficult for him to select properly from men whom he does not know and who do not live in his own neighborhood, than from among his own citizens, whose lives and capacities are familiar to him? This is, perhaps, the most pertinent argument that has been brought against the scheme. The problem can only be solved by practical application, and, unless appearances deceive, the application will be most practical, for all parties seem inclined to enter the lists. Every day fresh supplications reach the Vatican for the withdrawal of the prohibition directed against all political action on the part of good Catholics embodied in the well-known formula—"neither electors nor elected." Bishops and archbishops, rectors and curates assail the Pope with assurances that they are losing all authority and influence over their flocks by this compulsory holding aloof from the essential questions of daily life; and the Pope, though carefully abstaining from any public expression, has authorized the clergy to see that their parishioners are duly inscribed on the electoral rolls. The first costly step thus taken, the rest will naturally follow.

THE BEGINNING OF THE SESSION.

LONDON, February 9, 1882.

EVER since the end of August, when what is called the vacation commenced, a brisk and uninterrupted political skirmishing has been in progress. Now that Parliament has at last met, the excitement grows, and people expect a hot and passionate session. The Tory party came back to London doubly sanguine, thinking that they possess abundant materials for assailing the Ministry, and cheered by the success which has attended them in several recent elections. They are panting for the fray. Few indeed suppose that in a House of Commons where the majority has been hitherto so constant to Mr. Gladstone, it will be easy to inflict on him an open defeat. The plan rather is to harass and worry the Liberals by damaging criticism, to seize occasions when lukewarm Whigs and Irish Home Rulers may be induced to vote with the Tories, and thus so to weaken the position of the Government as to goad them into dissolving Parliament, when a general election would either sensibly reduce the strength of the Liberals or possibly even give the Tories a majority. It is probably this hope of returning to power which has made the Opposition, and particularly their younger and less responsible leaders, so unusually active and so vehement of speech all through the autumn and winter. How far are their hopes justified, and on what ground do they rest?

The main ground of attack which the course of affairs furnishes is of course the state of Ireland. When the Land Act passed, most people (though not those who knew Ireland best) expected that it would soon begin to pacify the country; that political agitation would cease to be seditious; that outrages would diminish; that rents would be paid; that it would become easy to release from prison the persons confined under the act which last spring suspended the writ of habeas corpus. The great source of evil—the injustice suffered by tenants—once eliminated from the patient's system, why should he not recover? The first effect, however, of the Land Act was not a remission, but an exacerbation of the disease. The Land League saw its very existence threatened by the removal of the land grievance which it had been created to deal with, and its leaders, whose eyes were fixed on ulterior objects, were forced to choose, and choose speedily, between the loss of their hold on the people and the adoption of a pure revolutionary policy. They chose the latter, and called on the tenants, instead of taking advantage of the Land Act, to refuse the payment of rent altogether. Mr. Gladstone's Government thought that in such a state of things it was necessary at all hazards to give the act a fair chance, since it offered the best prospect of pacifying the country; and forthwith proceeded to dissolve the League, having thrown some of its leaders into prison. Thus the struggle became for the moment more bitter than ever. Although an immense number of tenants have applied to the court created by the Land Act, a good many have stuck to the League, refusing to pay rent, and in many parts of the country farmers who have paid up have been assaulted, beaten, wounded, or even killed. Thus Ireland remains in a very disturbed state. A large force of soldiers and police is needed to keep order; outrages are reported from many districts, and of course exaggerated by the Conservative press of Dublin and London; Kilmainham and several other jails are full of persons arrested on suspicion of being concerned in agrarian outrages or seditious schemes. The Tory leaders point to all this as a proof positive of the short-sightedness or weakness of the Liberal Government. "These are the fruits," they say, "of your tardiness in repressing the anarchy which began eighteen months ago. This is all the result you have obtained by a Land Act which shook the foundations of property. It was extreme enough to encourage and justify the revolutionary party, yet it has not satisfied them: it has only made the passion for complete emancipation from the payment of rent and from political connection with England angrier than it was before. Such is the fatal consequence of concessions to lawless agitation."

The Government, of course, answers that it has acted for the best; that the difficulties were not of its own making, but due to long-standing causes; that things would have been still worse had the Land Act not been passed. But, however true it may be that neither party is specially to blame for Irish discontent, the fact that this discontent has blazed out so fiercely while they have been in power tells to some extent against them in most people's minds. A government must expect to suffer for whatever misfortunes mark its tenure of office. It cannot be denied that Mr. Gladstone's Ministry has lost some of the prestige which it commanded eighteen months ago. It is, however, quite another thing to say that the country has lost confidence in it. The wealthier classes are, of course, hostile; they have been Tory in sentiment for the last ten years. But, for aught that appears, the constituencies—that is to say, the middle and poorer classes—remain where they were two years ago, when the general election of 1880 drove Lord Beaconsfield from power. They think that property is in England safe enough, whatever may happen in Ireland; they have been so long accustomed to hear of disturbances there, as not to throw any special blame on any one government; and they have still a firm faith in Mr. Gladstone's personal greatness and uprightness. They are, however, not so actively eager in his support as they were in 1880. They have begun to weary of waiting for the domestic reforms which were then promised. They feel as if something more might have been effected for England by so large a Parliamentary majority as the Government possesses. In fact, they are becoming languid, and, unless some comprehensive measures such as they care for are brought forward in this session, this languor is likely to grow and to endanger the prospects of the Ministry. The programme which has just been disclosed in the Queen's speech is rather useful than stimulating. The creation of a system of local government for the counties, and of a municipal government for all London; the reform of the bankruptcy law and the patent law; the conservancy of rivers and prevention of floods, are all important objects, the attainment of which would be a substantial gain to the community. But they are not likely to touch popular feeling. None of them could be made a rallying-cry at an election. The first of them is no doubt a matter of very great consequence, but its consequence is as yet imperfectly appreciated, even in the rural districts; and while failure to carry the bill will be discrediting, success is hardly likely to receive the full meed of praise.

In this comparative torpidity of their supporters, the Government have to thank their enemies for an unexpected piece of help. The extreme bitterness with which the Parnellite leaders have attacked Mr. Gladstone and Mr. Forster has all along done much to make those Radicals who thought their policy in Ireland too repressive rally round them, and to avert a schism between the more moderate and more pronounced sections of the Liberal party. Latterly, the Irish Land Leagues in England have resorted to something stronger than words: they have organized bands of those whom we call "roughs" and you call "hoodlums" to disturb or, if possible, break up the meetings which English Liberal members are accustomed to hold with their constituents during the Parliamentary recess. Not only in London, but in other parts of the country, such as Manchester and Newcastle-on-Tyne, meetings have been attacked by large gangs, usually armed with sticks. Sometimes the speaker's voice is drowned; sometimes the meeting is turned into a fight and dissolves in uproar. Such tactics are naturally irritating to the English workingmen, who retaliate by assembling prepared for a conflict, and, being far superior in numbers, can easily overwhelm the Irish. They were inclined to sympathize with the Irish national party against the landlords, and even against the Government; but when they see their own meetings disturbed and the members of their own choice assaulted, while Tory meetings are left unharmed, the old prejudice against the Irish revives, and they judge the coercive measures of the Government much more leniently. Disorder in public meetings has hitherto been regarded with surprising tolerance in England. It existed chiefly at election times, which were traditionally times of license; it was supposed to be rather a mark of English freedom and that sort of joyous exuberance, rough but good-natured, on which the English used to plume themselves. Besides, it was usually practised, in the days before the Reform Bill of 1832, by the popular party against those whom it considered oppressors. But during the Eastern-Question excitement, mobs belonging to the

anti-Russian or bellicose party used to break up by force the gatherings of the anti-Turkish party; and now the Irish in England are making the practice so common that before long those who have incurred their displeasure will have to appear in public surrounded by a bodyguard of martial committeemen. Such turbulence is so specially dangerous in London, with its vast floating criminal population, to whom a riot is a godsend, that if it continues the police will probably be instructed to interfere more actively for the protection of meetings than they have hitherto been permitted to do. The immediate result may perhaps be to isolate the Irish party and its members from English parties even more than has been hitherto the case. Whatever improvement there may be in the internal state of Ireland—and the agrarian crimes certainly seem to be steadily diminishing—the attitude of the leaders of the National party continues strenuously hostile to the Government. Whether it is true that a practical alliance has been concluded between them and the Tories will be shown in the debates and divisions on which Parliament is now entering, and which promise to rival or surpass the heat and passion of last year. Y.

THE FELLAHEEN AND THE MONEY-LENDERS.

ALEXANDRIA, January 31, 1882.

THERE are some industrial and commercial features in the present condition of the Delta which attract less attention in the European papers than the more conspicuous political movements of the country, and yet are in everybody's mouth here, and are probably more important in themselves than many acts or events which more readily lend themselves to description in correspondence-letters. It is well known that from the time of the deposition of Ismaïl and the establishment of the European Control, the Fellaheen, or the body which includes all the smaller peasant proprietors and the better class of agricultural laborers, have been relieved from the odious abuses of taxation under which they have long suffered, and which are familiar to every student of the administrative system prevailing in a Turkish province. Every conceivable abuse of taxation reached the highest point of development. The taxes were levied in an endless variety of more or less irritating ways, all burdensome, incommodious, and oppressive; they were levied at the most inconvenient times; they were uncertain in amount, and occasionally could not be distinguished from mere arbitrary confiscation. The new Government and the European Control, in carrying out the recommendations of the "Commission of Inquiry," changed all that, and changed it effectually. Throughout the length and breadth of the land—as I can testify from my own inquiries and observations, pursued during a seven months' journeying up and down the country last year—all sense of injury from taxation has vanished. The taxes are now few, definitely ascertained, levied at convenient times, and of moderate amount. By a recent enactment, which has just received the consent of the Governments concerned, the immovable property of resident strangers is for the first time rendered subject to taxation.

It might be supposed from all this that a career of unexampled prosperity was opening upon the humbler classes in the country; the more so as there has been no recurrence of the famine that desolated the country three years ago, and for the last two years the Nile has, in a larger sense of the current phrase than is usually covered by it, "come up to the mark." But a new phenomenon has manifested itself which has plenty of examples in other countries, and especially in India. The petty proprietor of land, who is at once greedy for money and reckless, within honest limits, as to the means of obtaining it, and the uses he puts it to, does his utmost to get hold of a little capital for the improvement of his estate. He needs to pay for extra labor; he needs either a *sakia* or a *shadoof*, or the use of a coöperative modern pump (this last being still rare), to water his ground. He needs seed-corn and the simple instruments of agriculture, which scarcely differ from those still visible as painted on the walls of tombs thirty or forty centuries ago. Lastly, he needs support for himself, his family, and his laborers, if he has any, during the time that he is waiting for his crops to grow, or at least till he can raise money upon them while scarcely yet above the soil. It must be remembered that, owing to the late famine and oppressive taxation, he sets to work with no capital, and is fortunate if he has not already started in debt.

His first recourse is to one of the numerous so-called "banks" which abound in Cairo and Alexandria and have branches throughout the country. All but a few of the best of these banks are banks only in name. They are really companies of money-lenders, who are ready to advance any amount of money asked for, at a rate of interest which is sufficiently low, and on no other security than that of the applicant's land. I was told the other day, by a leading European proprietor of land at an inland town on the line between Cairo and Alexandria, that the practice is for the needy farmer to betake himself to the bank, and not to ask for a definite loan on the security of his field or fields, but first to offer his field or fields as security, then to ask how much money he can obtain upon them, and always to take as much as he can get. This report I find confirmed on every side. The Egyptian Arab presents a curious combination of love of money with impecuniousness and improvidence. He is said, by those who know him best in his business relations, to take no thought of the morrow, and to care only how much money he can get to-day. The banks know well enough how good and sure is the security offered them, and they have no inducement to obstruct business by asking for high interest, their competition being with each other for obtaining the valuable security offered. The result can easily be foreseen, and is already displaying itself in a menacing way. The village population are becoming more and more pauperized and dependent on the money-lenders for even the means of life. The banks are realizing their securities, and, in order to recoup themselves, selling the mortgaged lands to capitalists or farmers on a large scale, whether European or native, resident on the spot, who possibly employ the old owners as their laborers, so far as they need them, by way of supplement to the steam-engines and improved machinery which they bring to bear on the cultivation of cotton, maize, rice, *dura*, barley, or other products indigenous or exotic.

It need not be said to those who have studied land questions in a scientific spirit, that in this state of things a land problem is at hand having the gravest political bearings. Unless some stop to the process is put by legislation, by the education of the natives, or by the casual transformation of habits, it is evident that all the land of the country which does not belong to the Government or to religious corporations will be taken out of the hands of the mass of a population which, like the Irish and the French, are eminently agricultural in their habits, and accumulated in the hands of a limited number of rich people, mostly foreigners. The very same problem has within the last few years presented itself in British India; but, happily, the means of meeting it were at hand to a degree which never could be the case here, or perhaps in any other country. The British Government is at once absolute in India, and the scene of operation is sufficiently far removed from Europe to encourage the local government to adopt a bold legislative remedy without the apprehension of creating dangerous precedents at home. The Bengal Rent Commission recommended a trenchant mode of cutting short the claims of money-lenders, of vindicating the proprietary rights of the impoverished farmers, and of relieving the monetary pressure in a way which, under the circumstances, seemed most equitable to all parties. These recommendations are in course of being carried into effect. In Egypt the Government is of the weakest. The whole attention of the European Controllers is naturally concentrated on the Government lands, which are mortgaged for the European debts, and, as no reasonable charge can be made against the banks or private capitalists of fraud, of extortion, or even of overreaching, it would be difficult to upset the voluntary contracts which are made with the poor Fellaheen.

There is some talk of establishing what is called a national bank, the purpose of which is to act as an intermediate agent between the European bondholders and the cultivators of the soil. It is alleged that the European managers of the Daira estates, mortgaged for the debt, do not obtain as much revenue from the soil as would be obtained by a private and native company personally interested in the amount of the proceeds. It is not indeed probable that the Governments concerned, or the bondholders, will allow the eminent administrators they have appointed to be superseded under the speculative possibility of leaving a larger margin of profit for the benefit of the country, especially as that extra profit might be obtained by processes of exaction not congenial to European habits. The project, however, has been a good deal discussed here, especially in its obvious political bearings. It is worth while to mention it in connection with the state of things above described, in order to show that some such institution, under strong Government control, and subjected to the requirement of a comprehensive land-law, would meet the difficulty. It might serve as a vehicle for advancing on easy terms small amounts of capital really needed for the bona-fide cultivation of the soil, and dispense with what is, in effect, the oppressive condition of taking the soil out of the cultivators' hands. A.

YRIARTE'S RIMINI.

PARIS, February 8, 1882.

M. CHARLES YRIARTE is a writer of a new school—a critic of art who is at the same time a traveller, an artist, and an amateur. He has published on Florence and on Venice two works which are monographs of those famous cities, and which represent, with their fine illustrations in historical development, hundreds of volumes which it is almost impossible to find. It would not be just to call such works guide-books: they are of a much higher class—they are real art-treatises. But 'Florence' and 'Venice' contain only matter which can be found in other places; M. Charles Yriarte's new volume, on Rimini, is superior to them in one point—it contains much original matter. It is a chapter of history as well as of art, and it must, as such, find its place among the most important works on Italy.

Instinctively, Yriarte has found the true method of writing the history of Italy. After the downfall of the Roman Empire, Italy ceased to exist as a unit: it fell into an atomic state—each town became a little world in itself. By degrees two powers emerged from the chaos of

the Middle Ages, the Papacy and the Empire. "Le Pape et l'Empereur sont tout," as *Don Carlos* says in "Hernani." The communes of Italy looked to one or other to find a protector of their semi-barbarous independence. The military chiefs, the tyrants of the communes, enrolled themselves in the army of the Pope or in the army of the Emperor, to whom they bound themselves by a *feudum*, by an investiture. At first captains of a few soldiers, mere *condottieri*, they became the vicars of the Holy See or of the Empire: the Scaligers of Verona, the Sforzas, the Estes, the Malatestas, the Gonzagas, all began by commanding a troop of horse for some potentate—for the Pope, the Emperor, or Venice, or Florence. Gian Galeazzo Visconti, a mere *condottiere*, died master of all Lombardy, from the Alps to the Adriatic; his army was the largest Italy had ever seen; his wealth was boundless.

Rimini is hardly known by those who have not travelled in Italy. If it were not for Dante and his Francesca da Rimini, the name of this little city lying on the coast of the Adriatic would be hardly ever pronounced. Rimini became, in the Middle Ages, the domain of a family of *condottieri*, the Malatestas. In the twelfth century the Malatestas conquered nearly all the March of Ancona and a part of Romagna, and had a number of strongholds on the hills of the Apennines. The history of this curious dynasty may be summed up in two words—they were brigands and artists. They personified this extraordinary combination of qualities and of vices which gives so much originality to the Italian Renaissance—the love of art and the love of war, unbridled passions and veneration for knowledge, classic tastes and barbarous instincts. Yriarte traces the Malatestas as far back as 1130. The true founder of the dynasty was Malatesta of Verucchio, the first Guelf chieftain of the Romagnas, who lived a hundred years, and was stigmatized in Dante's Ghibelline verses. The eldest of his sons was the murderer of Francesca da Rimini and of his own brother, Paolo (*il Bello*). The successor of the murderer (surnamed *il Sciancato*, the lame) was the Malatestino del Occhio, of whom Dante says:

> "E 'l mastin vecchio e 'l nuovo da Verucchio,
> Che fecer di Montagna il mal governo,
> Là, dove soglion, fan de' denti succhio."

We cannot follow Yriarte in the genealogy of all the Malatestas, of the lords of Pesaro, of Rimini, of Fano. The branch of Rimini soon became the most important. In the year 1400 we find Rimini already a great centre of art. Carlo Malatesta, though a *condottiere*, surrounded himself with artists. He gave employment to Ghiberti, who afterward made the famous doors of the Baptistery of Florence; he founded the first Italian Academy; he himself painted miniatures on manuscripts. Rimini became very prosperous under his administration. His successor forms an exception in the family; he is called Galeotto the Saint; he had ascetic tastes, and entered the order of the Franciscans. The nephew of Galeotto, Sigismondo, is the most famous of all the Malatestas; he was one of the greatest warriors of his time, and was also one of the most active supporters of the movement of the Renaissance in favor of the classic and of the Latin and Greek writers, who during the Middle Ages had been despised and forgotten. "Of all the princes of the fifteenth century," says Yriarte, "he represents best, perhaps, the tendencies of an epoch during which, under the high culture of the early Renaissance, appears still the man of the Middle Ages, with his rudeness, his brutality, and his indomitable character." Sigismondo was brave, handsome (as his medals well show), eloquent; he seemed to be made of iron, and knew not fatigue. He was violent, heroic in battle, always ready to use a sword or a poniard, in peace as well as in war. He had the soul of a bandit, and his frantic desires knew no bounds. Some of his crimes are so dark that they cannot be told here. At the same time, this slave of the senses was the slave of art; he positively worshipped philosophy, poetry, architecture. He was like a pagan among Christians—faithless, without conscience, without pity. His enemy, Æneas Piccolomini, who became Pius II., accused him of heresy for having raised a pagan monument, wherein no statue, no image, no inscription, nothing alluded to the Deity. Pius II. wrote, however, about him that "he knew all antiquity, was very advanced in philosophy, and seemed born to do all that he undertook." Burckhardt says of him: "Audacity, impiety, military talent, refined intellectual culture—how many qualities and gifts were united in that one man!" This born rebel, this man overflowing with criminal passions, was beloved by the soldiers, by the people, and by his own family. His life reads like a novel; it is almost unreal. He seems too gigantic for the small proportions of the towns and the provinces where his intense activity was spent.

The name of Sigismondo will always be connected with the name of Isotta. She was the daughter of a merchant; a musician, a poet, an artist. Sigismondo fell in love with her, wrote verses for her, which Yriarte has found in the Vatican Library. He was married twice, but did not conceal his passion for Isotta. His court poets had to sing her charms; his artists had to paint her, to make medallions of her (these medallions are extremely interesting as monuments of art), or busts, or statues. In all these representations Isotta does not appear a great beauty. She was intelligent; she lived in the constant study of history, of philosophy, of poetry; she was a friend rather than a mistress, an Egeria rather than a Delilah. Pius II. speaks of her as a superior woman. After many years she finally became the legitimate wife of Sigismondo.

The campaigns of Sigismondo Malatesta interest us less at the present time than the monuments he has left behind him. The most extraordinary is the "Temple of the Malatestas," otherwise called San Francesco. An inscription in Greek on one of the pillars of the façade says that "Sigismondo Pandolpho Malatesta, son of Pandolpho, having safely emerged from the frequent and serious dangers which threatened him during the wars of Italy, in which he operated with as much energy as luck, vowed, in the midst of these conflicts, to build a temple to the Immortal God in the city of Rimini. He erected it with a generous munificence, and left in this world a very illustrious and holy memory." San Francesco is now the cathedral of Rimini, but it has preserved its character as a sort of temple and Pantheon, as it contains the tombs of all the Malatestas and of all the scholars and poets of the court of Rimini in the fifteenth century. It is certainly one of the most curious monuments of Italy. Its principal architect was Leon Battista Alberti, who used an ancient church as a frame, and surrounded it, as it were, with a marble envelope, thus taking a monument of the thirteenth century, belonging to the Franciscans, as his framework for a temple of the fifteenth century. Alberti is well known by the numerous works which he executed for the Medicis and for the popes. He was a writer as well as an architect, and, being a man of very high culture and of a great family, he was intimate with the greatest men of his time. In the Temple of the Malatestas he showed the Italians the first façade executed in what is called the style of the Renaissance. He forsook Gothic forms and returned to the models of antiquity, inspiring himself with the lines and forms of the arch of Augustus, which is seen on the Via Flaminia. The ornamentation was new, personal, and original; it showed the ciphers of Sigismondo, of Isotta, the rose and the elephant of the Malatestas, crowns of flowers and fruits, garlands and ribbons, reminding the spectator of the crowns of the old Greek temples. This great simplicity of form, allied to rich and almost profuse details, was something quite new at the time, quite different from what was seen in the basilicas of the Middle Ages. The interior of the Temple has the same character—simplicity of form, nothing but circles and straight lines, and with this an extraordinary wealth of details, all peculiar and expressive, having a personal character, without any monotony. There are eight chapels; each is a work of art in itself. Their sculptures are allegorical, are a mine of symbols and emblems, and are in the highest degree expressive and suggestive. They are now almost the only archives of this great family of the Malatestas; the only monuments of past greatness, of military glory; the only relics of hope and of ambition.

Yriarte enters into the most minute description of these monuments. The illustrations of his work make them appear again under our eyes, sometimes with details which it is difficult to perceive in the Temple itself. But what can give the general impression of this holy place of Italian art, with its fine marbles softened by age, its innumerable shades, its harmony of lines and of proportions, its rich simplicity? Outside, under the exterior arcades of the outer wall which surrounds the shell of the thirteenth century, are sarcophagi of the most simple antique form, the tombs of the philosophers, the poets, the artists of the court of Rimini. Among the number are Basinio di Basanii, a poet and pensioner of Sigismondo; Giusto de' Conti, the author of the 'Bella Mano'; Gemistus Pletho, a Platonian philosopher; Roberto Valturio, the author of 'De Re Militari,' and some others, who were doctors or philosophers.

The end of Sigismondo's life was troubled with many wars. He died at the age of fifty-one years, the victim of his ambition, having lost nearly everything but Rimini, and having had to fight in turn or together nearly all the princes of Italy. His successors slowly sank to the rank of private noblemen, and did not succeed in establishing independent duchies. Venice was too near and too powerful; the court of Rome was too ambitious. Rimini was so placed that it could not long remain a centre of sovereignty. Posterity must remember this extraordinary family of the Malatestas, equally remarkable for their soldierly qualities and for their enthusiasm for the fine arts. They are, with the Sforzas, the Medicis, the Estes, typical; they mark a moment in the development of civilization. They are in Italy what the last Valois afterwards were in France.

Correspondence.

THE PROGRESS OF "READJUSTMENT" IN VIRGINIA.

To the Editor of The Nation:

Sir: To the Northern Republicans who honestly think that the dominance of the Readjuster, or "Liberal," party is a blessing to Virginia, I would, through the *Nation*, make a statement of facts as calm and dispassionate as possible.

This party, since coming into power, has clearly shown its policy, and has vigorously executed it. It has given to West Virginia one-third of Virginia's entire debt, and has lopped off one-third of what remains. It has fulfilled none of its promises of retrenchment *except with regard to*

the debt. When a Debt-payer was Governor, it passed a bill abolishing the office of Governor's Clerk, and Governor Holliday had to pay his clerk from his own pocket; but no sooner does Governor Cameron come in than it gives him an appropriation for his clerk and $10,000 for refurnishing the gubernatorial mansion. In other appropriations it has shown how little it cares for saving public money, and how well it takes care of its own.

It has turned out of office every man whose political tenets do not conform to its creed. The guillotine in France was not more deadly or far-reaching than is political beheading under order of our Marat. We are not surprised, knowing the civil-service system of our land, when postmasters and clerks are dismissed for political reasons; but what have we to say when educational boards, college professors, and judges are removed to make way for partisans? A bill, recently passed, declares the boards of the Virginia Military Institute and of the Lunatic Asyiums vacant on the 2d of March, next following. The members of the board of the Virginia Agricultural College have already been removed and replaced by Readjusters, who, with unseemly haste, met and dismissed President Buchanan, late of Vanderbilt University, and a former president at Emory and Henry College in this State, to make way for a gentleman who saw the hand-writing upon the wall, and at the eleventh hour became a convert to Readjustment. In the few short weeks of their rule the board have dismissed three professors of this college. A bill is at present before the Legislature to appoint a new board of visitors for, and to reorganize, the University of Virginia. Is not this state of affairs alarming—not to office-seekers of the other party alone, but to every one who loves a pure and just government? Are we as a people becoming so indifferent to the fundamental principles upon which our free institutions rest that we will approve of such means if only they be used by *our* party?

But while this state of affairs is bad enough, the present condition of Virginia is worse. Scores upon scores of judges have been and are being removed from the bench, and their places are being filled with not only partisan, but ignorant men. The Readjuster party has not the material in its ranks to fill with competent persons the vacancies it creates. Here in Albemarle County, which contains the University of Virginia and the homes of Jefferson, Madison, Monroe, and Wirt—which has between twenty-five and thirty thousand inhabitants, a large percentage of whom are highly-educated people, and at whose bar about thirty lawyers practice—not one man with even a general education could be found in the party to fill the judgeship; and to this position was elected a man who was qualified neither by abilities nor by attainments. Our Constitution provides that such a judge shall be "learned in the law," and yet the Judge of Albemarle County had not so much as read a page of Blackstone in his life when elevated to the bench. We considered ourselves fortunate, however, in getting him, as he is an *honest* man; for the person whom the Readjuster caucus had nominated before him was of a character more fitting culprit than judge. The representative from this county had evidence on the floor of the House to show that he was a *horse-thief*, and I will do the Legislature the credit of acknowledging that when this fact became known they dropped him, and they then gave us the present incumbent. I use my own county as an illustration; other counties are not so fortunate as Albemarle. These are but a few of the facts that might be mentioned, and they may be easily verified. Do they not sound strangely?

There was a time in Virginia when the petition of a large majority of the citizens of a community had some weight in the appointment or election of its public officers. Now we know nothing but the absolute power of a sole dictatorship, and, in addition to the stigma of dishonesty, Virginia has to suffer the curse of an ignorant and too often unscrupulous judiciary.

DAYLESFORD.

CHARLOTTESVILLE, VA.

SHALL THERE BE AGNOSTIC CHURCHES?

TO THE EDITOR OF THE NATION:

SIR: In your editorial article on Agnostic Churches you say: "All attempts to build up an agnostic church are futile." With all due respect, it seems to me that neither is your conclusion correct in reason nor does it coincide with our actual experience. For twenty years Mr. Frothingham was the "priest" of an agnostic church. Mr. John W. Chadwick, of Brooklyn, has preached agnosticism for years. Mr. Conway, of London, has done likewise. I believe that the late Mr. John Weiss was, during his lifetime, an apostle of agnosticism, and the members of his society were his disciples. Other illustrations might be given of agnostic churches—agnostic practically if not nominally—which have flourished and prospered in this country and in England. But we claim that, even though not a single agnostic church had ever existed or does now exist, that fact would not establish the futility of all attempts to build up such a church. True, if we base our argument on that which was expounded by Mr. Miln in his last Sunday's discourse, we candidly admit that the conclusion would be irresistible that agnostic churches cannot be established. In other words, if in such churches we are to meet for ethical culture, then we agree such churches have no logical right to exist. Mr. Miln, in last Sunday's discourse, started out to say that all beliefs owe their origin to the religious sentiment. He said, too, in almost the exact words of Mr. Herbert Spencer, that the religious sentiment is a constituent part of man's nature. Now, had Mr. Miln carried out this idea to its logical conclusion, he could not have prophesied that the religion of the future would only concern itself with ethical culture. If his premises are correct, then the religion of the future must be a product of the religious sentiment, and must concern itself with the cultivation of that sentiment. For, necessarily, as long as the religious sentiment remains, there must be a religion to correspond with the sentiment. Ethical culture, however, has different functions than religious culture. The one appertains to what our conduct should be toward ourselves, our family, and society; the other to the relation existing between the mind of man and that inscrutable Power which lies behind phenomena and passeth all understanding.

And now, Mr. Editor, why can there not be builded agnostic churches whose function it shall be to cultivate the religious sentiment, which is said to be an attribute of all men? Why can there not be preachers whose duty it shall be to speak of the transcendent Mystery, and to cause men to forget their petty cares and strifes while dwelling upon a contemplation of that Mystery? You say yourself that "it is a strong proof of the deep hold which religion has on our race that an Englishman or an American will do almost anything rather than cease to talk or to think about matters of which he believes himself to know nothing." You will certainly admit that talk and thought on such matters conduce to the culture of men, and if yea, why should these Englishmen and Americans not meet once a week in some common place and there indulge in talk and thought on such matters, or rather there listen to the talk and thought of some refined and cultured preacher of such matters? The "common place" would be a church. Such churches do now exist, and they do much toward making their members better and nobler men.

AGNOSTIC.

NEW YORK, February 21, 1882.

[Our correspondent is either mistaken about Mr. Frothingham and Mr. Chadwick, or about the meaning of the term "agnostic." Mr. Frothingham's church was certainly not agnostic. He professed to believe in and address in prayer, if not the Christian God, "an intelligence at the heart of things." So, we believe, did Mr. Chadwick. When they prayed they prayed to something or somebody. A genuine agnostic does not occupy himself with anything supernatural, because he knows nothing about the supernatural. What can "the religious sentiment" be in a man who has no religion except a sense of the mystery which surrounds life; and if this mystery be "transcendent," which we suppose means insoluble, how can a genuine agnostic either preach on it or listen to preaching on it? The essence of agnosticism consists in the abandonment of all attempts to know the unknowable. A person who "tried to forget his petty cares and strifes in contemplating Mystery" would be doing the very thing which the agnostic creed forbids, and if he were a genuine agnostic would get no good out of it. The contemplation of mystery as mystery is not recommended by any church. Christians contemplate mystery because it increases their reverence and admiration for God, but it can have no such effect on an agnostic. To him the whole world is a mystery which he cannot solve, and which it would be sheer waste of time to keep thinking about.—ED. NATION.]

COLLEGE DISCIPLINE.

TO THE EDITOR OF THE NATION:

SIR: You admit that the elective system as respects college studies may be carried to an extreme. I would add that perhaps our more conservative colleges are as near the true "between" ground as those which change more rapidly.

You also think the ordinary American college does not give the discipline as to the need of which you agree with me. I reply, it does in part—it makes some approach to it; and the smaller college more than the larger, and the conservative much more than the more changeable. This, I think, will hardly be denied by one who knows.

Respectfully, C. W. CLAPP.

GODFREY, ILL., Feb., 1882.

HUNGARIAN MUSIC.

TO THE EDITOR OF THE NATION:

SIR: Your issue of January 19 contains among the "Notes" the following statement: "Those wild and unmethodical Hungarian pieces which, according to Liszt, *his countrymen owe to the Gypsies.*" I read a similar statement in *Harper's Weekly* of Oct. 4, 1881.

Both your and *Harper's* correspondent may have heard of or read Liszt's 'The Gypsies and their Music in Hungary,' but, not having continued their research further—not having read the numerous comments on this work published in France, Germany, and Hungary—have been misinformed. Liszt published the above

work in French in 1859, and it was translated into German and Hungarian. The *Revue des Deux Mondes* at once took notice of it, and through this medium its contents became known the world over.

Liszt, who spent most of his lifetime in Germany, and was unacquainted with the present of Hungary, and more so with her past, wrote history founded on hearsay, to suit his own fancy. The world, judging by appearances, accepted his statements as facts. Was not the author one of the greatest piano-performers? Should not he who gained laurels all over Europe with this same music—himself of Hungarian descent—be a trustworthy judge, thoroughly posted on the subject? The information conveyed by Liszt's work "seemed" to prove that "Hungarian music is not Hungarian, but Gypsy, music."

This unfounded, audacious assertion was the more painful to the Hungarians as it was uttered by a compatriot who would have been the pride of any European nation, and was pronounced at a time when the Bach Government had deprived them of their constitution, and destruction threatened even their nationality. The Hungarian daily press rose up against it with a unanimous outcry; many a writer grasped the pen and took part in the strife with historical data, arguments, witticisms. Two pamphlets, one written in German by Alexander Czeke, the other by the Transylvanian savant Samuel Brassai, written in Hungarian, investigated the matter thoroughly: the first from a musical point of view, the latter in its relation to the language and people of Hungary; both proving Liszt's fallacy. Stephen Bartalus also wrote several vindicatory articles in the *Budapesti Szemle*, and the matter is at this day not one of belief, but of facts. After being long dropped by Hungarians, as a question thoroughly drained and settled, Alexander Bertha again brought it to public notice, as late as 1878, in an able article in the *Revue des Deux Mondes* (for August 15). Bertha says:

"Any one unacquainted with Hungarian music can hardly delineate the talent of the Gypsies. Even when they play well-known pieces, waltzes and marches, their performance is so peculiar in character that we forget to apply the regular rules of art. The appearance of a Gypsy band without notes, the unusual sight of the E-flat clarinet and cymbal, the unquenchable fire of their performance—all tend to keep the listener from analyzing the causes of the effect. If we add to these surprising peculiarities the novelty of Hungarian music to foreign ears—a music that differs widely in metre and accent from that of the Indo-Germanic tribes—we shall understand how the mistaken ideas arose in regard to the Gypsies. The wrong belief took root this way: excluding the well-known dance-music and operas of the present, whenever the Gypsies played that strange music, they were supposed to improvise—to give full play to their fancy—and these improvisations were called Gypsy music. The truth is, that the Hungarian Gypsy's occupation is the playing of Hungarian music.

"Old authors, mentioning the intrusion of Gypsies in Europe, describe all their qualities—which do not differ from their present attributes—but are unaware of their musical faculties. The Russian 'Bohemian,' the Spanish 'Gitano,' the English 'Gypsy' are of the same origin as the Hungarian 'Czigány'; their origin is clad in the same shadowy mist. In their main traits they even to this day resemble each other; but those strains they never knew, nor did they ever improvise—nay, most of them have no talent whatever for musical performance.

"How did the Gypsy turn into an artist in Hungary? No question is easier to answer. They accommodate themselves everywhere to their surroundings. In sensual Russia they display their wives' charms; in superstitious southern Europe they are conjurers, sorcerers; in England fortune-tellers; but nowhere have they formed such perfect music-bands as in Hungary, because they found music in no country such an indispensable public want as in Hungary.

"It might be brought up as a counter-argument, that the Russian, Spanish, and English Gypsies introduced the same music in those countries, but not finding a soil as proper for its improvement dropped it; while the Hungarian Gypsy could not fail to cultivate it in a country whose people did not sheathe their sword for centuries. Art was similarly upheld in Rome by Greeks; the Greek genius became rejuvenated in Rome in all the different arts indispensable to a public which had no room for the development of Roman art. This is the case in Hungary.

"Two undeniable facts counterbalance this erroneous supposition. To make the comparison possible, it should be proved that the Hungarians had no music before the intrusion of the Gypsies, just as the Romans had none except the Greek. Furthermore, the difference in character between the poetry of the Hungarians and the music of the Gypsy would have to be shown up.

"In regard to the first, we know that it is said of Attila, the savage ancestor of the Hungarians, that he loved to hear his musicians during his plain meal; we know that much later Árpád, the conqueror of Pannonia, drew water from the Danube for his offerings with an upturned hunting-horn; we know that at a contest of artists at the Wartburg in Thuringia, the lyre of the Hungarian Klingsor won the first prize. At the time of Sigismund, when the first Gypsies made their appearance, they are not spoken of as musicians. Their place is taken by the national poets, the so-called 'hegedüsök.' On the other hand, it was the Italians who were attracted by the liberality of Matthias Corvinus, whose song filled the cathedrals and seasoned the feasts. All this tends to prove that art was never neglected in Hungary; that the Gypsies found a proportionately developed art, which had taken deep root in the national soil. It were hard to believe that the Hungarians, who cling so tenaciously to their customs and laws, should have abandoned their music, to accept that of a race employed only in the meanest labor and lowest trades.

"In regard to the second, the proof is yet more obvious, no matter whether we consider the older or the newer Hungarian literature.

"We notice at once that the popular school, which in Hungary is the same as the French romantic school, and goes hand in hand with the music, has suppressed the classic and West-European poetical forms. This result cannot be attributed to Petöfi's and Arany's genius alone. Their main merit is to have expressed their ideas in rhythms best suited to the language and music. They have led Hungarian literature back to its original sources—we might say to those of the whole Finno-Ugric race, to which the Hungarians belong—the historical evidence of which is found in the choriamb (—∪ ∪—) metre of the Finnish epos 'Kalevala,' which Petöfi and Arany reinstated, and which we find constantly recurring in Hungarian music played by Gypsies."

Bertha gives a very complete sketch of the development and progress of Hungarian music. For fear of taking up too much of your valuable space, I must refer your readers to the article mentioned, and add that while it is painful to every nationality to be deprived of its righteous claims, to be misrepresented before the world, it is doubly so to a Hungarian, who knows how little his country can boast of compared with some others, and who daily meets with strange misconceptions of its character, nationality, history, and literature.

JAMES S. FRIEDLÄNDER.

TOLEDO, O., January 23, 1882.

Notes.

ROBERTS BROS. have in press 'Sonnets and Canzonets,' by A. B. Alcott, mainly, we are told, composed during the past two years, or since the author's eightieth birthday.

We learn from the Boston *Advertiser* that J. R. Osgood & Co. are to be the publishers of the new 'Poole's Index,' and that the printing will be begun in April. The *Advertiser* notices from advance sheets that "under the heading *Women* there are references to nearly two thousand articles," and that "apparently no other subject has been so prominent in the periodical writing of the last half century." The fact here pointed out may be both true and significant; but is the *Advertiser* sure that "natural selection" had nothing to do with the proportion in this Index? It must be remembered that no periodical was indexed exhaustively, and that, to their credit be it said, a large share of the task of choosing and cataloguing fell to women.

The late Rev. Samuel Johnson, of Andover, Mass., who, by the way, was the author of several hymns of more than ordinary merit, was engaged upon the third volume ('Persia') of his 'Oriental Religions, and their Relation to Universal Religion.' We are unable to say what stage had been reached in its preparation, or in what condition his papers are left.

The little volume of 'Three Christmas Sermons,' preached by sons of the late Leonard Bacon on the day following his death, will be prized not least for the characteristic albertype portrait of Dr. Bacon which faces the title-page. The publisher is Edward P. Judd, New Haven.

Mr. Charles Welsh, whose facsimile edition of 'Goody Two-Shoes' proved so great a success last year, is preparing for publication, through Griffith & Farran, London, a life of John Newbery, Goldsmith's publisher, and otherwise an eminent member of the book trade of the last century.

The fourth number of vol. ii. of *Appalachia* (Boston: W. B. Clarke & Carruth) is dated December, 1881, and has a prosperous thickness. The contents are varied: a magazine article on Lake Dunmore and Vermont Midlands, illustrated by a very pretty albertype copy from a water-color; a practical description of routes to Mt. Ktaadn, with a very helpful map; the hitherto inedited diary of Captain Samuel Willard's scouting-party's journey across from the Pemigewasset to the Saco in the autumn of 1725; a second paper on geodetic formulæ; the proceedings of the Appalachian Club, etc.

The library of the New England Historic, Genealogical Society in Boston has nearly doubled in the past eleven years, and now embraces more than 17,000 volumes and nearly 55,000 pamphlets. Already there is urgent need of enlarging the premises to meet this increase.

An interesting document is published in the October-December issue of vol. xviii. of the Essex Institute Historical Collections—the circular letter, namely, issued in 1830 for the formation of an Essex County (Mass.) Lyceum. While the lyceum did not perhaps originate in this county, it there acquired its greatest development and became the parent of our present lecture system—an almost unrecognizable offspring.

Parts 8, 9, 10 of the new 'Brockhaus' Conversations Lexikon' (New York: L. W. Schmidt) carries on the work as far as *Angelfischerei*. The three maps, of excellent workmanship, represent South Africa and Madagascar, Algeria and Tunis, and Ancient Egypt; while the illustrations relate to angling, American races, and machinery.

We lately referred to Mr. John H. B. Latrobe's address on "The Capitol and Washington at the Beginning of the Present Century," as printed in the *American Architect*. It has now been put in pamphlet form (Baltimore); and though we miss some of the ground-plan illustrations, we have by way of compensation the famous cornstalk columns and maize and tobacco capitals designed by the writer's father for the Capitol.

No. 19 of the series of "Scientific Worthies" commemorated by *Nature* with biographical sketch and portrait is Baron Nordenskjöld, whose fine face adorns the issue for February 2.

No. 96 of the Berlin Geographical Society's *Zeitschrift* contains the usual exhaustive bibliography by Dr. Koner of the geographical publications of the past year.

The specimen number of Richard Oberländer's 'Fremde Völker' (Leipzig: Klinkhardt) promises, in regard to numerous semi-civilized, barbarous, and savage nations, a wealth of new paper and old wood-cuts, with a text which is merely a reduction of ordinary literary stock into a form suitable for the drawing-room table. The cuts are ancient and good, and in this case illustrate the author's remarks on Buddhism. Having had their first avatar in Humbert's 'Japon Illustré' a dozen years ago, they have transmigrated into every European country, and are continually coming to new births on both sides of the Atlantic, tenanting a new body annually or oftener. It is nearly time they found *Nirvâna*, since the motive of existence for most of them has long since passed away.

—Prof. Charles H. Chandler writes us from Ripon College, Wisconsin:

"Permit me to call attention to two errors in the paragraph concerning Antioch College in the *Nation* of the 16th inst. That paragraph locates Prof. Anthony at Iowa, and myself at Cornell. Prof. Anthony has been at Cornell for some nine years, and I came from Antioch directly to Ripon, a college greatly resembling Antioch as she was in her prosperous days, in respect to size, resources, and work done, but differing in being under the control of Congregationalists instead of Unitarians. Prof. Caldwell, of Cornell, was formerly a member of the Faculty at Antioch."

—It appears from a communication to the Boston *Daily Advertiser* that the death of the late estimable Professor of Chinese at Harvard, Kun-Hua-Ko, leaves his family in a condition which strongly appeals to the benevolent. "There are six children, of whom the oldest is only fourteen; the widow is not fitted by education or experience to do much toward their support, and they inherit no property to speak of." The University does its part by paying the cost of the family's return to Shanghai, and continuing the father's salary until they reach home. Beyond this they have no prospect of a maintenance, and it is proposed to raise a fund, to be held in Boston and disbursed at his discretion by a trustee, which shall yield an income of $300. This sum is estimated by good judges to be sufficient to keep the family in tolerable comfort, and enable them to continue the education of the oldest son, whose knowledge of English must soon qualify him to contribute something to the support of the household. The incident of Mr. Ko's death and burial, with every token of sympathy and respect on the part of his colleagues, must already have had a humanizing effect on those who merely read of it in the public prints. We cannot doubt that there are many who will gladly embrace the opportunity offered, by subscriptions to the fund, to show not only a common compassion for the unfortunate, but a superiority to race prejudices. Money may be sent to President C. W. Eliot, Cambridge, Mass.

—Among the legitimate and gainful results of the Civil War has been the increased importance of the Surgeon-General of the Army, and especially of the duties he performs. Before the Rebellion his functions were, as the name implies, confined to the army itself, and he was often harassed and limited in their exercise; now he is the custodian of public treasures and an indirect conservator of the public health. A great war is a great awakener as well as a great scourge, and, happily for the rest of mankind as well as for ourselves, many of the medical lessons taught by the struggle of 1861–65 were seized by the actors and turned to lasting account. One outgrowth has been the creation of the largest and finest collection pertaining to military surgery ever made. The diseases of armies are copiously spread before the student for his information; allied scientific topics also are practically illustrated, and the combined series, constantly increasing, now number twenty-two thousand specimens. In other words, there are enormous galleries overflowing with material for the most useful medical object-lessons properly arranged and described. The Surgeon-General has also the charge of a public medical library that is the best in this country, and, for working purposes, second to none in the world. It consists of more than fifty thousand bound volumes and nearly sixty thousand pamphlets on professional subjects. This has been collected under peculiarly favorable circumstances, and described with great care and skill by one of the most brilliant bibliographers of the age. The Surgeon-General is also the official custodian of more than sixteen thousand volumes of hospital records, and of immense quantities of original medical data, being the professional papers of the Civil War. These are in daily use for the confirmation or disproof of the numerous pension claims which for years to come must be adjudicated. Valuable as these are for the ends of justice, as historical documents, and for the study of military hygiene, medicine, and surgery, they are quite as important in connection with the general progress of medicine and its relations to the public health. Now, these three precious collections, whose existence affects in one way or another the whole country, are from necessity crowded into inadequate space in a single building—the theatre in which President Lincoln was shot. This, on its occupancy for public purposes, was insecurely remodelled; its walls are weak and out of plumb, and it is not only not fireproof, but surrounded and abutted by inflammable houses over whose occupants the Government has no control. It and its contents have already once narrowly escaped destruction by fire from without, and the whole may at any time be thus destroyed. When destroyed much that is of peculiar value can never be replaced. The Surgeon-General has repeatedly but unavailingly besought proper shelter for these treasures. The matter is again before Congress, and as $300,000 will buy the land and erect a plain and substantial repository, it is sincerely hoped that so modest an appropriation will not be withheld.

—A study of Census Bulletin No. 274, showing the first hundred cities in the United States according to population, reveals just ten cities above 200,000, and ten more above half that population. The names of the first nine on the list represent eight languages, and are measurably monuments of our polyglot origin. New York is English; Philadelphia, Greek; Brooklyn, Dutch; Chicago, Indian; Boston, English; St. Louis, French; Baltimore, Irish; Cincinnati, Latin; and San Francisco, Spanish. If we divide the East from the West by the old line of the Alleghanies, four of the first five are Eastern cities, while of the second five four are Western and one Eastern. Concerning Mr. Gannett's new grouping of our States we remarked (*Nation*, No. 866), that the populations of his five divisions, with the exception of the last, were not very dissimilar. But in regard to their *urban* elements they are quite unlike. In his first division of nine Northern Atlantic States we discover no less than forty-nine of our first hundred cities, while only nine of these (including Washington) are contained in the nine Southern Atlantic States. In his Northern Central group of eleven States there are twenty-eight of our foremost cities, and only nine in the eight States of his Southern Central group. The five remaining cities lie in three members of his Western group. A like disproportion is observable in the total urban population of the various groups. The census of our hundred largest cities was in 1880 a trifle over nine millions (9,076,564), a full sixth, and more, of our entire population. Of this total, 5,214,064 (more than five-ninths) were in the forty-nine cities of the Northern Atlantic division; only 726,621 were in the nine cities of the Southern Atlantic group; 2,250,668 in the Northern Central; 538,883 in the Southern Central; and the remnant, a little more than one-third of a million (846,331), were in the so-called Western department. Thus the urban dwellers in the two Northern groups are well-nigh seven and a half millions (7,464,752), in contrast with one and a quarter millions (1,265,504) in the two Southern.

— Fourteen of the hundred cities are in Massachusetts, twelve in New York, nine in Pennsylvania, seven in New Jersey, six in Ohio. Illinois (including Springfield, No. 100, pop. 19,743) and Indiana have four each; California, Connecticut, Georgia, Iowa, Kentucky, Michigan, Missouri, and Virginia three each; Minnesota, Tennessee, and Texas, two each. The remaining fourteen are scattered (one apiece) among the District of Columbia, Utah, and the States of Alabama, Colorado, Delaware, Louisiana, Maine, Maryland, Nebraska, New Hampshire, Rhode Island, South Carolina, West Virginia, and Wisconsin. In eight States, Arkansas, Florida, Kansas, Mississippi, Nevada, North Carolina, Oregon, and Vermont, there is no place with a population of 20,000. The largest town in any of them is Wilmington, in North Carolina, with 17,361 inhabitants. Its census number was No. 123, showing that twenty-two places larger than it were all too small to rank in the first hundred. It is further noticeable that our foremost cities are concentrated in a few States. A majority of the hundred, that is fifty-two, are situated in the six States of Massachusetts, New York, Pennsylvania, New Jersey, Ohio, and Indiana. Whoever will learn the names of the cities according to the Bulletin arrangement will correct many a misapprehension into which he and his friends have fallen concerning their comparative size. Let him remember that No. 10, New Orleans (216,090), is the smallest city over 200,000; that No. 20, Providence (104,857), is the smallest over 100,000; that No. 35, Toledo (50,137), is the smallest over 50,000; that No. 45, St. Paul (41,473), is the smallest over 40,000; that No. 63, Omaha (30,518), is the smallest over 30,000, and that No. 77, Lancaster (25,769), is the smallest over 25,000; and those six numbers will put into his hand a master-key to the size, both absolute and relative, of the "head-centres" of the whole country.

—A thousand pencils have marked in the third canto of the 'Purgatorio' the sententious saying of Virgil, in doubt as to the way—

"Chè il perder tempo a chi più sa più spiace"—

"For to lose time displeaseth most him who knows most." A singular emendation of this passage has been proposed, in No. 212 of the *Rassegna Settimanale*, by Prof. Giovanni Rizzi. He finds the verse quite intelligible by itself, yet irrelevant to the context, seeming to regard it as an allusion on Virgil's part to his own superior wisdom. He accordingly proposes "a chi più *va*" ("who goes furthest," or, with the strained meaning he attaches to *va*, "who has furthest to go"). This misconception is promptly exposed, and the correction rejected, by two writers in the succeeding number of the *Rassegna*, much in the fashion in which a rash Shakspere emendation is "sat upon" in the *Athenæum* or *Academy*, but with rather more courtesy. Foreign spectators of the controversy will be glad to have the integrity of the verse upheld, and indeed Prof. Rizzi admits that there is no support for his substitution in any codex. Whoever consults No. 213 of the *Rassegna*, by the way, will do well to read, in addition to the

rejoinders of Finzi and Borgognoni, Luigi Morandi's article on the difficulty of translating Shakspere. It is very much enlivened by liberal extracts from Baretti's forcible and *spirituel* discourse, in opposition to Voltaire, written in French in London in 1777, and unjustly forgotten. One of Baretti's theses was that Shakspere could not well be translated into any of the Romance languages, least of all the French ; the corollary being that even to judge him required a "britannization." This was developed with great ingenuity and critical virility, particularly in regard to Voltaire's implied assumption that no author who does not cut a good figure in a French version can be a great author. Baretti met this by showing how difficult it is to translate the commonest phrases, and, *e.g.*, how different is the conception involved in *Le Roi de France* for a Frenchman and in *Il Re di Francia* for an Italian.
